'Not for your sakes am I about to act, house of Israel, but for my sacred name which you have profaned among the nations. And I will show that my name is sacred, and the nations shall know that I am Jahweh, when by my treatment of you I show before their eyes that I am God. And I will take you from the nations and bring you to your land, and I will sprinkle clean water upon you, and you shall be clean from all your pollutions; and I will give you a new mind and will put my Spirit within you, and will cause you to walk in my statutes' (Ezk $36^{22\text{-}27}$, considerably abbreviated).

This is the programme for the good time coming; Jahweh will restore His people and will make them fit for His service. The fitness will be partly external and Levitical. The most elaborate precautions will be taken not to offend the exclusiveness of the sanctuary. The Temple, its servants, its surroundings, will be all that the most rigid ritualist can desire. But along with this there will be an internal change in the people themselves; they will have a mind to obey the statutes of Jahweh, and that these statutes are ethical in their nature we have already seen. Forgiveness for past offences is to be granted, but the main thing is not forgiveness but regeneration. Yet the taking back of the adulteress, the renewal of the covenant with her, and the cleansing of her from all she has done imply a forgiving mind on the part of her God (Ezk 16^{63}, where the RV introduces the word 'forgive' for *kipper*).

8. In the post-exilic prophets.—There can be no doubt that from Ezekiel's time onwards two tendencies manifested themselves in Judaism. On one side, the free grace of God was looked for to forgive past offences; on the other, the utmost care was taken to secure ritual purity. The keen sense of the wrath of God expressed, for example, in the Book of Lamentations drove men to pray for forgiveness without the intervention of priest or altar. The post-exilic prophets encourage the people with specific promises of forgiveness: 'Return unto me, and I will return unto you, saith Jahweh' (Zec 1^3, Mal 3^7). 'As I determined to do you evil when your fathers provoked me to anger, so now have I determined to do you good' (Zec $8^{14\text{f.}}$). Interwoven in the Book of Jeremiah, as we now read it, are several passages which represent this post-exilic view and give specific promises of forgiveness. A celebrated example is the promise of the new covenant which ends thus: 'For I will forgive their guilt, and their sins will I remember no more.' Even more striking is the following: 'In that time the guilt of Israel shall be sought, but it no longer exists, and the sins of Judah, but they shall not be found, for I will forgive those whom I preserve.'[1] But the most delightful and consistent exponent of the forgiving love of God is the great prophet whose words are preserved in the second half of the Book of Isaiah. The words of comfort with which he begins his preaching are accompanied by the assurance that Zion has been forgiven, that she has received the full measure of punishment, and that restoration is at hand ($40^{1\text{ff.}}$). The glowing promises that follow are based upon the firm conviction of the love of Jahweh for His own: 'Fear not, for I have redeemed thee; I have called thee by name; mine thou art. . . . Because thou art precious in mine eyes, art honoured and I love thee, I will give mankind instead of thee, and nations for thy life' ($43^{1\text{ff.}}$). The sorrowful experiences of the past could not be ignored, but they were only a momentary ebullition of wrath and would be forgotten in the infinite kindness that is to follow. Zion, though now desolated and afflicted, is assured of the affection of her Husband who keeps her walls ever before Him. 'I am the one who blots out thy transgressions for my own sake, and thy sins I will not remember' (43^{25}; cf 44^{22}). Nor is this love a national matter alone. The individual has part in it; even the sinner may count on it: 'Let the wicked forsake his way and the unrighteous man

[1] 1 K 8. For the theory of the Deuteronomistic editor of the Book of Judges, see Jg 2^{14} 3^8 $10^{10\text{ff.}}$.

[1] Jer $31^{31\text{-}34}$ 50^{20} 33^8. A similar promise is found in Mic 7^{18}. The exilic or post-exilic origin of all these passages needs no demonstration.

his thoughts; let him turn to Jahweh that he may have mercy upon him, and to our God for he will abundantly pardon' (55[7]). It is unnecessary to multiply quotations, for this part of the OT is familiar to every Bible reader.

9. **In the Priestly Code.**—The ritual ideas of Ezekiel were taken up by the priestly compilers, whose work is now embodied in the middle books of the Pentateuch. The tradition is here collected and recorded with the idea of avoiding everything that could offend the sacred service, or, if the contagion could not be avoided, with the purpose of purging it away as soon and as effectively as possible. So far as sin comes under the head of ritual defilement, it may be removed by these rites. There is a sin, indeed, that cannot be so removed. Whoever breaks the commandments of God with full knowledge and with deliberate purpose must be cut off from the congregation (Nu 15[30f.]). But for all other offences there is purification. Certain classes of sacrifices called 'sin-offerings' and 'guilt-offerings' play a conspicuous part in the ritual, but the cleansing efficacy is ascribed as well to other sacrifices, and even to unbloody offerings. How far the removal of such contamination as was treated in this way was forgiveness, in the sense in which we use the word, is extremely difficult to make out, partly because the authors of these directions believed in the efficacy of the traditional rites, and did not concern themselves to explain them, partly because ideas of expiation were imported into the rites from non-Jewish sources. The theory doubtless was that by these rites the impurity was removed, call it forgiveness or call it purgation. See, further, EXPIATION AND ATONEMENT (Hebrew).

10. **In the Psalms.**—The Book of Psalms has preserved the experiences of believing Israelites in times of suffering and depression. Their temptation was to ascribe temporal misfortune, sickness, or privation to the retributive visitation of God. It is only natural that they should cry out in pain at His turning His face from them. Their settled conviction is that their sins have brought the affliction, though they are often unconscious of sinful motive. Yet in their perplexity they hold fast to the faith that God is merciful and loving. In many cases they are sure of forgiveness, and they are content to endure what He has sent, if only they may have the final revelation of His face. A well-known Psalm recounts the experience of one who had confessed his sin and received the assurance of pardon (32[1. 5]; cf. 78[38], 65[3] *et al.*). Where the history of the nation is reviewed, it is to show the forgiving love and patience of God in the past. And, where the authors prostrate themselves before Him in prayer, the most frequent petition is for forgiveness. It is clear that they do not think of any ritual requirement on which forgiveness is conditioned. On the contrary, they take pains to assure us that God does not ask sacrifice. His requirements are met by repentance and humility.

11. With the Book of Psalms we reach the highest development of OT teaching on this subject. The only thing to add is the declaration of the Book of Jonah that Jahweh forgives even the heathen when they cry to Him. The Book of Joel implies, rather than asserts, that Israel will be forgiven in the Messianic time, but for the Gentiles it has only the severe judgment of God. The Wisdom literature occupies itself with other problems.

II. *HUMAN.*—Forgiveness of man by man occupied small space in the mind of the Hebrews, if we may judge by the evidence at our disposal. This may be due in part to the nature of the documents, which are interested more distinctly in Divine than in human forgiveness. But in part the social organization of the people accounts for the fact we have noted. In the early stages of her history, Israel was a group of clans; and the clan recognized no obligations towards those outside the social group. In the later period, religious motives tended to emphasize opposition to foreigners. As between Israelites and Gentiles, therefore, there was no thought of forgiveness. All the cases of actual forgiveness which are narrated in the OT refer to members of the same group. Against the foreigner the nomad boasts that his own right hand is able to avenge a wrong even seventy-seven fold (Gn 4[24]). Against the foreigner also deceit is allowable, as is illustrated by the conduct of Abraham (12[10ff.] 20[1ff.]), Isaac (26[7ff.]), and Jacob (30[25ff.]), as well as by David's relations with Achish (1 S 27[8ff.]).

1. **In relation to fellow-Israelites.**—Within the clan all are brothers, and there is opportunity for forgiveness. Custom, however, sanctioned the *talio*; and, in case of gross wrong, excommunication was visited on the offender. The possibility of forgiveness, however, is indicated by the story of Jacob's reconciliation with Esau (Gn 33[1ff.]). Jacob's offence is notorious and he has reason to fear his brother's wrath, all the more in that Esau is at the head of a predatory band, whilst Jacob is a shepherd and comparatively defenceless. Jacob's gift may be interpreted as an acknowledgment of his guilt, though all that he says is that he will thereby soften his brother's anger (32[20]). Esau generously attempts to refuse the gift but finally accepts it. The completeness of the reconciliation is indicated in the words: 'Esau ran to meet him and fell on his neck and kissed him' (33[4]).

Since the reconciliation just mentioned takes place before the actual acceptance of the gift, this seems to be a case of real forgiveness. Where a money payment is made in compensation for the injury, it is a question whether the Hebrew writer thought of forgiveness. The story of Joseph, however, speaks of forgiveness in the strict sense of the word. Joseph's brothers, conscious of the wrong they have done him, fear his wrath. And after their father's death they feign a message from him praying that the wrong may be forgiven. The words used are: 'Take away the transgression and sin of thy brothers' (Gn 50[17]). Joseph's response implies that vengeance is a matter for God. As for himself, he forgives on the ground that the Divine purpose of good had been accomplished. As all this takes place strictly within the family, it is not probable that the author thought of such a thing as possible between men who were not of the same blood.

In the case of Abraham's prevarication there is wrong on both sides. Abraham deceives Abimelech, and Abimelech (unwittingly) takes Abraham's wife (Gn 20). The reconciliation is effected by a money payment, in return for which Abraham intercedes for Abimelech. The author of the account does not think of either party as forgiving the other. His interest is wholly absorbed in the Divine protection accorded to Abraham. In like manner the reconciliation of Jacob and Laban is narrated with no reference to forgiveness on either side (31[44ff.]).

In a few cases where the Divine forgiveness is alluded to, we may suppose human forgiveness implied. Pharaoh asks Moses to forgive his sin (Ex 10[16f.]). What he really desires is the Divine forgiveness mediated by Moses, for the sin is really against Jahweh. Where Moses himself implores forgiveness for the people (Ex 32[32], Nu 14[19f.]) we may suppose that the prayer is motived by his own forgiving spirit, but the narrator does not seem to reflect upon this aspect of the matter. In the quarrel, however, in which Aaron and Miriam took sides against Moses we may suppose Moses

to have forgiven his sister, for he consents to intercede for her. Aaron's request is: 'O my lord, lay not upon us this sin in which we have done foolishly' (Nu 12^{11}).

The life of David affords some examples that should be considered here. Two instances are recorded in which he has his enemy in his power and spares him (1 S 24 and 26). Saul's words imply that this generosity is without parallel. David, however, reveals that he was not moved altogether by generosity. He would not lay his hand on Jahweh's anointed (24^{7} 26^{9}). To slay a consecrated person was sacrilege. Even the mutilation of the king's robe is dangerously near that crime, as we see from David's self-reproach (24^{6}). There seems to have been a mixture of motives in this case. In the case of Nabal, however, where David forgoes the vengeance which he had sworn to take, no such mixture occurs. Abigail takes Nabal's guilt upon herself and prays David to forgive it. 'Take away the transgression of thy maid' (1 S 25^{28}). The generous gift she has brought reinforces her petition, and David 'accepts her face' (v.^{35}). The sequel intimates that his conscience had not been clear from the start, for, after all, Nabal was a fellow-Israelite (cf. v.^{39}).

Jonathan's intercession for David is followed by a temporary reconciliation on the part of Saul, but nothing is said of forgiveness of any real or fancied wrong (1 S 19^{4-7}), and David's generosity towards Meribaal (Mephibosheth) is repayment of Jonathan's kindness rather than generosity towards the house of Saul (2 S 9^{7-13}). Absalom's crime, however, is forgiven, though somewhat reluctantly, by the king; and the woman of Tekoa, who brought about the reconciliation, pleads for forgiveness on the ground that strict justice often works injury (2 S 14^{1-24}). We can hardly doubt that forgiveness would have been granted to Absalom a second time had there been opportunity. David gives us a further example in the case of Shimei, whose grossly insulting conduct was pardoned on his own request (19^{17-23}). Yet the king did not go so far as to forget the injury, and his resentment made itself felt at the close of his life (1 K 2^{8}).[1] In like manner Solomon's forgiveness of Adonijah was not whole-hearted, and an occasion was found for nullifying it (1^{53} 2^{23-25}).

The above, which seem to be the only specific cases of forgiveness in the Hebrew Scriptures, show us how imperfect was the apprehension of this grace. Exhortations to kindness towards one's fellow-man are frequent, but there seems to be little or no reflexion on the exigency which arises when one has been wronged by his neighbour and seeks forgiveness. The law of *talio* is strictly enjoined, and the Deuteronomist warns against weak compassion on offenders: 'Thine eye shall not pity' (Dt 13^{8} 19^{21} 25^{12}).

2. In relation to non-Israelites. — The bitter conflict waged by the prophetic party against foreign religion naturally sharpened opposition to foreigners. Ancient Semitic usage sanctioned extermination of enemies, and the carrying out of this 'devotion' was regarded as a religious duty. Samuel rejects Saul because he shows weakness in this regard (1 S 15), and at a later time a member of the prophetic order denounces Ahab for making a treaty with Benhadad (1 K 20^{31-43}). The Deuteronomist's stern command to exterminate the Canaanites is the consistent expression of this opposition to foreign custom. There is evidently no room for forgiveness here. Even so genuinely religious a character as Jeremiah has no idea of forgiving his persecutors (Jer 7^{16} 11^{20} 15^{15} 17^{18} 18^{19-23}).

The Jewish community in the post-exilic period is equally uncompromising in its attitude towards foreigners, and the conflict of parties within the community itself embittered the pious minority against the Hellenizers, who had the government on their side. Nehemiah's attitude towards Sanballat is typical (Neh 2^{20} $4^{4f.}$ [Heb. 3^{36}] 10^{28-31}). The ritual motive came in to reinforce patriotism. The Jews, the sacred people, necessarily regarded all men except themselves as unclean. The prayers for vengeance which recur in the Book of Psalms are in effect prayers for the annihilation of everything contrary to the will of Jahweh (Ps 3^{8} 5^{11} 11^{6} etc.[1]). Hatred of enemies is regarded as a duty, and the faithful hope for a time when with a two-edged sword in their hand they will 'execute vengeance on the Gentiles and punishment on the peoples, binding their kings with chains and their nobles with fetters of iron' (149^{6-8}). This implacable temper inspired the Book of Esther, and the story of Midian's extermination (Nu 31).

But voices of protest were not wanting. The Book of Jonah satirizes the pious people who hope for the indiscriminate slaughter of the Gentiles, and there was always the possibility that the foreigner might become a member of the Jewish community. Rahab and Ruth are examples. Yet neither the narratives which tell us of these cases, nor the abundant exhortations to kindness and compassion which we find in the prophets specifically enjoin the duty of forgiveness. It is not mentioned in the Decalogue, or in Job's list of virtues (Job 31), or in the ethical Psalms (Pss 15, 26, and 101). Only one of the commands of the Priestly Code seems to have it in mind. Here we read:

'Thou shalt not hate thy brother in thine heart; thou shalt surely rebuke thy neighbour and not bear sin because of him: thou shalt take no vengeance, nor shalt thou bear a grudge against the children of thy people, but thou shalt love thy neighbour as thyself: I am Jahweh' (Lv $19^{17f.}$).

The duty here enjoined is to be exercised towards the fellow-Israelite; but later in the same chapter (v.$^{33f.}$) we read:

'And when a client sojourns in your land, you shall not oppress him; like one of your own blood shall be the client that sojourns among you: and thou shalt love him as thyself, for you were clients in the land of Egypt: I am Jahweh your God.'

This passage recognizes the client (the proselyte, we may in fact say) as having equal rights with the native. The AV errs in this and other passages by translating the word (*gêr*) 'stranger.'

Whatever duty of forgiveness is implied in such passages has reference only to born Israelites or to those foreigners who have come into definite relations of clientage with the community. Some passages in the Book of Proverbs have a more definite bearing on our subject than any yet considered. The desirability of forgiveness was certainly in the mind of him who wrote: 'A brother offended is harder to be won than a strong city' (Pr 18^{19}) and who also said: 'The discretion of a man makes him slow to anger, and it is his glory to pass over a transgression' (19^{11}). In the same book we find the well-known passage: 'If thine enemy hunger, feed him' ($25^{21f.}$); and an exhortation not to rejoice when our enemy falls (24^{17}). Unfortunately the somewhat cold morality of this book leaves us in doubt whether genuine forgiveness is in the mind of the wise man, or whether he is taking the position that a slight is beneath the notice of a gentleman. The general sentiment is perhaps expressed by a late writer who thinks that only by the judgments of God will the wicked learn anything, and that leniency will only confirm them in their evil ways (Is 26^{10}). In the new age, when the wolf shall dwell with the lamb (Is 11^{6}), there will, of course, be complete harmony among members of the kingdom; there

[1] If 1 K 2^{1-12} is historical.

will be no offences committed, and consequently no need of forgiveness.

LITERATURE.—I. The subject of the Divine forgiveness is discussed in the various treatises on OT Theology, usually in connexion with Atonement and Expiation. The student may consult G. F. Oehler, *Theol. des AT*, Tübingen, 1873–4, § 204 (Eng. tr., Edinburgh, 1874–5); H. Schultz, *Alttest. Theol.*[4], Göttingen, 1889, ch. xxvi. (Eng. tr., Edinburgh, 1892, vol. ii. ch. vi.); A. Dillmann, *Handbuch der alttest. Theol.*, Leipzig, 1895, § 56; R. Smend, *Alttest. Religionsgesch.*, Freiburg, 1893, §§ 21 and 22; A. B. Davidson, *Theol. of the OT*, Edinburgh, 1904, ch. x.; B. Stade, *Bibl. Theol. des AT*, Tübingen, 1905, §§ 101 and 102. The Biblical material is treated by A. Ritschl in vol. ii. of his *Rechtfertigung und Versöhnung*[4], Bonn, 1900 (Eng. tr., Edinburgh, 1900). Ritschl's first ed., published in 1874, gave occasion for a fresh discussion of the OT view of Reconciliation and Atonement, and was followed by the monograph of E. C. A. Riehm, *Der Begriff der Sühne im AT*, Gotha, 1877. Riehm was not able to attain a truly historical view of the subject because of his theory of the order of the documents. His essay and that of Ritschl were examined and criticized by Schmoller in an art. entitled 'Das Wesen der Sühne in der alttest. Opfertora' (*SK*, 1891). His discussion, as indicated in the title, limited itself to the Priestly documents. The most thorough discussion since Ritschl is that of J. Köberle, *Sünde und Gnade im religiösen Leben des Volkes Israel bis auf Christum*, Munich, 1905. The same author has an article, 'Die Sündenvergebung in der alttest. Frömmigkeit,' in *NKZ* for 1905. Less satisfactory is F. Bennewitz, *Die Sünde im alten Israel*, Leipzig, 1907. See also the essay of J. Herrmann, *Die Idee der Sühne im AT*, Leipzig, 1905; one by W. Staerk, *Sünde und Gnade nach der Vorstellung des älteren Judentums*, Tübingen, 1905; and an art. by Kirchner, 'Subjekt und Wesen der Sündenvergebung besonders auf den frühesten Religionsstufen Israels' (*SK*, 1905). The Hebrew view is treated along with the Babylonian by J. Hehn, *Sünde und Erlösung nach bibl. und bab. Anschauung*, Leipzig, 1903. The theory of the later Jewish documents and their influence on early Christian doctrine are discussed by H. Windisch, *Taufe und Sünde im ältesten Christentum*, Tübingen, 1908. Cf. also artt. 'Atonement' and 'Forgiveness,' in Hastings' *DB* and 'Rechtfertigung' and 'Sündenvergebung' in *PRE*[3].

II. On the subject of human forgiveness (Hebrew) there is no special monograph. The attitude of Israelites towards foreigners is dealt with by A. Bertholet in his *Stellung d. Israeliten u. d. Juden zu den Fremden*, Freiburg i. B., 1896.

HENRY PRESERVED SMITH.

FORGIVENESS (NT and Christian).—I. *DIVINE.*—1. **In the NT.**—The difference between forgiveness as the subject of OT and ethnic religion, on the one hand, and of NT and Christian, on the other, is not so much a difference of terminology, or of accent, or of emotional intensity, or of its end, as of ethical and spiritual purity. In all alike the same or similar formulæ or ceremonial acts may be used; and the same end—that of the establishment or restoration of union with God—may be aimed at, and yet the underlying conception of sin and holiness and, therefore, of forgiveness may differ widely, while at the same time the difference may be felt rather than stated.

The discussion of the mode in which sin is removed in its cause, its guilt, and its consequences has been conducted on the Christian ground under the name not of forgiveness but of redemption, reconciliation, atonement, or justification. The reason for this procedure is that theologians have been more concerned with sin than with sins, with discovering and establishing, on both Scriptural and empirical grounds, a theory of the process by which God and mankind may come to be at one, rather than with showing how the individual as an individual may find grace with God.

Of the words referred to, 'redemption' or 'salvation' has the widest scope and embraces the whole benefit which man receives through Christ; 'reconciliation' or 'atonement' seeks to make clear how one special quality of sin in general, viz. guilt, is abolished; while 'justification,' so far as it differs from the others, may be said to be a forensic way of stating the position of the man who has been redeemed, or whose guilt has been blotted out. We are concerned here, therefore, not with the more general theories of redemption, or atonement, but with a transaction which has an individual interest, and, therefore, an interest which is at once more limited and more intimate. The question it asks is not how humanity as a whole may remove an evil affecting the race, but how the individual when becoming a Christian gets rid of the incubus of his sins; and then how, after becoming a Christian, he can annul the sins which still easily beset him.

In the NT the words used for 'forgiveness' are analogous to the words used in the OT, and come to it through the LXX. The commonest word is ἄφεσις, which as noun or verb is used 61 times, of which 45 are in the Synoptic Gospels (18 in Luke), 2 in 1 John (1[9] and 2[12]), 1 in James (5[15]), 6 in Acts (2[38] 5[31] 8[22] 10[43] 13[38] 26[18]), 2 in John (20[23]), 1 in Romans (4[7]), 1 in Ephesians (1[7]), 1 in Colossians (1[14]), and 2 in Hebrews (9[22] 10[18]). In RV the Greek word is rendered indifferently 'forgiveness' (50 times) and 'remission' (11 times). What is said to be forgiven is 'sins,' 'debts,' 'iniquities,' or 'trespasses'—a variety which reflects the richness of the Hebrew in expressions for wrong-doing.

In the Epp. another word, χαρίζεσθαι, occurs 11 times (2 Co 2[7. 10 bis] 12[13], Eph 4[32 bis], Col 2[13] 3[13 bis]), in Luke twice (7[42. 43]). Luke uses also ἀπολύω, twice in 6[37]. Also καλύπτω, 'to cover,' is used in Ro 4[7], Ja 5[20], 1 P 4[8]; and πάρεσις, 'passing-by,' in Ro 3[25]. In the Apocalypse the idea of forgiveness is expressed as a *loosing* or *cleansing* by the blood (1[5] 7[14] etc.).

Another term which bulks largely in the NT, especially in Romans, Galatians, and Hebrews, has been referred to already, viz. 'justification'—a word which always means '*being declared righteous*.' This justification is sometimes treated as the genus, of which forgiveness is a species, or the two are sometimes identified (as by Luther). It is more in accordance with the facts to say that forgiveness (like atonement) is the condition precedent to justification, or that a man is first forgiven, *i.e. made* righteous through the implanting of faith, and then *declared* to be in a normal relation to God.[1]

But a mere enumeration of the terms used, or of their filiation, is of little service in determining the specific difference between the forgiveness offered and received in Christ and that established elsewhere. It is hardly possible to express such a religious experience except in forensic, or commercial, or other terms of daily life. But nowhere does the maxim 'cum duo faciunt idem, non est idem' apply more forcibly than here. We must interpret such terms by their whole context of Christian experience, refusing to limit them by their etymological or current significance, before we can feel sure that we have seized their vital values.

Of critical importance in this context are the Parables of the Great Debtor and of the Prodigal Son, especially the latter. In the former (Mt 18[23-35]) the implicit is that man's normal relation to man is analogous to man's normal relation to God, and that, after any disturbance of that relation, the mode of restoration is the same. Any difference there may be is quantitative rather than qualitative—the debt is a debt in both cases, though one may amount to ten thousand talents and the other to a hundred pence. This parity of relationship, moreover, assumes a community of nature, even though this community be compatible with a difference in degree, or authority, or power. In other words, it is made clear out of the ground of condemnation of the unmerciful servant that the evil of unforgivingness is to be found in the fact that its object is a brother (Mt 18[21]), and, conversely, that, because God is our Father, whose love for His children is inexhaustible, therefore

[1] Aquinas, of course, regarding justification as 'a mode of motion from one state to its contrary state,' defines it as 'remission of sins accompanied by acquisition of righteousness' (*Summa*, I. ii. qu. cxiii 1; cf. Harnack, *Hist. of Dogma*, Eng. tr., 1894–9, vi. 288–292).

He forgives us fully and freely on the ground that we are made partakers of the Divine nature. Like as a father has love for his children, so has Jahweh love for them that fear Him (Ps 103[13]). This great truth of community of nature which was compressed by Jesus into the title *Father* is critical for any adequate explanation of Christian forgiveness.

The same parable, however, makes it clear that some effective recognition of this vital relationship must be found on the part of the offender before he can be restored to favour. For the very reason why the unmerciful servant was handed over to the tormentors was that he had in act broken down the homologous relationship of God to man and man to man. God's relation to man as His child is regulative of man's relation to his brother, or, in other words, the brotherhood of man rests only on the common fatherhood of God. He, therefore, who flouts that brotherhood is not so much punished or tormented as relegated by himself to a condition in which he is incapable of experiencing forgiveness, that is, of being restored to a normal relation to God. It is not by an arbitrary sentence but by a natural consequence that he remains in the land of outer darkness far from the home of light and love.

The Parable of the Prodigal Son sets out with equal clearness, and even more attractiveness, the same two master-truths. The father's love is always a potential energy waiting for the spring to be touched which shall release it in action, and that spring is touched by the desire of the prodigal for his home, joined to its expression in his changed life and return. The elder brother is the analogue of the unmerciful servant, in so far as his self-centred habit of soul prevents him automatically from sharing in that selfless love which does not weigh merit or demerit, but gives itself freely where there is willingness to receive it.

The full force, however, of the NT teaching on forgiveness is not given due expression until it is correlated with another law of the Christian life. Nothing is more familiar to readers of the NT than an antithesis which occurs constantly, though in varied forms. The Publicans are set over against the Pharisees; the 'elect' against the 'called'; the spirit against the flesh; the son against the slave; grace against the law; heaven against earth; faith against sight, and so on. But what has not been sufficiently observed is that these different antitheses are expressions for one and the same opposition between two states of the soul. One of these is described as carnal (*e.g.* in 1 Co 3[3]); or as psychical (*e.g.* in 1 Co 2[14]); or as walking by sight (2 Co 5[7]); or as the lust of the flesh (Gal 5[16]); or as being under law (Gal 5[18]); or as being a slave (Gal 4[7]); or in darkness (Lk 1[79], Jn 1[5], Ac 26[18] etc.); or in outer darkness (Mt 22[13]). The other is described as the Kingdom of God (Lk 17[21], Ro 14[17]); as light (1 Jn 1[7]); as life (Ro 8[10]); salvation (Lk 3[6]); faith (Gal 3[2]); liberty (Ro 8[21]). The very richness and variety of the terms used to describe the two states are an indication, on the one hand, that as living processes they do not lend themselves to definition, and, on the other, that they express something which has the mark of reality.

Moreover, other passages indicate a transition from one state to the other. Christians have passed from death into life (1 Jn 3[14], Jn 5[24]); from darkness to light (Ac 26[18]); the whole creation is to pass from bondage to liberty (Ro 8[21]); the disciples have ceased to be servants of sin and have become servants of righteousness (Ro 6[18]); those that were slaves have become sons (Gal 4[5]); the saints have been translated into the Kingdom of God's Son (Col 1[13]); they were raised with Christ (Col 3[1]).

The moment which marks the transition is defined as being born again (Jn 3[3]), as regeneration (Tit 3[5]), as conversion (Mt 18[3], Lk 22[32], Ac 3[19]), as an opening of the eyes (Ac 26[18], Jn 9[14], Lk 24[31]), or of the heavens (Jn 1[51], Mt 3[16], Ac 7[56] 10[11], Rev 4[1]), or of the understanding (Lk 24[45]). The subjective factor in the transaction is called ordinarily repentance (Mt 3[2] 4[17], Lk 13[3], Ac 2[38] 3[19] 17[30] 26[20]), or repentance joined with faith (Ac 20[21]).

The precise character of the process which leads to forgiveness must be duly emphasized before any clear conception can be gained of the nature of Christian forgiveness. From the above it is clear that two psychological conditions are sharply contrasted, viz. the psychical and the spiritual, the former of which is characterized by want of freedom, and the latter by the possession of it. The one revolves round the lower self, and the other round God, and hence one is the realm of disorder and the other of order, in much the same way as a geocentric centre of the universe leaves confused what a heliocentric reduces to order. The act which 'translates' the soul is not man's but God's, though man has his work to do in preparing himself for the re-creative act of God—faith is the human face of grace. When the cup of the soul is emptied of self and purified from the dregs of earth, the wine of heaven is poured into it from above, and the man is born into a new order, the spiritual, out of the old order, the psychical, and he is a new creature, for the old things are past and gone, and all things have become new (2 Co 5[17]). The annulment of the old is called in the technical language of religion 'forgiveness.' The nature of this forgiveness will be best understood by considering for a moment an aspect of the change of condition which plays so large a part in the homiletics of St. Paul.

Man, as a religious animal, passes, according to St. Paul, through three stages, the choic or earthy (1 Co 15[47. 48. 49]), the psychical (v.[46]), and the pneumatic (*ib.*). (*a*) The characteristic of the first is animalism unchecked by any practical knowledge of law (Ro 7[7]), and, therefore, a man in that stage commits, strictly speaking, no sin (v.[8]); not till a law forbids lust does the animal-man discover what lust is, or learn that it is wrong (3[20]). When he does this, however, he is ready to pass into the second, or psychical stage.

(*b*) The characteristic note of the second stage is law, *i.e.* commands of an external and superior authority, enforced by sanctions. This power of law acts as a check on the natural impulses of its object; and, as he is ordinarily a man not yet wholly freed from the passions of his choic, or earthy, state, he spends his life in a sort of intermittent warfare with the Law. He learns, however, slowly, by means of the pains and penalties inflicted by law for disobedience, that it pays him better in the long run to obey than to disobey, and thus a habit of obedience slowly grows out of suffering, or the fear of suffering. The psychical man learns to obey through fear of pain or hope of comfort, and hence he is sometimes described as a hireling or mercenary, to distinguish him from the choic man who is a slave, or from the spiritual man who is a son.

It is important for our present purpose to note here that forgiveness has no place at all while man is merely earthy, and a limited and lower place only while he remains on the second, or psychical, level—none in the first stage, because forgiveness implies some sense of moral responsibility; and a lower in the second, because that sense is as yet imperfect. In the psychical stage the man is as yet concerned with his own good, whether higher or lower, and hence forgiveness can only mean the remission of some penalty, the non-exaction of some pain or loss which would otherwise fall to him on

account of breach of law. It is obvious that forgiveness in this sense has little to do with the forgiveness which figures in a religion which is built on spiritual reality.

(*c*) But the Christianity of the NT is avowedly and obviously a religion of the spiritual, or third, degree. Its worship is in spirit and in truth; *i.e.* its proper sphere is that of spirit, and its proper object the Great Reality. Its characteristic is love, and love is a super-personal force directly connecting person with person. Its sanctions are not external, its motive is not fear or gain, and its driving-power is in the 'unspeakable gift' which has been committed to the soul. Negatively, it may be said that the hall-mark of this religion is freedom from law; and, as a matter of fact, it is this very freedom from law which forms the subject-matter of the polemic contained in the Epp. to the Romans and Galatians. If we bear this in mind, we shall see quite easily that the forgiveness which stands in the heart of the 'Christian spirit' is synonymous with liberation from law and its consequences as such. 'The law of the Spirit of life in Christ Jesus made me free from the law of sin and of death' (Ro 8^2). And 'if ye are led by the Spirit, ye are not under law' (Gal 5^{18}).

It is necessary, moreover, if we are to appreciate the central position occupied by *forgiveness* in the NT, that we should notice that it is no specific law, Jewish or otherwise, that is the enemy of the Spirit, but law as law, and especially that law embracing all lower laws, viz. the law of cause and effect, by means of which the human mind constructs a coherent whole out of the scattered members of our empirical life, and in so doing robs man himself of his own freedom. The laws of Space and Time added to the law of Causality form the trinity of forces evolved by man out of his inner consciousness by a Divine necessity, for the purpose of first fettering him that he may afterwards be led to seek and find liberation. When by asceticism, self-surrender, obedience, endeavour, prayer, or contemplation he breaks through the boundaries set by the law and attains direct communion with the Great Reality, he experiences what is called 'forgiveness.' It is not so much that he escapes from the penalties of broken law, such as disease, agony, death, or hell; the boon is different and greater. He is set free from law altogether as law, and acts as the Spirit within him (with which he is now one) impels him to act; and, even though the consequences of past breaches of law still persist (for he still in soul and body is a member of the phenomenal-world), yet they do not persist as penalties, but have 'suffered a sea-change' into instruments of the Divine alchemy which is transmuting the dross of earth into the gold of heaven. Hence, in the fullest sense he is set free from law in the whole range of its jurisdiction. He has been 'forgiven,' that is, set free from the kingdom of Law by being admitted and naturalized in the kingdom of Spirit.

2. In the Christian Church.—The history of the conception of forgiveness in days after those of the NT is a history of the struggle of the two forces of Life and Form to establish an equipoise. It might be contended with some plausibility that the equipoise was seldom, if ever, actualized, and that at the best any approximation to it was due to a more or less bitter and persistent hostility between different Churches, or different sections in the same Church. Nor is it difficult to see why this should be the case, for the 'mystic' nature of forgiveness as portrayed in the NT was too lofty for human nature's daily food, and hence it might be predicted that some means would be devised to give the inner process known as 'forgiveness' some concrete form or statement which might be intelligible to the ordinary Churchman. This was effected as part of that development of the life of the Church which came to be known as Catholicism, and was carried out with growing decision and thoroughness from the date of the 'peace of the Church' (A.D. 313). The dominant form it finally took was that of the 'sacrament of penance.'

But the forces which substituted the 'sacrament of penance' for the originally dynamic and unformulated act of forgiveness were active from the first. The community of Christians was at the first a company of saints, membership in which gave and maintained forgiveness of sins. Sins previously committed were due to ignorance—they were *delicta pristinæ cæcitatis* (Tert. *de Bapt.* 1)—but, being recognized for what they were, repentance ensued, forgiveness followed repentance, and was conferred or ratified by baptism: 'Cessatio delicti radix est veniae, ut venia sit poenitentiae fructus' is Tertullian's pithy statement of the process (*de Pud.* 10). In some obscure way the forgiveness of sins was related to the Cross; Ignatius speaks of 'the flesh of Jesus Christ which suffered for our sins' (*Smyr.* vii. 1); and, similarly, Hermas (*Sim.* v. 6. 2) refers to the many labours and sufferings by which the Son purged the sins of the people entrusted to Him.

It still remains uncertain whether forgiveness of sins was from the first regarded as the pre-condition of baptism, or as its principal consequence, whether, that is to say, baptism effected or merely proclaimed forgiveness. But what is clear is that the inner act known as forgiveness was very soon embodied in a sacred ordinance; that this sacred ordinance of baptism was regarded as washing away all previous guilt; and that it admitted its recipient into a holy society, in which subsequent sins were an abnormality requiring special treatment. The original Christian teaching had been that none but God could forgive sins, even though He might act mediately; but this mediate action quickly crystallized into the assertion that the right of forgiving post-baptismal sins was in the bishop as the successor of the Apostles. This claim, made by Pope Calixtus against the so-called Novatian heretics, marked unconsciously the parting of the ways, for it defined the process which changed the Church as a 'sure communion of salvation and of saints, which rested on the forgiveness of sins mediated by baptism, and excluded everything unholy' into a body not inherently holy but 'a holy institution in virtue of the gifts with which she is endowed.' The primitive conception that God alone could forgive sins was changed into the proposition that the bishops alone had jurisdiction in the matter—'per episcopos solos peccata posse dimitti.' The way was now clear for the further materialization of the authority into the coherent system of the theory and practice of the 'sacrament of penance.' The efficient cause no doubt of the establishment of this sacrament was to be found in that secularization of the Church which was produced by its recognition by the Empire and the consequent crowding into it of men and women of all grades of piety. The majority, especially after the conversion of the barbarians, were but children in religion, and demanded elementary methods of discipline and training. These were found in the authority which came to be vested in the leaders of the Church, by which they were enabled to exclude from the community certain classes of sinners for varying periods, especially those guilty of murder, idolatry, and adultery. On repentance, however, the excommunicated person might after public confession and promise of amendment be reinstated. Out of this salutary custom of forgiving on terms those who had confessed and expiated their sins *against the Church* there grew gradually

a custom of another kind and of more searching activity, viz. the forgiveness after confession of sins *against God*, in which was involved also the substitution of the priest for the Church as the absolving authority.

The machinery thus established lay with a heavy weight on the mediæval world. Eugenius IV. instructed the Armenians that the sacraments of the new Law were seven, of which the fourth was Penance; that the matter of this sacrament consisted in the three acts of contrition, confession, and satisfaction; that the words of absolution were its form, a duly authorized priest its minister, and its effect the forgiveness of sins. Martin V. condemned those who maintained that all exterior confession was superfluous and useless where the sinner was duly contrite; and he also directed that all Hussites should be interrogated whether they believed that besides contrition it was necessary to salvation to confess to a priest only and not to a layman, however good and devout he might be. Sixtus IV. condemned the proposition that there was no obligation to confess evil thoughts, since they were blotted out by aversion to them without recourse to the Keys; he condemned also the proposition that confession should be secret, *i.e.* of secret sins and not of open sins.

To the sacrament of penance as an instrument of forgiveness there was added later a system of indulgences (*q.v.*) under which the Church dispensed from the temporal pains of Purgatory not merely canonical or notorious sinners, but all, whether living or departed, who either themselves or vicariously performed certain prescribed ecclesiastical exercises, such as saying given prayers, attending given offices, or paying fixed sums of money. This form of forgiveness of sins, however justified theoretically, can hardly be recognized as akin to the forgiveness of sins described in the NT.

Accordingly, in the 16th cent. the whole of the existing ecclesiastical doctrine and practice in the matter of the forgiveness of sins was challenged in the name of the NT. It was no accident which led Luther to direct his attack on indulgences, but a true insight into the fact that these were the logical outcome of a long historical process which was a corruption rather than a development. According to Luther, the liberty of every Christian man was destroyed by the priesthood; the Church Catholic had banished or buried the Church of Christ; ecclesiastical law had taken over the rôle of that condemned by St. Paul; the transaction of ceremonies had overlaid the piety of the heart; and a mechanical and external forgiveness of sins had ousted forgiveness as dynamic and proper to the individual.

The battle thus begun raged round the word 'justification,' which hence bore an extended connotation, being made to cover the fundamental difference of *Lebensanschauung* which marked the Reformers from the Romans, and was crystallized by the decrees of the Council of Trent on the one side and by numerous Confessions of Faith and Articles of Religion on the other. Unfortunately, it was a hard necessity laid on the Reformers that they were compelled to attempt to solve a religious problem by logic and by means which St. Paul called 'carnal.' Forgiveness, as we have seen above, is of a spiritual nature, that is, it belongs to a sphere where reason is not so much contradicted as transcended, but it was pulled down by the new learning into the world of reason and sought to be defended by proof-texts, historical precedents, philosophical speculations, and similar instruments of controversy. The result was, and is, that the true, essential nature of forgiveness has been left obscure in the Evangelical Churches by a process which meant only that one kind of scholasticism was substituted for another. The scholasticism of a Calvin differs in form, but not in method or spirit, from that of an Anselm or an Aquinas.

II. *HUMAN.*—It is the prerogative of religion to impose on its subjects, as regulative of their relations one to the other, the relation to them all of the God they worship. Christianity, accordingly, teaches that the forgiveness accorded to men by God is the pattern of the forgiveness which men are to extend to each other. This is set out clearly in the Parable of the Great Debtor, and in the fifth petition of the Lord's Prayer, for in the former the sin of the unmerciful servant is just this, that he did not do what his lord (=God) had done, and in the latter the statement that we forgive our debtors is not cited as the pre-condition of a contract, but as affirming that the forgiveness given to man by man is an organic factor in the forgiveness given to men by God. The Christian prays for forgiveness, and adds as a plea in justification of his prayer that he is in the habit of forgiving his debtor (Lk 11^4), but he does not imply that his appeal is to anything but the lovingkindness of God (Nu 14^{18}, Jon 4^2); on the contrary, he appeals to God for forgiveness on the ground that His nature and property is ever to have mercy and to forgive, and adds by way of proof of his being aware of the greatness of the boon he is seeking that he already practises what he seeks. This petition, therefore, is an expansion of Mt 5^{23}.

It may be urged that the capacity for extending forgiveness to others is acquired only as the direct consequence of being first made conscious of the forgiveness given by God, while Jesus seems to imply, if not to assert, that before being forgiven by God we must have forgiven others. The reply is that the objection is similar to that raised by the scholastic distinctions between prevenient, cooperant, and subsequent grace, viz. that the difference is formal only and not substantial. He who forgives another is in that very act forgiven by God, and he whom God forgives in the very receipt of forgiveness forgives all his enemies. Reason, and the expression of spiritual transactions in prayer or praise, may necessitate the bringing of the spiritual act under the category of time, but forgiveness, whether of man by man or of man by God, is one and undivided in the sense that where the one is the other is involved. Life remains a unity, though thought and action split it up into duality.

This identity of forgiveness on the Divine and human levels makes it unnecessary to do more than tabulate the moments of forgiveness as between man and man, for they are but the miniature copies of the moments of the forgiveness which God gives to man. (*a*) In the Christian sense of forgiveness the remission of the consequences of wrong-doing has no independent place at all; for, though it is true that man can so far intervene in the operation of the law of cause and effect as to affect its incidence on his own personal volitions, yet he cannot define its working on Nature or on the volitions of others. For example, an employer may refuse to commit to prison a servant who has robbed him; a man who has been assaulted may abstain from a counter-attack or from prosecuting his assailant; a father may pay his son's debts, or he may forbid him his house. In all these cases human volition counts for something in the course of events, and yet may have no connexion at all with forgiveness, for this may be as consistent with the exaction of penalty as with its remission. (*b*) Forgiveness regards the higher welfare only of the offender. If we say, for example, that the punishment of the liar is not so much that others do not believe him as that he

does not believe himself, forgiveness will aim at the transformation of the liar into the truth-teller, and the course of action adopted for this end will be determined by what sanctified common-sense dictates as being most serviceable. As God sends before Him His two angels of fear and love, so the son of God will use sometimes one, sometimes the other. (*c*) Forgiveness excludes all reference to the feelings or interests of the injured person, and concentrates itself on the good of the person who has done the wrong. This may be said to constitute the negative side of forgiveness. (*d*) Forgiveness, however, is not consistent with a contemptuous, or supercilious, or merely negative attitude towards the offender; the Christian does not treat his wrong-doer as unworthy of notice, or declare that his own peace of mind is too valuable to be disturbed by him, or wait calmly and passively until forgiveness is begged for. On the contrary, the spirit of forgiveness, because it is one expression of the spirit of Divine love, pursues the offender until it has accomplished his conversion. (*e*) In this process of trying to save his brother's soul a follower of Christ will probably find his warrant in the verdict of Jesus given in the first Word from the Cross, that wrong-doing is the product of ignorance. For, as no one injures his brother who knows that in so doing he is doing more injury to himself (both because he is limiting his own spiritual capacity and because he and his brother are at bottom one), so the man whose eyes are open will bear in mind that tolerance and magnanimity are called for rather than vindictiveness, or hatred in general. In a very true sense all injustice is due to ignorance, and ignorance calls for the tender care of a physician rather than the ferocity of an executioner. (*f*) Lastly, it follows from the above that forgiveness, when complete, is a single relation between two persons, to which each contributes his quota. On the part of the injured person there is required the spirit of forgiveness; on the part of the wrong-doer a whole-hearted recognition of his offence against his brother, joined to such acknowledgment of it in word and deed as may be meet; then the union of these two in the inner world of the spirit, *i.e.* of Reality, brings about that restoration of personal friendship and brotherly good-feeling in actual life which goes by the name of forgiveness.

FORM (Æsthetic).—1. Meanings of the word.—'Form,' in its literal significance, means any objective representation of an image or mental idea, whether in matter, language, or sound. This may be the work either of Nature or of Art. In both cases it is the product of an arrangement of the different, but related, parts of a complete thing, or image of a thing. The psychological impulse whence this process arises is that of expression, which belongs to the nature of mind. In the *æsthetic* sense this general conception is narrowed by the special effort to add beauty to the representation, to construct forms in accordance with the canons of good taste and perfect ideals. Æsthetic form is thus defined as the representation of choice images or ideas in forms that approach the perfection of Nature or Art.

Thus the evolution of art becomes the evolution of forms. Two features of this evolution should be noted. On the one hand, the forms of art have changed with the growth of man in intelligence, sympathy, and insight, *i.e.* as culture and social life have changed, though a uniform tendency towards the universal truth of life has always inspired and guided the process. On the other hand, as the various stages of culture and civilization have reached their zenith, those forms of art have crystallized in which are expressed its highest and noblest insights. Form and content, in short, have always mutually influenced each other. It is this obvious feature of æsthetic evolution that underlies and explains the apparently irrepressible conflict between the forms of so-called classical and romantic art. The fixity of any form of expression is called its classical phase; but this is seen to be purely relative. The adoption and imitation, for any length of time, of any form as the highest form suitable for the expression of æsthetic ideas necessarily lead to its becoming stereotyped and conventionalized; and thus a form becomes 'classical,' *i.e.* representative or typical of the highest insight of the times that gave it vogue. But, as soon as the inadequacy of these forms to express *new* ideas is perceived, or a change in beliefs, ethical standards, or emotional interest takes place, the classical conventions are threatened and superseded; a new spirit, often of revolt, is generated, which proceeds to invent new and, to the classical ear, barbarous fashions, leading to our romantic reactions. But these, in turn, become set, conventional, imitative; and so the cycle is gone through again. The essential fact which this conflict of forms brings out is that there is a real progress in the invention of forms to express the ever-widening meaning of life, the good of each epoch filling its rôle as guide and inspirer of its later products.

Form, in the *technical* sense, refers to the various *methods* by means of which the artist seeks to give perfect embodiment to his ideas. With these we need not concern ourselves here, belonging, as they do, to special disciplines. One remark may, however, be made: the methods have grown more elaborate and perfect for their purpose as the resources of ideas and of mechanical invention have been perfected. The form, in the instrumental sense, cannot be said to have reached its limit, unless we can say that the limit of ideas and of the means of expressing them has been reached.

2. No definite rules can be laid down for the classification of the various expressive forms of art. For the most part these follow the line of interest or inspiration, by which the artist's sense of beauty is controlled. According to his point of view, he may be either an impressionist, a realist, or an idealist, just as he lays stress upon the part sensuous feeling, imagination, observation, or the sense of beauty plays, or may play, in art. His forms will vary accordingly. In the case of the sculptor, the painter, or the poet, a large part of the images or ideas will be imitated from the forms of Nature, through which, by the subtle alchemy of feeling, imagination, and beauty, they will seek to express either their sensuous feeling, or their elementary sense of the veracious, or the higher sense of ideal beauty or perfection. Value may be conferred on the forms of art in any of these ways; but it is the last alone that reaches the highest spiritual standard.

3. Form and content.—Form may vary in accordance with the kind of ideas which the artist seeks to express. No poet would employ the lyrical form to express an epic or tragical meaning. Hence what we call beauty of representation means only our sense of pleasure in the manifest *fitness* of the outward form to express the inward state of mind. Where the balance between form

and content is maintained we shall find both adequate and beautiful, and therefore satisfying.

In some forms of art, however, especially of literary art, like fiction, *belles lettres*, and the essay, beauty of form is often deliberately sacrificed to intensity of impression and conviction; the subjective factor is allowed to overbalance the formal beauty of the work; temperament is allowed freer play, and even truth may be of less importance than fancy or imagination. Under these conditions the formal element of art does not necessarily become less perfect, but it is obscured in the stronger tides of passion. Art becomes descriptive and declamatory, as in much of Carlyle's writing, while interpretation becomes relatively unimportant.

Realistic art for this reason has always been deficient in the formal beauty of its representations: it tends to become documentary, evidential, not universal. This is the case with much of the art of the present day; and, since form cannot long be valued for its own sake, and since a return to classical form seems impossible, it must be judged as, on the whole, a healthy tendency, though obviously temporary, judged as art, and looking towards a higher synthesis of form and content, of the real and the ideal, which may follow.

On the other hand, form may be emphasized and deemed of *more* value than matter. This was the case with much of the literature of the 18th century. In the more objective arts, like architecture, sculpture, and painting, it is obvious that form cannot be sacrificed, if verisimilitude is to be secured; but even in these arts the formal element may overlay and obscure the living truth. Greek sculpture, while it is developed with wonderful beauty, spontaneity, and finality of form, lacks the spiritual note. On its formal side it is unexcelled, but as a revelation of the soul it has been often excelled. Rodin has expressed ideas in marble which the Greeks never approached or thought of expressing. So also has Michelangelo. In literature, too, form may overtop matter, as in Pope. The same is true of music and the other arts. Throughout this entire process, the æsthetic judgment seeks, in the work of art, the adequate relation of form and content, poetical thought finding equally poetical formal expression. Where this is the case, form is perceived to be the indispensable medium of the total spiritual ideal which the work was designed to produce.

4. The law of form.—This is the law of unity in diversity. Unity, *e.g.*, is an obvious demand of all formal representations which claim to have artistic value. This is clear enough in poetry and music, which cannot stir our appreciative sense of their beauty by merely stringing together a continuous stream of sounds, however harmonious, in the absence of unifying ideas, endowed, *ab initio*, with power to move the emotions. In lyrical poetry this seems specially obvious; but it is no less so in the epic or the tragedy, which lead to a certain inevitable catastrophe, impressive in itself, and purging the spectator's emotions by fear and pity. And, making due allowances for the different mediums in which the sculptor, the painter, and the architect work, the same is true of their arts as well.

Unity, however, depends, in turn, upon the related elements, diverse in kind and number, which enter into and help to compose it. The unifying of the detail of a work of art into a thing of beauty requires great skill and judgment to avoid excess. Emotion, which enters so largely into this activity, is an unstable medium to work in; and its extreme licence, as in Whitman, often vitiates the value of a representation otherwise extremely nobly conceived. Restraint is one of the best guides of form. In addition to this, it is clear that the human mind takes pleasure in the congruity of the various parts of a work of art; and, where this is sacrificed to power, energy, or force, we feel that something essential is lacking. In these matters the judgment will be guided as much by the sense of fitness between the detail and the central and unifying idea as by emotion. Few have manifested the law of form more perfectly than Shakespeare, who nearly always produces in us a feeling or judgment in which we repose in a disclosed unity amid a wealth of plot and incident.

5. Ethical implications.—Behind all these technical considerations, governing the evolution and control of the formal element in art, lies the fundamental truth that form is always subject to the influence of moral ideals, to the ethical quality in the personality of the artist, and to the acknowledgment accorded by humanity to the Supreme Good. In particular must moral character in the artist be a powerful influence in the form of his art. As Ruskin said, a bad man is not likely to produce art of the highest kind. The precise ways in which the ethical factor affects the forms of expression in art cannot be reduced to strict classification; but it is safe to say that it will impart to all works of art, where its influence is allowed to work, a sincerity and earnestness, as well as a certain chastity and exaltation, not otherwise attainable. After all, the highest art culminates in the supreme revelation of Nature, the perfect man, who unites the ideal in the real, in whom God and man are reconciled. Thus, even on the formal side, art and religion are seen to seek the same end. However this may be, it is certain that we can never permanently approve, either æsthetically or morally, an art, however beautiful or correct in its mere form, which lacks the qualities of greatness, imparted to it first by the artist himself, and next by the ideas to which he, by means of its forms, gives a local habitation and a name. If *he* be a man of high ideals, the form of his art is likely to reflect the quality of those ideals.

FORMALISM, FORMS.—See WORSHIP.

FORMOSA.—1. Geography and ethnology.—The Formosa of this article is a continental island, extending from 20° 56′ to 25° 15′ N. latitude, and from 120° to 122° E. longitude. Its southern end lies 386 miles due east from the British crown colony of Hong-Kong, and its northern end some 140 miles E.S.E. of Fuchau, the capital city of the Fokien Province of China. It has a length of 225 miles, and a breadth of 80 miles across the widest or middle part; while the coast-line encloses about 13,500 square miles of territory—an area considerably larger than Holland, or about half the size of Scotland. Thickly wooded hills cover the whole eastern side of the island, the ranges culminating in Mount Morrison, which is more than three times the height of Ben Nevis, and was so designated by Richard Collinson, after the name of his 'dear friend' who began missionary work in China fully one hundred years ago (*Proc. of Roy. Geog. Soc.* viii. [1864] 25). For the most part, the inhabitants of Formosa are found in the towns and

villages scattered over the broad, level, western seaboard, and may be classified as follows: (1) the Malayan aboriginal tribes, made up of (*a*) about 180,000 Pepohoan, who live in the more accessible valleys, and who have become almost entirely Sinicized in their dress, language, and general style of living, and (*b*) about 122,000 semi-nude savages, who occupy the higher mountain ranges, differ from the Pepohoan in speaking their own Polynesian dialects, and spend their time in hunting for game or for the heads of people with whom they have no tribal relationship; (2) the descendants of immigrants from the mainland of China, consisting of (*a*) about 80,000 from the Kwantung Province, who speak the Hakka form of the Chinese language, and (*b*) about 2,776,855 from the opposite province of Fokien, who use what is known as the Amoy vernacular; and (3) about 83,330 Japanese, who began to arrive when the island was ceded to Japan in 1895.

2. **Religious and other beliefs; manners and customs.**—With regard to the religious beliefs and practices of the people of Formosa, it is not necessary to enter into details here about the civilized Pepohoan and the Chinese settlers, because these two classes may be looked upon as one so far as superstitious worship is concerned, while other articles in this Encyclopædia will deal in an exhaustive way with the religions of China and Japan. The first thing to notice in making any statement about the savages of Formosa is the extreme paucity of the information which is available. No European or English-speaking scholar of recent times has acquired any of their dialects, or lived amongst them more than two or three days at a time. It should be remembered, however, that, for thirty-seven years during the first half of the 17th cent., the Dutch were in possession of Formosa—at a time, too, when the ancestors of the present-day hill tribes swarmed all over the western side of the island. Devoted pastors from Holland then laboured for the conversion of this people, and they have left on record many notices of the native customs which are still to be met with. In the absence of anything more circumstantial belonging to this period, the present writer may here transcribe from his *Formosa under the Dutch* (1903, p. 75, and *passim*) the following account, compiled from the writings of Candidius, Junius, and others:

'Although no books or writings have ever been found in the Island of Formosa to give us information concerning the religion of the people, it is nevertheless certain that the people there have a religion which cannot be otherwise designated than as heathenish and superstitious, inasmuch as it agrees very much with those other heathen religions which have been handed down from one generation to another. The Formosans imagine that there are several gods, each having his own work and abode; but of one Supreme Creator they know nothing, affirming that the world has existed from all eternity and shall eternally so remain. Nevertheless, they believe that there are certain rewards for the good, and severe punishments for the wicked; the former having to cross over a very difficult gulf before they can become partakers of great joy and every variety of pleasure, while the latter will never be able to cross this gulf, but must roll about there for ever by way of punishment for their sins; a doctrine which would seem to involve belief in One Divine Being, since there must be a Supreme Ruler of the universe if all men are to be judged according to their deeds. The ridiculous part of their religion is that the people find sin in things which are really not sinful. For instance, it is considered an evil thing for any one to build a house on some so-called forbidden day; or to gather wood or food without taking due notice of the singing of birds, or for any pregnant woman to keep alive her children before the thirty-seventh year of her age—a custom which is surely abominable and in itself deserving punishment. On the other hand, they see no sin in actions which are extremely sinful; so much so that crimes like adultery, fornication, murder, and theft do not trouble them in the least, but rather cause boastfulness, under the belief that their gods find pleasure in them; from which it may be inferred that this people must have a very degrading opinion of their deities.

The Formosans have several gods whom they worship, and to whom they sacrifice in time of need, two of them especially being regarded as excelling in power and riches. The one—who is a male and lives in the south—is called *Tamagisangak*, and is supposed to beautify man; the other—who is a goddess and lives in the east—is named *Tekarpada*. It is said of her that thunder is heard when she scolds her husband for not sending sufficient rain on the earth; which, however, he immediately does on hearing her voice. Both these gods are worshipped most zealously, and oftenest by the women of Formosa. There is another god, who lives in the north, and whom they look upon as extremely wicked, called *Sarisano*. They try to propitiate him, seeing that he has the power of making people ugly, and of causing them to take chicken-pox and other kinds of disease. They are greatly afraid of these evils, and seek to ward them off with all their power, affirming that when they serve this *Sarisano* there is not the slightest need for fear. Besides these there are yet two other gods, *Tapatiap* and *Takafutta*, the gods of war, who are more especially worshipped by the men when they go out to battle, no scruple being made about propitiating them by sacrificing even on the streets. Temples are everywhere to be met with, there being one for every sixteen houses: and, while all other nations have priests to perform religious ceremonies, this is done here by priestesses called *inibs*. These *inibs* sacrifice the heads of pigs and deer, which they are accustomed first to boil somewhat, and then to place before their gods with some rice, strong drink, or *brom*, and *pinang*. Thereupon, two of the priestesses rise and call upon their gods with a horrible shouting and screaming, so furious that their eyes stand out of their heads as they foam at the mouth, causing them to look as if they were either demon-possessed or suffering from madness. Their gods are then said to appear in such terrible form that the priestesses begin to shake and tremble violently—as one actually sees them do—before they fall to the ground as if dead; the bystanders meanwhile showing signs of deep grief, by giving themselves up to continuous weeping and howling. On recovering, the two priestesses climb to the roof of the temple and stand, one at each end, calling upon their gods with violent gesticulations. Every article of clothing is now laid aside, and they appear stark naked before their idols, to honour them and move them to answer prayers by the exhibition of, and continual tabering upon, their female parts. They then wash their bodies in clean water, and remain naked before the people, who are mostly women on such occasions—the men being not very religious—and who have all the while been making themselves as drunk as possible. The *inibs* also busy themselves in expelling demons and warding off all sorts of evil. Nor do they simply foretell good and bad weather, for, by cutting the air with a naked sword, and performing various frantic gestures in public, they profess to drive away the devil who causes the bad weather, so that he is not able to stand the hacking with the sword, but takes refuge in the water and is drowned. These and a hundred other such outrageous stories they tell the common people, who are largely dependent on them, and who wonder greatly at their doings.

Besides these ceremonies performed by the priestesses, every Formosan has a kind of private religion which he practises in his own house, where each one honours his gods in the way that pleases him best. The people also celebrate several feasts, during which they solemnly worship their gods in the temples, with the addition of feasting, dancing, and singing. When any Formosan becomes sick, a rope is first tied round him. He is then suspended from the end of a *spring-branch*, and suddenly let fall from above, so as to shorten his sufferings by breaking his neck and bones. As soon as he is dead, the fact is proclaimed by the beating of drums, whereupon the women gather together, each one bringing a pot of native wine, or *brom*, in which they always indulge very freely. The corpse is likewise treated in a most wonderful way, by placing it near the fire while a funeral feast is going on and the friends are exhausting themselves by dancing to the sound of a drum. These ceremonies are kept up for nine days, during which a most horrible stench is caused by the gradual drying and roasting of the corpse. After this period of mourning, the body is washed nine times, wrapped up in a mat or something of that kind, and placed on a high scaffolding, which is draped round with hangings till it looks like a bedstead or field-tent. Here it is left for three years, till it has become thoroughly dry; whereupon they bury it in their houses, giving their friends at this time another funeral feast according to their means. From all these doings, it is apparent that the Formosans are a stupid, blind, and ridiculous heathen people; and yet it has pleased God—as we shall hereafter see—to bring many of them to a knowledge of the Truth.'

With regard to the foregoing account, it need only be said that, as Chinese immigration to Formosa increased, the bulk of the aborigines had steadily to retire into those fastnesses from which they have ever since been making head-hunting raids upon their invaders and those associated with them, the result being that this has placed the hill tribes in a position of almost complete isolation; for no outsider dares to travel through that high mountain region unless he is convoyed along from tribe to tribe as an accredited guest. Only very occasional visits by Europeans have been paid to it in recent years, and about some of these a few notes may now be given.

(1) In June 1857 R. Swinhoe spent two or three days among the *Kweiying* and *Tylokok* tribes of North Formosa, and found them to be a dark-coloured race, whose features, speech, and customs suggested a decidedly Malayo-Polynesian origin. The tatu marks on their faces first attracted notice, the males having three series of short lines arranged in compact groups on their foreheads, the upper and lower consisting of eight horizontal lines each, and the middle one of six. The tatuing of youths begins when they are sixteen years of age; but, when further on in their teens, and when they have qualified for marriage by capturing the head of some enemy, they are tatued under the lower lip with a square of short horizontal lines. The faces of the married women have tatu marks from ear to ear; first three simple lines; then two rows of signs like × between two lines lower down; and, below all, four more simple lines. These people usually wear very little clothing, but on holiday or festival occasions gaudy dresses are worn; and, on celebrating a marriage, they all turn out in fine attire, and assemble at the house of the bride's father, when the skull won in that combat which entitles the bridegroom to take up his position is brought forward and presented to the bride, who prepares a draught in it by mixing spirits with the brains, and then offers it as a loving cup to all the guests, commencing with the chief of the tribe and ending with the bridegroom. The huts of the Kweiying are made of bark and rough planks held together with rattan, and thatched with palm leaves. The women and old men do most of the hard work in cultivating the fields for dry rice, sweet potatoes, millet, and tobacco. When on the hunt for game or human heads, the Kweiying and the Tylokok are much guided by a certain small species of bird, the notes of which are taken either as an encouragement or as a warning. If thought to be propitious, they follow the flight of the bird, and lie in ambush where it comes down, to watch for their prey. The people of these tribes could not be induced to make any reference to their superstitious practices. They dress their dead in a plaid or wrapper, and bury them in the ground without burning incense or raising any kind of monument, only a few trees which are planted at the time being left to mark the spot.

(2) During May 1878 the present writer visited the savage *Bu-hoan* and *Kale* tribes in the high mountain region of Central Formosa. The people of the first-named tribe were found to be a fine, tall, muscular race, and not by any means so degraded as one might have expected them to be. According to the testimony of the few Chinese who barter with them, they are truthful, chaste, and honest in their dealings with each other. The pursuit of head-hunting is their one serious crime against society. This degrading practice appears to be carried on in much the same way and for the same reasons as it is in Borneo, and it has come to be so largely mixed up with the beliefs and customs of the Formosan tribes that, apart from all quarrelling, heads must be brought in to keep up the traditional stand against Chinese invasion, to show the continued possession of bravery, and to furnish an occasion for excitement, for jubilation, and for the inordinate consumption of native whisky. On the visit referred to, rows of human heads and bleaching skulls were seen, fastened up at the end of the chief's house. All the other houses were similarly provided, there being thirty-nine in one collection, thirty-two in another, twenty-one in a third, and so on. They were the terrible outcome of clan-fights, and of many a fatal meeting with straggling little companies along the base of the mountains outside. Intellectually, the Bu-hoan seemed to be mere children. For example, any party hunting for game or on the war-path would separate into two companies and arrange to meet again 'after one hand'—that is, in five days. When they were questioned through an interpreter who understood the Chinese dialect used in Formosa, one tribesman pointed skyward and referred to the Great Father of all men as *A-pa*; and on the writer entering a ruined house-steading where some bodies had been buried, the villagers peremptorily called him back, and caused some drops of water to be sprinkled over him as an old priestess uttered some sort of incantation. Another little incident may be mentioned. Chief Arek and several others had been so benefited by the doses of quinine served out that they invited the donor to go with them and inspect the water-spring of the village—a proposal which the interpreter said was an unmistakable mark of confidence. It seemed that the clear abundant water of the spring was then supposed to be under an influence which was causing numerous deaths among the people, and that they wished to exhibit their practice of firing into it in the hope that the bullets from their long guns might dislodge the unseen enemy. After all the yelling was over, the writer drank from the well before them, and said they need have no fear now, but begin again to use the water from this Well of Tur-u-wan. The dampness of the houses or cabins in which they slept was sufficient to account for the prevalent sickness. They commence the erection of these structures by digging a large oblong pit about four feet deep. The earth forming the floor of this pit is then firmly beaten down, and the sides are built round with large stones. The wall is afterwards carried three feet above the level of the ground, a bamboo frame-work is thrown over from wall to wall so as to form eaves about two feet from the ground on either side, and above this thick slates are placed to complete the structure. When any one of the tribe dies, his friends do not convey the body to the outside of the village for burial, but the log fire which always smoulders at one end of the apartment is immediately cleared away, and a deep hole is dug, into which the body is placed in a sitting posture. Pipes and tobacco, with other articles used by the deceased while living, are placed beside the body; some simple ceremony of mourning is gone through, a couple of the nearest relatives fill up the grave, and everything then goes on as usual.

There is not much to remark about the Kale clans of Formosa. They were found to be a finely-formed healthy-looking race, their faces free from tatu marks, and all of them wearing a reasonable amount of clothing; not a few, indeed, being rather prettily arrayed in bright-coloured dresses, and ornamented with ear-rings, bangles, and necklaces of cornelian stone. The chief of the village of Ka-piang was a stately-looking dame, who received the respectful service of her people as a matter of course. The few presents offered by the writer for her acceptance at the close of the introductory ceremony included about twelve yards of a highly-coloured cotton print which at once stirred the hearts of all the beholders. It was a piece of the flimsiest Manchester stuff, with great staring flowers on a frightful pattern of scroll-work; and yet that bit of cloth made a remarkable impression on the minds of this people. All formality was now banished. The writer and his party were looked upon as having had some share in the manufacture of this wonderful production; the word was passed that a first-class medicine-man was now standing amongst them; and their pent-up feelings found relief in an order to have supper prepared forthwith. Very few

traces were met with of any belief in the unseen. Ghosts are known to exist, and various simple expedients are resorted to for propitiating them; while at harvest time, offerings of thanksgiving take the form of laying out little quantities of grain and cooked meat, that the good spirits may partake of the essence, before the people feast themselves on what is left. The Kale also indulge in the practice of head-hunting; for one morning when the writer pointed with strong disapprobation to a number of freshly cloven-in skulls, the Kapiangers immediately shouted out with great emphasis, 'Lang-wah! Lang-wah!' meaning that all their customs in connexion with head-hunting were not only blameless, but greatly to be commended.

(3) A two days' journey south-east from Kapiang brings one to the country of the *Amia*, the largest tribe in this part of the island. Our fullest knowledge of the Amia comes from George Taylor, Chief Lighthouse Keeper at South Cape, from whose notes mainly the following account has been compiled. The Amia trace their descent from the occupants of a long catamaran which was washed ashore at Pilam many years ago from a distant island of the Pacific; the place of debarkation is still pointed out and made the scene of an annual religious offering to the spirits of those early castaways. They have also the tradition of a 'first man and woman,' believing that, long ago, some great unknown Being planted his staff in the ground, which first became a bamboo and then gave birth to a man and a woman, the impression of whose feet on a large stone is still shown to privileged persons, at a place called Arapani. The Pilamites also believe in one Supreme Deity named *Marahtoo*, who is supposed to live 'above and beyond the earth,' and whose assistance is implored on all occasions of danger. The ceremony of adoration or intercession is performed by priestesses or witches, and consists of prayers, accompanied by throwing handfuls of small glass beads in the air, together with small pieces of pork. Among the villagers living near South Cape, however, the belief in a special Supreme Deity is unknown, although spirit-worship prevails, with belief in witchcraft, and in prophetic powers as displayed by certain individuals. Beads and small slips of bamboo blackened on one side constitute the ritual implements used when interviewing the spirits; and the priestesses or witches profess to interpret, by the odd or the even number of beads, or by the position of the bamboo slips as they fall, what the spirits wish to make known. Thus ghosts or spirits of the dead are generally believed in, and thought to be visible to the priestesses; indeed, if they appear to others than those authorized to interview or observe them, it is considered necessary for such unlucky beholders to plead for the immediate intercession of the priestesses, lest death should ensue.

Spirits are supposed to dwell in caves, cliffs, and high places, and to be the cause of echoes; and accordingly such localities are held sacred and reserved for superstitious ceremonies and incantations, these being gone through when the tribe is going on the war-path, when sickness prevails, or on other important occasions. The village elders alone may be spectators of what goes on there, and the chief sight brought before them is that of the priestesses contorting themselves and getting worked up into a kind of ecstasy, till they swoon away or pretend to do so. In this last condition they are left till they enter the village next day to make known the will of the spirits. Those priestesses have a reputation all over the island for superiority in knowledge and power, and they are frequently consulted by the people of other tribes. The Amia believe in an after-state, where good and bad actions performed in this life meet with corresponding rewards and punishments. They have no special code of moral law, but are very much guided by use and wont, and by what they suppose will benefit each other and the community generally. Their creed requires belief in a future heaven, a hell, and a purgatory. Every one, of course, hopes he will go to heaven after death, and hell seems to be reserved as the possible *terminus ad quem* for one's neighbours. They say, however, that, since no one ever comes back to complain, the future world must be better than the one they now live in. Heaven is supposed to be far away to the north, and hell equally far in a southerly direction. Purgatory is in the air, and its inhabitants are ghosts or evil spirits. As to the special delights of heaven or what the punishments inflicted in hell may be, they profess complete ignorance, but hold that the latter cannot be so very severe, for otherwise the spirits would not remain. On this whole subject, their general idea seems to be that each soul will hereafter follow its own tastes and inclinations, the good associating with the good, and the bad with the bad.

There is not much courtship or observance of nuptial ceremonies among the Amia. Young people fall in love with each other, and proclaim their intention; should no objection be raised, there is the usual gathering of friends with its necessary feast. Cohabitation takes place immediately after. The Amia have only one wife at a time, but divorces are very frequent, and arise from infidelity, or some trifling dispute, or incompatibility of temper. Vicious young men get their wives divorced every two years or so, and wives also desert their husbands on the slightest provocation. Nor do such occurrences give rise to much scandal or comment, as the married state with them can scarcely be called a permanent institution until the males are about forty years of age, when they seem to acquire discretion and a fixed wife simultaneously; for after that, divorces are practically unknown. In cases of divorce, where both the husband and wife were possessed of considerable wealth before marriage, an equitable division of the property and the children is made by the village chief, whose decision is accepted as supreme and final. Sometimes the offspring of divorced persons consult their own inclination as to which parent shall retain custody of them, though in deciding this point the grandparents have an influential voice. No stigma is attached to the children, and, in so far as they can, they strive to take up residence in whichever home is the more comfortable. A curious custom is for all the young unmarried men to live and sleep together in a large dormitory, where story-telling and drinking bouts take place. The idea is to keep the minds of the young women and children from being debased—an end that is served by causing them to come in contact only with staid and elderly people.

Before going to hunt, the Amia splits open a betel-nut in which he places a red bead (one of any other colour is unsuitable), and, laying it in the palm of his hand, waves it in the face of heaven, invoking protection and success in the chase. When any one is sick, a sorcerer is called, who waves the leaf of a banana tree over the patient, then sucks the painful part, and, whether the person recovers or dies, the only reward to which the sorcerer is entitled is one of these red beads. Also, when an enemy has been killed, a few drops of his blood are sprinkled on the ground as an expiatory offering to the departed spirit. The staple food of the Amia includes beef, pork, and all kinds of fish, with rice and vegetables; but they never partake

of chicken, believing that fowls are the abode of good, gentle spirits, and should, therefore, not be used as food. When hungry and far from home, they find relief by tightening their girdles and chewing betel-nut, of which they always carry an ample supply. They suppose that earthquakes are brought about by a huge pig scratching itself against an iron bar stuck into the earth; rain and wind, by spirits in some way or other; and that thunder and lightning arise from quarrelling between the male and female deities named *Kakring* and *Kalapiat*, the former causing thunder by knocking about the household effects in his anger, and the latter producing lightning by uncovering herself in her displeasure—this being a favourite method which Amia females adopt for showing their temper against others. The people of this tribe further believe that the sun, moon, and stars were made by two spirits named respectively *Dgagha* and *Bartsing*; and that the sun revolves every day round the flat world, going under the earth at night. During warm weather, both men and women go about stark naked in their own villages; but, when travelling or hunting outside, the men wear waist-cloths and the women jackets and petticoats. The Amia may be put down as numbering about 12,000.

Since the cession of Formosa to Japan in 1895, various successful attempts have been made by Japanese travellers and scholars to obtain fuller information regarding the ethnography, language, customs, and folklore of the native tribes, but their accounts are found only in ephemeral periodicals which are unknown to the outside world, or in reports which were prepared for the local Administration, and they are all in the Japanese language. Y. Ino especially made good use of the opportunity given him for collecting a large amount of useful data in every district of Eastern Formosa; and, from the ethnological and linguistic material obtained, he has divided all the aborigines into the following eight groups, proceeding from the north downwards: (1) Atayal, (2) Vonum, (3) Tsou, (4) Tsalisen, (5) Paiwan, (6) Puyuma, (7) Ami, (8) Pepo. Only a brief summary can be given here of Ino's remarks on the superstitions of some of these tribes. Among the Atayal, ancestor-worship is the main religious observance. The people suspend cakes or boiled rice or millet from trees, on the day before full-moon at seed-time and harvest, and hold a general feast next day, at which there is much drunkenness, and any amount of riotous, licentious dancing by the young women and girls of the village. The Vonum also meet for ancestor-worship twice a year. Their distinctive ceremony consists in the fixing in their houses of bundles of green grass, and sprinkling native whisky on the ground in front—such spots being looked upon as sacred that day—and, while fire from the striking of steel on flint serves for everyday use, it must be obtained by the rubbing of two sticks on ceremonial occasions like this. People of the Tsou tribe have a tree near the entrance to their villages which is thought to have a peculiar sanctity attached to it, and once a year they sprinkle whisky on the ground under its branches, and worship the spirits of their ancestors. They also regard a certain kind of orchid as sacred, and carefully cultivate it near the holy tree just now referred to, as their forefathers are supposed to have carried this flower into battle and thereby to have gained their victories. The Tsalisen occasionally observe a ceremony which takes the form of arranging on the ground dishes containing rice, millet, fruit, and native wine, and mumbling over them certain prayers or incantations, the spirits thus invoked being supposed to come down and preside so long as the ceremony lasts. Severe penalties are inflicted on any one who breaks the rules of this ceremony, or who offends by stepping within the charmed circle. A tradition is current among the Tsalisen that their ancestors came down from heaven with twelve earthen jars; and another tradition is that the moon gave birth to them, for which reasons an old earthenware jar and an ancient circular piece of white stone are still preserved and treasured as being of peculiar sanctity. Many of the Paiwan think that the spirits of their ancestors dwell in a thick wood; others that they are enshrined in swords handed down from generation to generation. They worship them when about to plant their fields and at harvest-time, and once every five years, on one of these festival days, they join in a game called *Mavayaiya*. This takes the form of the players trying to catch a bundle of woodbark on the point of their bamboo lances, the one who impales it being considered the victor. According to current tradition, this practice is the survival of an ancient game in which a human head was tossed about and then offered as a sacrifice to the spirits. On a certain festival day among the Puyuma, a monkey is captured and tied to a tree in front of the boys' public dormitory, where it is killed by the arrows which are thrown at it. The village chief afterwards steps forward and throws a little wine three times skyward, and a little more three times to the ground. All present thereupon spit on the dead monkey, and cast its body away, before joining hands in the hilarious dance which follows. Tradition explains that during early times, when the Puyuma were all-powerful, a member of some subjugated tribe was always sacrificed on such occasions, but that, in their present weakened condition, they have to be satisfied with the oblation of a monkey.

FORTUNE (Biblical and Christian).—Two inconsistent conceptions of fortune are found in association with Heb. thought. The one recognizes it as a superhuman force acting alike upon gods and men, and gradually deifies it as a person to be invoked and appeased. The other keeps its apportionment strictly within the functions of Jahweh, without any betrayal of the monotheistic position; and this conception eventually established itself as a norm of thought and devotion in Christendom.

I. There are several indications that Fortune was known to the early Semites under the name of *Gad*, and amongst them must be placed the ancient tradition in Gn 30[11]. If the text be read according to the direction of the Massoretes (בָּא גָּד; so also the Targum), Leah is represented as first exclaiming, 'Good fortune is come,' and then selecting the term as the name of her handmaid's son. The tribal name may have been current before this explanation of its origin was given; but the vivid human interest of the narrative points on the whole to the opposite conclusion. The Aram. lady was so delighted at the success of her device and the close of her disappointments that she gratefully recognized the action of the power which she had already learnt to be superior to any local god, and chose for the child a name that would be a memorial of her gratitude and a pledge of his future prosperity. At the time of the narrator this power had probably itself been invested with personality and exalted to the rank of a god. At the more ancient period, in which the traditional story is placed, an earlier stage in the development of the thought is represented. The power is conceived as impersonal, with a certain degree of uncertainty attaching to it, which could not be entirely removed by any kind of appeasement. The endeavour to devise means of ensuring the favourable action of this force must have been an important factor both in hastening the process of personification and in grouping the gods into a hierarchy.

1. **Origin of the term.**—Etymologically the radical idea in the word *Gad* is that of cutting or penetrating into something—cutting the flesh as a religious observance (1 K 18[28]), or making attacks upon the life of the righteous (Ps 94[21]). 'Cutting off' so as to make detachments or bands is a later meaning (see *Oxf. Heb. Lex. s.v.*). Hence fortune is conceived primarily as an external influence, hostile, or at least likely to be mischievous, breaking in upon a man's hope or scheme, and not to be averted by the ordinary worship of the local god. It was an easy step, in accordance with principles traceable in almost all the early stages of primitive religion, to invest this influence with neutral qualities and make it a source of good as well as evil. That is evidently the stage corresponding with the presuppositions of the narrative of Leah; and the full personification of Fortune as superior to the local gods and altogether outside their control was a natural corollary.

2. **Early range of the conception in Israel.**—It was almost certainly from the Canaanites that Israel learnt this conception of Fortune, and also borrowed the nomenclature. Several place-names might be quoted in evidence. On the northern limit of Joshua's conquest was the town of Baal-gad (Jos 11[17] 12[7] 13[5]), possibly identical with the Baal-hermon of 1 Ch 5[23] (but see Curtis, *ICC* [1910], *in loc.*) and Jg 3[3]. The boundary was variously designated, topographically by the conspicuous landmark of the famous mountain, or, more reverently, by the village on its slopes with the significant name 'The Lord of Good Fortune,' or 'Good Fortune is our Lord.' To interpret the place-name as denoting that Baal brings good fortune to those who reside there is to ascribe to the people an impossible degree of idolatry even in those polytheistic days, unless the name was current among the earlier Can. population. In that case it is easy to understand why the Israelites sometimes preferred to call the place by a less suggestive name. Migdal-gad (Jos 15[37]), again, in the territory of Judah, is 'the tower of Gad,' and is commemorative of the ancient worship there. Apparently it dates back to a time when Fortune had already become personified in the locality.

A similar feature can be traced in personal names, two of which at least are very ancient. Gaddi (Nu 13[11]), 'my fortune,' was one of the twelve spies; and Gaddiel (Nu 13[10]), 'God is my fortune,' was another. Neither of these involves the conclusion that Fortune was already regarded as an independent deity. Endearment or devoutness is a sufficient explanation. The former recurs again centuries later under the form of Gaddis (1 Mac 2[2]), the eldest brother of Judas Maccabæus. For Gadi (2 K 15[14. 17]), the father of Menahem, there are Nabatæan and Palmyrene parallels; and a fond name of such a kind would naturally be popular with mothers. Azgad (עַזְגָּד) is the name of one of the signatories of the covenant in Neh 10[16]. A number of the family or clan had returned with Ezra (2[12]; but cf. Neh 7[17], 1 Es 5[13] 8[38], RVm). The clan was evidently a large one, and the original detachment was followed by a second. Its name has been identified with the Aram. אֲזַגְדָּר or עֲזַגְדָּר (*Targ.* Is 18[2]), a 'runner' or 'messenger'; but no early instances of its use in this sense can be found. 'Gad is mighty' (Gray, *Heb. Prop. Names*, London, 1896, p. 145) is the meaning; and the thought is not a general complaint of the hardness of fate, but the ascription of power to a god Fortune conceived as personal. It is not probable that this family learnt this special form of idolatry in Babylon, for so far that district has yielded few, if any, traces of the prevalence within it of the worship of Fortune. The family became familiar with the worship in their earlier Canaanitish home, and brought it with them to Babylon, where, in the misery and disappointment of the times, it may well have spread among their countrymen, though not attracting the native Babylonians. That large numbers of this family should join the return from the Exile would be due partly to a reaction in favour of the worship of Jahweh, and partly to an adventurous and unstable type of character.

The only explicit reference in the OT to the worship of Fortune is in Is 65[11], where also the kindred deity Destiny (Meni) appears. The passage may be dated before the reforms of Nehemiah (Box, *Isaiah*, 338), or even before the return from the Exile, in which case it may help to account for the large representation of the Bᵉnê 'Azgad among

the exiles. It shows that the worship of Gad was well organized with a full ritual, and with attractions that appealed strongly to certain types of mind and conflicted with the claims of Jahweh. The group of rites was an adaptation of the primitive *lectisternium*, in which the images of the gods were placed on couches before tables covered with viands (cf. Jer 7^{18}). Fortune and Destiny would be treated thus in association (cf. Jerome, *in loc.*), there being, indeed, traces that the two were thought of as a pair, different in gender but complementary in function. This 'preparing a table' does not carry the idea of indulgence and debauchery, as in Ezk 23^{41}. The thought was that the worshipper would ingratiate himself with the gods, averting ills which Destiny had prepared and securing the beneficence of Fortune; and the simple motive of courting the favour of a god was both original and permanent (cf. Jer 44^{17}, Bel$^{11ff.}$).

3. Range outside Israel.—It is not easy to relate the worship of Fortune in Israel with that in kindred races. Aramæan, Arabic, and Syrian parallels are available; and there are possible connexions with Bab. beliefs, though there is no distinct mention of the god. Lenormant writes (*Chald. Magic*, Eng. tr., London, 1877, p. 120) of a 'Manu the great, who presided over fate'; and Sayce states (*Hibb. Lect.*^{2}, 1891, pp. 460, 476, 489) that Merodach was worshipped with a view to ensure prosperity. Hence Gad and Meni have been identified with Merodach and Ištar; and this has been strengthened by the Oriental practice of worshipping Jupiter and Venus as the Larger and the Lesser Luck. Yet the result may be only an illustration of the tendency to invest the gods with real influence upon the life of man, or, under other circumstances, to identify them with the planets. For, in the Isaianic passages, Fortune and Destiny are antithetical rather than graded powers; and Meni is the god of a hostile fate, not of a lower degree of good fortune (cf. Skinner, *in loc.*). Similarly the LXX renders Gad by *δαιμόνιον* and Meni by *τύχη*, though the reverse order is supported by evidence of value, both MS and Patristic. But the significant thing is that the translators selected equivalents that are in antithesis. The one denotes a goddess, conceived as benignant; the other a supernatural force, awful, arbitrary, and only with difficulty persuaded to assume an attitude even of neutrality. The Bab. conception was different. It invested its higher deities with a power of affecting man in his enterprise and ways; but, as far as available information goes, it did not personify this power, or even separate in thought the power from the gods so far as to reach the Greek conception of a natural force playing upon gods and men alike. Hence neither the origin of the name Gad nor the responsibility for his worship can be claimed for Babylon. In Persian religious thought there is a closer parallel, possibly dependent in part upon Heb. influences and itself in turn influencing the development of the conception in Israel. An Old Persian word for 'god' is *baga* (Av. *bagha*; Skr. *bhaga*, 'fortune'; an implication of divinity accompanying the Av. term). *Βαγαῖος* as a Phrygian name for Zeus, and the identification of Gad with Jupiter, may be of a later date.

At a comparatively early period signs of personification appeared in the principal Sem. dialects. A transition is found in the Syr. phrase quoted by Baethgen, 'I swear by the Fortune (גוא) of the king,' with which may be compared the practice of swearing by the *τύχη* of the Seleucids. To places also the name was applied, at first adjectively in the sense of lucky or unlucky, and then with the implication that the place was the abode of a genius or god, kindly or ill-disposed. Both the Isaianic passage and the non-Jewish evidence point back to an indeterminate period, during which the process of deification had been going on. For, just as an inscription of the 4th cent. B.C., dealing with the financial administration of Lycurgus, refers to the cost of the sacrifices *τῇ Ἀγαθῇ Τύχῃ* (Roberts and Gardner, *Introd. to Gr. Epigraphy*, Cambridge, 1905, 100 Aa 12), and conveys the impression that the worship was long-standing, there are Phœnician, Nabatæan, and Palmyrene inscriptions of a contemporaneous or little later date, which refer to the worship of Gad as though its origin were lost in antiquity and its prevalence were known to all. A Punic inscription of 254 B.C. (Cooke, *North Sem. Inscr.* Oxford, 1903, p. 27) carries back the line of descent of one of the royal *καναφόροι* to an ancestor who is described as בן גרעת. Baethgen reads the name as 'The Fortune of Athe,' Athe being probably identical with the Phrygian Attis or Adonis, whose cult was popular in the district (see, however, Nöldeke, *ZDMG* xlii. 471); and in any case a Phœnician deification of Gad at an early date must be allowed. A later inscription was discovered at Maktar in 1892, and records that a local council vowed to גד חימם—a close parallel to the 'Fortunæ Cœlestis sacrum' of *CIL* viii. 6943. 'Lovers of Gad' is the title given on an altar in a village in Ḥauran to the family at whose expense the altar was built. The Palmyrene inscriptions are later, but again are evidence of a well-established practice. One of them links the worship of Bel with that of גד חימי=*Τύχη Θαιμεῖος*, *i.e.* Gad, the patron deity of the clan חימי. Another protects a sepulchre with the imprecation that the breaker-in may 'have no seed or fortune for ever,' and thereby shows how the original conception of fortune as not itself a god, but simply a good gift administered by a god, lingered side by side with the later impersonation. Altogether it is certain that the tendency to deify Fortune was not specific to Israel, but common to the different races among which Israel grew up. It found expression in the roots of their language; it took definite shape in the attempt to analyze and group the apparently superhuman activities that were traceable in human life; and in the struggle with monotheism it was at length worsted, surviving in the form only of a private superstition.

In pre-Islamite Arabia, again, Manât is one of the three chief deities (cf. Qur'ān, liii. 20; Wellhausen, *Reste arab. Heid.*^{2}, Berlin, 1897, p. 25; Lyall, *Anc. Arab. Poetry*, London, 1885, p. xxix), and is identified by the astrologers with Venus, the goddess of Lesser Luck (Siegfried, *JPTh*, 1875, p. 356 ff.). Gad would consequently be the god of the Greater Luck, and equivalent in popular thought to Jupiter, to whom that title was given. These, however, are comparatively late identifications, and cannot have exercised any influence on the growth of the conception in Israel. What is wanted is a common source for beliefs that prevailed among the principal Sem. races, and cannot at present be traced in Bab. literature. The Assyr. Manu rabu (*WAI* iii. 66) has been suggested as the origin of Meni (Lenormant, 120), with Kibi-dunḳi as that of Gad. The latter god is described as a dispenser of favours; but the linguistic affinities are too remote to allow a confident assertion of dependence. It is more likely that the starting-point is to be found in a primitive human instinct, or rather in one of the earliest differentiations of the religious instinct, and that the development itself in Israel, checked at times of religious revival, recovered under the influence of the indigenous and neighbouring peoples.

4. In the NT.—There are no distinct indications in the NT of the personification of Fortune or of his particular worship. The nearest passage is

1 Co 10^{21}; but 'the table of demons' need not even be the formal *lectisternium* in the precincts of the altar or anything more than the feast that was customary after certain sacrifices. It shows that the Christians at Corinth were in danger of becoming entangled in the idolatrous usages of their city, but not that they had yielded to the seductions of the worship of Fortune. Nor may such an inference be drawn from the allusions to sorcery and other magical arts in such passages as Ac 8^{9} 13^{6}, Gal 5^{20}, Rev 9^{21} 21^{8} 22^{15} *et al.* (see DIVINATION). For, though it was undoubtedly believed that in such ways the weather and the crops, and the health and conditions of men, might be affected for weal or woe, the power assumed to be under the control of the sorcerer was rarely viewed as concentrated in a single person of Divine rank. A close connexion with idolatry is evident, especially in the cities of Asia; but not many in the Christian communities went further than to suspect or suppose that the arts of the sorcerer might elicit supernatural influences or even stir demonic agencies into action. Of the recognition of Fortune as a distinct deity there are no clear traces.

II. While the worship of Fortune was a form of idolatry that marked certain groups in Israel and occasionally became a national danger, views consistent with monotheism appeared at an early time, survived temporary and partial eclipses, gradually gathered force, and in the Christian era may be said to have held the field without any real rival. Of these views, common to both Jews and Christians, it is possible to distinguish several constituent elements.

1. The fundamental belief is that man's earthly fortune, with all its changes, is in the hands of God. To that belief frequent and varied expression is given in Scripture. Pleas for gratitude because of God's gift of good fortune are abundant (as in Dt $6^{10ff.}$); and the Song of Moses is a tribute to God as the dispenser of earthly favour, and a call upon Israel for worship because in that respect there is none like Him (Dt 33^{26}). It was an ancient proverb that 'the lot is cast into the lap; but the whole disposing thereof is of the Lord' (Pr 16^{33}); and in the early Christian practice the object was to provide a means by which an intimation of the Divine will might be given (Ac $1^{24.\ 26}$). Ps 31^{15} sets each of the godly remnant singing 'My times are in thy hand,' much as in Is 33^{6} 'stability in thy times' is made the principal result of the fear of the Lord. All useful gifts, writes St. James (1^{17}), are 'from above, coming down from the Father of lights'; similarly Jesus Christ in Mt 7^{11} and 6^{32}, where He even expostulates with men for supposing that their physical needs are forgotten. On the other hand, God dispenses evil fortune, according to the OT, where evil spirits and even Satan (Job 1^{6}) are His ministers, by means of whom He brings adversity and disaster upon men. In the NT these beings become antagonistic to Him, and themselves independent sources of evil; but they are still subject to His restraints, and countervailing aids are provided (2 Co $12^{7.\ 9}$). Everywhere God is the Lord of life; and the degree of earthly weal or woe is portioned out by Him.

2. As to God's aim in determining the changing conditions of life, there is a difference, at least in emphasis, between the teaching of the OT and that of the NT. Briefly the difference is that in the latter case moral considerations outweigh material good fortune, and secular blessedness falls into the background. The promises of the inheritance of the land (Ps 37^{29}, Is 57^{13} *et al.*) were taken literally in the one case, but in the other (Mt 5^{5}) are inextricably involved with moral advantage. Even Ps 23, with its marvellous history in the records of devotion, is concerned primarily with earthly fortune; and the still waters, green pastures, and spread table are at least as prominent as the guidance in the paths of righteousness and the confidence of the conscious presence of God. Between Job's estimate of life's relative values and that of St. Paul, there is a striking contrast. Job loses everything; and, when his mind is chastened, he gains more than he had originally possessed (Job $42^{11ff.}$). Paul, too, lost most of the good fortune that men prize; but the effect was to make him exult in the fellowship of Christ's sufferings (Ph 3^{10}), and count all things only refuse, if he could but 'gain Christ and be found in him' ($3^{8f.}$). Earthly comfort in its varied forms is the principal and most prominent, though not by any means the only, pursuit of the good man in the OT; whereas against such comfort, either in itself or in its natural influence on human character, the NT with the strenuous and lowly life of Jesus in its centre is a protest. From Mt 5^{45} alone it might be inferred that God is indifferent to the morals of men in His gift of fortune; but the real meaning is that He affords the supreme example of fatherly love by showering kindnesses upon His children, though erring (2 P 3^{9}). His aim is conceived as no longer chiefly or only earthly good, but as the moral perfecting of men. 'Rains and fruitful seasons' are sent not merely to fill the floors with wheat and the vats with wine and oil (Jl $2^{23f.}$), but as witnesses to Himself (Ac 14^{17}); and the fortunes of men are so arranged as to become opportunities for or incitements to repentance (Ac 11^{18}). As He works in men in the prosecution of His benevolent purpose (Ph 2^{13}), so He works around them, shaping their lives with a view to their spiritual triumph.

3. The methods He uses sometimes seem arbitrary; nor have the difficulties been entirely removed either by the teaching of Scripture or by later Christian thinking. In His administration of fortune, God sends or permits to come to men pain, sorrow, loss, at times the most poignant and intolerable; and the numerous instances where there is no manifest balance between a man's real deserts and his fortunes carry God's methods as the Lord of human lives beyond the reach of intelligence, and invest them with mystery and apparent self-will. Partial relief may be found, as the Christian poets have been quick to see, in the educative value of pain and adversity, the opportunities for growth by exercise presented to the active and passive virtues alike. And the residue of unintelligibility is no necessary proof of arbitrariness. It may be regarded as unavoidable, or even as an indication of correct thinking, when a finite mind attempts to interpret the ways of the Infinite, and as involved in the great principle of every religion worthy the name that 'we walk by faith, not by appearance' (2 Co 5^{7} marg.).

4. Obscure as God's methods may be, the uniform representation of Scripture is that they are wise and gracious, and, subject to the right action of man's will, effective. The fundamental principle according to which His gifts are bestowed is indicated in the parable of the Talents—'to each according to his several ability' (Mt 25^{15}), which throws light upon the 'dividing to each one severally even as he will' of 1 Co 12^{11}. The distribution of fortune, as of natural gifts and of function, is in the hand of God, from whom no one is entitled to ask an explanation; yet He does not act without reason, but assigns to each man a lot in life and a series of experiences, such as each is best able to turn to purposes of moral advancement. The co-operation of man's will is indispensable, and neglect or rebellion on his part may make it necessary for God to arrange for him a new set of experiences (Jer $18^{4.\ 7-10}$), as His own design to enable a man to

make the best of himself is unchanging. No course could be wiser or kinder than to adapt the conditions of life in the interest of moral training and to the needs of mutual service. How God's particular gifts in detail conduce to that end is often a bitter and insoluble problem; but that such is the principle on which He acts is the implication of Scripture and the treasured conviction of Christendom.

5. Of this belief in the obscure but ethical disposal of human fortunes by God the Incarnation in some of its aspects is an illustration and pledge. On the one hand, as devised by God, it is such a modification of earthly conditions as is designed to bring redemption nigh. The cosmic relations are altered by the introduction of a new and mightier force; and upon the individual play influences from the incarnate Person and Life, which strengthen the tendencies to right and make the passage easier. Good fortune smiles upon him in his upward struggle, and supplies him with encouragement and aid. Further, in that God spared not His own Son (Ro 8^{32}), the transcendent gift is a proof that His bounty will provide everything necessary for salvation, and order and re-adjust the changing fortunes of man accordingly. On the other hand, the varied incidence of fortune in the life of the Incarnate Himself brought opportunities for His growth in wisdom and in favour with God and man (Lk 2^{52}). Though he was Son, yet He learned obedience by the things which He suffered (He 5^{8}), the tragedies of His life becoming a discipline in which there was no spirit of disobedience to be overcome, but a self-surrender to be kept complete at every stage by a deepening insight into the Father's will. Thus 'through sufferings' He was made perfect (He 2^{10}); His humanity in its absolute dependence upon God became complete in moral dignity and power—a qualification for sympathy with man in every state of fortune, and an eternal proof that God's intention in regulating the good and ill of life is to lead men on without coercion to obedience and perfecting.

LITERATURE.—Commentaries on Gn 30^{11}, especially Dillmann[6] (1892), Delitzsch[5] (1887), Gunkel[2] (1902), Driver (1904), Skinner (1910); and on Is 65^{11}, especially G. A. Smith[4] (1889), Delitzsch[4] (1889), Duhm[2] (1902), and Box (1908). Siegfried's essay in *JPTh* (1875) 356 ff., is especially valuable. Add F. Baethgen, *Beiträge z. sem. Relig.*, Berlin, 1888; J. Wellhausen, *Skizzen u. Vorarbeiten*[2], Berlin, 1899; Nöldeke, in *ZDMG* xlii. (1888) 479 ff.; and Baudissin, 'Gad,' in *PRE*[3] vi. [1899] 328–336.

R. W. MOSS.

FORTUNE (Chinese).—Popular ideas of what constitutes Fortune among the Chinese are variously classified.

1. We have, for instance, the 'Three Auspicious Stars,' an almost universal compendium, viz. Happiness, Emolument, and Longevity. A brief examination of each of these will help to elucidate the meaning which they convey to the Chinese mind.

Happiness is represented by the character *Fu*, and is frequently symbolized by the figure of a bat, the words for 'happiness' and 'bat' being similar in sound. *Fu* consists of a combination of two characters, signifying 'worship' and 'full,' and is explained to mean 'the felicity which attends Divine protection.' The character is found in every possible connexion: on the gables of houses, on the outside of funeral vaults, on written or painted scrolls; and is constantly heard from the lips of mendicants, and in all forms of congratulatory speech. It may be said to include every variety of earthly desiderata, and to correspond to our notion of 'blessedness.'

Emolument (*Luh*) is equivalent to the receipt of official stipend, or the material happiness which is conferred by the Imperial favour; and suggests the fact that, in China, one of the great objects of ambition, and one avenue to greatness which is open, practically, to all classes of people, is the attaining of a position in the service of Government. The 'upper classes' in China consist, almost exclusively, of officials or their relatives, and the 'landed gentry' are represented, to a large extent, by retired officers or their descendants. To the Chinese, therefore, the 'happiness' of official emolument is an endowment of a much more tangible character, and much more capable of realization, than its equivalent in Europe. The word *Luh* is pronounced in the same way as that which stands for 'deer,' and hence 'office' or 'emolument' is often suggested, symbolically, by the picture of one of these animals.

Longevity (*Shou*)—compounded of the characters for 'old' and 'speak,' indicating the prerogative of age to speak with authority—is frequently represented by a crane or a tortoise, creatures regarded as enjoying an extraordinarily long term of life; and, in Taoist circles, by the peach, with which is connected the gift of immortality.

'May the Three Stars [*i.e.* Happiness, Emolument, and Longevity] shine on you!' is a familiar inscription on complimentary scrolls, etc.

It must not be supposed that every one possesses an equally unlimited capacity for enjoying these various benefits. Like the operations of Fate, they are strictly measured by the receptivity of those who would seek to partake of them. The portion of happiness which is allotted to a man may be early exhausted by too large drafts upon it; the conditions may be present, but not the power to assimilate the blessings proffered. Happiness, in measure, is within the reach of all, but great endowments are the lot of the few. Similarly, with regard to preferment, though it is asserted that 'God never sends a man into the world without providing him with a place and a vocation,' it is also admitted that he may be unable to maintain the dignity of the office which Heaven has assigned him. Longevity depends upon the Decree (see FATE [Chinese]), but it rests to a large extent with the object of that foreordination whether he attains to the full measure of his allotted span or not. The possession of these gifts, in any large proportion, is recognized as depending on Heaven's apportionment—as the proverb says, 'Complete happiness comes from Heaven'; whilst a lesser degree may be cultivated by the virtuous—'Great virtue carries happiness along with it'; 'To dwell in peace is happiness.'

2. A somewhat more comprehensive category is that of the 'Five Blessings,' viz. Longevity, Wealth, Tranquillity, Love of Virtue, and a Fulfilled Destiny.

Wealth.—The character *Fu*, which differs in *tone* from that which stands for 'happiness,' though both are spelt alike in the Roman system, is explained as signifying a well-filled shelter; and, no doubt, to the vast majority of the Chinese this best represents the gifts of Fortune. The god of wealth is found in a conspicuous place in almost every house of business, and is daily propitiated with offerings and genuflexions; for, though economy and finesse are recognized as having an important bearing on the acquisition of wealth, it is believed that 'riches and honour depend upon Heaven.' In this connexion also it is understood that only to a minor extent can man attain to Fortune by his own efforts—as the proverb says, 'Great wealth is from Heaven, little wealth comes from diligence.' The mind which is wholly concentrated on amassing a fortune is likely to be disappointed, since 'Longing for wealth destroys happiness,' 'Man dies in the pursuit of wealth.'

Tranquillity includes health of body as well as peace of mind.

The Love of Virtue is regarded as one of the most certain means to Fortune—as the proverb says, 'To those who do good deeds in secret, Heaven sends happiness in return'; 'Those who rely on virtue prosper'; 'By a single day's practice of virtue, though happiness be not attained, yet misery may be kept at a distance'; 'Perfect virtue acquires nothing, therefore it obtains everything'; 'Perfect virtue does nothing, but there is nothing which it does not do.'

A Fulfilled Destiny, or to 'attain to the end of the Decree,' is equivalent to completing the span of life which is allotted; or, in other words, to die a natural death.

3. Another summary is described as the 'Three Abundances,' *i.e.* Abundance of Good Fortune (*Fu*), Abundance of Years (*Shou*), and Abundance of Male Offspring (*Nan*); but these are recognized as comprehended in the above, and as being synonymous with Wealth, Honour, and Tranquillity. With regard to the last item there is a proverb which says: 'If your sons and grandsons are good, what (other) wealth do you want? If they are bad, what use is wealth to you?'

4. There are other terms applied to Fortune, such as the 'revolution' or 'wheel of fortune,' and the Creator is sometimes referred to in language which seems to represent Him as 'Fortune,' in accordance with the idea that what is brought about for men by a higher power is to be attributed to Fortune.

5. **Methods adopted for the attainment of Fortune.**—The pursuit of Virtue was, in the early days, regarded as the best, if not the only, means by which the gifts of Fortune might be attained, such gifts being then comprehended under the heads of 'riches and honour'; and in the Classics there are very few references to any arbitrary methods for the acquisition of those gifts. The following of the *Tao*, or living in conformity with Nature, was regarded as the surest way of attaining happiness; but in later ages—possibly as a result of the introduction of Buddhism, with its material objects of worship—a host of divinities was gradually invented, including the 'happy gods,' or gods of Fortune (the Chinese equivalent of the Lares and Penates), who are worshipped with a view to the dispensation of the gifts of Fortune. Thus the *god of wealth* is represented as supporting in one hand a 'shoe' of silver, and holding up a number of fingers of the other to indicate, as is popularly supposed, the amount of percentage he guarantees his votaries. The *god of the hearth*, commonly described as the 'kitchen god,' usually takes the form of a rough print, which is pasted on the wall of the large oven which serves for cooking purposes in Chinese kitchens. The spirit is supposed to preside over the affairs of the household, and is periodically 'invited,' or presented with offerings of food (in some families twice a month); and on the occasion when the 'god' is timed to ascend, in a chariot of fire, to Heaven, *i.e.* by being burnt in a bonfire, a special oblation of flesh is presented, so as to secure his goodwill as he mounts aloft to report the doings of the household during the year just closing. *Kwanyin*, generally denominated the 'goddess of mercy,' is worshipped by women who are desirous of obtaining male offspring, her name in Chinese being most commonly known as the 'Giver of sons.' The figure of the goddess is in some cases an almost exact replica of the Madonna and Infant—a resemblance which, there is good reason for believing, is the result of a definite historical connexion, rather than a mere accidental coincidence. The varieties of means for warding off evil influences and inducing prosperity are almost incalculable, including the wearing of charms of every description, the writing of felicitous inscriptions on doors and walls, the scattering of a special powder in the four corners of apartments, the avoidance of ill-omened expressions on festival and other special occasions, and the careful study of the calendar with a view to the discovery of lucky and unlucky days.

6. **Fortune-telling.**—In the case of those who are in doubt, recourse to various classes of fortune-tellers is usual. These 'calculators of destiny' are generally divided into six classes: (1) those who profess to foretell the future by combining the eight cyclical characters which denote the year, month, day, and hour of birth; (2) those who study the physiognomy, the fingers, etc., of their clients, and attempt to delineate character, etc., thereby; (3) those who employ a number of slips of paper—generally 64 pieces—on which special symbols are written, and a specially-trained bird, which picks out two of these at a signal from its master; the two characters thus selected are interpreted as applying to the circumstances of the inquirer; (4) those who dissect the two written characters which are drawn at random by the applicant from a number submitted to him, and thus profess to trace his fortunes; (5) those who use a tortoise-shell and three ancient coins, or other contrivances, after the manner of throwing dice; (6) professors of *Feng-shui*, or geomancers, who examine the configuration of the countryside for lucky sites for buildings, tombs, etc. Cf., further, *ERE* iii. 731[b].

7. **Feng-shui**, 'wind and water,' is fully treated in a separate article, vol. v. p. 833.

8. **Popular scepticism.**—Whilst recognizing the fact of the traditions which appear to find almost universal acceptance, it is well to remember that there is another aspect of the question, represented by the common proverbs which seem to cast doubt upon the orthodox beliefs. To refer to the several departments of happiness which are represented as ideal, it may be said that, though the traditional means for the attainment of these desired ends are plainly exhibited and generally adopted, painful experience and doubt-provoking disappointment have suggested that the nominal high roads do not always lead to the destination indicated, as the following quotations may serve to show.

Happiness.—'Success (*Fu*) is the lurking-place of failure.' 'He who possesses a liberal mind will have great happiness.' 'The happy man finds a happy grave without the aid of the geomancer.' 'The fortune-teller dies in the prime of life, the Feng-shui philosopher has no burying-place.' 'The geomancer, whilst pointing south, north, west, and east, mumbles unmeaning words; if among the hills there are places which ensure nobility to later generations, why do they not seek such a place and bury their own ancestors there?' 'Misfortune and prosperity have no door, they are evoked by men themselves.'

Emolument.—'Riches and honour are but a dream, office and emolument like bubbles on the water.' 'Wealth is the storehouse of resentment.' 'Honesty never gets rich.' 'To him who does not covet money it comes of itself.' 'Promote happiness by being content, promote health by keeping an easy stomach, promote wealth by cutting down expenses.'

Longevity.—'For cultivating long life there is nothing like moral goodness.' 'The benevolent are long-lived.' 'Virtue is a sure means of longevity.'

Similar expressions are applied to Fortune generally, as, *e.g.*, 'If heart and luck both are bad, you will be poor all your life long.' 'Lucky people need never be in a hurry.' 'The unlucky may do anything.'

Thus, though belief in the efficacy of charms of various kinds may appear to be universal, and fortune-telling, in its several departments, has proved to be a most profitable business, it is nevertheless a fact that, even amongst those who constantly resort to these methods, there is a deep underlying suspicion as to their effectiveness. It may well be that, as the drowning man clutches at a straw, so the Chinese people, taking counsel of despair, find some consolation in the thought that by so doing they are omitting no precaution; and that, even if no good may result, no harm is done in thus maintaining the traditional observances.

The very complexity of the methods may itself account for the growth of sceptical opinions; the number of lucky days, as set forth in the Imperial calendar, and the innumerable cross-currents of good and evil fortune which must be considered in the selection of a date for any enterprise, have resulted in the feeling expressed by the paradox that one is as little likely to go astray by neglecting to consult the calendar as he is in attempting to unravel the complications which attend the selection of a lucky day, according to the arbitrary methods therein set forth. Superstition in China has, therefore, overreached itself, and the future of the Chinese people may serve to show that the chains of traditional custom are not so inexorably fixed as has been generally supposed by their Western critics.

LITERATURE.—See under FATE (Chinese) and FENG-SHUI.

W. GILBERT WALSHE.

FORTUNE (Greek).—The word τύχη contains the stem of the verb τυγχάνειν, which meant originally *to hit the mark*, as ἁμαρτάνειν meant *to miss the mark*. Hence τύχη had about it, to begin with, the idea of success. The conception of Fortune is absent from the early religion of the Greeks. Macrobius (*Sat.* v. 16) has pointed out that the word τύχη never occurs in Homer. By the father of poets everything is assigned to μοῖρα. On the other hand, Macrobius remarks that the later poet Vergil even ascribes omnipotence to Fortune. Fortune is a goddess who grows up before our eyes within historical times. There is no mythological history attaching to her. She is more like the simple allegorizations of Roman religion than the complex deities of Olympus, endowed with a family history, personality, and adventures by the prolific fancy of the Greeks. She is not, as some have supposed, an importation from Asia, like Cybele; nor is it necessary to connect her with the mysterious *Cabeiri*. Fortune is rather a home-growth of the Greek intellect. The connexion between the nymph Tyche and the goddess Tyche, which has been so charmingly traced by F. Allègre, seems to be devoid of solid foundation. We read in the *Theogony* of Hesiod (line 360) that one of the daughters of Oceanus and Tethys bore this name:

Εὐδώρη τε, Τύχη τε, καὶ Ἀμφιρὼ, Ὠκυρόη τε.

And again in the 'Homeric' *Hymn to Demeter* (line 420) one of the maidens who was playing with Persephone, when she was carried off by Pluto, was called by the same name:

Μηλόβοσίς τε, Τύχη τε καὶ Ὠκυρόη καλυκῶπις.

The juxtaposition of the two names Τύχη and Ὠκυρόη, as well as a comparison of the two passages generally, makes one feel certain that the author of the hymn was borrowing from the *Theogony*. But that this humble nymph, lost among the crowd of her three thousand sisters (*Theog.* 364), grew into the tremendous power which at last scaled Olympus and ousted the gods from their thrones—this is more than we are required to believe, at least until some proof is forthcoming.[1] All that can really be gathered from Hesiod's mention of the nymph Τύχη is that the word τύχη was in the Greek language in his time, whereas we cannot be sure that it was so in Homer's. The names of all the other Oceanides being significant, we may justly infer that Tyche's was so also.

1. **The poets.**—The earliest surviving use of the word, otherwise than as a proper name, is in the 'Homeric' *Hymn to Athene* (xi. 5):

Χαῖρε, θεά· δὸς δ' ἄμμι τύχην, εὐδαιμονίην τε.

Here τύχη is not a person, but a thing. The next is in a fragment of Archilochus (no. cxxxi. Gaisf.):

Πάντα τύχη καὶ μοῖρα, Περίκλεες, ἀνδρὶ δίδωσιν.

The thing is here on its way to being a person. It gives and no longer is given. Half a century later, Alcman finds a very respectable pedigree for this new personage. According to him, Fortune—presumably the fortune of a State—is the sister of Loyalty and Persuasion, and her mother's name is Forethought (Plut. *de Fort. Rom.* 4, p. 318 A). Solon, whose archonship was in 594 B.C., reduces the person again to a thing. In the Introduction to his Laws he invokes Zeus to grant them success and honour (fr. xxiv. Gaisf.):

Πρῶτα μὲν εὐχώμεσθα Διὶ Κρονίδῃ βασιλῆϊ,
θεσμοῖς τοῖσδε τύχην ἀγαθὴν καὶ κῦδος ὀπάσσαι.

According to Theognis (*c.* 544 B.C.), it is not virtue or wealth which is the one thing needful for life, but simply luck (129 f.):

Μήτ' ἀρετὴν εὔχου, Πολυπαΐδη, ἔξοχος εἶναι,
μήτ' ἄφενος· μοῦνον δ' ἀνδρὶ γένοιτο τύχη.

In other words, 'Nothing succeeds like success.' Pindar (*c.* 490 B.C.) is full of references to τύχη, sometimes associating it with Divine agency, as τύχᾳ μὲν δαίμονος (*Ol.* viii. 67), τύχᾳ θεῶν (*Pyth.* viii. 53), σὺν Χαρίτων τύχᾳ (*Nem.* iv. 7). He appears to have composed an Ode to Fortune, in which he declared her to be a Fate, and rather more powerful than her sisters (Paus. vii. 26. § 3). To this Ode is assigned the fragment which is preserved by Aristides (ii. 256),

ἐν ἔργμασι δὲ νικᾷ τύχα,
οὐ σθένος,

in which the sentiment is the same as in Ec 9[11]—'The race is not to the swift, nor the battle to the strong.' *Ol.* xii., which is said to have been recited in the temple of Fortune at Himera in Sicily, consists mainly of an address to the goddess herself, though its professed object is to celebrate the achievements of a runner named Ergoteles. This ode may be considered as the first formal appearance of Fortune on the stage of Greek literature. Under the title of 'Saving Fortune' (Σώτειρα Τύχα) she is hailed as the daughter of Zeus Eleutherius, and is invoked to protect Himera, seeing that ships at sea, battles by land, the counsels of the Agora, and the hopes and fears of men are all swayed by her power. It was under the same aspect, as the protectress of cities, that Pindar bestowed upon Fortune the epithet of φερέπολις (Paus. iv. 30. § 4).

2. **The tragedians.**—In Æschylus, a junior contemporary of Pindar, τύχη is rather a form of Divine agency than itself a Divine agent. With this highly religious poet all is αἶσα or νέμεσις or μοῖρα, with Zeus as chief ruler. Τύχη hardly appears as a power of any consequence to mankind. In the *Choëphori* (783–5), 'Zeus, the father of the Olympian gods,' is invoked to bestow good luck (δὸς τύχας; cf. *Sept.* 422). In *Sept.* (625) we have an express denial of the reality of chance:

θεοῦ δὲ δῶρόν ἐστιν εὐτυχεῖν βροτούς.

If we find in *Agam.* 664

τύχη δὲ σωτὴρ ναυστολοῦσ' ἐφέζετο,

it is only as an alternative for

θεός τις, οὐκ ἄνθρωπος, οἷακος θιγών.

The only passage in which Fortune figures as an independent power is *Sept.* 426,

πύργοις δ' ἀπειλεῖ δεῖν', ἃ μὴ κραίνοι τύχη,

which may be let pass as only a way of speaking,[1] which does not represent the true mind of the poet. Neither does Fortune bulk largely in the mental field of Sophocles. We have mention of τύχη σωτήρ (*Œd. Tyr.* 80), but it is only in a passing phrase. The unhappy Iocasta, who proclaims the reign of Fortune and denies Providence (*ib.* 977 ff.)—

τί δ' ἂν φοβοῖτ' ἄνθρωπος ᾧ τὰ τῆς τύχης
κρατεῖ, πρόνοια δ' ἐστὶν οὐδενὸς σαφής,
εἰκῇ κράτιστον ζῆν, ὅπως δύναιτό τις—

is soon convinced of her error; the noose seals her confession that Fate is more than Fortune, and that some intelligent, but inexorable, power rules

[1] Pausanias (iv. 30. § 3) is responsible for the identification.

[1] For other allusions to τύχη by Æschylus, see *Agam.* 333; *Prom. Vinc.* 375; *Pers.* 602; *Supp.* 380, 523.

the lives of men. Œdipus, flushed with his unparalleled successes, proclaims himself the son of Fortune, the giver of good, and is therefore prepared to face with equanimity the possible revelation of a low origin (*ib.* 1080 f.):

ἐγὼ δ' ἐμαυτὸν παῖδα τῆς Τύχης νέμων
τῆς εὖ διδούσης οὐκ ἀτιμασθήσομαι.

But the actual revelation is such as to render the light unendurable to him, and it makes the chorus moralize on how man's prosperity 'never continueth in one stay.' This might be taken as illustrating the power of Fortune; yet it is not Fortune but Fate, since it has all been foretold. With Sophocles, as with Æschylus, the religious view prevails, and fortune is nothing but the mode of action of the gods (*Philoct.* 1316):

ἀνθρώποισι τὰς μὲν ἐκ θεῶν
τύχας δοθείσας ἔστ' ἀναγκαῖον φέρειν.[1]

It is not till we come to Euripides, 'the rationalist,' that Fortune appears as a rival power to that of the gods. Euripides was a man of a religious cast of mind, but he was unable to accept the contradictions of the established theology, and he gave voice to the new science and the new philosophy of the Periclean age, as Tennyson did to that of the 19th century. The antithesis between Zeus and Fortune is strongly brought out in a passage of the *Hecuba* (488–91), where Talthybius, finding the ex-queen of Troy lying in the dust, exclaims:

ὦ Ζεῦ, τί λέξω; πότερά σ' ἀνθρώπους ὁρᾶν,
ἢ δόξαν ἄλλως τήνδε κεκτῆσθαι μάτην,
ψευδῆ, δοκοῦντας δαιμόνων εἶναι γένος,
τύχην δὲ πάντα τἀν βροτοῖς ἐπισκοπεῖν;

Talthybius does not decide the point, neither does the poet himself,—he was not an atheist, but a sceptic,—but his language is loaded with a triple tautology, as if to emphasize the apparent falseness of the notion that there is an over-ruling Divine will discernible in the course of human affairs. Chance, it is suggested, is the true bishop of the diocese of man.[2]

With the elder dramatists we found that there was a tendency to resolve chance into Divine agency; with Euripides the tendency is to resolve Divine agency into chance.[3] If the gods do preside over the cauldron of human destiny, they throw in confusion, 'in order that in our ignorance we may worship them' (*Hec.* 960). In Euripides, too, we become aware of a change in the conception of *τύχη*. With Sophocles, as with his predecessors, *τύχη*, so far as it was a power at all, was a benign power, and meant definitely 'good fortune,' so that there was no need to add the epithet *ἀγαθή*. But with the lachrymose Euripides, Τύχη became the personification of Ill Fortune. 'Alas!' says Agamemnon (*Hec.* 785), 'What woman was ever so unfortunate?' 'There is none,' replies Hecuba, 'unless you were to speak of Tyche herself.' Also, apart from personification, the word *τύχη* is used by Euripides in a bad sense (*Herac.* 714):

ἦν δ' οὖν, ὃ μὴ γένοιτο, χρήσωνται τύχῃ;

With later writers this was usual only when the word was employed in the plural. Τύχαι properly means no more than 'turns of chance.' But man looks upon good fortune as his right, and so attends more to the changes for the worse.[4] The successors of Euripides went further than he did himself. Chæremon, a tragic poet who flourished about 380 B.C., answers the question asked by Talthybius in a sense unfavourable to Zeus and his coadjutors (Stob. *Ecl.* i. 202):

Πάντων τύραννος ἡ τύχη 'στι τῶν θεῶν,
τὰ δ' ἄλλ' ὀνόματα ταῦτα πρόσκειται μάτην,
μόνη διοικεῖν οὖν ἅπαντα βούλεται.

To the same effect speaks the comic poet Menander, who exhibited his first play in 321 B.C., the year which followed the death of Demosthenes and of Aristotle. The words of Menander seem to be intentionally directed against the philosophical doctrine of Providence (Stob. *Ecl.* i. 194):

Τύχη κυβερνᾷ πάντα, ταύτην καὶ φρένας
δεῖ καὶ πρόνοιαν τὴν θεὸν καλεῖν μόνην,
εἰ μή τις ἄλλως ὀνόμασιν χαίρει κενοῖς.

The conviction that Chance is the real arbiter of the life of man reappears long afterwards in Lucian. In his Council of the Gods, Momus is made to lay a complaint before Zeus with regard to the way in which Heaven is becoming peopled by aliens, such, for instance, as Mithras the Mede. But the most absurd part of it all, adds Momus in conclusion, is that certain empty names of things which have no substantial existence, such as Virtue, Nature, Destiny (Εἱμαρμένη), and Chance, are being set up as deities. Though these are mere figments of philosophers, yet they succeed in withdrawing their worshippers from the gods; for men are convinced that, though they were to sacrifice a thousand hecatombs, yet Chance will perform the part of Fate (*τὰ μεμοιραμένα*) and give to each what was spun to him from the beginning.

3. **The historians.** — Among the historians, Herodotus is too much occupied with the religious view of life to leave any real efficacy to Fortune. He sees everywhere the hand of God in history. Sometimes this action is moral, as in the story of how Glaucus, who had entertained the thought of appropriating a deposit, had not a single descendant left to perpetuate his name in Sparta (vi. 86). Sometimes it is merely capricious. There is a jealous God, who will not allow even big beasts to 'fancy themselves' (*φαντάζεσθαι*), but has a thunderbolt ready to hurl at them. This God acts on the same principle as was enjoined by Thrasybulus upon Periander, and docks every head that overtops the rest (vii. 10). It has been well remarked by F. Allègre that Tyche is in part a protest against the malevolence of the Olympian deities. It was something to have a power which was purely non-moral, and which, if it rewarded without merit, was at least free from malignity when it caused disaster. With Herodotus, Fortune is a sign of the present favour of the Immortals,[1] but,

'When haughty power mounts high,
The watcher's axe is nigh.'

A rigorous consistency must not, indeed, be demanded from the chatty and charming Ionian. He gives us views of all sorts. The same Artabanus, who is made to dilate on the jealousy of God, also offers the following highly sensible remarks—that good counsel is the best thing; for, even if it be worsted by Fortune, its goodness is not impaired, whereas he who has counselled ill, even if Fortune attend upon him, has only made a find (*εὕρημα εὕρηκε*).

Although Thucydides came into the world only 13 years later than Herodotus,[2] yet in turning from the one to the other we are passing at one bound from the theological to the positive stage of thought. Thucydides makes Pericles say, or appear to say (for the passage admits of different interpretations), that there may be a real unintelligibility in the march of events, as there is in the processes of human thought,[3] 'wherefore we are accustomed to ascribe to chance whatever takes

[1] For passing mentions of *τύχη* by Sophocles, see *Aj.* 435, 803; *Œd. Tyr.* 773, 776; *Ant.* 996, 1158, 1182; *Trach.* 724; *Phil.* 546, 1096.

[2] Cf. a passage quoted by Stobæus, *Ecl.* i. 196:
'Η τὰ θνητῶν καὶ τὰ θεῖα πάντ' ἐπισκοποῦσα [μέν]
καὶ νέμουσ' ἡμῶν ἑκάστῳ τὴν κατ' ἀξίαν τύχη
μερίδα.
By throwing in the words *κατ' ἀξίαν*, the writer, unless he is speaking ironically, makes chance into Providence.

[3] See especially *Hel.* 711–715, 1137–1143; *Hec.* 956–60.

[4] Other passages in Euripides bearing on fortune are *Alc.* 785; *Herac.* 866.

[1] i. 124: ὦ παῖ Καμβύσεω, σὲ γὰρ θεοί ἐκορέωσι· οὐ γὰρ ἄν κοτε ἐς τοσοῦτον τύχης ἀπίκευ.

[2] Herodotus was born in 484 B.C.; Thucydides, in 471.

[3] i. 140. § 3: ἐνδέχεται γὰρ τὰς ξυμφορὰς τῶν πραγμάτων οὐχ ἧσσον ἀμαθῶς χωρῆσαι ἢ καὶ τὰς διανοίας τοῦ ἀνθρώπου.

place contrary to reason.' If anything can be shown to have a definite cause, then it does not come under the domain of chance. That name is reserved for those events for which we are unable to assign a cause. Chance constitutes the irrational, or at all events inscrutable, element in things, which is not under the control of human forethought. Τύχη is now no longer a person, but a statement of fact. There are certain events for which no cause can be assigned. These it is convenient to throw together under the head of *τύχη*. This meaning of the term was facilitated by the use of *τυγχάνειν* as a mere auxiliary verb—*τυγχάνω περιπατῶν*, 'I am walking,' *ἐτύγχανον περιπατῶν*, 'I was walking,' and so on. So generally *τύχη* meant what *was*, without question raised as to how it came to be. If one had insisted on raising this question and getting an answer from Thucydides, he might perhaps have referred one to Divine agency. At least he makes the Melians declare that they rested their trust not to be defeated *τῇ μὲν τύχῃ ἐκ τοῦ θείου* (v. 104), seeing that their cause was just.

4. The orators.—In the orators we may expect to get nearer to the heart of the people than in a scientific thinker like Thucydides. For the orator, who has to play upon the feelings of the multitude, must share those feelings himself, or at least seem to do so. Let us take the greatest of them—Demosthenes. He is full of passages on the power of Fortune,[1] as well he might be, seeing that his own 'best-laid schemes' went 'aft agley.' It was the touch of truth in the reproach brought against him by his rival Æschines, that he was an unlucky statesman, which gave it its sting. Æschines (*in Ctes.* § 157, p. 76) warned the Athenians against the 'evil genius and ill fortune which ever dogged the footsteps of the man.' Demosthenes himself displayed a secret distrust in his own luck, when he got his friends to put their names to his decrees, instead of signing them with his own.[2] But in his public speeches he put a bold face on the matter. He had done all that in him lay; if fortune thwarted him, he was not to blame (*de Cor.* § 303). But it was absurd to attribute the disasters of the State to his personal fortune. Nor was the fortune of the State itself really bad. For the Athenian State had the advantage over other States of having played the nobler part, and yet being better off than they. But Athens had to take her share in the general blast of ill-fortune which was then blowing over mankind—with the exception, we must suppose, of Philip (*de Cor.* §§ 253, 254, p. 311). This curious conception of a hierarchy of 'fortunes'—that of individuals, of States, and of mankind in general—is in accordance with the genius of polytheism, and throws light on the manifold worship of Fortune public and private, which became more prevalent as time went on.

5. The philosophers.—Anaximenes (544 B.C.) made a very shrewd remark when he said: 'We are wont to apply the term "fortune" to the element in life which is incalculable to man. For, if we always went right in our judgments, the name of Fortune would never have been heard of' (Stob. *Ecl.* ii. 346). We get a very slighting estimate of the power of Fortune in what may perhaps be deemed an unexpected quarter. Democritus (430 B.C.) is quoted as saying (Stob. *Ecl.* ii. 344):

'Men have framed for themselves an image of Fortune by way of apology for their own ill counsel. For Fortune does not oppose wisdom much, but the quick-witted and clear-sighted man guides most things in life aright.'

With regard to the power of Fortune, Epicurus speaks as contemptuously as his predecessor, in language which seems to be modelled on his.[1] In the fourth book of the *Laws*, Plato's Athenian stranger is on the point of saying that 'pretty nearly all human affairs are a matter of chance.' He corrects himself, however, and substitutes the formula that 'God, indeed, governs all things; but, under God, chance and opportunity (*τύχη καὶ καιρός*) are the pilots in all that relates to man,' this again being amended by the addition of 'art' to 'chance and opportunity,' as being more polite (*ἡμερώτερον*). But, when we reach the tenth book, which is Plato's great and final pronouncement on matters theological, we find a very different value assigned to art (*τέχνη*). He starts from the view held by some people that 'all things which come into being, or have come, or yet shall come,' are due to three causes, Nature, Chance, and Art—the more important, such as the four elements and the constitution of the universe, being ascribed to the first two, Nature and Chance, and the less important to the last, namely Art. He then goes on to show that the soul is the only thing that moves itself, and must therefore be the cause of all becoming. Now, soul is either good or evil, wise or devoid of wisdom. It is impiety to say that the orderly movements of the universe are caused by an evil and unwise soul; we are therefore compelled to conclude that they are produced by one or more souls possessed of perfect virtue (898 C). But, if soul be prior to body, then the things of the soul are prior to those of the body. And, as art is one of the things of the soul, we are thus brought to a Divine artificer more exact and painstaking than any human workman, and one therefore who will not neglect small matters any more than great. In this cosmos of the beneficent soul (896 E), what room is left for chance? Plainly there is none. Chance then—Plato does not say this, but we may say it for him—must lurk in the chaos which precedes the cosmos, where dwells the evil soul of disorder.

If we turn now to Aristotle, we shall find, as usual, the same thing said, only in less theological language. After giving us in the *Physics* (ii. 3) his famous fourfold division of causes, into Material, Formal, Efficient, and Final, he goes on to say that Chance also and Spontaneity (ii. 4: *καὶ ἡ τύχη καὶ τὸ αὐτόματον*) are reckoned among causes. How then do they come in, and are they synonymous, or are they not? First, let it be observed that a thing is due to chance, not if it have not an efficient, but if it have not a final, cause—in other words, if it be not intended. A man who is not in the habit of going to market goes thither on a particular occasion, and meets another man who takes the opportunity of paying him a debt. This, we say, is due to chance. It is the kind of thing that might have been done on purpose, only in this case it was not. Each of the two persons has his own particular cause for going to market, and the payment of the debt results from the conjunction of the two, as a kind of by-product. Thus Chance (*τύχη*) is something within the sphere of mind or human agency which is not due to that agency. And, as Chance is to Man, so is Spontaneity to Nature. When some effect which might be produced by Nature is not produced by Nature, then we say that it took place spontaneously. It is not necessary here to discuss the question of Spontaneity. But, with regard to Chance, let it be observed that Aristotle finds the source of it in undesigned collocations.

ST. GEORGE STOCK.

FORTUNE (Iranian).—The concept of fortune in the sense of chance or good luck finds little place in the Avesta and Pahlavi texts. A happy wife is termed 'fortunate' (*hubagha*) in *Vīsp.* ii. 7, but neither this nor the frequent word *uštā*, 'weal,' 'good fortune' (lit. 'according to wish'), can be regarded as referring to good luck in the common acceptance of the term (cf. the passages listed by Bartholomae, *Altiran. Wörterb.*, Strassburg, 1904, col. 417 f.). Nevertheless, there are a few passages which seem relevant in this connexion. Success and fortune (*apemča bagemča*) are objects of reverential honour (*Yašt* xv. 1), as is also the everlasting and boundless progress of events according to one's wish (*vīspāyūm . . . uštatātem akaranem*), which it is the torture of the wicked not to enjoy (*Vīsp.* xviii. 2). Supplication is offered to the Fravashis (*q.v.*) for all boons (*ayaptanām vīspanām* [*Yašt* xiii. 135]), who grant them when prayed for (*ib.* 24), as do Ardvī Sūra Anāhita (*ib.* v. *passim*), Tištrya (*ib.* viii. 49), Drvāspa (*ib.* ix. *passim*), Mithra (*ib.* x. 33), Vayu (*ib.* xv. *passim*), Aši (*ib.* xvii. *passim*), and Xšathra Vairya (*Vend.* xx. 3). Boons are invoked upon Vištāspa by Zoroaster (*Yašt* xxiv. 46), while Ātar (the Fire) prays (*ib.* 38) on behalf of the same monarch: 'May the Apportioner and Distributor bring to thee a boon' (*upabarat āyaptem baxtača nivaxtača*), the allusion probably being to Ahura Mazda. According to the 9th cent. *Šikand-Gūmānīk Vijār*, iv. 8, 29 (tr. West, *SBE* xxiv. 128, 130), heaven (*spihār*) is the place of the Divinities (*baghān*), who are 'the distributors of happiness (*nēvakīh baxtārān*), from which they always justly bestow their distribution of every happiness.' In conformity with this, Haoma granted his four first worshippers the heroic sons Yima, Thraētaona, Urvāxšaya and Keresāspa, and Zarathuštra (*Yasna* ix. 4, 7, 10, 13); and the obtaining of boons is the direct reward for pious observance of religious duties (*Yašt* xxiv. 25).

Among the people it would seem that fortune played a larger rôle than in the official religion, for *baxta*, 'fortune' (also 'fate'; see FATE [Iranian]), occurs as a component of a number of proper names (Justi, *Iran. Namenbuch*, Marburg, 1895, pp. 61 f., 487 f.):

Baxtāfrīt ('blessed by fortune'), Baxtāvar ('fortunate'), Baxtiyār ('possessing fortune'), Baxtišāh ('fortunate king'), Āzādbaxt ('possessed of the fortune of the free-born'), Bidārbaxt ('possessed of watchful fortune'), Dārābaxt ('having the fortune of Darius'), Juvānbaxt ('possessed of young [*i.e.* sturdy] fortune'), Hūbaxt ('having good fortune'), Xurrambaxt ('possessed of joyous fortune'), Naubaxt ('having fortune [ever] new'), Nēkbaxt ('possessed of fair fortune'), Šādbaxt ('to whom fortune is friendly'), Šiguftahbaxt ('he whose fortune has bloomed'), Sulṭānbaxt ('possessed of the fortune of a sulṭān'), Vadbaxt ('possessed of evil fortune'), and Zādbaxt ('fortunate through the birth [of a son]').

Yet it must be confessed that the concept neither of Fortune nor of Fate (*q.v.*) was encouraged by Zoroastrianism. In the ceaseless conflict of good with evil, which human and super-human beings alike must wage, there was little room for mere chance. Such fortune as the Iranian might crave—and all that he might have—was such as his own efforts could win; and the most besides that he might hope for were those boons which Ahura Mazda and his minor Divinities might vouchsafe their pious worshipper and fellow-combatant against Ahriman and his forces of evil.

Side by side with fortune went misfortune, not alone for the wicked who merited it, but even for the good. Why the wicked so often flourish in this world while the righteous suffer woe is answered by ascription of both good and evil fortune to Fate by the *Dīnā-ī Māinōg-ī Xrat* (li., tr. West, *SBE* xxiv. 93 f.). A more orthodox answer, and one more in accord with the Zoroastrian spirit, though not without a fatalistic touch, is given in the *Dātistān-ī Dīnīk* (vi., tr. West, *SBE* xviii. 23–25), which first states that this state of affairs is more apparent than real, for

'not at every time and every place, and not to all the good, does evil happen more—for the spiritual welfare of the good is certainly more—but in the world it is very much more manifest' (§ 2).

The treatise then goes on to say that

'the labour and trouble of the good are much more in the world, and their reward and recompense are more certain in the spiritual existence; and the comfort and pleasure of the vile are more in the world, and their pain and punishment in the spiritual existence are more severe. And this, too, is the case, that the good, through fear of the pain and punishment of hell, should forsake the comfort and ease in the world, and should not think, speak, or do anything improper whatever. And through hope for the comfort and pleasure in heaven they should accept willingly, for the neck [*i.e.* as a yoke], much trouble and fear in the practice of virtue in thought, word, and deed. The vile, through provision with temporary enjoyment—even that enjoyment of improprieties for which eventually there is hell—then enjoy themselves therein temporarily, and lustfully on account of selfishness; those various actions also, through which there would be a way to heaven, they do not trouble themselves with. And in this way, in the world, the comfort and pleasure of the vile are more, and the anxiety, vexation, despondency, and distress of the good have become more; the reason is revealed by the stars.'

LOUIS H. GRAY.

FORTUNE (Jewish).—God's free interference in human affairs is one of the cardinal doctrines of the OT. To His causation as rewarding or punishing are ascribed all the happy and unhappy experiences in human life. There is therefore no Hebrew equivalent for Fortune. Leah's exclamation, בגד, Gn 30[11], rendered in LXX ἐν τύχῃ, should be translated 'by the help of Gad' (cf. באשר, v.[13], and *HDB*, art. 'Gad'), a divinity of fortune supposed to have been worshipped in Laban's household (see FORTUNE [Biblical and Christian]). Post-exilic Judaism further developed the doctrine of Divine compensation. Ezekiel was the first to teach its application to individual no less than to national life. The fundamental doctrine of the Wisdom literature is that piety is remunerated in this life.

The gist of the book of Tobit is that all ends well, and better than before, because a righteous man is rewarded for his merit. The Mishna *Pe'a*, i. 1, which is repeated in the daily Morning Prayer, sees in the observance of certain commandments a profitable investment, 'the interest of which a man enjoys in this world, while the capital remains intact in the world to come.' In *Kid.* 39*b* we read: 'Whosoever keeps one commandment is rewarded (in this world), his days are prolonged, and he will inherit the earth.' Cf. *Pirḳe Ab.* iv. 11: 'Whosoever keeps the Law in the midst of poverty shall eventually keep it in the midst of wealth.'

Likewise, a state of adversity is not a mere sport of fickle fortune, but an exercise of מדת הדין, the attribute of Divine judgment. God deals with man in a judicial manner, מִדָּה כְּנֶגֶד מִדָּה, 'measure for measure.' To every transgression of the law an appropriate penalty is attached: 'With what measure one measures it shall be measured unto him' (*Soṭa*, 8*b*). 'There is no death and no suffering without sin' (*Shab.* 55*a*). Frequently the correspondence between each manifestation of misfortune (so-called) and the particular sin which caused it is not evident; but it exists, and resignation is demanded of the sufferer. The Burial Service is called צדוק הדין, the acknowledgment of the justice of the Divine judgment.[1] Some instances of misfortune are viewed as evident manifestations of Divine retribution. Thus bereavement is the penalty for broken vows, for neglect of the study of the Law and of certain ceremonies; domestic strife, premature birth, and death of children in infancy, for enmity without cause. For with-

[1] This is an ancient forensic term 'to plead guilty' (*Ber.* 19*a*, *Ta'an.* 11*a*). The Mish. *Sanh.* vi. 6 directs that after an execution the relatives and friends of the criminal should call on the judges and witnesses and acknowledge the justice of the decree.

holding tithes and other priestly dues comes failure of crops. Violence is punished by swarms of locusts and famine; perversion of justice by wars and pestilence; false swearing, blasphemy, and Sabbath-breaking by visitation of wild beasts, depopulation, and devastation; incest, idolatry, and neglect of duly observing the Sabbatical and Jubile years by exile; fornication by wounds, bruises, and the bite of serpents, etc. Dropsy is a token of immorality, jaundice of hatred without cause, poverty of pride and overbearing, croup of slander (*Shab.* 32*b* ff.). Bloodshed was the cause of the destruction of the Temple and driving the Shekhina away (*ib.*). Jerusalem was destroyed for neglect of Sabbath observance and of daily recitation of the *Shema'*, for impudence, for despising school-children, for levelling classes, for not reproving each other for sin, for slighting the learned (*Shab.* 119*b*).

The manifold experiences of life, however, did not square with this doctrine of judicial retribution; and a problem was created which already tried OT saints (*e.g.* Ps 73). In the age of Ḳoheleth, 'because sentence against an evil work was not executed speedily' or the righteous rewarded, evil was on the increase (Ec 8^{11}). The author himself did not know what to make of life. The problem must have been more trying during the religious persecution under Antiochus. A modification of the OT doctrine of retribution became necessary. A man's worth was not to be estimated by his fortunes and misfortunes. The true compensation was in another world. This faith supported the martyrs under persecution. It did not, however, entirely solve the problem to the legalist.

R. Yannai said: 'It is not in our power to explain the prosperity of the wicked and the suffering of the pious' (*Pirḳe Ab.* iv. 15). When Moses was on Mount Sinai to receive the Law, God revealed to him the greatness and martyrdom of R. Akiba. 'What, said Moses, such knowledge of the Law and such a reward! Hush, God replied, I have thus decreed it' (*Menach.* 29*b*).

To account for the inequalities of life with regard to nations and individuals, the Rabbis devised a theory which is a combination of OT views and that which relegates retribution to another world, according to which the prosperity of the wicked is a reward in this world for some merit, the punishment being reserved for the next world; the suffering of the righteous is to be regarded either as chastisement for some imperfections, or as a trial of their faith and constancy, or even as an atonement for others. For references to the Rab. literature on the subject, see Weber's *Jüd. Theol.*[2], Leipzig, 1897, ch. xx.

The spread of astrology all over the Roman Empire, its universal acceptance as an exact science, and its hold on the popular mind affected also Jewish folklore and introduced into the Judaism of the Talmudic period an attraction for the pagan doctrine of fortune. The term used for it is מַזָּל, *mazzal*, Aram. מָזְלָא, *mazzala*, standing also for constellations of the zodiac and for planet. Since there is no record in the post-exilic age of a relapse into star-worship, the re-introduction of the term into the Jewish vocabulary should be traced back not to Babylonianism, but to contact with the 'Chaldæans,' astrologers and charlatans of the early Roman Empire. Mazzal, then, is not a divinity like Fortuna, but is either a 'station of the planet' at the time of a nativity or of some other event, or it signifies, in the late Magian sense, a *fravashi* (*q.v.*), the genius, guardian angel, 'external soul' of an individual. Another term is גַּד, *gad*. Sometimes both are used, *e.g.* בִּישׁ גַּדָּא וּמִסְיָא מָזְלָא (*bish gadda utmia' mazzala*), 'thou of ill fortune and obscure planet' (*Ḳoh. R.* vii. 32). But the use of the word was discouraged by the Rabbis because of its association with the god Gad of Is 65^{11} (see RV).

Thus *Shab.* 67*b* forbids the repetition of the magic formula, גַּד גַּדִי וְסִינוּק לָא, *gad gaddi v'sinuḳ la*='grant me fortune, O my Fortune, and relax not.' A place Gaddia ('fortunes') was kakophonized into *Gallia* ('dunghills'). *Mazzal* remained a Jewish word, and *mazzal tob* ('good luck') is still used as a formula of congratulation at births, weddings, the blessing of the new moon, and other occasions.

Mankind, then, has a mysterious connexion with the planets (Targ. Ec 7^{15}). 'All depends on that connexion (Mazzal)' (*ib.* $9^{1, 2}$).

'Life, children, sustenance depend not on a man's merits, but on his Mazzal' (*Mo'ed Ḳaṭ.* 28*a*). Every individual has a Mazzal. 'In the case of a sudden fright, if one does not see the cause of it, his Mazzal sees it' (*Meg.* 3*a*). 'The Mazzal makes wise; the Mazzal makes rich' (*Shab.* 156*a*). 'Every plant has a Mazzal in heaven, which influences it and bids it grow' (*Gen. R.* 10). 'Even the copy of the Law in the Synagogue chest is subject to the influence of Mazzal' (*Zohar Nāsō*, 134). 'Animals, on the other hand, have no Mazzal' (*Shab.* 53*b*). 'The Mazzal sees neither what is before it, nor what is above it, but what is below it, like a man descending from a ladder with his face turned backwards' (*Num. R.* 12). 'The propitious hour recedes if pursued' (*Ber.* 64*a*). The Mazzal of two is stronger than that of one (*B. Meṣ.* 105*b*).

Celestial phenomena came to be regarded as harbingers of good or of evil.

Thus an eclipse of the sun forebodes evil to the Gentiles and of the moon to the Jews, because the former reckon time by the sun, the latter by the moon. If the eclipse is in the east or west, it concerns the inhabitants of the respective places; but, if in mid-heaven, the portent refers to the whole world. A red sun is an omen of war, and a grey one of famine. If the eclipse is at sunset, the forthcoming evil will be delayed; if at sunrise, it is near at hand (*Suk.* 29*a*).

Some days were considered more fortunate for transacting business than others (*Sanh.* 65*b*). The corn of the year before a Jubile was supposed to be of finer quality (*ib.*). There were lucky and unlucky months.

'If an Israelite has a lawsuit with a Gentile, let him withdraw in the month of Ab because his Mazzal is weak, but let him present himself in the month of Adar when his Mazzal is strong' (*Ta'an.* 29*a*). Merit is imputed on a meritorious day, and guilt on a guilty day (*ib.* 28*b*). It is unlucky to submit to the operation of bleeding on a Tuesday, because on that day Mars reigns in the heavens. Mondays and Thursdays, too, are dangerous, but may be risked by those who have ancestral merits to shelter them. Friday should also be an unlucky day, but, since the multitude are accustomed to that day, 'the Lord preserveth the simple' (Ps 116^{6}). Wednesdays on the 4th, 14th, and 24th of the (lunar) month should be avoided. Likewise the new moon, the third of the month, and the eve of festivals are dangerous (*Shab.* 129*b*). The day of the new moon was regarded as unlucky for the transaction of business (*Sanh.* 65; *Sifre*, 171); so also Fridays. The *Shulch. Aruch Yore de'a*, 179, directs that one should not embark on a new venture on Mondays and Wednesdays. See also Zohar on Pin'ehas. Tuesday is a lucky day, because on the first Tuesday the words 'that it was good' (Gn 1^{10}) were repeated (*Pesach.* 2). Virgins marry on (the eve of) Wednesdays, and widows on Thursdays (*Keth.* i. 1). On the night of the Great Hosannah it is possible to ascertain whether one will survive the year by observing one's shadow on the wall. The shadow of the man destined to die will appear headless (current Jewish tradition). Nachmanides on Nu 14^{9} sees Scriptural allusion for this tradition, the words 'Their shadow is removed from over them' (see RVm) being equivalent to 'doomed.'

The gifts and denials of fortune were considered beyond control. The fortunate was one 'on whom the hour was smiling' (*Ber.* 7*a*). He could risk being in dangerous situations. 'Thou art in luck,' said Abaye to his colleague R. Papa, 'the Demon (Keteb Meriri, who was then raging) could do thee no harm' (*Pesach.* 115*b*). The following pretty story deserves mention:

R. Joseph Mokir Shabbi (=Sabbath-respecter) is foretold by a 'Chaldæan' that he will eventually obtain the enormous property of his rich neighbour. The latter sells his property and purchases a pearl of great price, which he keeps fastened in his turban. In a shipwreck he loses his turban. It is swallowed by a fish. After some time, at a fish market R. Joseph happens to be the only purchaser of fish in honour of the Sabbath, and comes into possession of the identical fish and the precious pearl (*Shab.* 119*a*).

Similarly the unlucky man regarded himself as hopeless. A brother of Raba in the agony of his last moments objected to prayers on his behalf as useless 'because he was delivered to his Mazzal' (*Mo'ed Ḳ.* 28*a*).

A change of circumstance may effect a change of fortune. A common saying among the Jews is *M'shanneh maḳom M'shanneh mazzal* (משנה מקום משנה מזל). In case of extreme illness the custom, based

on *R. Hash.* 17*a*, still prevails of changing the patient's name, generally into *Chaim*, signifying 'life,' or *Alter*, 'another.' In the formula said on the occasion (see p. 149 of the *Book of Life*, ed. B. H. Asher, London, 1863) occurs: 'And thus may his Mazzal be changed from evil to good,' etc. Many Rabbis asserted that Israel is not influenced by Mazzal (*Shab.* 156), but the belief in astrology was already common.

In the Middle Ages, Maimonides was perhaps the only one who wrote against a belief in fortune (*Yad Ab. Cochab.* xi. 8). On the other hand, that most talented Rabbi, Ibn Ezra, was the most superstitious. In the poem on his Evil Star he maintains that if he dealt in candles the sun would not set in his lifetime, and if in shrouds no one would die. Although this was written in jest, he lived up to the conviction of his ill fortune. He was himself the author of several works on Astrology.

LITERATURE.—See literature at the end of art. FATE (Jewish).

A. E. SUFFRIN.

FORTUNE (Roman).—It is not possible to follow out the history of the ideas which the Romans attached to this word with the same accuracy as in the case of Greece; for (1) the Romans have left us no literature earlier than the second half of the 3rd cent. B.C.; and (2) when Roman literature begins, it consists chiefly of translations or paraphrases from the Greek, and in it such Roman words as *fortuna* are apt to become modified in a Greek sense. We have no Italian Homer of whom we can say that the word for 'chance' is not to be found in him; we can only infer, and somewhat doubtfully, that, as the idea of a capricious force interfering in human affairs is a late growth in Hellas, so it may have been in Italy. Our treatment of the subject must begin with the *cult of Fortuna* at Rome and in Latium—about which we know something, though without any certainty of detail.

1. *Fortuna* is formed adjectivally from *fors*, as *Portunus* from *portus*, *Neptunus* from some word unknown to us; and *fors*, so far as we can guess from later literature, must have signified what we call luck, whether good or bad, *i.e.* the incalculable element in Nature and in human life. Not a capricious force, such as was expressed in later times by the word *temeritas* (Pacuvius *ap.* Auct. *ad. Herennium*, ii. 23), and in the literature of the Empire sometimes by *fortuna* (this is a semi-philosophical idea of which the early Romans could have known nothing), but the idea of luck or accident which is common to the minds and language of all peoples at all times without any reflexion or reasoning on the mysteries of human life. As Portunus was the spirit or deity presiding over doors and gates, so Fortuna must have been, for the early Latins, the deity presiding over the incalculable element in human life, not a mere personification of Chance itself. This distinction survived, more or less faintly, to a late period of Roman history. When Nonius, in the 3rd cent. A.D., wished to distinguish *fortuna* and *fors*, he wrote: 'Fortuna et fors hoc distant; fors est casus temporalis, fortuna dea est ipsa' (Nonius, v. 15). The examples which he quotes from Accius' *Tragedies* do not show the distinction clearly, and are doubtless affected by the Greek original; but from the 13th book of Lucilius' *Satires* he cites the line 'Aut forte omnino aut Fortuna vincere bello,' where it is plain that Fortuna is conceived as something beyond and above mere chance. So in the famous passage of Pacuvius already quoted (to which we shall return), the last five lines contrast Fortuna with *temeritas*, blind chance:

'Sunt etiam alii philosophi qui contra Fortunam negant ullam extare, temeritate enim autumant esse omnia: id magis verisimile esse usus reapse experiundo docet. velut Orestes modo fuit rex, factust mendicus modo naufragio: nempe ergo id fluctu, haut forte fortuna optigit.'

And the author who quotes the lines (Cornificius, as the Germans call him) adds: 'nam hic Pacuvius infirma ratione utitur, quom ait verius esse temeritate quam Fortuna res regi,' etc. Fortuna perhaps never wholly lost the meaning of a power presiding over luck, which might be propitiated by human beings, or assisted by them in her operations: thus Cæsar, after his defeat at Dyrrhachium, told his soldiers that 'fortunam esse industria sublevandam' (*de Bell. Civ.* iii. 73).

This point will be more fully illustrated below, so far as it appears in Roman literature. But it is also strongly suggested by the earliest worship of Fortuna in Latium. Experts are all agreed that at Rome Fortuna was not an indigenous deity; she did not belong to what has been called 'the religion of Numa,' *i.e.* the earliest form of the organized religion of the State as indicated in the religious calendar (see art. ROMAN RELIGION, Introd.); universal tradition ascribed her introduction to Servius Tullius, a king of foreign extraction, and the traditional representative of the plebeian element as distinguished from the old patrician *gentes* and their religious worships; and her earliest temples were outside the *pomerium*—a sure sign of extra-Roman origin (see Wissowa, *Rel. und Kultus der Römer*[2], p. 256). The most ancient seats of her worship in Latium were at Prænestе and Antium; and here such facts as we know point clearly to a deity who has a controlling power over men's fortunes, rather than one who simply represents luck good or bad. In each of these sites there was an *oraculum Fortunae*; and oracles, however simple and primitive, are never associated with the idea of blind chance, but are the result of human experience, which marks special sites with special Divine inhabitants as suited to resolve the uncertainty which besets human life at every turn. That uncertain element the Latins expressed by the word *fors*; Fortuna, as has already been said, was the deity presiding over *fors*, and therefore capable of foretelling the future. This is the true meaning, then, of the Latin Fortuna; it is not till the time of Servius that we hear of a Fors Fortuna, —a combination quite in keeping with Roman religious usage, but probably indicating a degenerate offshoot from the original Latin stock.

That stock, if we examine it as it appears at Prænestе, where we have some little knowledge of it, may have been touched by Greek influences at a very early period, but the Latin conception of Fortuna can hardly have been seriously affected. The cult-title of the goddess here was Primigenia, which must mean 'first-born'; and that she was or came to be regarded as the first-born daughter of Jupiter is made certain by an inscription of great antiquity, first published in 1882 (*CIL* xiv. 2863): 'Orceria Numeri nationu cratia Fortuna Diovo filei primocenia donom dedi' (see Fowler, *Roman Festivals*, p. 223 ff.). Here a woman presents an offering to Fortuna, the first-born daughter of Jupiter, for help in childbirth (*nationu cratia*); she had no doubt consulted the oracle, which here, as elsewhere in Italy, foretold the future by means of lots (*sortes*) mixed together by a boy before he drew one. Now, it is true that this anthropomorphic conception of the deity as daughter of Jupiter is foreign to old Italian ideas, and, as Prænestе was undoubtedly exposed to the invasion of foreign cults at a very early period, it is highly probable that Fortuna had here taken on some of the characteristics of the Greek Tyche or Nemesis; but this could not well have been the case if the nature of the original Latin deity had not been of such a kind as to suggest or allow a connexion with Jupiter. But Jupiter is of all Italian deities the one who can least be associated with anything in the nature of blind chance; and we

are justified in conjecturing that this Fortuna was a Power believed to govern the destinies of women in childbirth, perhaps also of the children to be born. Fortuna was at all times more especially a woman's deity, as her many cult-titles clearly show; and adjoining her great temple at Prænestе, as Cicero tells us (*de Div.* ii. 85), was another also dedicated to her, which was especially frequented by matrons; here there was a statue of her with two children in her lap, popularly (but no doubt wrongly) believed to be Jupiter and Juno (see Wissowa, *op. cit.* p. 259; Fowler, *op. cit.* p. 224 ff.).

So far, then, as we have any evidence on the question, it would seem that the name Fortuna did not suggest to the primitive Latin any idea of blind chance as a ruling factor in the world. Like all Latin *numina*, she was a power to whom, among the changes and chances of this mortal life, appeal might be made for help, especially by women. Not, of course, every change or chance; there never was, as Wissowa says (p. 261), at any rate during the Republican period, a Fortuna who was a general deity of luck; but in course of time, specialized and localized under various cult-titles, she came to express the hopes of Roman men and women in relation to particular activities or critical moments. It is probable that the cult of Fors Fortuna, already mentioned, was connected with the work of harvest; the dedication-day of the temple, which was beyond the Tiber, was 24th June, when that work would be largely completed; and we have the evidence of Columella (x. 316) that after a successful harvest the praises of this deity were sung. The other temple attributed to Servius, in the Forum Boarium, was certainly that of a woman's deity, who seems to have been identical with Mater Matuta, and also with the Pudicitia of Livy, x. 23 (Wissowa, 257). *Fortuna muliebris*, connected traditionally with the story of Coriolanus and the persuasive power of Roman matrons, might be worshipped only by women once married (Dion. Hal. viii. 56), and may therefore have been the spirit believed to guarantee good luck in legitimate wedlock. *Fortuna virilis* was also a woman's deity, more especially of the lower orders, and was supposed to bring good luck in connubial relations (Fowler, *op. cit.* p. 68). At the end of the Hannibalic war, the great deity of Prænestе was transplanted to Rome, probably after successful recourse to her oracle, which so far the Roman State had declined to use; but transplanted cults seldom retain exactly their original characters, and here we find the beginning of the *Fortuna publica populi Romani*, of which we hear so much in later times. Fortuna tends in the later Republic to become a kind of good genius of particular acts and times: *Fortuna hujusce diei* is the unknown *numen* in whose charge are the events of a particular day; *Fortuna equestris* is the good luck of the Roman cavalry, and so on. The idea became popular; innumerable Fortunæ came into existence (see a list in Plutarch, *de Fortuna Romanorum*, 10); and, as the Greek conception of τύχη became more familiar to the educated Roman mind, Fortuna lost in purity and dignity what she gained in popular favour.

There is thus in the early history of the worship of Fortuna nothing to suggest that the virile and persistent Roman ever believed himself or his State to be at the mercy of chance. Such an idea would, indeed, have been utterly inconsistent both with his character and with his conception of his relation to the gods, who in his view, so far from being capricious, were always open to supplication, and practically bound to yield to it if approached in precisely the right way. The only right way was known to the religious authorities of the State, and in placing himself entirely in their hands the Roman believed himself to be perfectly safe in all matters which lay outside the sphere of his own will and his own activity. But assuredly he never minimized the importance of that will and activity—*virtus*, as he called it. The *fortuna Romanorum* is a late idea, not to be traced further back than Polybius, and in him, as we shall see, by no means definitely conceived; it was by *virtus* and *pietas*, strenuous endeavour and a sense of duty, that the Romans of later days believed their forefathers to have conquered the world.

2. In the scanty remains of the earliest Roman literature, offspring though it was of a sceptical Greek age, we find nothing to suggest that the Tyche of Euripides and his successors had gained a footing in Italy. *Fortuna*, it is true, as well as *fors*, has come to mean the incalculable in human affairs, and in this sense was used throughout all later Roman literature; but we have distinct traces of the true Roman feeling that 'fortunam esse industria sublevandam.' One of the *sententiae* of Appius Claudius Cæcus (*c.* 300 B.C.) is the famous saying, 'Est unusquisque faber ipse suae fortunae' (here *fortuna* has partly the sense, which never left it, of prosperous condition, wealth); and in the *Annals* of Ennius (i. 172 [Baehrens]) we find the perennial proverb, 'fortibus est fortuna viris data.' So again, old Cato, in his *Origines* (quoted by Gellius, iii. 7), wrote that the gods give a soldier 'fortunam ex virtute.' Such sayings fairly neutralize commonplaces like—

> 'Multa dies in bello conficit unus
> Et rursus multae fortunae forte recumbunt:
> Haudquaquam quemquam semper fortuna secuta est'
> (Ennius, *Ann.* i. 195).

In Plautus and Terence the use of *fortuna* and its compounds in the ordinary sense of luck or chance is constant, but not even the influence of the Greek original ever suggests the elimination of human endeavour, unless where, as in *Captivi*, II. ii. 54, or *Pseudolus*, II. iii. 14, the chances of war as bringing captivity and slavery are reflected from the unhealthy conditions of Greek life in the post-Alexandrian period. In Cato's book *de Agricultura*, the only complete prose work we possess of the period following the Hannibalic war, *fortuna* is not once alluded to. Disintegrating as the consequences of that war were to the old Roman character, they could not all at once obliterate the sense of the need of strenuous human endeavour, and they may have added to it the first intuition of the idea of the destiny of Rome, her mission to rule the world, which remains immortalized in the *Æneid*. In spite of an attempt to introduce Epicureanism early in the century, the better minds at Rome kept clear of any degrading doctrine of chance, with its corollaries of individual selfishness and *laissez faire*.

3. This better tendency was upheld and confirmed by the presence and influence at Rome of two Greeks of great ability, personal friends of Scipio the younger, sympathetic admirers of the Roman spirit—*Panætius* the Stoic philosopher, and *Polybius* the philosophic historian. It is hardly possible to exaggerate the importance of these two men, and especially of Panætius, as guides to the Roman mind in beginning to reason on the facts of life; and their opinions of the power of Fortune must here be briefly explained. Greeks as they were, they form an integral part of the history of Roman thought.

Both of these men belonged to the Stoic school, but their Stoic doctrines were curiously tempered so as to harmonize with the Roman character, and they were no doubt directly influenced by their knowledge of that character and of the extra-

ordinary progress of the Roman State in the last two centuries. In each we find the freedom of man's will fully acknowledged, and his dependence on his own active endeavour emphasized. Cicero, in his *de Officiis* (ii. 6 ff.), has reproduced the view of Panætius on this point. The passage is an emphatic assertion of the power of man to work out his own fortune by his own reason and will. Not that chance is wholly excluded; 'magnam vim esse in fortuna in utramque partem, vel secundas ad res, vel adversas, quis ignorat?' (ii. 6. 19). Accidents will happen which could by no human means have been avoided; but these are comparatively rare, and by far the greater part of the good or bad fortune that may happen to a man, in spite of the element of chance that is always present, is mainly dependent on 'hominum opes et studia.' So far from sitting down passively to take what fortune brings him, the duty of man is here declared to be the free use of his reason and will in modifying for his own advantage and that of his fellow-men the conditions under which he lives (see Schmekel, *Phil. der mittl. Stoa*, p. 194). It was in accordance with this common-sense view of life that Panætius rejected all divination, thus breaking with the older Stoic view, and also with the traditional Roman practice—a fact which was of great importance for the Romans of the last cent. B.C. The more the philosopher exalts the position of man in Nature, the less need will he ascribe to him of such methods for securing himself in the future.

Polybius was not a professed philosopher, but his mind was a philosophic one, and in his treatment of history it is extremely interesting to note his view of Fortune. He works out his own ideas of historical causation independently, and from the practical standpoint of a statesman and a historian, and we cannot expect him to be always precise or consistent. But it is quite clear that he uses the word *τύχη* mainly in two senses: (1) *in modum vulgi*, where he is ignorant of the cause of a phenomenon (*e.g.* ii. 70. 2, ii. 38. 5, viii. 22. 10, xv. 6. 8, and many other passages); when he knows the cause he never uses the word, and, as he is always seeking out the facts of causation, his attitude is strictly scientific. We may be sure that he did not really believe in capricious Divine interference, in Nemesis, or in blind chance. (2) Τύχη expresses an agent or power working to a definite end, as in i. 4, of the force which has brought about the growth of Roman dominion. Here he certainly does not mean chance;[1] no caprice is suggested in the work of this force; it comes near the *φύσις* of bk. vi. (iv. 11. 9. x. 57. 1), which he invokes, when in a more strictly scientific mood, to explain the regular and natural succession of political constitutions. And this 'Nature' of bk. vi. is not far removed from the Stoic idea of Fate, Destiny (*ἡ εἱμαρμένη*); but as used by a historian it must not be pressed to a philosophical dogma. He uses it much as the modern historian is apt to use the word 'evolution,' to express the natural course of events, without perhaps meaning anything very definite by it. One thing is certain, that both the *τύχη* and the *φύσις* of Polybius can include human agency; the human will is free for him as for Panætius, and, though man is subject to Nature, Destiny, or whatever it be called, *yet he is a part of this himself*, and can use his reason to shape his course. A good example is in bk. x. 5, §§ 7 and 9, where historians are blamed for attributing the successes of the great Scipio to Fortune, instead of to his own character and genius; cf. i. 35, iii. 31 *ad fin.*, and a very interesting passage in xxxvii. 9. (See the writer's article on this subject in *ClR* xvii. [1903] 445 ff., from which a few sentences have here been quoted.)

[1] For the Stoic *τύχη* (*αἰτία ἄδηλος ἀνθρωπίνῳ λογισμῷ*) see Reid on Cic. *Acad.* i. 7. 29.

Assuredly there was nothing in the writings of these two remarkable men to undermine the Roman sense of *virtus*, or to lead to that popular idea of the caprice of Fortune which we shall meet with soon, and which was due far more to the strange incalculable events of the last cent. B.C., and to the growing feeling of the uncertainty of human life and the hopelessness of the social and political situation, than to any serious reflexion or philosophical reasoning. The general tendency of the best Roman minds in that century was towards Stoicism of the more common-sense type which Panætius had introduced, which admitted no capricious cosmic agency, and exalted the power of human endeavour; and for some time at least the Scipionic circle, as it has been called—the group of disciples of Panætius and Polybius—continued to combine the reasoning of their teachers with strenuous human action. To this school, in some sense at least, belonged the two Gracchi, and also the satirist Lucilius, in whose fragments, more than 900 in number, the word *fortuna* occurs only twice. One of these passages (333 [Baehrens]) has been alluded to above:

> 'Aut forte omnino aut Fortuna vincere bello;
> Si forte ac temere omnino, quid rursum ad honorem?'

Here *fors* seems to be mere chance, and the word *temere* reminds us of the passage of Pacuvius quoted already; *fortuna* seems to be rather a guiding force, like the *τύχη* of Polybius in i. 4; and the general meaning suggested is that *fortuna* and human endeavour aid each other in the field of battle.

4. We may now pass to the two great intellects of the last age of the Republic, *Cicero* and *Cæsar*; of the great poet who was their contemporary a brief word will be said directly.

Taking *Cicero* first—it is by no means easy to gain a clear impression of his idea of Fortuna; he wrote in many different moods, reflected or translated the views of many schools of philosophy, and was not himself a man of strong conviction on religious or philosophical questions, following the principles of the New Academy, which denied that absolute truth was attainable, and sought for probability in the opinions of various schools. In his later years Cicero was drawn strongly towards Stoicism, and in the passage from his *de Officiis* already quoted (written in 44 B.C.) he clearly approves the views of Panætius that Fortuna is a power working for good and evil on mankind, but that man himself can counteract it by his own will in most matters of real importance. He was, in fact, the direct intellectual descendant of the Scipionic circle, and inherited their belief in Panætius and the Roman type of Stoicism which he introduced. But there can hardly be a doubt that Cicero, under the influence of his age, and the chaotic uncertainty of its social and political life, felt the reality of Fortuna, good and bad, more keenly than would have been approved by Panætius. It is in his writings that we first find (with the exception of the passage in Pacuvius) Fortuna spoken of in terms, not of the old Latin goddess, but of the later Greek Tyche; she is *volubilis*, *inconstans*, *caeca*, etc., and sometimes appears with the external attributes of the Greek deity. All this is, indeed, little more than literary language, and expresses no very definite conviction; but it is of value for our present purpose, because it reflects beyond doubt the popular ideas of the time. But for Cicero's more serious view of the matter we may turn with advantage to his work *de Divinatione*, composed almost at the end of a life chequered by many turns of Fortune's wheel (44 B.C.). In the first book of this treatise he puts into

the mouth of his brother Quintus the Stoic view of divination as represented in his lifetime by Posidonius of Rhodes, who differed from his master Panætius in maintaining that human skill and observation can to some extent unravel the mystery of the future, of fate, the 'ex omni aeternitate fluens veritas sempiterna' of the Stoics. In the second book Cicero argues against this view (though himself an augur), and here we seem to find his own personal view of Fortuna. He declares that divination, whether of predetermined fate or of matters accidental, is altogether impossible.

'Quomodo **ergo** id quod temere fit caeco casu et volubilitate fortunae, praesentiri et praedici potest?' (§ 15 *ad fin.*). 'Nihil enim est tam contrarium rationi et constantiae quam fortuna; ut mihi ne in deum quidem cadere videatur, ut sciat quid casu et fortuito futurum sit. Si enim scit, certe illud eveniet. Sin certe eveniet, nulla fortuna est. *Est autem fortuna.* Rerum igitur fortuitarum nulla praesensio est' (§ 18).

No doubt this is the view of Carneades and the Academic school generally; Cicero tells us as much (§ 9); but a perusal of the whole book will produce a strong impression that he adopts it *in toto* and with conviction, and in the incomplete *de Fato*, written shortly afterwards, we find much the same view, here also in the course of a criticism of Posidonius. Fate, he says, is the product of the brain of philosophers; common sense and experience teach us that Nature exists and Chance exists, but not Fate. Where is the need to foist in fate (*inculcare fatum*), 'cum sine fato ratio omnium rerum ad naturam fortunamque referatur?' (§ 6). Such arguments are scarcely convincing, and we feel that Cicero is not very clear as to the meaning he attaches to the words *fatum*, *natura*, *fortuna*; but there seems no doubt that he genuinely disliked the idea of a chain of causation—ἡ εἱμαρμένη, as the Stoics called it; he has too lively a consciousness of his own free will, and of the sport of chance in the history of his own time, to accept such a theory. His intense humanity forbade it; he lived too much in the world, enjoyed too thoroughly the exercise of his own individuality. Lastly, the reader may do well to turn to an interesting passage in the *de Natura Deorum* (iii. 88), in which, after insisting that the gods do not give us virtue, and that we do not thank them for it, but for riches, *externæ commoditates*, and such like, he sums up in these words: 'judicium hoc omnium mortalium est, fortunam a deo petendam, a se ipso sumendam esse sapientiam.' Here, as in the passage from this book quoted above, Cicero is plainly uttering the opinion that suits his own mind best.

Of *Cæsar* it has often been said, not only that he believed in Fortuna, but that he believed in her as his own peculiar patroness, as Sulla had done before him. But an examination of his extant writings by no means confirms this opinion. As has been shown in the *CR* (xvii. 153), the passages usually relied on, when read carefully by the light of their context, fail to prove that Cæsar had any particular belief in his own good luck (*e.g.*, the letter enclosed in Cic. *ad Att.* x. 8 B., *de Bell. Gall.* iv. 26, vi. 35, *de Bell. Civ.* iii. 10), and tend to show that, as regards Fortuna in general, he simply believed in good and bad luck, as we all do, particularly in military operations. In describing his defeat at Dyrrhachium he begins by saying that 'fortuna, quae plurimum potest cum in reliquis rebus tum præcipue in bello, parvis momentis magnas rerum commutationes efficit; ut tum accidit'; but after the battle, in addressing his soldiers, he tells them that 'fortunam esse industria sublevandam.' As far as we can judge from his own writings, he seems as rational as Lucretius on this point; and, if it be true that he held Epicurean doctrines (which is, however, by no means certain), it may be that he looked on Fortuna much as the poet did—as the mechanical force of Nature acting in ways which we cannot foresee or understand. Lucretius wrote (v. 77):

'Praeterea solis cursus lunaeque meatus
Expediam qua vi flectat natura gubernans

and what his *natura gubernans* is appears in line 107, 'quod procul a nobis flectat *Fortuna* gubernans.' On these lines Munro notes that the Epicurean Nature is at one and the same time blind chance and inexorable necessity, and compares vi. 31, 'seu casu seu vi, quod sic Natura parasset.'

5. But, if Cæsar himself steers clear of any degrading view of Fortuna, and never in reality personifies her, this is not so with his younger contemporaries. The experience of the last century of the Republic might well create a belief in the blind or wilful dominion of chance in human affairs; society and politics seemed to be governed by no benevolent destiny, or rational law of development. Cicero himself had spoken of Fortuna in this sense when pleading for Marcellus before Cæsar in 46 B.C. (*pro Marcello*, § 7). Sallust in more than one passage writes of her in a way which we have never as yet met with: 'Sed profecto Fortuna in omni re dominatur; ea res cunctas, ex libidine magis quam ex vero, celebrat obscuratque' (*Catil.* 8); and in the tenth chapter of the same work, while he looks on the history of Roman conquest down to the destruction of Carthage as the result of *labor* and *justitia*, he declares that after that terrible event 'saevire Fortuna ac miscere omnia coepit.' The author of the Cæsarean book on the Alexandrian war (possibly Asinius Pollio) speaks of Fortuna (ch. 25) in terms of the Greek Nemesis, as reserving those on whom she has heaped benefits for a harder fate. And Cornelius Nepos (*Dion*, 6) in the same way says that the fickleness of Fortuna began to sink the hero whom she had just before exalted.

It is true, indeed, that neither of the two finest spirits of the Augustan age ever uses the word in this way. They were both natives of Cisalpine Gaul, then the best strain in the population of Italy. Both were of the same type of character—mild, serious, intensely human, right-minded—with a profound conviction of the duty and destiny of the Roman State. For *Virgil*, when Rome or Æneas or even Evander his predecessor and ally is in question, Fortuna is the same thing as Fate, or Providence, or the will of Jupiter representing the Divine government of the world, or the Destiny of the Stoics. 'She is not so much a deity, as Reason and Providence conceived and expressed as the benevolent will of a deity' (Heinze, *Virgils epische Technik*, p. 287).

'Me pulsum patria pelagique extrema sequentem
Fortuna omnipotens et ineluctabilis Fatum
His posuere locis.'

So says Evander to Æneas (*Æn.* viii. 333 ff.). To follow her guidance was the duty of Æneas and his Trojans, and therefore also of the Romans. At the beginning of *Æn.* v. she turns the course of the fleet towards Sicily by threatening a storm: 'Superat quoniam Fortuna, sequamur,' says Palinurus to Æneas, 'Quoque vocat, vertamus iter' (22 f.). In v. 709 ff., after the burning of the ships, when Æneas is minded to stay in Sicily, crushed by the blow, old Nautes says:

'Nate dea, quo Fata trahunt retrahuntque sequamur;
Quicquid erit, superanda omnis Fortuna ferendo est.'

Here, if the whole passage be read, it becomes clear that *fortuna* is the will of the gods, against which a man can fight if he will, but submission to which is really victory. So in x. 49 Venus urges Jupiter to let her save the boy Ascanius, *i.e.* snatch him from the fate which she imagines to be decreed for him; but

'Aeneas sane ignotis jactetur in undis
Et quacumque viam dederit Fortuna sequatur.'

Once more, a curious passage in x. 107 ff. must be here noticed, because it shows that Virgil could conceive Destiny as working independently of Jupiter, and in contrary directions for different peoples: in response to the pleading of Venus on one side and Juno on the other, Jupiter declines to interfere:

> 'Sua cuique exorsa laborem
> Fortunamque ferent. Rex Jupiter omnibus idem;
> Fata viam invenient.'

Thus Fortuna is in Virgil, at any rate in the *Æneid*, a moral conception, to which the leader of men, and indeed all men and States, have to respond by obedience and faith, inspired by that sense of duty to god and man which the Romans called *pietas*. When the poet is not speaking of *pius* Æneas, or of any one who has this sense of duty, he may use *fortuna* in the ordinary sense of chance. In the speech of Turnus (*Æn.* xi. 378 ff.), which is introduced by the words 'Talibus exarsit verbis violentia Turni,' and is therefore the speech of one uncontrolled by a sense of duty, we find quite a different Fortuna:

> 'Multa dies variique labor mutabilis aevi
> Retulit in melius, multos alterna revisens
> Lusit, et in solido rursus Fortuna locavit.'

For Fortuna in *Livy* the reader must be referred to the valuable summary in the introduction to Weissenborn's edition, p. xix ff.; the general results of an independent inquiry can alone be stated here. Whoever reads Livy's noble Preface to his work cannot fail to be struck by the absence of any attribution to Fortuna or Fate of the growth of Roman power, or the decline of the virtues which brought it about: Livy is here clearly writing from conviction, arrived at independently of the fashionable views of his day. He attributes all to man himself —to the *virtus* and *pietas* of the old Romans, to the decline of morality and manliness in later periods of their history. It is true that in the course of his vast work he speaks of the *Fortuna Populi Romani* (an idea now coming into vogue), *e.g.* in vi. 30, i. 46, ii. 40, vii. 34. 6. But in almost all these and other passages this Fortuna does but come to the aid of energetic human endeavour, or human endeavour finishes the work of Fortuna. 'Quicquid superfuit Fortunae P. R., id militum etiam sine rectore stabilis virtus tutata est' (vi. 30). It is true, also, that he occasionally uses the word *fortuna* in the ordinary sense of chance, and once or twice he personifies her in the Greek fashion as capricious, *e.g.* v. 37. 1 ('adeo occaecat animos fortuna, ubi vim suam ingruentem refringi non vult'); but this seems to be a casual and momentary reflexion—the exception to the general rule. 'Fortes fortuna juvat' (viii. 29) expresses far better his personal conviction.

6. After the Augustan age, and for the first two centuries of the Empire, the history of Fortuna becomes difficult to follow; and it may be convenient to treat of it under four different heads or aspects of the idea, viz. (1) the *Fortuna Populi Romani*, which we have just found expressed in different ways in Virgil and Livy, and which is also to be found in Propertius; (2) Fortuna as Fate, or closely related to it, affecting human life in general; (3) Fortuna in the vulgar sense of Chance, an unaccountable factor in human life; (4) Fortuna as a deity, especially connected with the worship of the Emperors, but showing herself in other ways also. It may be added here that the word is often used in this period in the sense of high position and dignity, as over and over again in Pliny's panegyric on Trajan, and elsewhere in literature; but this is outside the general scope of this article.

(1) *Fortuna Populi Romani* has what we may call a downward tendency, in this period, to become a goddess; so far it is not easy to prove that the idea of the destiny of Rome had been so regarded, for the *Fortuna Publica Pop. Rom. Quiritium in colle Quirinali* of the calendar of Cære (*Eph. Epigr.* iii. 7) cannot be dated earlier than 194 B.C. That idea may possibly have begun with Ennius, though it is not found in any of his surviving fragments; it is obvious in Polybius from the Greek *quasi*-philosophical point of view, as has been shown; it is expressed, without distinct association with a divinity, in Virgil and Livy. The nearest approach to this Fortuna as a goddess in the Republican period is found in the coins of the gens Sicinia and the gens Arria, which bear a female head (see Roscher, *Lex. der Myth.* i. 1515) with the inscription 'Fort. P.R.,' but without any other sign of a cult. But, when the State came to be represented by the individual Cæsar, and its greatness associated with his welfare, the growing tendency to pray to Fortuna for his safety brought the deity, in various forms and cults, very close to the idea. This is well shown in the famous ode of Horace (i. 35), where the Fortuna of Antium,[1] pictured in a curious and puzzling manner, is entreated to preserve Augustus in his proposed expedition to Britain (cf. also Augustus in *Mon. Ancyr.* ii. 29; and see below, p. 103). But the older abstract form of *F. Populi Romani* survives alongside of this tendency; *e.g.* in Vell. Paterc. ii. 86 and 103; Tac. *Hist.* iii. 46, 'adfuit ut sæpe alias Fortuna Pop. Rom.,' *i.e.* by bringing Mucianus and the Syrian legions to the Danube. In this context the short work of Plutarch, or of Plutarch's school, must be mentioned, *de Fortuna Romanorum*. Here, however, Fortuna is rather Chance (*τὸ αὐτόματον*) than the grander conception of Livy or Virgil; the question raised is whether the greatness of Rome was due more to Fortuna or to Virtus, and the author concludes that it is due to both, but chiefly to Fortuna. 'She came to Rome to stay, and laid down her wings.' There is not much to our purpose in this work, but it serves to show how much people were thinking about Fortuna at the time, and chiefly in relation to Roman history.

(2) *Fortuna as Fate*, or a guiding power of some more or less definite kind. It was said at the beginning of this article that Fortuna, as distinguished from Fors, never wholly lost the meaning of a superior and intelligent power. In the Empire, among educated people at least, this still holds good, in spite of the fact that Fortuna becomes more and more conceived on the one hand as a deity, on the other as luck and ill-luck in human life, which is the sport of chance. Thus Seneca (*de Beneficiis*, iv. 8. 3) writes: 'nunc naturam voca fatum fortunam, omnia ejusdem dei nomina sunt varie utentis potentia sua'—an interesting passage, because the universal providence of Stoicism is here a nameless deity, neither Jupiter nor another, the God whom Seneca urges his disciples to love as well as worship, in language hardly distinguishable from that of St. Paul (see Zeller, *Stoics, Epicureans, and Sceptics*, p. 322 ff.; Boissier, *Religion rom.* ii. 71 ff.). But, as a rule, Seneca uses the word in the current sense, as a power not to be worshipped or submitted to, but to be overcome by the human will and wisdom; *e.g.* in *de Constantia Sapientis*, 15. 3 (and, indeed, *passim*), 'vincit nos fortuna nisi tota vincitur'; *Epist.* 98, 'valentior omni fortuna animus est.' Evidently there is no clear distinction between Fortune and Fate, yet the former is not so much pure luck or chance as something whose action we are not able to understand (Aug. *de Civ. Dei*, v. 9), or the executor of the decrees of Providence (Macrob. *Sat.* v. 16. 8).

[1] There were two Fortunae at Antium, but Horace speaks of one only, which may perhaps indicate that he did not know much about the cult.

This old Stoic notion we have already noticed as illustrated in Polybius. The great historian of the Empire is occasionally puzzled by conflicting ideas of Fortune and Fate, though, as a rule, he uses the word in the vulgar sense, e.g. *Hist.* iv. 47, 'magna documenta instabilis fortunae summa et ima miscentis.' In a famous passage in the *Annals* (vi. 22, where see Furneaux's notes, and some excellent remarks in the Introduction to his first vol. p. 21) Tacitus tells us that he cannot make up his mind whether human affairs 'fatone et necessitate immutabili an forte volvantur' (cf. iv. 20), where *fors* is identical with *fortuna* as popularly used. It would seem that, as Furneaux says (p. 22), Tacitus was inclined to accept the idea that our destiny is fixed from the moment of our birth, and could be foretold from our horoscope if we were sure of our interpreter; it is only now and then that he has doubts, as, when writing (*Ann.* iv. 20) of the excellent Manius Lepidus who did good work in enviable quiet under Tiberius, he doubtfully raises the question whether favour or dislike of princes is the work of Fate and our 'sors nascendi,' 'an sit aliquid in nostris consiliis,' etc. This is no real philosophic reflexion, but merely the passing doubt of an acute mind which has watched the tyranny of Domitian. Is the human will free to shape its course bravely and with happy result?

(3) *Fortuna in the vulgar sense of pure Chance.*—There is no need to illustrate this further than by quoting the famous passage of the elder Pliny (*HN* ii. 22), in which the universality of the ascription to Fortuna of all good and evil in human life is most emphatically stated.

'Toto quippe mundo et omnibus locis omnibusque horis omnium vocibus Fortuna sola invocatur et nominatur, una accusatur, una agitur rea, una cogitatur, sola laudatur, sola arguitur. Et cum conviciis colitur, volubilis, et plerisque vero et caeca existimata, vaga, inconstans, incerta, varia, indignorumque fautrix. Huic omnia expensa, huic omnia feruntur accepta, et in tota ratione mortalium sola utramque paginam facit (*i.e.* in the debit and credit of human accounts—adversity and prosperity—everything is set down to her), adeoque obnoxiae sumus sortis, ut sors ipsa pro deo sit, qua deus probatur incertus.'

This last sentence should not lead us to imagine that Pliny is here thinking of Fortuna only as a goddess with a cult: what he is really thinking of, as the context shows, is the dismal superstition which attributed all the changes and accidents of life to Chance, whether vaguely conceived and invoked as a deity or regarded as an unintelligible something about which no one had the inclination to reason—a superstition which excludes human endeavour, and indeed human sense of duty generally, and which may be, far more than we should guess without this remarkable passage, accountable for the want of 'grit' and vitality in all classes under the Roman Empire. It may perhaps be connected with the popularity of a coarse Epicureanism in the last period of the Republic, of which Cicero speaks (*Tusc. Disp.* iv. 6 and 7); for, in spite of its noble presentation by Lucretius, or by Cicero in *de Finibus*, bk. i., the disciples of this school undoubtedly learnt that the gods care for none of us, and that good and bad luck come to good and bad men by blind chance only. We have seen how after the period of Cicero and Cæsar the idea of Fortune as treacherous and capricious began to gain ground, but was checked among men of education and reflexion by the *Æneid* of Virgil and the *History* of Livy; but we may conjecture that among the uneducated or half-educated, in a period in which the outward forms of religion were revived, without the inward conviction of man's shortcomings or of his dependence on a Deity for help towards right conduct, this poisonous notion of Chance was weakening the fibre of the Roman. It is probable that the constant use of Fortuna in the literature of the period, and even by serious authors like Seneca, Juvenal, and Tacitus, is a reflexion of this condition of the popular mind. But we find it in its rawest form in writers who took life less seriously, such as Ovid (e.g. *Metam.* iii. 141), or Petronius (*Sat.* 120, 121), or in the work of a soldier like Velleius Paterculus (*e.g.* ii. 57, 75, 110 *ad init.*), who was not really a man apt and able to reason about such questions.

(4) *Fortuna as a deity*, in common belief and in connexion with the Imperial family. When Juvenal writes, at the end of his tenth satire,

'Nullum numen abest, si sit prudentia; *nos te*
Nos facimus, Fortuna, Deam, coeloque locamus,'

he is no doubt thinking of his own time, of the growing tendency to turn the vulgar idea of Chance, illustrated under the last head, into a goddess Fortuna worshipped in iconic form.

Two curious stories of this 1st cent. A.D. may illustrate the tendency. Suetonius tells us of the Emperor Galba (writing only a generation later) that he dreamt one night that Fortuna told him that she was standing wearied outside his door, and that if he did not speedily welcome her she would be the prey of any passer-by. He went and opened the door, and found a bronze image of the goddess at the threshold; this he took with him to his Tusculan villa, where he made a shrine for her and set up an elaborate cult. The rest of the story will be found in Suet. *Galba*, 18. Another story was that Sejanus had a statue of Fortuna which turned its back on him just before his fall, as he was sacrificing to it (Dio. Cass. lviii. 7. 2). There seems no doubt that he had a statue, and an ancient one, of a deity belonging to his native Etruscan town Volsinii (see Fowler, *op. cit.* p. 171), which may have been an Etruscan representative of Fortuna; but the instructive point of the story is the way in which this statue was seized upon as one of Fortuna by the common belief of the age.

There was, indeed, a tendency to identify other deities with the one now becoming so popular in all parts of the Empire; among the innumerable votive inscriptions to Fortuna to be found in every volume of the *CIL* are many which seem to show that Tutela, Nemesis, perhaps Victoria, come very close to her (specimens of this tendency may be found in Dessau, *Inscr. Lat. Selectæ*, ii. 1. 93 ff.); at the same time it may be noted that the typical figure of Fortuna, with cornucopiæ and patera, or rudder, wheel, or ship's prow, remains essentially the same, as found on coins and statuettes in great numbers in all parts of the Empire (see art. by R. Peter on 'Fortuna' in Roscher's *Lex.* i. 1503 ff.; Mau, *Pompeii*, p. 336 of the Eng. tr.). In this form Fortuna found a place among the Penates of the household.

In two cases, however, under the influence of the syncretizing tendency of the age, Fortuna puts on, in addition to her own, the attributes of other deities: (1) of the mysterious Panthea, by which she seems to become exalted into a position in which she unites the attributes of all other deities (see Roscher, i. 1534 ff.); (2) of Isis (*ib.* 1530 ff.), possibly as a consequence of an old connexion with sea-faring, which was common to both. The latter identification is the most curious development of Fortuna under the Empire.

We can see the process of assimilation in a charming passage of the romance of Apuleius (xi. 15), where the young Lucius is initiated by the priest of Isis into the mysteries of the goddess. Lucius is told that he has passed out of the capricious power of the blind and reckless Fortuna, into the loving care of a Fortuna who is not blind, and who even illuminates the other gods by her own light. 'Behold, freed from his former troubles, rejoicing in the provident care of great Isis, Lucius triumphs over his own Fortune.'

The worship of Fortuna in connexion with the person of the Cæsar may be called an adjunct of the official cult of the Emperor (see art. ROMAN RELIGION, Period IV. § 1). It began in 19 B.C. with the return of Augustus from a course of travel in Greece and the East, when, as we learn from his own record (*Mon. Ancyr. Lat.* ii. 29, Gr. 6. 7), an altar was dedicated on Dec. 15 to Fortuna Redux, and a permanent cult instituted. In the year A.D. 14, *i.e.* in the first year of Tiberius' reign, games were celebrated to Divus Augustus and Fortuna Redux, which henceforward were held

annually in the beginning of October under the name of *Augustalia*, and appear in the religious calendars (Tac. *Ann.* i. 15: *Fasti Amiterni* and *Antiates*, and *Feriale Cumanum*). From this time onward Fortuna Redux, with the title *Augusta* often added, became specially a deity of the Imperial family. We find her invoked, with the sacrifice of a cow, in the ritual of the Arval Brotherhood, 'ob diem quo urbem ingressus est Vespasianus,' 'pro salute et reditu Domitiani,' and on other occasions of the same kind down to the beginning of the 3rd cent. (Henzen, *Act. Fratr. Arv.* pp. 86, 122). For full information on this worship, and the kindred one of Fortuna Dux, see R. Peter, in Roscher, i. 1525 ff.

How far Fortuna was conceived by Augustus and his immediate successors as a really efficient *numen* must remain doubtful; but later on there can be no doubt that she, or rather her image, became little better than a fetish. The story of Galba and the image has already been told; the *Scriptores Historiae Augustae* tell us of Antoninus Pius, and even of Marcus Aurelius, that they kept a golden image of her (*Fortuna aurea* or *regia*) in their bed-chambers, and carried it with them wherever they went (see, *e.g.*, Jul. Capitolinus, *Ant. Pius*, 12: Spartianus, *Severus*, 23). But after the spread and final recognition of Christianity this came to an end, as did the official worship; for Fortuna, whether thought of as a goddess of chance or as a protecting deity, was equally irreconcilable with Christian convictions.

Summary.—We may now sum up in a very few words the long story that has been told above. Fortuna begins as a deity, not of mere chance, but of helpful power in relation to certain events of human life, especially childbirth and seafaring, and then develops under many forms and cult titles which, however, gradually lose their original force and meaning, like so many other of the early Roman worships (see ROMAN RELIGION, Period IV. § 1). Meanwhile the influence of the later sceptical Greek idea of τύχη introduces the Roman mind to the conception of blind chance, best shown in the fragment of Pacuvius (above, p. 98); but this is neutralized among the better educated by the later or Roman School of Stoicism, beginning with Panætius and in a historical form with Polybius, and having a tendency to associate the conception of Fortune with the Destiny of Rome and the *Fortuna Populi Romani*, as we see it in Virgil and Livy. In the confusion of the last age of the Republic, and perhaps under the influence of popular Epicureanism, the more degraded idea of Fortuna gains ground, and appears in writers of a less earnest moral type in the 1st cent. of the Empire, and also in the thought and worship of the less educated classes. Lastly, we return to an official or state cult of Fortuna in connexion with the cult of the Cæsars, and with the settled order of the Empire; and finally, under the benign influence of Christianity the lower aspects of the idea and the cult alike tend to disappear.

See also FATE (Greek and Roman).

LITERATURE.—R. Peter, in Roscher, *Lex. der gr. und röm. Myth.* i. 1503; G. Boissier, *La Religion romaine*[2], Paris, 1891; H. Dessau, *Inscriptiones latinae selectae*, ii., Berlin, 1902; W. W. WARDE FOWLER.

FOSTERAGE.—By this term is meant the practice of receiving into a family the child of another household, to keep and nurture for a certain period. The custom differs from adoption (*q.v.*) in that the foster-child does not become a permanent member of the family by which it is received. Language does not originally distinguish between nurse and foster-mother, and fosterage may be considered as a natural development of nursing, arising when considerations of health or other special circumstances render it desirable to separate the child for a time from its parents. Such cases will occur in any community, however primitive, and the natural tie of affection between nurse and nursling may be expected to subsist between foster-parents and their charge. Among certain peoples this feeling attains exceptional strength, and the relationship develops into an important institution. This happens especially in a tribal condition of society, when family relationships are still the main social nexus, before the growth of political association.

I. *ORIENTAL RACES.*—**1. Arabs.**—Although it is among European nations that the custom reaches its highest development, it has its importance for certain Oriental peoples also. It must have prevailed from early times in Arabia. Muhammad was put out to nurse with a woman of the Beni Sad, who reared him among her own tribe until he was five years old, and anecdotes are told of the attachment which he displayed in later years towards his foster-mother and her daughter (Muir, *Life of Mahomet*[3], London, 1894, pp. 5–7). When he came to legislate for his followers, he laid down a law against the intermarriage of persons connected by the tie of milk-kinship. The principle of the law is stated in the words: 'Whatever is prohibited by consanguinity is also prohibited by fosterage': that is to say, the tie of milk is as much a bar to marriage as the tie of blood, and the kin of foster-parents come within the forbidden degrees in just the same way as the kin of actual parents (*Hedaya*, tr. Hamilton and Grady, London, 1870, p. 67). This enactment must be regarded, not as an arbitrary decree of the Prophet, but as giving legal form and sanction to the traditional usage among the Arabs (Robertson-Smith, *Kinship and Marriage in Early Arabia*[2], London, 1903, pp. 175 f., 195 f.). Muhammad's principle was worked out in the *Hidāya*, and a metaphysical theory was supplied by later legists. The prohibitions thus established remain in force to the present day, and are incorporated into the Anglo-Muham. law of India (R. K. Wilson, *Anglo-Muham. Law of India*[3], London and Calcutta, 1908, p. 113).

2. India.—On this point there is a sharp distinction between the Muhammadans of India and the Hindus. Among the latter fosterage is not unknown, but it has no particular significance and is practically unrecognized by Hindu law (H. Maine, *Early Institutions*[7], 243), whereas adoption holds an important place in this code. A foster-child enjoys no legal status unless the ceremony of adoption has been performed (J. D. Mayne, *Hindu Law*[4], Madras and London, 1888, § 167). The pure-blooded inhabitants of Rajputana, however, with their more primitive type of community, give much more prominence to foster-kinship.

'Although the foster-family of a Chief is never of the Rajput clan, but belongs almost always to some particular family of a well-known pastoral tribe, yet the foster-brothers often attain much influence and position at his court, and the family has a recognized hereditary status of "kinship by the milk"' (Lyall, *Asiatic Studies*, London, 1882, p. 221).

In the same way the Rajas of Bundelkhand have their children fostered by women of the Ahīr caste of cowherds; in speaking to a man of this caste, *dawa*, 'foster-father,' is a respectful mode of address [information from H. Spencer, I.C.S.]. The same habit of choosing the foster-parents of chieftains among a particular subordinate tribe will meet us again in Ireland.

3. Turco-Tatars.—That foster-kinship was more

than a legal fiction among the Muhammadans of India may be seen in the case of Akbar, the Mughal Emperor of Delhi.

Akbar had much to suffer on account of the favours which he lavished on his foster-mother, Maham *Anka*, and her family. She was for many years the most influential person at his court, and her son, Adham Khan *Koka*, was one of his generals. When this man actually stabbed the Emperor's minister, Muhammad Khan *Atka*, it is remarked by the Muslim historian that Akbar's wrath caused him to forget the *nisbat* ('connexion') which bound him to the assassin's mother, and to order his summary execution. The murdered minister and his son, Aziz, were related to Akbar through another foster-mother. Aziz succeeded his father in power, but proved troublesome and contumacious; the Emperor, however, refused to inflict any but the lightest punishment on him, saying: 'Between me and Aziz there is a stream of milk which I cannot cross' (Malleson, *Akbar*, Oxford, 1890, p. 177).

The titles *anka*, *atka*, *koka*, here used to designate the foster-mother, her husband, and their son, are Turkish words in use among the nomadic tribes from whom the Mughal Emperors drew their origin; and the sentiment which Akbar acknowledged cannot be ascribed to the influence of the Muham. faith which he and his people had embraced (he was far from being a devout Muslim), but marks the prevalence of the custom of fosterage among the Turco-Tatar nomads of Central Asia. The custom and the associated sentiment no doubt grew up among them under conditions of life broadly similar to those which obtained over most of Arabia. Among these tribes, as among the Arabs, the tie of milk seems to have been from immemorial times equivalent to blood-relationship. The Osman Turks allow to a foster-brother free access to the *harīm*, which is otherwise permitted only to near kinsmen (A. Vambéry, *Das Türkenvolk*, Leipzig, 1885, p. 216). A chieftain's foster-brothers are found among his closest adherents, on whom he relies in the hour of need (Elias and Ross, *Ta'rīḫ-i Rashīdī*, London, 1898, p. 459, note). The same trait will be noted in the case of the Irish and Scottish tribesmen.

4. Circassians.—The Oriental peoples agree, as a rule, in regarding the act of nursing at the breast as the essence of the foster-kinship, which therefore centres in the person of the foster-mother: it is only as related to her that the rest of the foster-kindred come into account. With the Circassians, however, the foster-father seems to be of more importance.

'The son of a Circassian chief is taken from home and consigned to the charge of a tutor or foster-father, called an *attalik*; and, until he attain the age when his education is supposed to be complete, it is considered as an unpardonable weakness in the real father to desire to see his child. Boys are regarded rather as the property of the tribe than of the parents; and, should the latter have neglected to choose an *attalik* for their son, any one who feels disposed may offer to undertake the charge. There are even instances of an enthusiastic educator carrying off a pupil by force; and this is not by Circassian law a punishable offence' (L. Moser, *Caucasus*, London, 1856, p. 32). The rôle of the *attalik* is here very similar to that of the *aite* in Ireland or the *fóstri* in Scandinavia (see below).

II. *EUROPEANS*.—1. Slavs.—The European peoples do not, as a rule, lay the same stress as the Orientals on the function of the foster-mother, nor is milk-relationship generally regarded as a bar to marriage. An exception must, however, be made in regard to the Slavs of southern and eastern Europe, who, influenced perhaps by their Muham. neighbours, consider the union of foster-kindred as unlawful. Foster-children (and also adopted children) are regarded in the same light as the natural offspring, and the foster-child bears the name of the foster-father so long as it remains in his house (Maine, *Early Law and Custom*, London, 1891, p. 257; F. S. Krauss, *Sitte und Brauch der Südslaven*, Vienna, 1885, pp. 10, 14, 602).

2. Greeks and Romans.—The two European nations which were the first to reach a high level of civilization are those among whom the relationship is of least importance. Neither Greek nor Latin has any special term to denote foster-kinship, nor is it recognized by Greek or Roman Law. Isolated cases no doubt are to be found, and there are indications that under the later Roman Empire (as in the Parisian world of the 18th cent.) fashionable women sometimes got rid of domestic burdens by putting their children out to nurse in the country. An edict of the Emperors Honorius and Theodosius (dated A.D. 409 and incorporated in the *Theodosian Code*) forbids parents to entrust their offspring in this way to the care of shepherds, a class that was held in very ill esteem:

'Nemo curialium plebeiorum possessorumve filios suos nutriendos pastoribus tradat. Aliis vero rusticanis, *ut fieri solet*, nutriendos dari non vetamus' (*Cod. Theodos.*, ed. G. Hänel, Bonn, 1842, p. 909).

Foundlings.—A different type of fosterage receives special treatment in Roman Law. This arose from the custom of exposing new-born infants which the parents did not desire to rear. It sometimes happened that the unfortunate babe was rescued and brought up by strangers from motives of compassion or convenience. The story of Oedipus and the plots of many Greek comedies afford examples. In Rome, the codes of the later Empire define the rights of the fosterer (*nutritor*) in such cases. The *Codex Theodosianus*, adopting the principle of an edict of Constantine, lays down (lib. v. tit. 8) that any one who rears an infant thus exposed acquires full rights over it, and may treat the foundling as his son or his slave, at pleasure. If the actual father desires to recover his child, he must give in exchange a slave of equal value, or pay an equivalent sum. Similar provisions are found in the semi-Roman codes of various barbarian peoples who were in contact with the Empire, and among whom the exposing of children was a common practice. The statute just quoted was incorporated in the *Lex Romana Rætica* of the 8th century (see *Capitulum Regum Francorum*, cxliv., in Canciani, *Barbarorum Leges Antiquæ*, Venice, 1781, iii. 274). A further development is added in the Laws of the Visigoths (*c.* A.D. 654), where the actual parents, if identified, are laid under a formal obligation to redeem the child; if they fail to do so, they are to suffer exile for life, and the *judex territorii* is directed to pay the redemption price out of the father's property; or, if the father has nothing, he is to become a slave in place of his son, who is to go free. It is further laid down that, if parents entrust a child to another person, the fosterer is to be paid annually a shilling (*solidum*) for each year of the child's age, up to the age of ten, after which his service is to be taken as equivalent to his keep. It is, of course, impossible to say whether such enactments were really operative among the rude nations for whom they were framed.

The attempt to enforce the performance of parental duties was no doubt due to the growing influence of the Church, to which the practice of exposing children was naturally repugnant. The *Formulæ Sirmondi*, which probably represent the practice of the *tractus Turonensis* (Touraine), speak of a class of officials called *matricularii*, whose special duty it was to take charge of foundlings. These infants were usually left at the church-door by stealth; the *matricularii* had to take care of them and induce charitable persons to receive them into their families. The Synods of Vaison (A.D. 442) and Arles (A.D. 443?) laid down canons dealing with this question.

Cf. Hefele, *Hist. of the Councils*, Eng. tr., Edinb. 1883, iii. 166, 171; *Formulæ Sirmondi*, in Canciani, iii. 419, 438; see also Regino, *de Eccl. Discipl.*, Paris, 1671, lib. ii. §§ 69–72.

The methods adopted by the mediæval Church are still in force in the Balkan States (F. S. Krauss, 587). In the more progressive countries the care of waifs and destitute children is generally recognized as a public duty, and is entrusted either to Foundling Hospitals and similar institutions, or

to foster-parents, who are paid for their trouble either by the State or by local authorities (*EBr*[11], art. 'Foundling Hospitals').

3. Anglo-Saxons.—After the introduction of Christianity into England, these duties were discharged by pious women (*sacræ virgines* [Augustine, *Ep. ad Bonifac.* 23]). The laws of King Ine provide an allowance for any one who takes charge of a foundling; and other early laws define the rights of foster-parents on lines similar to those laid down by the *Codex Theodosianus*. Fosterage by desire of the parents seems to have been prevalent among the Anglo-Saxons. Augustine, in the *Epistle* just referred to, complains that mothers are apt to delegate to others the duty of nursing their children; and the early Church set its face against the practice, but it was too deeply rooted to be easily suppressed. Thorpe asserts that the custom of fosterage was as prevalent among the Anglo-Saxons as among the Scandinavian nations (*Ancient Laws and Institutes of England*, London, 1840, Glossary, *s.v.* 'Foster'). It should be observed, however, that the words *fóstre* and its derivatives, on which he seems to rely, are used of nursing in general, whether in the home of the parents or elsewhere (cf. T. Wright, *Womankind in Western Europe*, London, 1869, p. 55). But there is other evidence to show that the custom was very general: *e.g.*, the efforts made both by ecclesiastical authorities and by kings to check the abuses, and even crimes, which occasionally arose from the carelessness or treachery of foster-parents.

Thus, Kenelm, son of Kenwulf, king of Mercia, was murdered in infancy by his fosterer in order to clear the way to the throne for his aunt Quendreda (for other examples, see J. Thrupp, *The Anglo-Saxon Home*, London, 1862, p. 83 f.).

Such instances might suggest that the relationship did not possess the same sanctity among the Anglo-Saxons as in Scandinavia or in Ireland. But it is natural to suppose that, as a rule, a strong affection did subsist between foster-parents and their charges.

Both King Edgar and King Athelstan showed their gratitude to their foster-mothers by bestowing on them substantial grants of land (Sharon Turner, *Hist. of the Anglo-Saxons*, London, 1852, iii. 5–7).

4. Scandinavians.—In Scandinavia the custom attains a much higher development, and it is to be noted that the word *fóstr*, with its derivatives, belongs originally to the Scandinavian branch of the Germanic languages, whence it was early borrowed by the Northern dialect of English. In primitive Norway, as elsewhere in the ruder stages of society, it sometimes happened that children exposed at birth were reared by strangers, and that this charitable office produced a mutual affection of great strength (Dasent, *Burnt Njál*, London, 1861, preface, xxv). But, as a rule, fosterage was undertaken by the wish of the parents; examples are to be met with on every page of the Norse and Icelandic Sagas, and the native codes legislate specially for this kind of relationship.

(1) *Characteristic features.*—The maternal office performed by the foster-mother is not here, as in the East, the essential point; it is rather the foster-father (*fóstri*) who plays the leading part. The charge of the child does not always begin from infancy, and it is usually continued to the verge of manhood. According to the Icelandic code of law known as the *Grágás* (tit. xxi.), the age of sixteen is the normal limit of the period; but in the Sagas it often lasts to eighteen or even later (*Herverar Saga*, ed. P. F. de Suhm, Copenhagen, 1875, p. 81). The fosterer does not merely rear the child; he undertakes its whole education.

In the *Völsunga Saga*, Sigurd's foster-father instructs him in *idrottir*, chess and runes, and teaches him to speak foreign tongues (du Chaillu, *Viking Age*, London, 1889, ii. 45). So, in the *Droplaugar-sona Saga*, Bessi the Wise, in offering to foster the son of Droplauga, promises expressly to teach him his own wisdom (*Sagan af Gunnlaugi Ormstungu ok Skalld-Raffni*, Copenhagen, 1775, p. 48, note). Often the boy's education is completed by his being taken as a comrade on expeditions of adventure and piracy (Dasent, *Orkneyinga Saga*, Rolls Series, 1894, p. 220). A knowledge of law being an important branch of knowledge, Njál teaches it to Thorhall, so that he becomes the greatest lawyer in Iceland (Dasent, *Burnt Njál*, i. 82). The crafty Thrond teaches Sigmund 'how to bring all kinds of lawsuits, and how to get his own rights and those of others' (York Powell, *Færeyinga Saga*, London, 1896, p. 75).

Such cases justify the saying *fjórdungi bregdr til fóstrs*, 'the fostering is a quarter of the man' (Cleasby-Vigfusson, *s.v.* 'Fóstr').

In many cases the foster-father gives part of his property to his foster-son. The amount that may be thus conveyed is limited by the ancient law in the interest of the proper heirs (*Norges Gamle Love*, Christiania, 1846, i. 213); but in the Sagas the foster-son is sometimes made heir to half or all his fosterer's property (K. Kaalund, in *Aarbóger for nordisk Oldkyndighed og Historie*, 1870, p. 279).

(2) *Strength of sentiment.*—The affection which sprang from this relationship is described as of extreme intensity, both as between foster-child and foster-parents, and as between foster-brethren; as in Ireland, it is said to have been even stronger than the tie of consanguinity.

When Thorhall, one of Njál's foster-sons, heard of Njál's death, he was so violently moved that 'he swelled all over and a stream of blood burst forth from both his ears, and could not be staunched, and he fell into a swoon' (*Burnt Njál*, ii. 195).

A violation of this sentiment is regarded as an offence against the natural charities.

The tragic motive of the *Laxdæla Saga* consists in the gradual estrangement brought about by the machinations of a wicked woman between the foster-brothers Bolli and Kjartan, which issues in a fratricidal conflict. Attacked unwillingly by Bolli, Kjartan flings away his weapons, saying: 'I am much more fain to take my death from you than to cause the same to you myself' (*Laxdæla Saga*, tr. M.A.C. Press, London, 1899, p. 178).

The term 'foster-brothers' came to be extended to those who had gone through the ceremony of swearing brotherhood, as in the so-called *Fóstbrœdra Saga*. (This rite is described in Vigfusson and York Powell, *Origines Islandicæ*, Oxford, 1905, i. 319 and in art. BROTHERHOOD [Artificial], vol. ii. p. 857; cf. Dasent, *Gisli*, Edinburgh, 1866, p. 23.) The proper term for such a 'sworn-brother' is, however, *eidbródr* or *svarabródr* (see Vigfusson and York Powell, *Corpus Poeticum Boreale*, Oxford, 1883, i. 424).

(3) *Reasons of special development.*—The causes which gave the practice of fosterage peculiar importance in Scandinavia must be sought in the barbarous and violent condition of society described in the Norse and Icelandic Sagas. The weaker man, unable to secure the safety of his household, could gain the protection of a stronger neighbour by fostering his son. Or, again, one who found himself isolated and threatened by enemies might acquire in this way the support of powerful friends.

In the *Færeyinga Saga* the crafty and treacherous Thrond, being a kinless man, takes to himself foster-sons from three different families. Tord of Geirulfsöre, in the *Vigaglums Saga*, is fosterer to one of Helge Asbjórnson's children; being convicted of theft, he refuses to pay the usual fine, saying that 'it would be little good he should get by fostering Helge Asbjórnson's son, if he should have to pay the penalty in a case like that!'

The fosterer is therefore, as a rule, in a position of inferiority to the parents of his charge: hence the saying that 'he is the lesser man who fosters another's child' (Cleasby-Vigfusson, *s.v.* 'Barnfóstr').

This maxim may be illustrated by a tale which is told in the Saga of Harald Hárfager (S. Laing, *Heimskringla*[2], London, 1889, i. 391–4). Athelstan of England had tricked Harald into performing an act which might be construed as a form of homage to the English king. Wishing to pay him back in kind, Harald sent his infant son, the child of a servant-girl, to Athelstan under the charge of Hauk. On being admitted to the king's presence, Hauk advanced and set the child on the king's knee; and, when Athelstan asked what this meant, he replied: 'Harald the king bids thee foster the child of his servant-girl.' Taking a child on one's knee (*knésetja*) was among Germanic peoples the usual form of accepting parentage. Athelstan was very angry, but presently accepted the situation, and brought up the boy, who grew up to be king Hakon. Harald was de-

lighted at the success of his retort, 'for it is the common observation of all people,' says the chronicler, 'that the man who fosters another's children is of less consideration than the other.'

Instances are, however, to be found where the offer to undertake the charge of a boy is made as an overture of friendship, as when Heidrek, in the *Herverar Saga* (p. 111), offers to foster the son of the king of Gardaríki; the queen's advice to her husband on this occasion shows that it was dangerous to refuse such a proposal when made by a formidable and ruthless warrior. Again, the person who offers fosterage may be an equal or superior, and his intention may be to make reparation for injuries done, by thus accepting the inferior position. So Njál undertakes to foster the boy Hauskuld, whose father has been slain by Njál's son Skarphedin (*Burnt Njál*, ii. 59).

(4) *Fosterage as a legal contract.*—The ancient laws of Scandinavia give the foster-father a legal status, and define his rights and obligations in respect to the foster-child and the actual father. The parties enter into a regular contract, and the foster-father receives a certain amount of money or goods or land to defray his expenses. If either side fails to fulfil its part of the bargain, the law provides compensation. Thus, if the child is withdrawn by the father, he cannot recover the money he has paid; while, if the fosterer sends the child home before the proper time, or if he does his part so badly that the father is justified in withdrawing his child, he must refund a proportion of the amount paid to him (*Grágás*, tit. xxi.; *Gamle Love*, i. 286, § 88). In some cases recognized by the *Grágás* no payment is made by the father, fosterage being given in consideration of benefits rendered or promised. The case of an orphan is specially provided for: if he is reared by a person not legally responsible for his nurture, the fosterer may claim a fee (*fóstrlaun*) out of any property which may come to the foster-son, or out of any *wergild* which may be adjudged for injury done to him—provided always that the person who makes such a claim has formally undertaken the duties of a foster-father. By so doing he acquires the rights and undertakes the liabilities of the natural parent: he is entitled to make claims on behalf of his foster-son, and is responsible for claims made against him.

Thus, when Sigmund in the *Færeyinga Saga* (as above, pp. 36–38) claims *wergild* from Throud for the murder of his father Breste, Throud, as a counterstroke, undertakes the fosterage of Laf, whose father had been slain by Sigmund, and makes a cross-claim against Sigmund for *wergild* on behalf of Laf. Under the ancient *Gulathings-lov*, either of a pair of foster-brothers has the right to demand a *wergild* of 12 *aura* for the death of his fellow from the slayer (*Gamle Love*, i. 80, § 239).

In all this legislation there is much that is closely similar to the provisions of the *Ancient Laws of Ireland*; the whole conception of the foster-relationship is much the same, and there are striking coincidences in points of detail.

5. Gaedelic Celts of Ireland.—(1) *Legal enactments.*—References to the subject of fosterage are scattered throughout the five volumes of the *Ancient Laws of Ireland* (which, it must be remembered, do not constitute a code and have no historical unity). The most important locus is the *Cáin Iarraith*, or Law of Fosterage-Fee (ii. 146–192). The term *iarraith* answers to the Scandinavian *fóstrlaun*, and denotes the value in money or kind made over to the fosterer by the parents. The amount of this fee is fixed on a scale varying according to rank, a higher rate being charged for girls than for boys. Provision is made, as in Scandinavian law, only with more detail, for the termination of the arrangement on either side, and for compensation to be made by the foster-parents in case of neglect or of harm done to their charge. The treatment which the foster-child receives is to vary according to the rank of the parents and the amount of the *iarraith*. Rules are laid down as to gradations of food and dress, with a minuteness that belongs to artificial theory rather than actual practice (for details, see CHILDREN [Celtic], § 7). The foster-father is to teach the useful and agreeable arts, especial stress being laid on riding. He has the right of inflicting castigation and other punishments in case of misbehaviour; on the other hand, he is made responsible for mischief done by the foster-child, so far as this can be ascribed to his own neglect or ill teaching. His functions thus include those of a tutor; the importance of the moral influence so exercised gave rise to a saying to the effect that fostering is two-thirds of a child's nature (O'Donovan, *Battle of Magh Rath*, Dublin, 1842, p. 294). As one man might foster several boys, it is clear that in a more settled state of society the foster-father would easily pass into a schoolmaster. And, in fact, the term *aite* may mean either 'foster-father' or 'tutor,' and the derivative *aitechas* or *oideachas* is in modern Irish the regular equivalent of 'education'; so also *dalta* is an ambiguous term meaning sometimes 'fosterling' and sometimes 'pupil.' The relations between tutor and pupil are expressly recognized by the Laws as constituting a distinct species of fosterage; a section of the *Cáin Lánamna*, or Law of Social Connexions, defines the mutual obligations of the 'teaching foster-father' (*aite forcetail*) and his pupil (*Laws*, ii. 349). Maine has pointed out the analogy between this relationship and that which subsists between the Brāhman and his disciple (*Early Institutions*, 242). In ecclesiastical documents, such as the *Lives of the Saints*, the same terminology is employed to designate the spiritual teacher and the pious youths who come to live with him and receive instruction in the Faith.

It is significant that in the *Cáin Iarraith* the foster-mother (*muime*) is barely mentioned. It is true that this omission is to some extent made good by paragraphs in the *Cáin Lánamna* (*Laws*, ii. 349); but there can be no doubt that among the Gaedels, as in Scandinavia, the foster-father was the pivot of the relationship.

In the Laws, as is natural, fosterage is regarded mainly as a contract for mutual advantage. Yet even here it is expressly stated that it may be undertaken for love; and, even where a consideration is paid, it is recognized that the relationship established does not end with the termination of actual fosterage, which is fixed at the age of 17 for boys, 14 for girls (*Laws*, ii. 176, 193). A durable connexion has been created, described as *lánamnas*—a term which ordinarily denotes the most intimate of all relations, that of husband and wife. When the foster-father returns his charge to the parents, he gives parting gifts (*sedit gairitechta*), which are, in fact, the assertion of a lasting claim on the gratitude and good offices of the foster-child (*Laws*, ii. 190).

(2) *Historical evidence.*—There is much uncertainty as to the period in which the Irish Laws first took definite shape, and it is difficult to judge how closely their theory corresponds with actual usage; but there can be no doubt that their enactments in regard to fosterage are founded on a custom which was inwoven with the life and habits of the Gaedels as far back as they are known to us. It is already in vigour in the legends of the Ulaid (the cycle of Conchobar and Cúchulainn), which represent a state of society perhaps as old as the Christian era; and it meets us at every turn in Irish literature and history, down to the break-up of the old tribal system about the year 1600. Even in the 17th and 18th centuries it still lingered in certain regions.

In Ireland, as in Scandinavia, it was deemed an

honour and advantage to be allowed to rear the son of a powerful chieftain, and thus establish a claim to favour and protection. A passage in the *Laws* (ii. 285) seems to imply that fostering could be undertaken only by persons who stood in a certain degree of consanguinity to the parents. This may have been the rule in very primitive times, or it may have been a point of artificial theory, not really observed in practice; at all events, if there ever was such a restriction, it must have disappeared very early. As a rule, no doubt, the foster-parents belonged to the same clan as the father, but this was not always the case. The son of a noble house often had several fosterers.

At the birth of Cúchulainn, who was nephew to the powerful king Conchobar mac Nessa, and whose future greatness was foretold by Druids, a competition at once arose for the privilege of fostering the child (Thurneysen, *Sagen aus dem alten Irland*, Berlin, 1901, p. 61). The daughter of another king, Eochaid Sálbuide, had twelve foster-fathers (*ib.* 63). When St. Patrick preached to the daughters of King Lægaire, and told them of the greatness of God, they asked, among other questions, whether many had fostered God's Son, implying that this would be a test of His rank and power (Joyce, *Soc. Hist. of Anc. Ireland*, ii. 17). In the latest days of the old national life we find the same view expressed. Fynes Morison says that women of good wealth seek with great ambition to nurse the children of lords and gentlemen, 'not for any profit, but rather spending much upon them while they live, and giving them when they die sometimes more than to their own children. But they do it only to have the protection and love of the parents whose children they nurse' (Itinerary, in C. L. Falkiner's *Illustrations of Irish History*, London, 1904, p. 318).

According to Sir John Davies (in H. Morley's *Ireland under Elizabeth and James I.*, London, 1890, p. 296), the poorer and weaker sometimes actually bought the 'alterage' of a 'potent and rich' man's children—an inversion of the principle of *iarraith* described above. It is probable that, during the centuries of constant warfare with the English invaders, the desire to gain protection and support gave additional strength to the system of fosterage, and imparted fresh intensity to the feeling by which foster-kindred were united.

(3) *Strength of sentiment.*—The feeling referred to had always been one of singular power. Everywhere in the older literature the tie between foster-father and foster-child, or between foster-brothers, is regarded as equivalent to the ties of blood.

In the tale of Ronan and his son Mælfothartig, the latter's two foster-brothers are his trustiest companions: one of them dies with him, the other avenges his death ('Fingal Ronáin,' in *RCel* xiii. [1892] 368). In the tale of the Battle of Magh Rath (ed. O'Donovan, pp. 135, 161, etc.), King Domnall is throughout deeply concerned about the personal safety of his foster-son, Congal Cloen, though the latter is in rebellion against him. When circumstances force men so connected into conflict, the situation is felt to be peculiarly tragic, as in the combat between Cúchulainn and Fer Diad (E. Hull, *Cuchullin Saga*, London, 1898, p. 186 ff.), or in the destruction of Conaire by his foster-brethren, the grandsons of Donn Desa (*Togail Bruidne Dá Derga*, ed. W. Stokes, in *RCel* xxii. [1902]).

Giraldus Cambrensis in the 12th cent. (*Topog. Hibern.* iii. 23) and many English writers and politicians of the Elizabethan period bear emphatic testimony to the binding force of this attachment.

'In the opinion of this people,' says Sir John Davies (as above, p. 296), 'fostering hath always been a stronger alliance than blood, and the foster-children do love and are beloved of their foster-fathers and their sept more than of their own natural parents and kindred, and do participate of their means more frankly, and do adhere to them in all fortunes with more affection and constancy.' Stanihurst (*de Rebus in Hibernia gestis*, Antwerp, 1584, p. 49) and Fynes Morison (p. 319) speak in similar terms, and Spenser (*View of the State of Ireland* [*Works*, Globe ed., London, 1906, p. 636[a]]) describes a scene equally barbarous and impressive, when, after the execution of Murrough O'Brien, his old foster-mother flung herself on the ground and drank the blood that flowed from the headless corpse.

(4) *Political significance.*—The passion which inspired such actions was to Englishmen morally unaccountable and therefore repugnant; and its consequences were politically inconvenient. A relationship so wide-spread and so intimate formed a social cement of great tenacity, and helped to solidify the tribal system which the conquering race was above all things anxious to undermine. If a native leader had a turbulent and dangerous following, it was apt to be commanded by a foster-brother, who clung to him with desperate loyalty.

The State Papers supply instances in point. When the Sugan Earl of Desmond was finally hunted down, the only man left with him was his foster-brother, Thomas O'Feighey (R. Bagwell, *Ireland under the Tudors*, London, 1890, iii. 391). See also J. Perrott's report as to the fosterer of Turlough Lynagh O'Neill (Calendar of State Papers [Ireland], 1574–1585, p. xxii).

Another circumstance gave a formidable extension to the influence of the custom. The relationship was not confined to the family of the fosterer, but might be accepted by the whole sept to which he belonged. Examples of this are given by O'Curry (*Manners and Customs*, ii. 375), who goes so far as to assert (ii. 355) that fosterhood 'was *generally* that of a whole family or tribe,' and that 'in very many cases it became a bond of friendship and alliance between two or more tribes and even provinces.' This is an exaggeration; it is more probable that the tribe was concerned only when the fosterling was the son of an important chief. Such cases are to be met with frequently in Elizabethan times.

Hugh Roe O'Donnell, born about 1572, was fostered by chieftains of the O'Donnells and McSwineys and also by the O'Cahans, thus uniting the support of three of the strongest clans in the north of Ireland (*Life of Hugh Roe O'Donnell*, ed. D. Murphy, Dublin, 1895, pref. xxxii). The strength of the famous Shane O'Neill is reported to lie 'not in the nobility nor yet in his kinsmen and brothers, but in his foster-brothers the O'Donnellaughs, about 300 gentlemen' (Calendar of State Papers [Ireland], 1509–1573, p. 333; cf. Introd. to this volume, p. xv). In a description of the state of Ulster in 1586 the Quins and Hagans are spoken of collectively as fosterers of the Earl of Tyrone (Cal. State Papers, 1608–1610, Introd. p. x).

It was not only the cohesion thus imparted to the tribal system that made the custom objectionable to English politicians. They saw in it one of the main influences which tended to merge the English settlers in the native population. The Statute of Kilkenny in 1367 declared fosterage and *gossipred* between English and Irish to be high treason; and 'fosterage and alliance with the Irish' headed the list of charges for which the seventh Earl of Kildare and eighth Earl of Desmond suffered attainder, and the latter execution, in the year 1468 (*DNB*). Nevertheless, the Statute of 1367 soon became inoperative in this respect. Sussex, writing in 1557, complains that it is not put in execution (Cal. State Papers, 1509–1573, p. 138). Fynes Morison (p. 260) classes fosterage, along with intermarriage, among the five main causes which combined to alienate the Anglo-Irish from the English connexion. At the very end of the 16th cent. Spenser (p. 675[a]) declares that the English settlers tend to 'become mere Irish, with marrying with them, fostering with them, and combining with them against the Queen.' Amid the general effacement of native institutions which followed the suppression of Tyrone's rebellion, fosterage disappeared, though traces of the custom persist in later days.

6. Gaedels of Scotland.—As the Scottish Highlanders were originally an offshoot of the Irish race, it is not surprising to find that fosterage prevailed amongst them also. It did not attain the same political importance here as in Ireland, but there is sufficient evidence to show that it was equally common and associated with an equally powerful sentiment. Two striking examples of the devotion displayed by foster-brothers are cited by Sir Walter Scott in the preface to his *Fair Maid of Perth*. As the native social system lasted unbroken in the Highlands longer than in Ireland, this characteristic feature survived later. Dr. Johnson found it still in vigour when he visited the Hebrides in 1773. His *Journal* describes in detail the arrangements made between foster-parents and the fathers of their charges (*Journey*

to the Western Islands, London, 1876, p. 118). Skene (*Celtic Scotland*, Edinburgh, 1876–80, iii. 221) gives four examples of written contracts of fosterage, the latest of which dates from 1665. They confirm the accuracy of Dr. Johnson's statements, and agree in principle with the Irish *Cáin Iarraith* already quoted. The obligation of the foster-father and the parent, and the share of expenses to be borne by each of the parties, are very precisely specified.

7. Wales.—Among the Brythonic races the evidence of fosterage is much more meagre than with their Gaedelic relations. The remains of Breton and Cornish literature are too slight to furnish any information, but in the *Mabinogion* instances are found sufficient to show that the custom held a certain place in the primitive life of the Welsh people (see the tales of Peredur, Kulhwch, and Branwen, in Lady C. Guest's *Mabinogion*, London and Llandovery, 1849, i. 313, ii. 250, iii. 114).

The references to the subject in the *Ancient Laws of Wales* are casual and unimportant in comparison with the elaborate provisions found in the Irish Laws; but they imply that it was a common practice for a noble to allow his sons to be fostered in the house of a serf (*aillt* or *taeog*). If such fosterage lasted a year and a day, the boy thereby acquired a right to a share in the goods of his foster-father (*Ancient Laws of Wales*, London, 1841, pp. 95, 393). No such right seems to have existed in the case of freehold (*breyr*) land.

The sons of kings seem to have been frequently brought up in noble houses. The early Latin *Life of St. Samson*, who lived in the 6th cent., speaks of his parents' families as being of high rank and fosterers of kings (*altrices regum*) (*AS*, 28 Jul., vi. 574). Giraldus Cambrensis declares that in his time this usage led to civil discord, as the nobles who had thus reared the different sons of a royal house took each of them the side of his own foster-son, and pushed *his* interests against his brothers'. Giraldus adds that truer friendships are accordingly to be found existing between foster-brothers than between brothers in blood (*Descriptio Cambriæ*, lib. ii. cap. 4, 9).

A remarkable instance of this is quoted in J. E. Lloyd's *History of Wales*, ii. 549. When, on the death of Owain Gwynedd, war broke out among his surviving children, and his son Hywel was defeated and slain by his half-brothers, he was defended to the last by the seven sons of his foster-father Cadifor, who died fighting round him.

Sir J. Rhŷs (*Welsh People*[3], London, 1902, p. 207, note) suggests that the explanation of the custom of fosterage in Wales is to be sought in the character of the marriage-contract and the division of the children on the separation of the parents. But this theory is at variance with the whole treatment of the subject in Irish law, and it is not likely that the custom had different origins in two neighbouring peoples of kindred race. It is perhaps more likely, as is suggested by Anwyl (see CHILDREN [Celtic], § 1), that it was connected with some primitive tabu which forbade the father to see his children until they had reached a certain age (cf. the account of the Circassian practice quoted above, I. § 4). Whatever the origin of fosterage may have been, the evidence here collected indicates that it is most likely to develop and assume importance in a disturbed and unorganized condition of society, where the individual, not being able to rely on a central authority or on corporate social instinct, is led to seek security by laying great stress on family ties, and by giving to artificial relationships the same sanctity as to the natural obligations of blood-kinship.

LITERATURE.—For discussions and descriptions of fosterage in different countries, see especially the following: H. S. Maine, *Lectures on the Early History of Institutions*[7], London, 1905, pp. 241–243; *EBr*[11], art. 'Foundling Hospitals,' with the authorities there quoted; R. Cleasby and G. Vigfusson, *Icelandic-Eng. Dict.*, Oxford, 1874, under 'Barnfóstr,' 'Fóstr,' and derivatives; V. Gudmundsson, in H. Paul's *Grundriss der german. Philol.*, Strassburg, 1891, iii. 415 ff., with authorities cited; K. Weinhold, *Altnord. Leben*, Berlin, 1856, p. 285 f.; K. Kaalund, in *Aarbøger for nordisk Oldkyndighed og Historie*, 1870, p. 279 ff.; *Ancient Laws of Ireland*, vol. vi., Glossary, Dublin, 1901, p. 460, *s.v.* 'Iarraith'; E. O'Curry, *Manners and Customs of the Ancient Irish*, London, 1873, ii. 355, 375; P. W. Joyce, *Soc. Hist. of Anc. Ireland*, do. 1903, ii. 14–18; C. Plummer, *Vitæ Sanctorum Hiberniæ*, Oxford, 1910, i. cvi; J. E. Lloyd, *Hist. of Wales*, London, 1911, i. 310, ii. 549. For primitive peoples, consult the references given by A. H. Post, *Grundriss der ethnolog. Jurisprudenz*, Oldenburg, 1894–95, i. 96–98, ii. 67, 177.

E. J. GWYNN.

FOUNDATION, FOUNDATION-RITES.—Throughout the lower culture the erection of a new building, or the foundation of a new settlement, is the occasion for certain rites, which may be described as magico-religious, and of which the rites still performed in civilized countries at the laying of a foundation or memorial-stone, or at the consecration of a church or masonic lodge, are the pale and attenuated survival.

1. Choice of site.—The first business is naturally the choice of an appropriate site. Among savage and barbarous peoples this choice is guided not merely by considerations of health or suitability to the occupation (whether hunting, fishing, agriculture, or the rearing of cattle) whereby they gain their means of livelihood, or of safety from enemies or from wild beasts, but also by its acceptability to superhuman beings and the prospect it affords of good fortune. For this purpose recourse is had to divination, the methods of which are various.

The site having been provisionally selected, the Mundas of Chotā Nāgpur dig a hole at each of the four corners and place a small quantity of rice in them, with a prayer to the divinity Singbonga that the test may truly indicate whether the site be good or bad. If the rice is found next morning undisturbed, the omen is good, and with another prayer to Singbonga for a blessing on the site the work of building proceeds (Dalton, *TES*, new ser., vi. [1868] 33). This mode of augury is common in India and Africa. In Africa sometimes, but not always, the omen is reversed, as among the Maravi, west of Lake Nyasa, where a small heap of flour is laid under a tree. If twenty-four hours later it is found undisturbed, the site is rejected as displeasing to the *Wazimo* (ancestral spirits), who decline to partake of food there. But, if the flour has been disturbed, the *Wazimo* have eaten of it, and the choice of site is ratified (Andree, *Ethnog. Parallelen*, Stuttgart, 1878, i. 24).

The foregoing are illustrations of a simple method of divination. When professional diviners are called in, the ceremonies frequently become very complex, and it is impossible to enumerate or even roughly classify them. Attention may, however, be drawn in passing to the Chinese practice, which has elaborated geomancy into a pseudo-science called *feng-shui* (*q.v.*), without which no site is selected for any purpose (de Groot, *Rel. Syst. of China*, Leyden, 1892 ff., iii. 936; Dennys, *Folklore of China*, London, 1876, p. 65). But there are some methods of divination which, followed by uncivilized peoples, have found a place in mediæval times, and among the more backward inhabitants of modern Europe. Animals of good omen for this purpose are met with in many countries.

In Japan a Buddhist temple was erected, under the Emperor Kotoku, on the spot where a white deer was seen quietly moving (*Nihongi*, Aston's tr., Yokohama, 1896, ii. 236). In Germany the Abbey of Herford was erected on a site shown, in answer to prayer, by a snow-white cow bearing a burning taper on either horn; and the site of a neighbouring church was determined in the 11th cent. by a flight of doves (Pröhle, *Deutsche Sagen*, Berlin, 1863, p. 132 f.). Many such sites in France and Germany are alleged to have been chosen by similar indications. The capture of a bear in the forest on the banks of the Aar on Good Friday, 1191, when Duke Berchthold of Zäringen was contemplating building a fortress to overawe his rebellious lieges, is said to have decided the site of the town of Berne (*ib.* 160). The contrary case is reported from India, where the village of Ner Pinglai in Berar was built by Nawab Muhammad Khan Miyazi on the spot where, we are told, a hare turned on one of his hounds and put it to flight (*NINQ* iv. [1894–5] 205; cf. 108, and Crooke, *PR*[2], 1896, i. 100). On the N.E. slopes of the Carpathians the Huzule peasant does not regard every site as lucky, and thus suitable for his house. He is guided in the choice by his cattle, and builds where they prefer

to lie. He avoids the place where red ants make their hill; but a hill of black ants promises good fortune. Like a wise man, however, he will sleep over it, and that on the very spot. If his dreams are fair, especially if of fine cattle, this settles the matter; otherwise he looks elsewhere. Or sometimes he will test the site by leaving on it a glass not quite full of water and covered with a leaf. If on the following day the water has increased, the place is lucky; if it has not, he will avoid it. If these precautions be omitted, the site may turn out to be haunted by evil spirits; and then the house also will be haunted, and mischief will result to the inmates (Kaindl, *Die Huzulen*, Vienna, 1894, p. 29).

Another form of divination is found frequently in French legend, as, for instance, in the story of the foundation of the famous abbey of Cluny, concerning which we are told that the monks were unable to agree where it should be built. The dispute was finally decided by one of them, who was a mason, flinging his hammer; and the abbey was erected on the spot where it fell (Sébillot, *Folk-lore de France*, iv. [Paris, 1907] 114).

A somewhat similar mode is employed by the Southern Slavs. It is not, indeed, employed to fix a site, but to determine whether the hill-spirit will permit the erection on a hillside provisionally selected. The peasant-farmer who proposes to build rolls a flat round cake down the hillside. If it ultimately falls on its face, the hill-spirit which haunts the place is favourable; otherwise the omen is against him, and the farmer must seek another position. The cake here is perhaps an offering to the hill-spirit. In the Austrian Duchy, furthermore, the peasant lays about the chosen site some large stones. Coming three days later, he turns them over to see whether worms are to be found beneath them; and he builds on the spot where that stone lies under which the worms appear. The worms are the messengers of the earth- or hill-spirit who dominates the place, and their presence is a sure indication of his consent (Krauss, *Volksgl. der Südslaven*, Münster i. W., 1890, p. 158).

Throughout N.W. Europe a very common legend relates that the site, especially of a church, was changed by supernatural means. The legend is usually ætiological, and its object is to account for a site the original reason for which has been forgotten. But it often points to the necessity for securing the consent of the local earth-spirits to the erection. This belief appears repeatedly in both legend and custom in many parts of the world. It is brought prominently forward in many stories relating to the elves or fairies, in the British Isles and elsewhere.

In Galloway, for example, 'when the new house at Greenan was being founded, a woman appeared and asked the masons and others taking a hand in the work to change the site. She told them that the house on that site would be right over her dwelling, and in consequence much annoyance and inconvenience would be caused to her and her household' (*Rep. Brit. Ass.*, 1897, p. 491). In Sweden great care is taken to avoid a spot haunted by the underground folk. The builder must go to the chosen place, make known his purpose in a loud voice, and ask permission; and the day before he intends to begin work he lays his tools and materials there. If the underground folk agree, the noise of people busy with hammering and hewing will be heard in the silence of the night. In the Faroe Islands an instrument as modern as the compass is laid on the site. According to its behaviour it is ascertained whether the *Huldre* dwell there; if they do, they must not be disturbed (*Zeitschr. d. Vereins f. Volksk.* viii. [1898] 274, 273).

Sites in Europe and elsewhere, especially for churches, are said to have been indicated by the direct command or the apparition of supramundane beings, such as the Virgin Mary. Or an image is found in a certain spot and cannot be removed. It is needless to refer here to instances. Sometimes the Divine will is shown by a flame or light seen in a bush, as in the case of the Monmouthshire church of Llantilio Bortholly (*Parochialia*, *Arch. Cambr.*, 6th ser., xi. [1911], Suppl. 38, 71). Some of these sites, such as that of the famous shrine of Our Lady of Guadalupe, near the city of Mexico, may have been places of pagan worship, converted to Christianity in accordance with the well-known policy of the Church.

2. **Appropriation of the site.**—The site being chosen, the next business is to appropriate and exorcize it, and incidentally to mark it out. Among the Basuto, when the village, or *kraal*, as it is often conveniently termed, is to be removed, the chief drives into the ground a peg covered over with charms to nail the village firmly to the soil of the new site, and in order that neither war nor any other misfortune may distress the inhabitants and force them to change their abode. This is a formal and religious act, and probably attended with ceremonies which our authority has unfortunately not thought proper to recount (Casalis, *The Basutos*, Eng. tr., London, 1861, p. 124). Among the A-Kamba of East Africa (like the Basuto, a Bantu people), when a new village is founded, a medicine-man is generally consulted, and, having satisfied himself by divination that the site chosen is lucky, he kills a goat and walks over the rough outline of the village, sprinkling it as he goes with the goat's blood and the contents of its stomach. The fence of branches surrounding the site is then put up. The head of the village and his family camp in temporary shelters inside the fence for several nights before beginning to build the huts. On the second and fourth nights of their preliminary occupation the head of the village must cohabit with his wife—doubtless as a magical rite to obtain prosperity, and increase in cattle and crops, as well as in the human population (Hobley, *Ethnol. of A-Kamba*, Camb. 1910, p. 58). The circumambulation of the site as performed by the medicine-man of the A-Kamba is also a magical rite. In Siam, when the ground for the erection of a Buddhist temple is first dedicated, eight *luk nimit*, or round marking stones, are sprinkled with holy water and buried, to mark the limits from which evil spirits are warned off (Alabaster, *The Wheel of the Law*, London, 1871, p. 272 n.). Doubtless the priest performs the sprinkling by walking the boundary. The Etruscans, on founding a city, ploughed with a cow and a bull a furrow round the limits; and we gather from Ovid's account of the *pomerium* of Romulus that the animals yoked to the plough were white (*Fasti*, iv. 826). To some such rite as this, misunderstood by later ages, we must attribute the numerous legends assigning, as the extent of lands given for various purposes, the quantity that the recipient could walk or ride round in a day. Thus Coirbri, when a fugitive from the south of Munster, was given by his son-in-law Aedh, king of Connaught, as much of certain wooded lands as he could pass round in one day. As in all these stories, the extent of the land thus acquired was much greater than the donor anticipated, and led to subsequent trouble (*Annals of the Four Masters*, Dublin, 1851, iii. 239 n.). Variants of the tale are by no means confined to Europe.

The most famous of all is perhaps the Hindu legend of Viṣṇu, who appeared to Bali in the form of a dwarf mendicant and begged three paces of his vast kingdom. The boon was granted contemptuously. Forthwith the dwarf with his first step measured the earth, with the second the skies, and there was no space left for the third. Bali submitted to the god, and was made the judge of the dead (Southey, *The Curse of Kehama*, quoting in a note Sonnerat's *Voyages*. The ultimate literary source is the ancient poem of the *Harivaṁśa*).

Of similar origin are the stories which represent the quantity of land as to be enclosed by a bull's hide. It is cut into very thin thongs, and the area is thus rendered unexpectedly great. The earliest example of this is the tradition of Dido, who obtained the site for Carthage in this way. Parallel tales are found in Britain and Scandinavia, though not without suspicion of literary influence—a suspicion, having regard to the legend of Gefjon's Ploughing, not entirely deserved. The legend is also current among the Tatar tribes of Siberia, and as far to the east as China. There, in one version, the settlers are Spaniards, in others Dutch; and to the Dutch and Portuguese is attributed a similar trick in India and Cambodia. The incident is even told by the Hottentots of the first settlement of the Dutch at the Cape of Good Hope (Arbousset and Daumas, *Exploratory Tour in S. Africa*, Eng. tr.,

Cape Town, 1846, p. 25). The kind of rite to which these legends point may be illustrated from the practice of the Bechuana in founding a new town.

A bull is taken, its eyelids are sewn together, and, thus blinded, it is allowed to wander at will for four days. It is then killed where it is found, roasted, and eaten on the spot. The witch-doctors take the skin, and, after it has been marked with certain appropriate markings and 'medicine,' it is cut into one long spiral thong. This thong is finally divided into lengths of about two feet. One of the lengths is pegged down in each of the paths leading to the new township. 'After this, if a foreigner approaches the new town to destroy it with his charms, he will find that the town has prepared itself for his coming' (*JAI* xxxv. [1905] 303 f.). It is clear that we have here a mystic rite intended for the protection of the town and its inhabitants.

Among some of the Kaffir tribes of South Africa the medicine-man formally disenchanted the site before the work of building was begun (*Mélusine*, x. [1900–01] 70, citing Magyar, *Reisen in Süd-Afrika*, Budapest and Leipzig, 1859).

The practice of the Yaos and Manganja about Lake Nyassa prescribes that the chief, with his brother and the medicine-man, shall rise at dawn. Walking round the site, they tie the grass-tufts into little knots, smearing them with medicine. At the spot where the *Kuka* hut is to be erected they take fire and put 'medicine' upon it. Then, taking water, they blow it in a spray from the mouth. This is to guard the village from lions and cannibals. The people then bring the building materials, and clear the ground (Rattray, *Folklore in Chinyanja*, 1907, p. 109).

Among the Ho tribe of Ewe, a Negro people of West Africa, a big mound is cast up. The priest then takes four cowries in his hand, mixes meal and water in a calabash, and prays 'the earth which they have just found' (possibly the *genius loci*) for favour and human fecundity, and that nothing evil may happen. He pours the meal and water on the ground, praying the earth to be soft, and throws the cowries upon it. If they, or even two of them, fall with the opening upwards, the augury is favourable. When the site has been cleared and prepared for building, 'medicine' is made and sprinkled on the earth, and the people all wash their faces with it, and are asperged with holy water. Lastly, an offering of meal is made to the earth for favour (Spieth, *Die Ewe-Stämme*, Berlin, 1906, p. 867).

In some of the Moluccas, where the population is Muhammadan, a ceremony which, like that of the Ewe, is called by our authorities 'consecration' is performed.

On the day of the new moon the owner's wife measures a piece of rope with her 'fathom'—that is, presumably, the length of her outstretched arms—and gives it to her husband, together with a bottle of water and an egg. The rope is rolled up and laid partly in the ground, with the bottle and the egg. The owner invokes the prophet Loqman the Wise, and explains to him that these objects are placed there to obtain an augury. He watches all night. If a dog approaches, it forebodes quarrels in the house; if a cat passes by, it means sickness. If neither of these contingencies occurs, and if next day the rope is found of the same length, the bottle still full, and the egg uncorrupted, the omens are favourable, and the work proceeds. This rite would seem to be not merely a consecration, but an endeavour, like some of those previously discussed, to ascertain the will of the higher powers (Riedel, *De sluik- en kroesharige rassen*, The Hague, 1886, p. 160).

Nor is consecration of the site, even of ordinary dwelling-houses, unknown in Europe. In some parts of Germany pious people of the old faith still sprinkle the site with holy water and bless it. Formerly a priest performed this function; and by its means all evil, all ghosts and demons, were exorcized (*Globus*, xci. [1907] 335, quoting Montanus, *Die deutsche Volksfeste*, Iserlohn, 1854–58). Consecration (*q.v.*) of sacred sites is, of course, well known. It is not a specially Christian rite, but has descended from much more archaic times and practices.

3. **Laying the foundation.**—When the site has been appropriated, it is cleared and levelled. The next step is to collect the materials. This is often done either by rule, or in accordance with the directions of a priest or medicine-man after divination; and certain rites must be observed. It is begun on a day declared lucky, or (where astrology is practised) according to the calculations of the astrologers. Except among highly civilized peoples, where more substantial materials are easily obtainable, or in the case of very important buildings, the fabric is usually of timber. If a block-house, as frequently among the peasantry of Europe, the lower beams constitute the foundation. Otherwise the stability depends on the centre-poles or the corner-poles; and it is consequently about their erection that ceremonies tend to aggregate. Such ceremonies to procure stability may be roughly divided into those whose object is: (*a*) to scare away evil spirits and destroy spells; (*b*) to conciliate the local spirits; (*c*) to provide a new tutelary power.

Among many peoples the house must face in a particular direction, frequently to the east. On some of the Moluccas it faces the east, in order not to offend the divinity Upulero (Riedel, 380). In the State of Manipur (India) it is the rule of some of the Nāgā tribes that the house must not face the west, because that is the direction taken by the spirits of the dead. As showing how utilitarian sometimes coincide with superstitious considerations and render it difficult to distinguish the real origin of a practice, it is to be noted that the prevailing wind is westerly, and it would, therefore, enormously increase the danger of fire to build the house fronting in that direction (Hodson, *Naga Tribes of Manipur*, London, 1911, p. 43). The custom of many North American tribes is to place the encampment with its entrance to the east. This was always done among the Omaha when the tribe encamped for tribal ceremonies; while at other times, if the entrance was not actually in that direction, it was always symbolically so reckoned, and the position of the various clans relatively to it was the same (Fletcher, *27 RBEW* [1911], 137). In the lower culture the plan and erection are always traditional, and it would be a serious breach of custom to depart from them. When a chief of the Bechuana chose a site and fixed the place of his own dwelling and the public cattle-kraal, each of his tribesmen knew the relative position of his own hut (Mackenzie, *Ten Years North of the Orange River*, Edinburgh, 1871, p. 367).

(*a*) *To scare away evil spirits and destroy spells.*—Some of the ceremonies at the foundation of a house or more important building are in themselves apotropæic.

The Tlingit, as appears from one of their recorded traditions, cut the large trees for the timbers of a feast-house fasting; and, while it is being completed, the drum is beaten continually (Swanton, *Tlingit Myths and Texts*, Washington, 1909, p. 335). The Japanese ritual for the building of a royal palace prescribes that the ground is to be levelled and cleared by young virgins; with a sacred spade they are to dig holes for the uprights; with a sacred axe they are to make the first cut in the trees selected for the timbers; and at the completion a ceremony is performed at the gates, in the course of which the names of the gods who watch over the house are repeated by the officiant (*TASJ* ix. [1881] 190 ff.). In building a house the Baganda begin from the roof. The apex is a ring of cords bound together, and into this the reeds for the roof are stitched. The workmen who made the rings for the royal houses were required to live apart from their wives while they were at work; and no one might come near them or touch the work (Roscoe, *Baganda*, London, 1911, p. 370 f.). The sprinkling of 'medicine' in the ceremony practised by the Ho tribe has already been mentioned (§ 2). In the neighbourhood of Dinant, in Belgium, the owner of a new house dips a box-twig, which has been blessed by the priest, into holy water and asperges the foundation-stone before laying it, and the twig is built into the wall (*RTP* ix. [1894] 563). The virtues of holy water, both heathen and Christian, are well known.

Near Goslar, in Protestant Germany, a tale is told of a master miner bold who successfully explored a vault belonging to the mountain-folk and wrested from them a silver goblet. He sold the goblet, and applied the proceeds in building a new wall to his kitchen. But, as soon as the fire was kindled, the wall fell in. When this had happened several times, he consulted the parson, by whose advice he bought a new Bible and built it into the wall; and the wall stands to this day, though the owner and his family have died out (Pröhle, 30).

In some parts of the Scottish Highlands 'there should be placed below the foundation of every house a cat's claws, a man's nails, and a cow's hoofs, and silver under the door-post. These will prove omens of the luck to attend the house' (J. G. Campbell, *Superstitions of the Highlands*, Glasgow, 1900, p. 231). In Sussex a bottle containing pins is buried beneath the hearthstone to ensure safety from witchcraft (Henderson, *Folkl. of Northern Counties of Eng.*, London, 1879, p. 232). In Lincolnshire an animal's heart stuck full of pins was regarded as a great protection (*FL* xii. [1901] 176). In Ceylon, four pebbles and four silver coins should be charmed, and one of each buried at each corner of the site. Precious stones of poor quality may be

substituted for the pebbles with advantage, since they attract the 'sight' of gods and benevolent demons (*JRAI* xxxviii. [1908] 190).

The Huzules lay incense, money, salt, and bread under the lower beams of their blockhouses towards the interior, and towards the exterior charcoal and mortar from a baking oven. The former objects are regarded as luck-bringing, the latter as efficient against enemies, probably spiritual. We may, however, perhaps see here a relic of the custom of bringing fire from the old house (Kaindl, 31). Salt and bread are widely regarded among comparatively civilized peoples as valuable talismans, the former as driving away evil influences, the latter as bringing plenty. They are among the first objects to be brought into a new house; and salt is commonly placed on the breast of a corpse while it is lying in the house. Money, like bread, and doubtless for similar reasons, is pre-eminently lucky.

When Pope Julius II. in full canonicals laid the foundation-stone of the citadel of Cività Vecchia, he spread mortar in the form of a cross (an apotropæic spell) and put under the stone a vase full of coins (*RTP* ix. 90, citing Bonanni, *Numismata summor. Pont.*, Rome, 1696). During the viceroyalty of Lord Dufferin, Lady Dufferin laid the foundation-stone of a hospital in India and put underneath it coins, together with a little golden serpent, an infallible charm for the building (*RTP* vii. [1892] 489, quoting Lord Dufferin's *Four Years of Viceroyalty*, ii. 231).

Pre-historic celts and arrow-heads are amulets wherever the Stone Age has been forgotten in the march of civilization. In France they are constantly found buried beneath the foundations or in the walls of houses, or even churches, as preservatives against thunder or fire; or they are kept in the house for the same purpose, or hung up in the stables and outhouses to secure the domestic animals from disease. They are also worn on the person or stuck into fruit-trees (Sébillot, iv. 70).

Various plants, too, are held to be prophylactic. The consecrated box-twig at Dinant has already been mentioned. On the island of Rügen a juniper-bush is laid in the foundation to keep out the devil and evil spirits (Kuhn, *Sagen, etc., aus Westfalen*, Leipzig, 1859, ii. 60). On the island of Serang in the Moluccas, beneath the spot where the sleeping apartment will be, health-giving herbs and roots are buried to keep off evil spirits (Riedel, 119). Sacrifices of men or animals will be discussed below. Independently of sacrifice, however, blood has a well-recognized magical value. The Ottoman Jews, on digging a well, cut the throat of a cock and allow three drops of blood to fall into the excavation in order to destroy the effect of any talisman which might cause it to fall in (*Mélusine*, viii. 281). To the blood of fowls, among other substances, the Nicobarese ascribe occult virtue; they smear their houseposts, or even their own bodies, with it, either alone or mingled with various powerful ingredients, for protection against evil spirits (*Intern. Archiv*, vi. [1893] 13). In Aberdeenshire the first stone laid is that behind the fireplace. A chicken is struck upon it until it is covered with blood. This will ensure that the pot boiling on the fire will always be well filled, so long as he for whom the house is built occupies it (Gregor, in *RTP* vi. [1891] 173). It is said that the mortar used to build the Tower of London was tempered with the blood of beasts (*NQ*, 7th ser., vi. [1888] 350, quoting Fitzstephen's *Survey of London*, London, 1598). Blood is prescribed for this purpose in many places; whether it is actually used is another question. Not very long ago a builder at Brooklyn went to much trouble and expense to try the experiment with bullock's blood; but the results did not justify the outlay (*ib.* vii. 13). Like all barbarous customs, the use of blood tends to the adoption of a milder expedient. One of the traditions relating to the bridge in the Kuventhal, Lower Saxony, affirms that a bottle of wine is walled up in the foundation (Schambach-Müller, *Niedersächs. Sagen*, Göttingen, 1855, p. 18). To this origin we may attribute the breaking of a bottle of wine against the bows of a ship in the ceremony of launching.

(*b*) *Sacrifices.*—In cases like those hitherto examined, the shedding of blood seems not to have a sacrificial object, but to be performed for the prophylactic virtue of the blood itself. More numerous, however, are the instances in which it constitutes a sacrifice. In connexion with this we shall find that life, whether of men or of the lower animals, is not the only form of sacrifice at the foundation of a building.

Sacrifices are sometimes offered to ancestors on these occasions. In German South-west Africa, when a man dies at a *werft*, or village, the *werft* is abandoned and a new one founded. If he has been a man of importance, he is buried in the cattle-kraal of the old *werft*. After a lapse of years the people often return to the former site to rebuild there. The holy fire of the *werft* where they have been living in the meantime is extinguished, in order that new fire may be made with fire-sticks in the sacred manner on the site to which they are returning. Before doing this, they invoke the deceased chief of the *werft*, calling themselves his children and telling him they have done as he ordered. When the new sacred fire has been made, it is the custom to slaughter a sheep as a sacrifice before the huts are put up (*S. Afr. Folklore Journal*, i. [1879] 61). On the island of Buru in the East Indies, as soon as a site has been decided on by divination, an offering to ancestors is made (Riedel, 12).

This also seems to be the explanation of an obscure Maori custom. 'The ground-plate which supports the house is carved to represent the prostrate figures of slaves who had been sacrificed; on them the figures of ancestors stood.' Taylor (*Te Ika a Maui*², London, 1870, pp. 36, 502) explains this as referring to 'an extinct custom of killing human victims and placing them in the holes made to receive the posts, that the house, being founded in blood, might stand.' The crushing of human victims beneath the pillars of a new building is, as we shall see hereafter, capable of another explanation. But, if it were really a sacrifice here, it would without doubt be a sacrifice to ancestors.

More usually, however, it is to divine beings or to local or earth-spirits that the sacrifice is offered. In India the examples are very numerous. Only a few can be referred to here; some others will be considered later.

The Kols of Chotā Nāgpur offer an egg to the good god Singbonga, the yolk being his symbol (F. Hahn, *Einführung in das Gebiet der Kolsmission*, Gütersloh, 1907, p. 91). When the fort of Lohagad was built, a Maratha offered his son and his son's wife to be buried under the foundation, because the king was warned in a dream that 'the favour of the god of the hill was won by burying alive a man and a woman' (*BG* xviii. pt. iii. p. 249).

The practice of slaughtering an animal on such occasions is firmly rooted throughout the west of Asia and the north of Africa.

The Arabs of Moab, east of the Dead Sea, thus endeavour to pacify the *jinn* (who are regarded as malevolent spirits) whenever a tent is set up in a new place. As soon as the tent is fixed, a fat sheep is taken, its head turned to the south, and its throat cut with the words, 'Permission, O possessor of this place!' This is a request for authority to enter the tent and to dwell there. Part of the blood is received from the victim in a bowl. With it the master of the tent anoints the centre-pole; and sometimes the goat-skin curtain closing the entrance on the west side is also asperged with the blood. The half-sedentary Arabs of the same country make a similar offering at the building of a house, first on putting up the vault, again on the threshold when the lintel is laid, and once more on the threshold at completion. The practice even extends to Christians of the Greek and Latin communions (Jaussen, *Coutumes des Arabes*, Paris, 1908, p. 339 ff., cf. 319).

Analogous to this was the ancient Roman custom on fixing a boundary stone. A victim was killed and offered as a burnt sacrifice. Fruits of the earth, together with the bones, ashes, and blood of the victim, were put into a hole, and the boundary stone was rammed down upon them. It has been suggested with probability that the

annual festival of the *Terminalia*, in the course of which a lamb and a sucking pig were slain and the boundary stone sprinkled with their blood, was a renewal of the rite with which the stone was originally fixed in its place (Fowler, *Roman Festivals*, London, 1899, p. 325). In the east of Europe a lamb or, as an alternative, a cock is commonly sacrificed; for, according to a popular adage in Greece, 'there must be blood in the foundations.' The object of the sacrifice seems to be to propitiate the στοιχεῖον, or familiar of the spot (Rodd, *Customs and Lore of Mod. Greece*, London, 1892, p. 148).

The Sea Dayaks of Borneo, when removing a village, kill a fowl or pig for every family before digging the holes to receive the posts. The blood is smeared on the feet and sprinkled on the posts to pacify Pulang Gana, the tutelary divinity of the earth (Roth, *Natives of Sarawak*, London, 1896, ii. 15; cf. 215). The Milanaus in N.W. Borneo seem originally to have offered a human sacrifice to the earth-spirit (*ARW* xii. [1909] 140). In the Malay peninsula brazil-wood, ebony, and scrap-iron are deposited in the hole for the centre-post. The last is possibly apotropæic. A fowl, goat, or buffalo is sacrificed by cutting its throat, and the blood is spilt into the hole, or an egg is deposited in it (Skeat, *Malay Magic*, London, 1900, p. 143 f.).

In the New World, similar sacrifices appear to have been made, though the exact object is not quite so clear. The Mazatecs in Southern Mexico, for instance, dig a hole beneath the place intended for the fireplace, and bury there cacao-beans, eggs, and small chickens, 'to secure good fortune' (Starr, *Ethnog. of Southern Mexico*, i. [1900] 79). In Guatemala, the Kekchi Indians, when building a communal house, slaughter a pig at midnight and smear the posts and beams with its blood (*ARW* vii. [1894] 465).

In Africa, when the foundations were laid of a European house, built by some German missionaries and other prisoners for the king of Ashanti before the taking of Kumasi, a sheep was slain, and the blood sprinkled on certain places with prayers to the 'Fetish' (Ramseyer-Kühne, *Four Years in Ashantee*, ed. London, 1875, p. 226). When Tako-donu, the founder of the Kingdom of Dahomey, conquered the Foys about the year 1625, he took Dà, their king, put him to death, and built his palace upon the victim's body, whence the palace and ultimately the kingdom were called Dàwhomi, 'Dà's belly' (Ellis, *Ewe-speaking Peoples*, London, 1890, p. 279 f.).

It is perhaps open to doubt whether this last was literally a sacrifice, or a ceremony such as those described in the following section. The same question does not arise as to the practice in Polynesia, where human sacrifices were not uncommon. At Maeva, for example, such sacrifices were performed at the foundation of temples. The central pillar of one of these was said to rest upon the body of a man who had been offered as a victim to the sanguinary deity worshipped there (Ellis, *Polyn. Researches*[2], London, 1831, i. 346). Similar rites were practised in Melanesia (Codrington, *Melanesians*, Oxford, 1891, p. 301).

In Western Europe numerous cases are reported from Brittany and Belgium where an animal has been killed and the foundations sprinkled with its blood. Usually the animal is a domestic fowl; but in the Morbihan it is said that at the building of a house or a church an ox would be killed, and its blood offered to the earth-spirits, that they might not destroy the building. A pair of fowls was often offered. They were feathered and buried in the middle of the site. Afterwards they were dug up to ascertain whether the sacrifice was accepted. This would be deemed to be the case if they were found eaten by worms. In Anjou and Maine the custom of burying in the foundations a small living animal, such as a frog, was continued to very recent times (*RTP* vii. 37, 179, ix. 564; Sébillot, iv. 90 f.). So in Leitrim, Ireland, it was usual to kill a hen and allow the blood to drip into holes at the four corners of the house (*FL* x. [1899] 118). Remains pointing to the practice of killing and burying animals have been discovered in Germany, in pulling down old houses (*Am Urquell*, iii. [1892] 165). The dried bodies of cats found so frequently walled up in old houses both in this country and on the Continent point to their having been immured alive. The hypothesis derives probability from the belief that every new building must have a victim, in order that human life may be preserved. This belief is at the root of the numerous legends in which the erection of a bridge is undertaken by the devil, with the stipulation that he is to have the first living being (or soul) who crosses it, but he is usually outwitted with a dog or a cat. The devil of Christian belief here doubtless replaces the river-spirit of pagan Animism (see art. BRIDGE, in vol. ii. p. 851). The same belief applies, however, to other constructions.

Many legends of human sacrifice in India relate to the erection of embankments or the excavation of tanks and artificial lakes. In the government of Jaroslav, Russia, there is a story of a miller who used to seize and drown in his mill-pond a belated wayfarer to keep the water-spirit in good humour and prevent the weir from being washed away by the spring floods (Löwenstimm, *Aberglaube und Strafrecht*, Berlin, 1897, p. 16). Among the Masurs, about Gilgenburg in Eastern Prussia, the first living thing that enters a newly built house must not be a human being, for Death lurks there for his prey. It is customary, therefore, to fling a dog or cat first into the house (Toeppen, *Aberglauben aus Masuren*[2], Danzig, 1867, p. 90). At Liège a cat was formerly shut up in a new house to die of hunger before any one else entered; for, when any living creature has died in a house, it is believed to be a guarantee of the life of the rest (Monseur, *Le Folklore wallon*, Brussels, 1892, p. 115). Such practices are, in fact, found all over Europe. The Russian peasant believes that the building of a new house is apt to be followed by the death of the head of the family (Ralston, *Songs of the Russian People*, London, 1872, p. 126)—a belief found in Galloway in the vaguer form that it is 'unlucky for one to build a house to live in' (*Rep. Brit. Assoc.*, 1897, p. 463). Among the Ewe, the Ho tribe think that whoever first enters a new village must die; hence the old people are sent in befroe any one else (Spieth, 370). The Yoruba send two slaves to sleep the first night in a new house, to break the enchantments of the evil spirit Akalasho (Andree, i. 25). In Russia, where slaves are not available, a specially bold person, generally a relative of the owner or a servant, is chosen for this purpose. If nothing untoward happens, and he has no bad dream, the house is safe (*Globus*, lxxxvi. [1905] 51). Or, as among the Ho, the oldest member of the household enters first (Ralston, *loc. cit.*). It is not an unusual thing in the west of Europe for the *curé* to attend to sprinkle holy water and bless the house, in order to exorcize the evil spirits and prevent the death of the house-master during the following year (*RTP* xii. 332; Harou, *Le Folklore de Godarville*, Antwerp, 1893, p. 135). In the Sandwich Islands, offerings being made to the gods, presents were also made to a priest, who entered the house with prayers and other ceremonies and slept in it before the owner took possession, in order to keep away evil spirits, and secure the inmates from the effects of incantations (Ellis, *Polyn. Res.* iv. 322)—a practice followed also in some parts of Melanesia and West Africa.

In course of time sacrifices of living victims, whether human or not, are frequently commuted for something which merely symbolizes the real intention. Thus in Germany, and indeed in other European countries, the skulls or hoofs of horses, querns, and pottery and vegetable remains have been repeatedly found beneath the walls of buildings. In Ireland, horse-skulls have been found, as well as broken querns, buried beneath houses or in recesses of the walls (*FL* xxii. [1911] 54). In Lincolnshire the old-fashioned jugs known as 'greybeards' are sometimes found embedded beneath the foundation, the threshold, or the hearthstone of ancient buildings (*FL* xii. 176). Among the Saxons of Transylvania a human bone used to be buried beneath the floor to give stability to the building (von Wlislocki, *Volksgl. und Volksbr. der Siebenbürger Sachsen*, Berlin, 1893, p. 202). In the middle of last century, when Corgarff Castle, Aberdeenshire, was demolished, it is said that the workmen found in the foundations a fragment of a skull wrapped in a red material. And Dr. Gregor discovered some evidences of a former custom, on the erection of important houses in Ross-shire, for the workmen to seize the first person or animal they met in the morning on going to work, and to touch his head with the first stone to be laid (*RTP* ix. 563). In taking down old Blackfriars Bridge (built in 1760–1768) for the purpose of rebuilding in the year 1867, the engineers discovered, under the foundations of the second arch on the city side, and fifteen feet below the bed of the Thames, a quantity of bones of cattle and sheep and some

human bones. On these the foundations had been laid (Liebrecht, 285, citing *Illustr. London News*, 2nd March 1867). In mediæval times, if not later, at Rome it was the custom to bury ancient statues —the smaller whole, the larger smashed to pieces— under the foundation. Between 1872 and 1882 no fewer than 200 statues and busts were found on the Esquiline alone, buried in this way; and doubtless many more have been since recovered (*FLJ* i. [1883] 23, quoting a communication by Signor Lanciani to the *Athenæum*). Other surrogates will be referred to below (p. 115[a]).

Many substances, however, put beneath a foundation have their own proper value as offerings. Thus a favourite offering in the Moluccas, by way of propitiating the divinity of the earth, is gold or silver—either in dust or small pieces—food and *sirih-pinang* (Riedel, 63, 200, 225, 255, 286, 423); and in the Pueblos of New Mexico sacrificial deposits of turquoise and shell-beads have been found (*Amer. Anthr.*, new ser., ii. [1900] 169).

(*c*) *The provision of a guardian spirit.*—Numerous legends relate that on the construction of an important work such as a palace, a bridge, an embankment, or a city wall, the building repeatedly fell, until a living human being was buried in the foundations; or that such a victim must be obtained to render a fortress impregnable. In the Balkan Peninsula and adjacent parts of the Levant the tale is the subject of many ballads, of which the best known is perhaps that of the Bridge of Arta. Generally the victim is the master-builder's wife, but in the most piteous of all an innocent child is walled up; often it is a virgin or a beggar-boy, in one case a student. These legends are most numerous in Germany, the East of Europe, and India; but they are also found in the west of Asia, North Africa, throughout the European continent, and in the Celtic parts of the British Isles. Specimens have been discussed in the article already referred to (*ERE* ii. 850). Nor are they unknown on the American continent. The Shuswap believe that the beaver, when constructing a dam, kills one of its young and buries it beneath the foundation, that the dam may be firm (*Rep. Brit. Assoc.*, 1890, p. 644). It is common in tales of the N.W. tribes, and indeed a matter of actual practice, that, when a chief or great man built a house, captives and slaves were put to death and the house-posts reared upon their bodies; others were buried beneath the fireplace or the totem-pole in front of the house (Boas, *Ind. Sagen*, Berlin, 1895, p. 186; *JAFL* vi. [1893] 51; *Rep. Nat. Mus.*, 1895, p. 357; *26 RBEW* [1908], 437). In central America the incident is mentioned in the *Popol Vuh*; probably, therefore, the practice was not unknown. In S. America the palace of the Bogota, ruler of the Chibchas, was believed to rest upon the bodies of maidens (Liebrecht, 287; cf. *Anthropos*, v. [1910] 1166).

So deeply engrained are these stories and the beliefs which they imply in the popular mind that in modern times and civilized countries public scares have repeatedly arisen at the erection of great architectural and engineering works.

In India they have recurred many times within recent years, notably at the building of the Hooghly Bridge and the construction of the Calcutta Harbour Works and the new waterworks at Delhi. At the building of the cathedral at Shanghai it was said that the municipal council required a certain number of human bodies to bury beneath its foundations; and for a week people were afraid to go out by night, especially near the site. There was a similar scare in the north of China during the construction of the Manchurian railway. If in our pride we deny that these populations are civilized, let us remind ourselves that such scares have arisen in Germany, as when the bridge at Halle (finished 1843) was built (Grimm, *Teut. Myth.*, London, 1880–88, p. 1142), and during the construction of railways; that it was seriously believed by some people that a man had been thus buried beneath one of the towers of the great bridge between New York and Brooklyn (*NQ*, 7th ser., vii. [1889] 13); and that Lord Leigh, barely half a century ago, was accused of having built an obnoxious person (some people said eight!) into the foundations of a bridge at Stoneleigh (Liebrecht, 285, citing *Nature*, 15 June 1871).

No adequate explanation of legends and scares like these is feasible in the absence of a widespread custom which deeply impressed the popular imagination. Such a custom was not only once common; it is not yet abandoned among barbarous nations. Without going further afield than Turkey, it was reported by the correspondent of the *Echo de Liège*, on 1st Oct. 1865, that, when building a new blockhouse at Duga, near Ragusa, the Christian workmen who were engaged on the work caught two Musalmān soldiers in the act of preparing to bury two young children alive in the foundations. In many cases we have seen that the victims are regarded as a sacrifice to a god or spirit, while in others a magical virtue is attached to their blood. But there is yet another reason. The vague intention expressed in many of the legends to render the building stable or impregnable conceals the purpose, expressed more clearly in the accounts we have of actual sacrifices, to provide a supernatural guardian, a daemon, to watch over it.

'Thus when a new gate was made or an old gate was repaired in the walls of Bangkok, it used to be customary to crush three men to death under an enormous beam in a pit at the gateway. Before they were led to their doom, they were regaled at a splendid banquet: the whole court came to salute them; and the king himself charged them straitly to guard well the gate that was to be committed to their care, and to warn him if enemies or rebels came to assault the city. The next moment the ropes were cut and the beam descended on them. The Siamese believed that these unfortunates were transformed into the genii which they called *phi*' (Frazer, *GB*[3], 1911, 'Taboo,' 90).

The same purpose is explicitly attributed to similar practices prevalent in Burma up to the date of the British conquest. The notion that a human being put to a violent death becomes a powerful daemon is extensively believed. Nor is such a being necessarily hostile to the murderers; it may be, at any rate, propitiated and its friendship secured. The East Indian practice of head-hunting is an attempt to convert an enemy or a stranger into a supernatural protector. The well-known legend of St. Romuald, whose reputation was so great that the community proposed to secure him in perpetuity as a tutelary saint by putting him to death and thus obtaining possession of his relics, is typical of many tales localized from China to the Atlantic. And the same notion is probably—to some extent, at least—responsible for the veneration of the relics of Christian and Muhammadan martyrs. Mighty kings and heroes are sometimes buried on the boundary of the kingdom, to ward off attacks by their supernatural power.

Thus, according to the Norse Saga, Ragnar Lodbrog's son Ivar, dying in Northumbria, was buried by his own desire where his realm was most exposed to attack. Nor could William the Conqueror penetrate the territory until he had dug up Ivar's body and burnt it to ashes. In the *Mabinogion* we are told that, when Bran the Blessed, invading Ireland, was wounded to death with a poisoned dart, he commanded his men to cut off his head and take it to the White Mount, in London, and there bury it with the face toward France. When they did so, 'no invasion from across the sea came to this island while the head was in that concealment' (C. Guest, *Mabinogion*, London, 1877, p. 383). Eoghan Bell, king of Connaught, was similarly interred for the protection of his kingdom.

The custom of living burial for the same purpose was, if we may believe Irish traditions, which are no doubt accurate on this point, carried over into Christianity in connexion with the foundation of monasteries. Oran, one of the companions of St. Columba, offered himself, or the lot fell on him, to be buried alive under the monastery of Iona. Clonmacnois was consecrated by the similar burial of a leper who was in St. Patrick's retinue. The protective purpose does not definitely appear, it is true, in these stories. It is clear in the case of the

sisterhood at Cill Eochaille, founded by St. Senan of Inis Cathy. They entreated Senan that the body of a lowly monk of his community might be given to them 'to be buried by us, so that his relics may protect us.' Senan replied: 'Verily this shall be granted to you. Be in no distress as to one from whom your protection shall come' (*Arch. Cambr.*, 5th ser., xvii. [1900] 256). Probably in this case the monk was not buried alive. However that may have been, bodies or human skeletons are often found built into the foundation or the walls of churches in this country and on the Continent; and it has been conjectured that in the practice to which these discoveries point we have a relic of the belief now under discussion. The conjecture seems well-founded; but in the later Middle Ages, at all events, such burials, unless of persons renowned for sanctity, and even perhaps in their case too, may have been carried out without any definite reason beyond compliance with custom. Numerous tales of burial in the wall, whether inside or outside the church, in order to avoid the consequences of a pact with the devil, and of persons walled up alive by way of punishment, may have been founded on the custom when its origin had been forgotten.

We have already seen that in Russia the head of the household is liable to death on building a new house. In this connexion it is important to note that the *Domovoj*, or household spirit, is the soul of the founder of the homestead (Ralston, 122, 126; cf. DEMONS AND SPIRITS [Slavic]). The Roman legends of the slaughter of Remus by his brother Romulus and the self-sacrifice of Curtius, as well as the numerous tales, East and West, of the architect of a building put to death by the king, that he might not eclipse the achievement by any future work, have been referred upon plausible grounds to the rite by which a human victim becomes the tutelary spirit.

For the purpose of this rite, as for others, surrogates have frequently been provided for human victims. The statues found beneath buildings at Rome have already been mentioned. If we may believe Olympiodorus of Thebes, during the reign of the Emperor Constantine there were dug up in Thrace, on the Illyrian frontier, three silver statues in barbaric costume, with their hands bound behind their backs, which must have been buried for prophylactic purposes; and he notes that, shortly after they were found, the Goths, Huns, and Sarmatians invaded Thrace and Illyria (Liebrecht, 289). Whatever credit we may give to this story, it is quite certain that, as everywhere in the lower culture, magical virtue was attached during the Middle Ages to an effigy, and many stories illustrative of the superstition have got into literature. Its use in witchcraft is well known. A statue was frequently supposed to be possessed of a god or spirit who, unless a personage celebrated in Christian hagiology, was necessarily regarded as evil. The belief is still applied to the consecration of a house in some parts of India. The image of *Vāstu*, or the *genius loci*, is placed in a box face downward and buried in a pit near the foundation pole (*BG* xx. 525; cf. Crooke, *PR*[2] i. 102). In this way the genius is secured and effectually prevented from escaping.

Even easier modes of identification with the intended victim are practised. In Europe, in modern times, the ignorant populations of the Balkan Peninsula and adjacent islands would continue the rite of burying a human being beneath an important building, if the law permitted them to do so. Since it is forbidden, a man is sometimes enticed to the spot, his body, or simply his shadow, is measured, and the measure is buried under the foundation-stone, or the stone is laid upon the shadow. It is believed that he will die within the year, or, as it is said in some places, within forty days. In default of a human shadow, that of one of the lower animals is measured (Frazer, 89 f.).

In the island of Kisser in the East Indies, the guardian divinity of a house or village is the measuring-tape which has served to measure the foundations of the house or of the village-temple. It is wound round a stick, the head of which is carved into the figure of a human being, and is kept in a box (*ib.* 91 f.). In Russia, the carpenters at the first few strokes of the axe call out the name of some bird or beast, believing that the creature mentioned will rapidly perish. 'On such occasions the peasants take care to be very civil to the carpenters, being assured that their own names might be pronounced by those workmen if they were neglected or provoked' (Ralston, 126). The pronunciation of the name at the moment of the stroke causes the blow in some magical way to reach the owner of the name. British law in Burma is equally opposed to the rite in its cruder forms. Accordingly the Nāgā tribes of Manipur, who used to put a head under the main post of a new house, have discovered that a lock of hair is of equal value, 'for the ghost of the wretch would go there and seek the missing lock and be for ever compelled to remain beneath the post' (Hodson, 116).

Thus, in order to obtain a tutelary spirit, it is not absolutely necessary to immure a human victim. Fowler is of opinion that the real object of the rites already described at the fixing of a boundary stone among the ancient Romans was to provide a *numen*. Whether this was so or not (and it seems probable), there can be little doubt that the church-*grim* believed to haunt churches in Scandinavian and Teutonic countries was the ram, horse, or other animal killed at the foundation, or buried alive beneath the building. Many weird tales are told of the manner in which it performs its tutelary function.

In building a house it is often desired not to obtain a new protector, but merely to convey the family-god and settle him in the new abode. Images, icons, and ancestral tablets are in various countries reverentially and with soothing ceremonies transported to the place appropriated for them. The bringing of fire from the old home, as among the Russian peasants, is explicitly a transfer of the old house-spirit, who is formally welcomed to his new domicile (Ralston, 120, 137). The Hindu custom of interring earth from the parental homestead in the new foundations has probably a similar meaning (*PNQ* i. [1884] 87).

LITERATURE.—The principal works dealing with the foundation sacrifice are E. B. Tylor, *Primitive Culture*, London, 1872 (4 1903), i. 94 ff.; G. L. Gomme, *Folklore Relics of Early Village Life*, do. 1883, ch. i.; F. Liebrecht, *Zur Volkskunde*, Heilbronn, 1879, p. 284 ff.; R. Köhler, *Aufsätze über Märchen und Volkslieder*, Berlin, 1894, p. 36 ff.; E. Westermarck, *Moral Ideas*, i. [London, 1906] 461 ff.; E. Thurston, *Omens and Superstitions of Southern India*, London, 1912, p. 214 f. It has been most fully and systematically considered in an article by P. Sartori, in the *ZE*, Berlin, 1898, p. 1. Accounts of the other rites discussed must be sought for chiefly in works of descriptive folklore and ethnography, such as those to which reference has been made in the course of the article. The writer is indebted to his friend, Mr. William Crooke, for references to a number of Indian and other examples.

E. SIDNEY HARTLAND.

FOUNTAIN OF YOUTH.—The legend of the Fountain of Youth was known throughout Europe in the Middle Ages, and is even intertwined with the history of discovery in the New World, where Ponce de Leon sought the Fountain after hearing of the medicinal springs of Florida, with which he associated the Fountain of Youth the more readily since in popular belief the latter was located in the Indies. In Europe, this tradition of the Fountain was inextricably united with that of the River of Immortality. But the two did not have the same origin, and they should be kept apart as distinct legends. The River, or Spring, of Immortal Life was Semitic; the function of the river in legendary history was to preserve life. The Fountain of Youth was not Semitic but Hindu, and the function of this water was not to render man immortal, but to renew his vigour. The one idea easily glides into the other, and history shows

that the two national legends actually became united, the more quickly perhaps because the Semites themselves had the notion of rejuvenation, though it was not associated with man, and not at first with a fountain. This parallel phase of the legend is that of the rejuvenation of the eagle, which in Semitic legend renews its youth (cf. Ps 103[5]), but not at first by means of bathing.

In India the Fountain of Youth appears in early Brāhmanic legend and has continued down to the present day, although many of the modern 'Fountains of Youth' are in reality so called only by Europeans, most of them being known to the natives only as healing waters. The idea that some water was curative undoubtedly formed the basis of the legend in India, as it did in Florida. On the other hand, rejuvenation, either by fiat of a spiritual power or by means of drugs, charms, etc., was recognized as possible much earlier than was the special form of rejuvenation utilized in the legend of the Fountain. As early as the Rigveda, water is spoken of as medicinal, and men are rejuvenated by the will of the gods; but the two ideas are not brought together till a later period.

In Greece and Rome there was no Fountain of Youth attainable for man in this world, but only a spring of rejuvenation in the next or the spirit world. And so, originally, the Semitic 'Water of Immortality' was found only in Paradise, not within the reach of man on earth.

The legend of the Fountain of Youth was not known in France or Germany until it was introduced from the Orient. There is no reason, therefore, to suppose that this was an Indo-European myth. The kettle of Medea, which used to be brought into connexion with this myth, has a different motive, and the water here used has no similarity with the Fountain. In French and German legend the Spring is called *La Fontaine de Jovent*, the *Jungbrunnen*, etc., and the different popular versions, mixed with the Semitic legend of the Water of Immortality, are found to be clearly drawn from Oriental sources, all being originally forms of the story known as 'The Three Brothers.' The tale of Alexander's search for the Water of Immortality in India did much to facilitate the (otherwise natural) combination of the Semitic and Hindu legends. At the time of Sir John Mandeville, the 'Fountain of Life,' now identified with the 'River of Immortality,' was placed definitely in India. Older authors referred the legend of the Fountain more vaguely to 'the Orient.' In America there was no Fountain of Youth, only a medicinal spring, till European tradition had built upon native belief. Chinese and Muhammadan accounts have joined in spreading the tradition through the Pacific, where, again, European thought has often interpreted some other means of rejuvenation as a Fountain of Life, or the River of Immortality as a Spring of Youth.

It is probable that the Hindu fable was brought from India by the Nestorians (possibly by the Arabs), and was thence conveyed to Europe. Independently of the Nestorians there was constant communication with India as early as the 7th century. The Persians were not likely to have been the intermediaries, as they did not have the legend of rejuvenation, but only that of the Water of Life. Northern rather than Southern India (where European legend placed it) was the home of the Fountain. Outside of India, the eagle (see above) and the phœnix are rejuvenated. These two legends are also more or less confused. But it is to be noticed that the rejuvenation of both birds is ascribed to a fountain in the Orient. No classical writer, however, knows of such a fountain. As for the eagle, even Origen and Augustine, when commenting on Ps 103[5], on the eagle's renewed youth, do not ascribe it to a bath; though Donatus (*ad Heaut.* iii. 2. 10) attempts thus to explain the allusion to *aquilæ senectus* in Terence. But Jerome (*Ep. ad Præsidium*) has the legend, probably from an Oriental source, since, when the eagle's fountain is first located, it is placed 'in India.' To go back to earlier classical authorities is to lose all trace of the eagle's spring of rejuvenation. Aristotle (*de Anim.* ix. 22. 2), Pliny (*HN* x. 3. 3), and even Aelian (*περὶ ζώων ἰδιότητος*) and Aulus Gellius (in his ch. concerning marvels, ix. 4), are silent on the subject, although they have much to say of eagles, Aelian especially stating (*op. cit.* ii. 26) that the eagle 'needs no spring' (being superior to thirst)—a statement he would scarcely have made without modification had he known of the eagle's spring of youth. We may, therefore, conclude that the eagle was not rejuvenated by a bath in a fountain till the Oriental version of the Fountain of Youth became familiar to the Mediterranean littoral.

To sum up the tradition and legends of rejuvenation: there are various means of rejuvenation, but the Fountain of Youth appears to be derived from India, where it is first known. In European thought it was combined with the Semitic Water of Life, and with the classical Spring Immortal, which confers endless health and life on those who have passed the bourne whence there is no return, Anostos land, which coincides with the ends of the earth imagined as a home for the blessed. This, in time, coincides with the belief in the earthly paradise of the Golden Age described by Hesiod (*Works and Days*, 113) as free from disease and old age. The Fountain of Youth, considered rationalistically, is medicinal water with exaggerated properties.

FRATRES ARVALES.—See ARVAL BROTHERS.

FRAVASHI.—This is the Avestan name (Pahlavi *Fravāhr*) of a spiritual being, conceived as a part of a man's personality, but existing before he is born and in independence of him; it can also belong to divine beings. The concept so largely arises out of ancestor-worship that a complete account of it would include all the material already given in art. ANCESTOR-WORSHIP AND CULT OF THE DEAD (Iranian), vol. i. p. 454 f.

The etymology of the word given by Lehmann (in art. cited) is still accepted by Geldner and other excellent authorities, but it must be regarded as exceedingly doubtful. A. V. Williams Jackson has abandoned it, and Bartholomae marks the origin of the word as obscure. There are many proposals, but none can be regarded as proved. *Fravašayō aŝāunąm*, 'the Fravashis of the followers of Asha (Right, Truth),' first appears in the prose *Gāthā Haptanghāitī*, which represents a decided relapse from Zarathushtra's teaching towards the old polytheistic Nature-worship which he tried to supersede by his spiritual monotheism. The significant absence of the Fravashis from the *Gāthās* proper is best explained in the same way as that of Mithra and Haoma, divinities for whom Zarathushtra could find no room without compromising the unity of God. The Fravashis, as described in the oldest and most authoritative document, the *Farvardīn Yašt* (*Yt.* 13), have no definitely ethical character; nor is there any attempt to moralize them until the Sasanian age. Zarathushtra, who would admit to his heaven only spirits of the most abstract and ethical character, associating them with Ahura Mazda as a real part of his own hypo

stasis, was not likely to approve of the popular *manes*-worship, which moved in a far lower plane. He made much of the *daēnā*, the 'self' or 'individuality,' which, indeed, may well have owed its origin to his own analysis. He taught the great ethical lesson that this *ego*—a part of every man, good or bad—was the real determiner of a human destiny. The Fravashi has a certain resemblance to the *daēnā*; but the difference is vital, in that the former is divine, though in a sense in which the divine may be far lower than the human. Parsiism never allowed the association of Fravashis with the personality of a bad man. This was capable of interpretation on the same lines as the silence of the NT about the πνεῦμα of a sinner; but the original reason was very different. It was simply because the maxim *de mortuis nil nisi bonum* has a very serious significance among primitive peoples, and euphemism becomes a necessary precaution; hence the 'Fravashis of the pious' in Parsiism, and the *Di Manes*, or 'good gods,' in Roman religion. If in ordinary Parsiism 'unbelievers have no *fravashi*,'[1] it is only because the concept was too deeply rooted in ancestor-worship to be capable of association with the world of evil. The question was not pursued as to what happened to the Fravashi of a pious man who went wrong. Two exceptions are noted from late periods in the history of the religion. The *Sad-dar Bundahiš* (ed. and tr. Spiegel, *Trad. Lit. der Parsen*, Vienna, 1860, pp. 173, 175) says that the Fravashi of an unbeliever goes to hell with his soul and his 'perception.' Al-Bīrūnī (A.D. 1000), in describing Farvardīgān (the All Souls festival), makes the souls of the dead return to their old homes 'from the places of their reward or their punishment' (*Chronol. of Anc. Nations*, tr. Sachau, London, 1879, p. 210). This may be safely regarded as an outsider's inference, and a wrong one.

Speaking generally, we may say that the Fravashis when plural are ancestor-spirits, acting only collectively, like the *manes*. When the word is singular, there is usually an emergence of other elements in the concept; these form the principal subject of the present article. Before turning to them, we must notice a subsidiary characteristic of the Fravashis which is mainly due to their connexion with the benignant departed, as is shown by the fact that it manifests itself only when they appear in companies. The name 'guardian spirits,' by which E. W. West renders the Pahlavi *fravāhr*, is decidedly inappropriate as an equivalent for the Avestan term, as we shall see. But there are some tutelary functions which are exercised by the Fravashis, though we do not find any one Fravashi acting as guardian angel for the human being with whom he is linked; and this, of course, is the fatal objection to the use of the term 'guardian,' which would naturally suggest a conception like that found in mediæval Christian theology. But the Fravashis act together as bringers of rain and givers of fruitfulness to plants; here the *Amshaspands*, Haurvatāt and Ameretāt, took their place in strict Zarathushtrian doctrine. To judge from the strangely imperfect definition of these twin archangels given by Plutarch (*Isis and Osiris*, 46), the popular mind was never eager to accept such shadowy figures in place of the beloved ancestral spirits whom men continued to invoke for the necessaries of life. The Fravashis were most conspicuously active in promoting conception and birth, and the healthy growth of the babe at the breast. (Here their competitor was Anāhita, who was not really Iranian at all, still less a deity recognized by Zarathushtra.) The primitive belief that ancestor-spirits reincarnated themselves may account for the distant beginnings of this conception; but it must be noted that no doctrine of metempsychosis could spring from it on Iranian soil without bringing hopeless confusion into the relation between a Fravashi and his human counterpart. The Fravashis acted collectively here again, like their fellows the Indian *Pitāras*. They are powerful helpers in battle. The nearest approach to individual tutelary action is just where the connexion with the dead is strongest. In *Yašt* 13 there is an immense list of names of departed saints whose Fravashi is adored separately. Some of these are invoked for specific help—deliverance from evil dreams, heresy, persecution, etc.

So far we have dwelt on functions which link the Fravashis with the *manes*; we have now to note that these Iranian spirits have marked points of contact with another Roman conception, that of the *Genius*. Some of the characteristics already observed may come as well from this side as from the other. The Genius, with his female counterpart the *Juno*, was conspicuously associated with the promotion of birth; and this is perhaps pre-eminent among the activities of the Fravashis. The Fravashi, like the Genius, belonged to gods as well as men, and to communities as well as individuals; and tutelary functions were recognized in both to about the same very limited degree. The Greek ἀγαθὸς δαίμων is a kindred conception, less fully developed; and all three may well go back in their history to the common store of the pro-ethnic Indo-European people. It is possible that we may link it in its remote origins with the notion of an External Soul.

We come now to the ideas connected with the Fravashi in the singular. Avestan psychology made the human personality include five immaterial elements—'vitality' (*ahū*), '*ego*' (*daēnā*), 'perception' or 'sense' (*baodhah*), 'soul' (*urvan*), and Fravashi (*Yt.* 13[155]). The last was the highest, the immortal part, which, according to an important passage from the *Great Bundahiš* (tr. Darmesteter, *Zend-Avesta*, Paris, 1892–93, ii. 500 f.; Blochet, *RHR* xxxii. [1895] 104), dwelt with Ahura in life and united with the soul at death, thus saving it from extinction, when the other parts were dispersed among the elements. The pre-existence of the Fravashi was as essential a characteristic of the conception as its continuance. *Yt.* 13[87] tells us that the Fravashis appointed the paths of sun, moon, and stars. In the *Bundahiš* (ii. 10 f., tr. West, *SBE* v. [1880] 14) we read of the choice originally offered them by Ahura Mazda, between abiding eternally in the spiritual world and becoming incarnate to join in the battle against the demons. The same great Pahlavi cosmogony makes the first of four trimillennia in the world-year belong to the spiritual creation alone, the Fravashis living with Ahura above, before anything material was made. The silence of our earlier sources makes it probable that this first trimillennium was added in Sasanian times; but that the Fravashis existed before the other elements of human personality is beyond doubt an ancient idea. It is implied, of course, by the fact that in *Yt.* 13 the Fravashis of the yet unborn Saošyants are adored. They are, moreover, classed with those of the 'men of the primitive law' (*paoiryō-tkaēša*), Zarathushtra and his immediate followers, as the most powerful of all the host. That the Fravashi-concept has travelled a long way from exclusive association with ancestors is sufficiently shown by this strong and repeated connexion with men yet unborn, and by the express statement that 'the Fravashis of the living faithful are mightier than those of the dead' (*Yt.* 13[17]).

The connexion of the Fravashis with communities was alluded to above, among points in which the Roman Genius showed kinship. In *Yt.*

[1] Geldner, *EBr*[11] xxviii. 1043.

13^{21} we find that each of the four concentric circles of the Iranian commonalty—house (*nmāna*), family (*vis*), clan (*zantu*), and district (*dahyu*)—has its heavenly counterpart. The much disputed phrase *vithibiš bagaibiš*, in the Persepolis inscription of Darius, seems to be best rendered 'with the gods of the (royal) family,' the θεοὶ βασιλήιοι of Herodotus. There is an analogy here with the 'princes' of Persia, Greece, and Israel in Daniel, and with the 'angels of the churches' in the Apocalypse. Actual Persian influence in developing a conception rather decidedly out of the normal course of Jewish angelology can be argued more plausibly than is possible in most of the alleged cases of borrowing from Persia. Two NT passages speak of individual 'angels' in terms which strongly resemble the heavenly counterpart of Parsiism, whether or no the idea has been developed under Parsi influence. Mt 18^{10} makes the 'angels' of the little ones dwell perpetually in the Presence. The declaration is completely interpreted if these are the heavenly counterparts, the Fravashis, of those who have not yet learned to sin; no other conception of angels suits it so well, since tutelary angels of children would have no special reason for precedence over those of adults. In Ac 12^{15} Peter's 'angel' is clearly his 'double'—his counterpart which has taken his place while he still lives. (See on this and some other Biblical passages the present writer's paper in *JThSt* iii. [1902] 514–527.)

The connexion of the Fravashis with the stars was probably a feature peculiar to Magian theology, never naturalized in Parsiism. In *Yt.* 13 they guard the heavenly bodies, but only in the same way as other *yazatas* are said to do. Identification with stars is not found till a late Pahlavi treatise (*SBE* xxiv. [1885] 92), where it seems to be mentioned only as an opinion held by some. It is quite in keeping with Magian star-lore—one of the most prominent notes of the Magi in ancient accounts of them, but conspicuous only by its relative absence in the Avesta. If the Magi did thus identify Fravashis with stars, we have a promising suggestion for the interpretation of Mt 2, by the help of their well-known devotion to divination by dreams. An apparition of a bright Nova in the sky would suggest the Fravashi of a great one newly born.

FREEMASONRY.—The Freemasonry of the present day, organized as we now have it with its associations of Lodges (as the various units are called) grouped territorially under what are known as 'Grand Lodges' with their hierarchies of 'Grand Officers,' took its rise from very humble beginnings in London in the year 1717, when the famous 'Four Old Lodges' combined in order to establish the first 'Grand Lodge' of the world. Until that time there had been isolated Lodges of Masons, working for the most part independently of each other, as far as is now known, in different parts of Great Britain. Whence, then, had these various Lodges come? What was their origin? These are the problems that confront any one who would write a history of Freemasonry.

The earliest Masonic documents now extant are a number of MSS known as the 'Old Charges of British Freemasons,' so called because they contain certain charges as to conduct and duties which were in bygone times read or recited to a newly admitted member of the craft. Of these, 78 different versions (according to the latest list) are known to exist, the earliest of all (known as the Regius or Halliwell MS, and preserved in the British Museum) having the date of *c.* 1390 assigned to it by experts. These 'Old Charges,' though differing in details, all have the same general character, and consist of three divisions: (1) an invocation or prayer, addressed to the Holy Trinity; (2) the legendary history of Masonry; (3) the charges addressed to the new member.

According to the legendary history of the craft as narrated in these old MSS, masonry (or geometry, as it is called in them) was originated in Egypt by Euclid, and spread thence into various countries, reaching England in the time of St. Alban (A.D. 300), who is said to have obtained increased pay for masons from the king, and to have 'got them charges and manners.' It is further stated that King Athelstan (925–941) granted a charter to the masons of England allowing them to hold an assembly every year. No doubt, in thus ascribing the origin of geometry to the Egyptians, the compilers of these 'Old Charges' were but following the tradition (confirmed by modern research) that the Egyptians were compelled to invent it in order to restore the landmarks effaced by the inundations of the Nile. Egypt may also be considered the birthplace of architecture, which commenced there with the construction of the Pyramids, 3000 years or more before the birth of Christ. Much, again, of the present Masonic symbolism can be traced to Egyptian counterparts, and Egypt was the home of the 'Mysteries'; but we doubt whether any connexion between modern Freemasonry and Egypt can be established.

The rules or precepts contained in the 'Old Charges' were plainly intended for the government of bodies of operative masons, and it is to such bodies that we must look for the origin of the Freemasonry of the present day. With the progress of civilization the art of building necessarily grows more and more important, and those who practise it tend to become more and more a close society with their own trade secrets and rules for their governance, just as with other bodies of men who practise the same calling or trade. Thus it is on record that, from the very earliest times of the city of Rome, there were corporations of men with common interests called *Collegia*, which were recognized and allowed by law. Some of these corporations were formed for trade and commerce, such as the *Collegium Fabrorum*, or gild of workers in hard materials, the *Collegium Pistorum*, or gild of bakers, and others, members of which had a common profession, trade, or craft upon which their union was based, although every man worked on his own account. These corporations or gilds spread throughout the Roman Empire, until in the time of Theodosius II. (A.D. 401–450) there were, in almost every city and considerable town, companies similar to those which existed in Rome, who exercised some particular trade or occupation for the safety, benefit, or amusement of their fellow-citizens. That there was a *Collegium Fabrorum* in Britain is established by a reference to it on a tablet now preserved at Chichester, which records the erection of a temple to Neptune and Minerva. Probably the origin of English Freemasonry may be attributed to these Roman *Collegia*, though it may be impossible to trace its actual descent from them. This supposition is strengthened by the number of

points of resemblance that can be traced between the organization of a Roman *Collegium* and that of a Masonic Lodge. It may be asked, Why did the masons alone of all trades preserve their organization? Because, being largely employed to erect ecclesiastical buildings, they came specially into contact with churchmen, as the 'Old Charges' show, and thus may be supposed to have been more highly organized than other combinations of workmen, besides being more skilled; and because, as they moved about the country wherever their services were in request, they would need such organization more than the others would. It is known that the masons of the Middle Ages, when employed to erect some important building, used first to make for their own use a temporary hut or shed near the place where the work was to be carried on, which they called the 'lodge.' Thus, in the Fabric Rolls of York Minster, we find an order for the workmen issued in 1352 as follows:

'In summer they are to begin work immediately after sunrise until the ringing of the bell of the Virgin Mary; then to breakfast in the fabric lodge (*logium fabricae*); then one of the masters shall knock upon the door of the lodge, and forthwith all are to return to work until noon. Between April and August, after dinner, they shall sleep in the lodge; then work until the first bell for vespers: then sit to drink until the end of the third bell, and return to work so long as they can see by daylight.'

Hence we see that the masons employed on a particular building, and living together in the lodge, would naturally become a more or less exclusive and organized community. That such bodies did exist is proved by some MSS now in the Bodleian Library at Oxford, which contain lists of the members of what is called *la loygge Lathamorum*, or Lodge of Masons, attached to the Priory of Canterbury for the years 1429, 1431, 1433, and following ones. Such bodies of skilled workmen would naturally have their own operative secrets, and would be jealous of admitting outsiders to a knowledge of them, and would have some set ceremonial for the admission of apprentices. There can be little or no doubt that the Freemasons of the present day are the descendants of such bodies of operative masons, who moved about the country and set up their lodges wherever their services were needed, having a system of secret signs and passwords by which a craftsman who had once been admitted could be recognized by the members of another lodge. They were called 'Free' Masons because they were free to travel about in times of feudal bondage and to render their services where any great building was in process of construction. The earliest instance known of the name in this sense is found in a list of the companies entitled to send representatives to the Common Council, dated August 1376, and now preserved in the Corporation Records at the Guildhall, London; in this the nineteenth Company on the list is that of the 'ffreemasons.'

These organized bodies of workmen, with their rules and regulations, seem to have been more common at one time in Scotland than in England, or at all events to have left behind them more records of their existence in the north than in the south of Great Britain; thus two codes of rules for operative masons, drawn up in 1598 and 1599 respectively, which dates they bear, are still preserved in Scotland. They are signed by 'William Schaw, Maistir of Wark, Warden of the Maisonis,' and hence are known as the Schaw Statutes. William Schaw was appointed Master of Works in Scotland in 1584, and had under his care all the royal buildings and palaces in the Northern Kingdom. The later of these two Statutes provides that Edinburgh shall be 'the first and principal lodge in Scotland,' Kilwinning the second, and Stirling the third lodge, and contains an elaborate code of rules for the government of the craft. The Lodge of Edinburgh possesses minutes commencing in July 1599, and has been in continuous existence from that time, and, inferentially, from an earlier date.

In England the Masons Company of London, though its extant records date only from 1620, is considered by its historian (Edward Conder) to have been established about the year 1220, if not earlier, at which time there was great activity in the masons' trade in London, consequent on the building of London Bridge, which was commenced in 1176, and of Westminster Abbey, of which the foundation-stone was laid in 1221. These works, especially the latter, would naturally attract to London the members of such operative bodies as that previously mentioned as having existed at Canterbury, which were attached to religious houses, and possessed certain signs, secrets, and symbols relative to their craft. These symbols had doubtless descended from a remote antiquity, together with some knowledge of geometry, which was then regarded as a trade secret.

We have now to trace the gradual process by which the lodges of operative masons lost their operative character and were converted into the present-day Lodges of speculative Masons, who meet in secret, and have changed the working tools of the operatives into symbols inculcating moral lessons, so that the square with which the operative mason tries and adjusts rectangular corners of buildings is now regarded as a teacher of morality, the level denotes equality, and the plumb-rule uprightness of life and actions. This change was in progress both in England and in Scotland during the 17th cent., until it culminated, as before mentioned, in the establishment of the Grand Lodge of England in 1717; and various instances can be mentioned of the admission of non-operatives into the craft before that time. Thus it is on record that, on 8th June 1600, John Boswell, Laird of Auchinleck (a village in East Ayrshire, Scotland), was present at a meeting of the Lodge of Edinburgh, when, like the operative members present, he attested the minutes by his mark. In England the earliest proof of the existence of a non-operative or speculative Freemasonry is afforded by the records of the Masons Company of London, from which it is made clear that previously to 1620, and, inferentially, from a remote past, certain members of the Company and others met from time to time to form a Lodge for the purposes of speculative or symbolical Masonry, and were known as the 'Accepted' Masons. Hence comes the familiar title of 'Free and Accepted Masons,' implying a combination of operative and speculative Masons. Then it is also on record that Sir Robert Moray, who was Quartermaster-General of the Scottish army which occupied Newcastle in 1641, was admitted into Masonry in that year at Newcastle by some members of the Lodge of Edinburgh, who were also serving in the army. Next we find the celebrated antiquary, Elias Ashmole, founder of the Ashmolean Museum at Oxford, stating in his diary that he was made a Free Mason at Warrington in Lancashire in the year 1646; he also gives the names of the members of the Lodge, and it has been ascertained that they were all men of good social position, without a single operative mason belonging to their number. He also records in his diary that in 1682 he attended a Lodge at Masons Hall, London, when six persons were admitted into the Fellowship of Freemasons. In 1688 was published the *Academie of Armorie*, by Randle Holme, who was a heraldic painter and a professional genealogist, and acted as Deputy Garter for Cheshire, Shropshire, Lancashire, and North Wales; in it he writes: 'I cannot but Honor the Fellowship of the Masons because of

its Antiquity: and the more, as being a Member of that Society, called Free-Masons.' It is, therefore, obvious that symbolical Masonry must have existed in Lancashire before the admission of Ashmole, and in London before 1620; and that the gradual change of operative into speculative Freemasonry had begun early in the 17th cent., if not before.

However, we have no means of tracing the change with any completeness, until, in 1716, four of the then existing London Lodges met together and determined to unite under a Grand Master 'as the Centre of union and harmony'; and accordingly, on St. John Baptist's Day in 1717, the Grand Lodge of England was established at the Goose and Gridiron in St. Paul's Churchyard, London. Apparently the operative masons were already in a minority, for of the three principal officers then appointed one is described as 'Gentleman,' one as 'Captain,' and the third as 'Carpenter.' Dr. James Anderson, the historian of these events, says that they 'revived the Quarterly Communication of the Officers of Lodges (call'd the Grand Lodge), resolv'd to hold the Annual Assembly and Feast, and then to chuse a Grand Master from among themselves, till they should have the honour of a Noble Brother at their Head.' Hence the establishment of this Grand Lodge in 1717 is commonly known as the 'Revival' of Freemasonry, though there are no authentic records now extant of any previous Quarterly Communications or Annual Assemblies. But some sort of Annual Assembly must have been held, for the 'Old Charges' previously mentioned constantly refer to the duty of a Mason to attend the Assembly when properly summoned to do so; and possibly the note in Aubrey's *Natural History of Wiltshire* (ed. 1847, p. 99), that on 18th May 1691 there was to be 'a great convention at St. Paul's Church of the Fraternity of the Adopted Masons,' may refer to some such occasion, which was sufficiently notorious to be known even to a non-Mason. However that may be, this 'Revival' in 1717 forms the starting-point from which continuous Masonic history dates.

A similar Grand Lodge is known to have been in existence in Ireland in 1725, though the precise date of its establishment has not yet been ascertained; and in 1736 the Grand Lodge of Scotland was erected. From these three Grand Lodges have come, directly or indirectly, all the other regular Grand Lodges and their subordinates throughout the world, so that modern speculative Freemasonry has descended from the operative masons of Great Britain, who, in turn, may possibly have been descended from the Roman *Collegia*.

The founders of the premier Grand Lodge were quickly able to get 'a Noble Brother at their Head,' for in 1721 the Duke of Montague was their Grand Master, and from that time onwards an unbroken succession of noblemen or members of the Royal Family have presided over the Craft in England, the present (1913) Grand Master of English Freemasons being H.R.H. the Duke of Connaught, who succeeded the late King Edward VII.

In 1751 a rival Grand Lodge was established in London by some Irish Masons, who claimed that they alone preserved the ancient tenets and practices of Masonry, and that the regular Lodge had made innovations; so they called themselves 'Ancient' Masons, and styled the members of the 1717 Grand Lodge 'Moderns'; the two bodies continued in rivalry until 1813, when the 'United Grand Lodge of Ancient Free and Accepted Masons of England' was formed, and this body has continued ever since.

The spread of speculative Freemasonry throughout the world since 1717 has been something marvellous, especially of late years, until there are now in existence about one hundred and ten independent Grand Lodges, with almost twenty-three thousand subordinate Lodges, from which the operative element as such has quite died out, and with over two millions of members owning allegiance to these various Grand Lodesg, which exist in all civilized countries, except Russia, China, and Japan.

Besides the 'pure Antient Masonry, the growth of which we have been trying to trace, which consists of three degrees and no more, and is known as 'the Craft' *par excellence*, there are a number of other organizations calling themselves Masonic, a few being of real antiquity, but most being of quite modern growth. Among them may be mentioned the Masonic Knights Templars, a body of great strength in the United States of America; the Mark Masons, who are very flourishing in England; and the members of the Ancient and Accepted Rite, besides many others which it is needless to particularize in the present article.

The question is frequently asked, Is Freemasonry a *religion*? The answer to this must depend upon the meaning to be given to the term 'religion.' The latter may be defined as 'a system of faith in, and worship of, a Divine Being.' Freemasonry is defined to be 'a peculiar system of morality, veiled in allegory and illustrated by symbols.' But 'morality' is concerned with man's duties to his fellow-men, and is therefore different from 'religion,' which is concerned with his duties to his Creator. Thus our question may be answered in the negative—Freemasonry is not, and does not profess to be, a religion. At the same time it may be called a handmaid of religion, for it is founded upon the purest principles of piety and virtue; and no man who endeavours to live up to and act upon its teaching can fail to be a better man for doing so. As the early communities of builders in England, from whom our modern Freemasonry is descended, were mainly employed upon ecclesiastical buildings, it is only natural that Christianity should have been the religion of the early Masons, as is conclusively proved by the 'Old Charges' previously mentioned: it was not until the formation of the Grand Lodge of England in 1717 that they were left free to belong only to that 'Religion in which all men agree . . . that is, to be Good Men and True.' Freemasonry has never met with favour from the Roman Catholic Church, and has been expressly forbidden by several Papal Bulls; and some writers have maintained that its symbolism was only a cloak for a conspiracy against government and religion. But, whatever may have been the case with Continental Freemasonry, such an accusation is groundless as regards British Freemasonry; and Masonic Lodges in Great Britain were specially exempted from the operation of an Act passed in 1799 for the suppression of secret societies. Cf. art. FREE-THOUGHT, p. 122[b].

Now, with the spread of Freemasonry over the whole world, men of all religious faiths are admitted as members, and work together under its banners in harmony, as also do men of most varying political views; and Freemasonry has become a potent factor in promoting a feeling of universal brotherhood among mankind.

E. L. HAWKINS.

FREE-THOUGHT.—The term 'free-thinker,' as applied to certain writers and others who

individually or in societies, impugned the supernatural authority of the Christian Church, came into use during the 18th cent., and gained general currency largely as a result of its employment by Shaftesbury and Collins (cf. Collins, *Discourse of Freethinking*, London, 1713; Fr. tr. 1714). In France those belonging to societies of this type were called *libres penseurs*, *libertins*, or *esprits forts*; in Germany, *Freigeister* or *Freidenker*. The extent to which the designation was adopted by the free-thinkers themselves, and to which it eventually prevailed in common speech, forms a still unsolved problem in the literary and social history of the 18th cent. (cf. art. DEISM, vol. iv. p. 533 ff.; and ENCYCLOPÆDISTS, vol. v. p. 302 ff.).

In any case the essential feature of the term is its having been applied to certain fairly comprehensive societies and circles which agreed in regarding their 'free' views as palpably identical, while, on the other hand, the more eminent original thinkers of the period—from Hobbes and Locke to Hume, Gibbon, Voltaire, and others—did not apply the term to themselves. This fact indicates the two most salient characteristics of the free-thinkers—the one negative, viz. their opposition to the Church's doctrine of authority and revelation, and their implied appeal to the freedom and independence of autonomous thought; the other positive—their assumption that such free or natural thought leads universally to essentially identical conclusions in a natural morality and religion. Free-thought is thus intimately related to Deism. It rests upon the assumption that reason contains a truth which has existed from the dawn of human history—a truth which has been obscured and defaced by the historical development, and, in particular, perverted by superstition in the Christian Churches, but which may nevertheless be restored by the free exercise of rational thought. Specifically, however, free-thought, in its attitude towards Christianity, leaned in some cases to the more conservative view that natural truth was supplemented and reinforced by revealed religion, and in others to the more radical, that only the kernel of Christianity—that element, namely, which harmonizes with natural reason—can be maintained. The whole movement was really a reflexion of the ecclesiastically orthodox mode of thought, which desiderates a uniform and absolute truth, in a mode of thought free from ecclesiastical bias; and, further, it had recourse to an old idea which had become fused with the theology of the Church, viz. the Stoic doctrine of the universal ethical religion of conscience and providence. Formally, therefore, free-thought was the repudiation of supernatural authority, while, materially, it was the liberation of the Stoic doctrine of ethics and religion from the Christian dogma with which it had hitherto been incorporated.

It is true that this holds good only of the earlier stages of free-thought, *i.e.* of its English forms. In France, where Catholicism, conformably to its nature, had drawn a much more rigid line of demarcation between religious doctrine and modern thought than that found in Protestant England, free-thought, as represented by Voltaire, renounced all connexion with Christianity, and in the Encyclopædists and their adherents it broke away from religion altogether. In England the free-thought and Deistic movement issued from a revolution having positive religious aims and subject to powerful religious influences, whereas in France it was associated with a purely social and political revolution, whose exponents identified religion with the Catholic State Church, and so took up a position of fundamental antagonism to both at once. It was in France, accordingly, that the movement assumed its most radical form. Of its French representatives, Rousseau alone adhered to a form of religion in essence identical with Christianity. In the Netherlands and Germany, on the other hand, the English influence predominated, producing a more decidedly Christian variety of free-thought, the adherents of which, from the time of Grotius and Leibniz, maintained the essential identity of Christianity with Natural Religion, and differed in opinion only as regards the extent of the positive additions and guarantees which the former contributed to the latter.

In England, free-thought was, in a religious regard, extinguished by the rise of Methodism, and, as a philosophy, transcended in the historico-psychological relativism of Hume. In Germany it gave way before Herder's doctrine of development, and the poetic pantheism of philosophy. In France it succumbed to the anti-metaphysical principle of Positivism and the historico-critical method. In the purely religious sphere it declined greatly before the rehabilitation of ancient creeds which set in slowly with the Methodist movement, and then effectively asserted itself after the Napoleonic wars. More recently it has suffered further impairment at the hands of Socialism and its new-fledged ethical and metaphysical theories.

It must not be forgotten, however, that among the people generally, in so far as they have freed themselves from ecclesiastical authority, and yet desiderate some provision for religious education and edification, the tendency towards a form of free-thought that will meet this need is still active at the present day. To some extent the masses are predisposed towards such a type of free-thought precisely as in former times, by the natural theology which commingles with Christian teaching. The tendency is due partly to the elements of Christianity which survive when it has abandoned mysticism and the belief in miracles, and, accordingly, it continually re-emerges from the work of criticism in the Christian sphere. Partly, again, it rests upon ideas towards which the moral and religious emotion of mankind, emancipating itself from all historical data, readily gravitates; and, indeed, such ideas have a natural affinity with the moral and religious instincts, and are so far not unjustifiably called 'natural.' To these influences we must add that residuum of tradition from the deistic and rationalistic epoch which has all along continued to operate powerfully in poetry and general literature, and in positive and apologetic theology, and from which a popular rationalism may ever anew be developed. It is to be noted, moreover, that almost all endeavours to enlighten the masses, and all democratic movements and organizations inspired by modern philosophy, tend naturally to approximate to the same position. Virtue, love of mankind, belief in Providence or in development, progress, the unification of the race, and an all-embracing philosophy of teleological optimism—such are the features of a phase that ever recurs in this sphere.

It is true that, among the classes referred to, belief in the personality of God, the immortality of the individual, and the freedom of the will has become less assured. Here, in fact, modern science is at work with its conceptions of the universe and of law, and tends to effect some sort of synthesis between the teleological idea of ameliorative optimism and agnostic or pantheistic conceptions. Then the ideals of progress have come to be focused more upon the present world, upon the social and humanitarian factor, and—in place of personal immortality—the permanence of the race. This is just what was to be expected. The older type of free-thought belonged to an age which knew nothing of the achievements of modern scientific thought, or of its pantheistic metaphysics, and was thus more

favourably disposed towards the belief in God, immortality, and a responsible freedom: regarding these, in fact, as truths issuing from the light of nature. But, discounting these changes, we may venture to assert that, in all civilized countries where the people are no longer under the control of the Church, a wide-spread tendency to free-thought pervades the lower and middle classes. Within the sphere of pure science, on the other hand, and among the higher classes—so far as they have been influenced by science—the clash of fundamentally antagonistic systems and the habit of scientific scepticism have conspired to produce sheer anarchy in such things; and to speak here of a free-thought exhibiting any kind of unanimity in its conclusions is out of the question.

This brings us to a phase of the subject which, though of great importance, is usually overlooked. The characteristic feature of free-thought, as distinguished from modern science, properly so called, is its pervading sense of an axiomatic unity amongst its adherents, based upon the assumption of certain self-consistent, universally binding, and 'natural' truths. The sociological aspect of ethical and religious thought manifests itself here in the assumption—'natural' and self-evident—that all independent thinkers will inevitably arrive at uniformity in their convictions and modes of thought. On the foundation of natural religion arises, so to speak, a 'natural' Church of free-thinkers. At the outset, indeed, the free-thinkers proposed simply to continue the process of purifying the Church by criticism, and the English Deists and free-thinkers had originally no other end in view; their object was the conservation of the old religious organization—imbued, however, with a purified or natural knowledge of God, which, after all, was the true essence of Christianity. But, in proportion as the Church resisted their efforts, and their internal development carried them beyond the Christian sphere of thought, they found it necessary to form communities and societies of their own. It would certainly be wrong to dissociate this tendency from the purely theoretical and dogmatic side of the movement, where, on the assumption of a free, autonomous, and individual thought, it might appear, of course, as something altogether individualistic. As a matter of fact, however, such movements in the sphere of doctrine, like all other human interests, have a social aspect. This is found, first of all, in the axiomatic character which the free-thinkers expected to attach to the uniformity of their assumed principles, and in the fact that, being invisibly united in these, they were feeling their way towards becoming a power of the future and of progress—a spiritual federation of mankind, which would of itself come to prevail in virtue of the mere force of natural thought. Thought, just because it is free, *i.e.* because it issues from the necessity of nature, which is everywhere the same, is likewise a socially unifying factor. But, again, they were, of course, forced to recognize that, though the community of man would come into being of itself, it nevertheless required the aid of education and propaganda. They were thus brought to realize the necessity of organization, and, in the nature of things, their organizations became counterparts and imitations of the Churches. But they went further still. Even for fully developed and mature minds they felt the need of some visible means of confirming and deepening the convictions held in common—some kind of ceremonial and worship which should present these convictions to the imagination in vivid form, and thus evoke the stimulating and elevating force of solidarity. The result was the establishment of something analogous to Church worship, which, indeed, has to some extent the same end in view, while the only elements thereof that the free-thinkers could not use were the idea of exerting a real influence upon the Deity and the preaching of ecclesiastical dogma.

It was in this way that the movement was led to adopt the policy of forming associations, and became allied with the forces working for the disestablishment of the Church. Of outstanding free-thinkers, Rousseau alone wished to make the new religion an official and compulsory one, proposing at the same time, however, that the individual be allowed to cultivate his distinctive tenets in his own way.

Here, then, we have the explanation of the fact that the 18th cent. was crowded with secret societies and free-thought unions, the secrecy being resorted to partly as a protection against the power of the State Church, and partly as a means of drawing the masses, or, as it might be, of outrivalling the attractions of Church life. The academies of the 17th cent. had already pointed the way. From the soil of Deism sprang Toland's scheme of a *Socraticum Sodalitium*, for which his *Pantheisticon* was to serve as a liturgy. But the most outstanding example is found in Freemasonry (*q.v.*), which was instituted in England by the foundation of the Grand Lodge in 1717, was introduced into France in 1725, and found a footing in Hamburg in 1733, and which now pervades the whole civilized world. Freemasonry created a sacred symbolism and ritual of its own, as also a sacred mythical history, and thus actually forms a kind of rival to the Church, though it has here and there found it possible to keep on good terms with the latter. In Romanic countries it has become an organization working aggressively against Catholicism. Here, too, should be mentioned the Theophilanthropists of France (1797), the Abrahamites of Bohemia (1782), numerous Unitarian societies, and the ephemeral *Culte de l'Être Suprême*, instituted in France on the lines laid down by Rousseau.

The task of exploring the annals of the 18th cent. with reference to the formation of secret societies is one which still awaits the investigator. But the phenomenon is in no sense confined to the 18th century. When the religious revival of the first half of the 19th cent. had thrust such associations into the background, and the progress of science had largely undermined their Deistic principles, fresh combinations made their appearance—due partly to the reaction against the religious revival, and partly to the advance of modern science. The so-called *Deutsch-Katholicismus* founded by the contumacious priest Johannes Ronge, and the community which, under the name of *Lichtfreunde* (1840), set itself against the Protestant supernaturalism of the religious reaction, led to the formation of numerous 'free-religious' and free-thinking congregations in Germany (see art. DEUTSCH-KATHOLICISMUS, vol. iv. p. 672 ff.). In France the Religion of Humanity took shape at the hands of Comte; in Britain, America, and India arose societies professing the religion of reason. In 1880 an international society of free-thinkers, with national sections, was instituted at Brussels; and it was in the interests of that society in Germany that Bruno Wille wrote his *Lehrbuch für den Jugendunterricht freier Gemeinden* (Berlin, 1905), and Andreas Bard compiled his *Freidenkertexte* (Schwerin, 1909), while Edgar Monteil did the like for France in his *Catéchisme du libre-penseur* (Antwerp, 1877). The non-religious ethical instruction given in the schools of Paris—the so-called *instruction civique*—proceeds on similar lines. Another free-thought federation is the International Order for Religion and Ethics, which has its

central organization in Berne (1908); it owes much to the influence of Auguste Forel. Similar aims are pursued by the societies for moral culture which, originating in America, have spread throughout the civilized world. The latest organization of the kind is the Monistic Society inaugurated in Rome by Ernst Haeckel, but it is not likely to be the last. It stands to reason that, if modern thought should eventually prove unable to remodel the Churches, and find itself totally incapable of coming to terms with them, it must provide something to take their place. The alternative organizations which it has hitherto produced have been mainly imitations of the Church in one or other of its aspects, and a really sufficient substitute has not yet been found.

On the whole, we may affirm that the principle of an autonomous and non-theological type of thought for which the free-thinkers contended has, so far as science is concerned, been fully vindicated, and is now regarded as axiomatic and outside the sphere of controversy. But their other principle—their belief in the universally valid conclusions of Natural Theology—has completely broken down in the face of modern historical relativism and amid the clash of the great philosophical systems. Free-thought is thus, in one of its aspects, a self-evident principle, and, in the other, a shallow illusion now finally dispelled. This fact, again, militates against its tendency to produce new associations and groups, though fresh efforts in that direction are always being made. Cf. also art. MODERNISM.

E. TROELTSCH.

[*Additional Note.*—Owing to a lack of sufficient material on which critical inquiry can profitably exercise itself, it is a work of peculiar difficulty to trace the progress of free-thought in the religious life of the *Ancient East*. But, as Max Müller long ago pointed out, the religion of Buddha was originally a pure a-theism. It was only as a reaction set in, and the popular mythology began to exercise itself in the direction of a Buddha-cult, that this system of atheology decayed. In the Brahmanic cults it is not, perhaps, incorrect to say that pantheism took its rise in a semi-developed attitude towards 'free-thinking' in its widest application; while in Persia the reaction from polytheism in favour of a partially enlightened Mithraism, and the later Mazdaism, issued in nothing that deserves the name of free-thought. In *Egypt*, despite the vast store of materials that bear upon the problems of religion, little definite knowledge has come to hand; though it is arguable that the religious reformation attempted by Akhenaten was prompted by what may, for lack of better nomenclature, pass as Rationalism.

With *China*, different tendencies were at work. Apart from ancestor-worship, the religion of China has been, and still is, rationalistic in a pronounced degree. The arrested growth of religion, as generally understood, is one of the significant facts that face the historian. In the 'religious' reformations connected with such names as Kung-fu-tse, Lao-Tse, and Mencius, the purely ethical side of religion, and the reduction of supernatural elements to a minimum, are points that deserve consideration.

Free-thought in *Israel* was never truly realized save partially and sporadically; of a system of Rationalism we cannot properly speak in this connexion. It is true there are traces of a free-thought movement in the later books of the OT, such as Job and Ecclesiastes; but these lie out of the main current of the nation's religious development, which was in the direction of a rigid monotheism, akin in many respects to the creed of Islām.

Not until we reach *Greece* do we find those forces vitally at work out of which a co-ordinated system of free-thought springs; but, once there, we realize that those forces were active all down the stream of Greek history. Many reasons might be alleged for the unique place which Greece holds in the evolution of human freedom; but they are not germane to the present inquiry, which is to indicate the direction of the movement itself. It may be noted, however, that nothing contributed more to the rationalizing of all religious thought, which characterizes the most progressive epochs in Ancient Greece, than the fact that for the people generally there was no definite creed, no sacred book, no universally acknowledged priesthood. 'Each local cult had its own ancient ritual,' says J. M. Robertson (*Short Hist. of Freethought*, i. 137).

Of any definite cult of free-thinking in *Ancient Rome* there is scarcely a trace. Religion was largely based on purely material considerations, and the element of 'mystery' was noticeable by its absence. It was the very lack of this element which brought about the hankering after weird emotional cults, which became such a feature in the last days of the Republic and in the early Empire. Lucretius is, perhaps, the one genuine exception to the statement made above; his great poem, *de Rerum Natura*, based on the teaching of Epicurus, is one long attack on supernaturalism, and a pæan, in hexameters, to the spirit of Rationalism.

Coming to a later period, we must briefly mention the rise of Rationalism in *the Muslim world*. No free-thinker of any country—Voltaire alone excepted—is more celebrated in England than Omar Khayyam, the high priest of free-thought and of pessimism. But, though Omar has attained no great vogue in Islām, he does not stand alone; the names of al-Kindī and Averroës (to mention two only) at once spring to the mind. Of free-thought in later times there is less to record; but that the foundations of Islām are being gradually undermined in the modern Muhammadan world by its contact with Western thought, no serious student can doubt; and this in spite of phenomenal successes secured by the followers of the Prophet in Central Africa during the past half century.

Of Rationalism in *Christian Europe during the Middle Ages* we find many traces; but the questions that arise in dealing with its progress must be sought for in a history of heresy. With few exceptions, a free-thought propaganda during those centuries was mainly confined to the struggles of 'heretics' and the semi-'orthodox' to assert for themselves a right to worship in accordance with what they held to be reason and revelation.

It is with *the Renaissance* (*q.v.*) that free-thought, in the modern sense of the term, begins to make itself powerfully felt. The free-thinkers of the 15th and 16th cents. once more set ablaze the torch of human liberty which had been smouldering for a millennium. The complex ecclesiastical organization which had its centre at Rome had tried—and almost successfully—to quench it; but the re-discovery (so to speak) of Greek culture, and the opening up of vast avenues of thought which was the consequence of that discovery, finally broke the domination, mental and spiritual, exercised for ages over the minds of men. A beginning

was made by Boccaccio and Petrarch; the movement culminated in Machiavelli, the politician, and Giordano Bruno, the philosopher and man of science.—E. H. BLAKENEY.]

FREE WILL.—I. *GENERAL.*—**1. Freedom a vital question.**—The Free Will controversy is sometimes regarded as turning 'merely upon words and ambiguous expressions' to which 'a few intelligible definitions would immediately have put an end' (Hume, *Philos. Works*, Edin. 1854, vol. iv. 'Liberty and Necessity'). Historically, a vague terminology—will, motive, necessity, determination—has undoubtedly caused confusion. But, while the controversy has often been verbal, there is a real issue at stake. 'The government of God and the responsibility of man are equally involved' (H. B. Smith, *Faith and Philosophy*, Edin. 1878, p. 359). Again, the Free Will controversy is not an indifferent one, as Sidgwick implies (*Methods of Ethics*[6], Lond. 1901, ch. v.). Historically, indeed, thinkers of the most diverse moral systems are indiscriminately found on both sides of the discussion. Anthony Collins the free-thinker defends necessity against Clarke. Bramhall defends freedom against Hobbes. Edwards and Chalmers seem to fall into the same ranks as Hume and Mill. This *quæstio vexata* seems to cut athwart well-defined moral affinities. The capricious manner in which men 'of high-toned character and devoted piety' (J. Martineau, *A Study of Religion*, ii. 196) are affiliated to either side of the controversy is no proof, however, that the question of freedom is an ethically indifferent one. For (1) this caprice is more apparent than real. Though Bain, for instance, may claim to have Chalmers on his side, yet the *Weltanschauungen* represented by the two are separated *toto cælo*. Leslie Stephen and Green also may both be called determinists, but in a very different sense. Principal Cunningham took Hamilton to task for identifying predestination and philosophical necessity, and historical justice demands such differentiation (W. Cunningham, *Reformers and Theol. of Reformation*, Essay ix.). (2) We must also discriminate between what thinkers are defending and what they are denying. Thus Augustine denied free will in order to defend God's free grace. The defence was the real aim, the denial was incidental.

'There are theses which are, outwardly considered, entirely untrue, but, inwardly considered, true. Thus is Augustine's doctrine of sin and grace to be judged. As an expression of psychological religious experience it is true; but projected into history it is false' (Harnack, *Outlines of the Hist. of Dogma*, Eng. tr., Lond. 1893, p. 372).

This is really a vital point to remember. Many who oppose free will do so because they wish to conserve the effects of good actions already done (so T. H. Green, *Prolegomena*[4], p. 129), while many who champion free will do so to give some ground of hope to those who feel the burden of the past (so W. James, *Pragmatism*, New York, 1907, p. 120). The problem of freedom is neither a linguistic nor an ethically indifferent question. It is a permanent problem of thought.

2. Ground of problem in human nature.—Kant has emphasized the difference between man's theoretical and his practical activities. Man, as intellectual, demands coherence in experience. From this point of view, character is 'empirical'; *i.e.* it falls under the law of causation. Man belongs to the realm of Nature. But man, as moral, looks on himself as an 'intelligible' character, and 'the intelligible character has this prerogative over all other beings that he fixes his end for himself' (*Werke*, ed. Hartenstein, Leipzig, 1867–68, iv. 85). Viewed thus, man belongs to a realm of ends. Whatever may be thought of Kant's use of this distinction (see J. Ward, *The Realm of Ends*, Lect. xiv., for a discussion both of its importance and of its liability to abuse), the distinction itself is recognized as important, and so

'for us, as for Kant, the question of freedom takes the form of a deep-seated antithesis between the interests of the scientific or intellectual consciousness on the one hand, and the moral and religious convictions of mankind on the other' (J. Seth, *A Study of Ethical Principles*, p. 345 f.).

The moral life is a real part of human experience, and it must not be denied in the theoretic interests. This at once obviates many objections to freedom. (*a*) When the psychologist denies freedom, he does so in the theoretic interest. Psychology is in the third person, its point of view is that of the spectator (cf. H. Höffding, *Outlines of Psychology*, Eng. tr., 1892, p. 345); morality is in the first person, its point of view is that of the agent. To raise the question of freedom at all is to transcend the ground of psychology, unless, indeed, we get a psychology, such as Boyce Gibson outlines in *Personal Idealism* (London, 1902, pp. 136–192), that takes the inward point of view.—(*b*) In the same way arguments against freedom based on the law of the Conservation of Energy lose their force because such discussions are carried on in a universe of discourse which leaves the moral attitude outside.—(*c*) It is quite true also that historians and statisticians are able to appeal to uniformities of experience due to material conditions 'without regard to the volition' of men (Buckle, *Hist. of Civilization*, 1867–68, p. 24), but that is just the business of the statistician (cf. W. James, *Will to Believe*, p. 216 f., for a brilliant refutation of this objection).—(*d*) 'We always explain the voluntary action of all men except ourselves on the principle of causation by character and circumstances' (H. Sidgwick, bk. i. ch. v.). Sometimes we excuse our own actions on this principle, yet if one

'really seek to excuse himself in the sequel, by trying to show that it was impossible for a man with his particular antecedents to act otherwise than he did, he is regarding the action entirely from an external and non-moral (which for him in the circumstances is an immoral) point of view' (Pringle Pattison, *The Philosophical Radicals*, Edin. 1907, p. 101; cf. p. 322).

These and all similar attempts to deny freedom shatter on the moral consciousness. W. James, in 'The Dilemma of Determinism' (*op. cit.* 145–183), has shown by a series of arguments *e consequentiis* how Determinism destroys the ineradicable moral instincts of man. Butler also dismissed Necessity from the same point of view with a 'disrespect amounting to contempt' (W. E. Gladstone, *Studies Subsidiary to Butler's Works*, Oxford, 1896, p. 268).

The problem of freedom may thus be said to be grounded in human nature. To discuss it is to raise the validity of the moral consciousness. It is a philosophical and theological question, not a question of physics or empirical psychology.

The admission of a freedom from co-action or compulsion is not enough to satisfy the moral demand. To man in normal conditions this is not denied by any one. It may be impaired by disease, it may be limited by inadequacy of material, it may be compulsorily taken away, but otherwise it is a common human possession. Such a power, however, is purely non-moral. It does not distinguish man from life in general. But freedom has meaning only in reference to the moral nature of man. 'It is the reason's postulate for the dictamina of conscience' (J. Duncan, *Colloquia Peripatetica*, 1907, p. 30).

Nor is it sufficient to view freedom as the action and reaction between character and environment. On this view, character is partly inherited, partly acquired, but the acquired character is the inevitable product of the inherited one. 'The whole man is inherited, if we may use such a phrase' (Leslie Stephen, *Science of Ethics*, Lond. 1882, p. 289). Freedom may be thus regarded in the interests of naturalism or of idealism. T. H. Green

does it in the latter interest. 'The action is as necessarily related to the character and circumstances as any event to the sum of its conditions' (*Proleg.*[4] p. 126; cf. p. 129). Logically, in either case the moral consciousness is violated. According to this view, things could not possibly have been otherwise; and praise and blame, punishment, obligation, and the hope of progress are illusions. In short, the moral point of view is disregarded. For, morally viewed,

'action is not referred backward in time to the circumstances and predispositions of which as motives it is the legitimate outcome, but the man brings his action face to face with a "Thou shalt" which he finds within him, and according to its conformity or want of conformity with this law he approves or condemns his conduct' (Pringle Pattison, 322).

We must take our stand on the moral nature of man; and, while admitting the prevalence of habit, the power of inherited character, and the force of circumstances, and so refusing a *liberum arbitrium indifferentiæ* which is dismissed now by indeterminists as a contradiction in terms (cf. Wendt, *System der christl. Lehre*, 196), we at the same time have to determine whether the consciousness that things could have been otherwise—that evil might be abolished, that responsibility is a fact, that punishment is not a fiction—is possible of vindication on any *Weltanschauung* that can gain the respect of the reason. This is the problem of Freedom.

II. *Philosophy and Free Will.*—1. **Free Will and Naturalism.**—Naturalism explains all Reality in terms of matter and motion. It carries necessity all through experience. On this view, freedom has no meaning. So the philosopher who believes in free will has to defend its possibility against this system. This can be done (1) by an argument from consequences.

'Those who hold "naturalism" are bound to believe that every decision at which mankind have arrived and every consequent action . . . was determined by the quantity and distribution of the various forms of matter and energy which preceded the birth of the solar system' (A. J. Balfour, *The Foundations of Belief*[3], 1895, p. 20).

(2) The concept of the 'Uniformity of Nature,' which is the foundation of Naturalism, may be shown to be not opposed to mental activity, but a fruit of it. It is a reflexion, in short, of the activity of the self into the realm of Nature—a metaphorical explanation of Nature in terms of human action. Natural laws are symbolic formulæ of explanation, not ontological dogmas. They fail even to earmark individual cases in their own sphere; they are thoroughly inadequate to explain all reality. This offspring, then, of the active self cannot be used to discredit its parent. (3) Again, in conscious life we find all along a subject as well as an object. T. H. Green has shown that knowledge is inexplicable without a subject. Hume's sensationalism is inadequate to explain cognition. But feeling and conation imply a subject also. For feeling and conation depend on interest and attention. W. James finds that the 'duration and intensity' of mental effort are not dependent on the object, but on the subject. He calls this an 'independent variable' at which science has to stop (*Text-Book of Psychology*, N.Y., 1892, p. 455); but it is not so. It is only one phase of the activity of the subject which is all along present. This we may call the psychological possibility of freedom, and

'freedom is a permanent attitude of the conscious subject, consciousness always implying a consciousness of the subject's relative independence in relation to the object that conditions but does not necessarily regulate its activity' (*Personal Idealism*, 161 f.).

This 'creative synthesis,' which characterizes conscious life in general, is the distinguishing quality of moral life in particular. For here we are in the realm of ideals, of values which create and control activity. This is admitted by 'Idealism' and 'Pluralism' alike as against Naturalism. How, then, do they explain this activity itself? What is their view of freedom?

2. **Freedom and Absolutism.**—The problem of freedom arises when we ask: (1) What is the relation of the self to the character? (2) What is the relation of both—of a person—to Reality?

(1) Absolutism tends to identify the self and the character. This is one result of equating the 'real' and the 'rational,' but it overlooks the fact that experience for us is not complete, and that the 'ought to be' is not the 'is.' H. Bergson has pointed out that there is another and a truer way of looking at things.

'Hence there are finally two different selves, one of which is, as it were, the external projection of the other, its spatial and, so to speak, social representation. We reach the former by deep introspection, which leads us to grasp our inner states as living things, constantly *becoming*, as states not amenable to measure, which permeate one another and of which the succession in duration has nothing in common with juxtaposition in homogeneous space. But the moments at which we thus grasp ourselves are rare, and that is just why we are rarely free. The greater part of the time we live outside ourselves . . . we "are acted" rather than act ourselves. To act freely is to recover possession of oneself, and to get back into pure duration' (*Time and Free Will*, Eng. tr., p. 231 f.).

It is not simply, however, by deep introspection that this happens. It takes place also when we obey great ideals. On this view, the self, though manifested in the present character, is greater than it. Hence it is possible for sudden changes of character to take place, to make a new beginning. The evil past can be transformed, and its very memory may be an inspiration in its own undoing; while the past, in so far as it is of value, is made a ground of further development (cf. Boyce Gibson, *Rudolf Eucken's Philosophy of Life*, Lond. 1906, p. 27 f.). We hold, then, that the self acts teleologically on its own character, *i.e.* it acts through ideals. The mechanism of character it either accepts or modifies and turns into new channels for new purposes. The mechanical and intelligible worlds of Kant are thus brought together in the unity of a growing personality—free, yet using its freedom in ordered calculable ways.

(2) Absolutism tends to make the self a phase of Reality. In fact, the self in this system is in a state of unstable equilibrium. Its essential features are either projected into the social order or sublimated into the Absolute Experience. We have seen how on the first view freedom is attenuated. On the second view we have the acosmism of Spinoza, which can give no place to freedom except as the rhythm of the Divine life (cf. J. Seth, 379–386, for a criticism of this view of freedom).

3. **Pluralism and Freedom.**—Pluralism recognizes the distinction between the self and the character. Freedom is its watchword; but, as expounded by some, the objective element in experience is undervalued. As a reaction against Naturalism it makes truth wholly pragmatic. Nature is absolutely plastic. There are no laws there till we make them. The world is an ἄπειρον, and chance governs all (τύχη κυβερνᾷ πάντα). This 'Tychism,' however, errs in overlooking the persistence of character. For, even in the case of a sinner converted, his past is recognized somehow as his own. Moreover, civilization and Nature, impersonal and mechanical in some sense, are yet the very media through which the self acts. Moral ideals, again, though self-accepted, have the characteristic of universality. We are in danger here of laying exclusive stress on a bare activity of the subject. But this is not enough; objectivity and unity are also required. These are given us in the physical and psychical orders in which our freedom works as well as in the universality of the moral ideal itself.

We have already attempted to give a view of the freedom of the subject in relation to the character. What is this freedom in relation to

outward reality? This is the most living problem in modern metaphysics. It involves not only the relation of man to Nature, but that of Nature to God and of man to God.

Freedom touches the problem in so far as the power of obeying the moral imperative is concerned, and thus it postulates at least that the mechanism of Nature must not be either indifferent or hostile to its own teleological activity. The difficulty of the problem is increased by the fact that between man and Nature there is what Comte called *l'humanité, i.e.* Nature as modelled by man.

This aspect of Nature is the hope of the moral consciousness—that all Nature is in reality a fit vehicle of spirit. When moral endeavour has already done so much to make the world familiar and subservient, may it not do all? On the other hand, *l'humanité* often fills moral endeavour with despair. For here progress against evil customs and perverse institutions seems to be helpless; and even customs and institutions, good in themselves, hinder progress when taken as final resting-places of the living spirit.

The relation of persons to Nature, then, is actually one neither of freedom nor of slavery; but, ideally at least, moral effort demands that Nature become a fit mechanism for realizing worthy ends. This suggests that much of *l'humanité* (in the Comtian sense) must and can be subverted; it does not imply, however, that Nature itself is inherently opposed to freedom; for mechanism here may become media of purposive acts (cf. R. H. Lotze, *Microcosmus*, Eng. tr., Edin. 1885, i. 261; and H. Bergson, *Creative Evolution*, Eng. tr., Lond. 1911, for the relation between persons and Nature).

III. *FREE WILL AND THEOLOGY.*—Theology refers everything to God. Its great danger in so doing is that the personal attitude inherent in moral experience may be submerged. It is always difficult to do justice to God and man (cf. Pringle Pattison, *Hegelianism and Personality*, Lond. 1887, p. 153). Man's moral nature is threatened from this side even more than from the side of Nature, because, while the moral life rises up in self-defence against Nature, it feels secure in dependence on the Divine.

The religious consciousness asserts both the sovereignty of God and the freedom of man. Pharisaic Judaism held both views side by side (Jos. *BJ* II. viii. 14), and St. Paul (Ro 9. 10) emphasizes now the one, now the other. To do this is more important for morals than to do violence to either in the interests of premature synthesis. St. Paul did not neglect the individual attitude.

'The ethical sense of responsibility, the energy for struggle and the discipline of will was not paralysed or absorbed in Paul's case by his consciousness of redemption and his profound spiritual experiences' (J. Weiss, *Paul and Jesus*, Eng. tr., Lond. 1909, p. 113).

St. Paul, however, did not deal with free will from the standpoint of an insulated individual. The latter from the religious point of view is an *ens rationis*. Every man is related to God, and is—within the movement of history—open to influences of sin and grace. For St. Paul, God is the author of his redemptive experiences: they are not the effect of his free choice; they came to him from God. But they are not opposed to free choice. They are a gift; they are also a task.

Within the individual religious experience, freedom thus tends to coalesce with necessity; this freedom is not power to do anything irrespective of character, nor is this necessity physical coercion. This is the *felix necessitas boni* of Augustine (cf. Luther's *Freiheit eines Christenmenschen*, opening paragraphs). This freedom is perfect in God. It is the *non posse peccare* of a holy character. In man it is a progressive attainment nurtured by the Holy Spirit. The sovereignty of God is thus essential to this freedom because it means the conservation of spiritual values, and it gives the individual certainty of moral victory while it frees him from the tyranny of sin and the world. Negatively, it is freedom from sin; positively, freedom for righteousness.

It was in the interests of this ideal freedom that Luther and Calvin tended to neglect its natural basis in man's moral nature (cf. J. Oman, *The Problem of Faith and Freedom*, London, 1906, p. 14). This ideal freedom (cf. T. H. Green, *Works*, ii. 308 f., for philosophical cognates) is not an attained reality in religious experience. 'A power of choice is not thought of in this freedom, but a state of the most fixed and settled decision for God' (J. Müller, *Christian Doctrine of Sin*, ii. 12). Hence, till we reach that ideal, we need a conception of freedom to represent present experience. '"Freedom" in a world already perfect could only mean freedom to *be worse*, and who could be so insane as to wish that?' (W. James, *Pragmatism*, New York, 1907, p. 120).

Can God's sovereignty be reconciled with such a freedom of choice as we require? It cannot if God's absoluteness is asserted without qualification; then the moral life becomes unintelligible. Butler has warned us against speculating on how God ought to reveal Himself. We ought rather to find out how He has revealed Himself. So, God's absoluteness must be approached from experience. The defect of Augustinianism and Calvinism is that they start from a knowledge of God's absoluteness above experience, deduce logically from this eternal decrees, and so explain individual experience. We must start from experience, however; and, doing so, the problem is to reconcile God's absoluteness in grace with man's freedom. If we deny the latter, we deface man; if we deny the former, we are in a world which is a moral chaos, where ideals have no reality that can be depended on, where the holiest hopes of men may never be satisfied. The history of Free Will within theology is an oscillation between these two interests. The Greek Church had to conserve human freedom against the Gnostic fatalism, with its three fixed unalterable types of men (pneumatic, psychic, hylic). This was done in such a way as to obscure the distinction between nature and grace. Augustinianism, again, made an impassable gulf between the moral consciousness of responsibility and the new life of grace. In any attempted reconciliation both interests must be conserved.

1. **Freedom and Omnipotence.**—It is not enough to admit freedom *in civilibus* or *in moralibus* and deny it *in spiritualibus*. That is not the way to safeguard religious experience. So even Calvinists like Chalmers, who adopt the Edwardean position, insist on their right to make a free gospel offer (cf. T. Chalmers, *Works*, Glasgow, 1849, ix. 312 f.). It may be said that this is speculatively inconsistent, and it is so because God's omnipotence is logically started from instead of being explained from experience. The power to embrace God's offer of salvation must be granted to man. The difficulty is created by starting with an individual cut loose from God, by separating the ἐνέργεια τοῦ θεοῦ from the τὸ θέλειν in man. But that is not thinkable. God is there all along, though only in the religious life is His power graciously accepted. Hence the freedom theology requires for man is freedom in a universe where God is active, and where man is active too. In short, this is not a 'block universe,' but a realm of ends realized in God, realizable by man within the limits of his finiteness, opposable by man also within these limits. No other view

of freedom can satisfy the moral demand as it shows itself negatively in guilt, and positively in responsibility for future obedience.

2. Freedom and Omniscience.—Nor can we be satisfied with a bare foreknowledge unrelated to experience. It is true that, on the human analogy, we have foreknowledge of one's action without being its efficient cause; and so some theologians (Rothe, Martensen; cf. Gladstone, *op. cit.* 273, and Jowett, *Epistles of St. Paul*, 1894, ii. 370) have regarded the Divine prescience as the logical knowledge of everything apart from any causal connexion with anything; but we are in danger here of lapsing into the Epicurean view of God as careless of mankind. Again, thinkers (*e.g.* Royce) have regarded God's knowledge as timeless, as 'knowledge at one glance of the whole of the temporal order' (*The World and the Individual*, Lond. 1900, ii. 374; cf. J. Ward, *The Realm of Ends*, p. 313 f., for a criticism). Both these views err in not relating God's knowledge to human experience, but it is just this relation that is of religious value. Religion demands God's activity all through, but it demands this in harmony with morality. Hence it speaks of God changing His mind, of God delaying His judgments when men repent. In short, it admits a possible change in the course of history dependent somehow on human action. The very essence of the religious claims—repentance, new obedience—does not postulate a closed universe in which God is fettered or man predetermined either by omnipotence or omniscience. While God must thus be actively aware of all possibilities, and cannot be surprised, or His purposes ultimately frustrated, yet there is within this real contingency.

Thus it is possible to have a view of God's foreknowledge which is immanently present and lovingly active all through, but works in accord with holy purposes. This view, with all its difficulties, seems to us to safeguard God's freedom in Nature, to substantiate His continual efficiency in grace, and yet to conserve man's responsibility. It is the task of theology to furnish a *Weltanschauung* consistent with both these positions.

FRIENDLY ISLANDS.—See TONGAN RELIGION.

[1] For Hamilton and Mill, see art. LIBERTARIANISM AND NECESSITARIANISM.

FRIENDLY SOCIETIES.—1. The theory of mutual aid.—Friendly Societies are institutions formed for the purpose of mutual insurance, and have been one of the chief means employed by the working classes for providing against the risks of sickness, old age, and funeral expenses. The inadequacy of purely private providence to cope with the uncertainties of life and health among working people has been recognized from very early times, while religious and social fraternities have everywhere devoted some attention to guarding their members from losses due to these vicissitudes. The Greek ἔρανος appears frequently to have undertaken provident functions, and the mediæval gild in Germany and England used its 'box' or 'chest' for the purpose of assisting members in distress. Grants of burial money were a remarkably general feature of such fraternities, even when the common purse was used mainly for feasting, or when the primary object of association was the control of a craft. Some writers, indeed, assert that the modern Friendly Society is an actual descendant of the mediæval gild; but, except for some similarities in their fraternal functions and the fact that the English gilds decayed about the time when Friendly Societies took their rise, there is little to warrant the belief in any direct connexion. Feasting, attendance at funerals of members, solemn entrance oaths, contributions to the 'box,' processions to church, and assistance in times of distress, were common characteristics of fraternities of all kinds, and the fact that they appear in the earlier Friendly Societies does not suffice to prove that these institutions had any organic relation to the gilds. Possibly the customs of the gilds had an influence upon those of the Friendly Societies, but evidence for any closer connexion is lacking in England, although in Scotland, where the gilds continued in existence to a later period, some of them gradually merged into Friendly Societies as they lost their trade privileges. Cf. art. GILDS.

The Friendly Society is not a mere institution for promoting thrift. It must be sharply distinguished from Savings Banks, Building Societies, and similar organizations, which have afforded facilities for investment in small sums to the working classes. Its differentiating characteristic is that of mutual insurance as contrasted with individual investment, and in some important respects the security and welfare of the contributor may be more adequately promoted by becoming a member of a Friendly Society than by depositing small savings in a bank. Death, though certain, may come early or late. Sickness may fall upon one before he has had time to make any savings commensurate with the burden; to another, who has saved more, it may be so protracted as to consume all his reserve long before he is again fit for work; to a third it may not come for twenty or thirty years, and even then may be of brief duration. Old age, again, when the earning power ceases, is reached by a minority, and it may or may not be protracted in any particular case. Mutual insurance meets these contingencies as individual saving can seldom do, because the uncertainties of life and health for a single person may be almost translated into certainties when a large number of persons are concerned, so that, instead of taking account of the extreme possibility of the particular case, it is necessary only to proceed on the basis of average probabilities.

Many men could not possibly save sufficient to maintain themselves even on the barest necessaries of life during a protracted old age; still more could not do so without undergoing very great privation during their working years. As it is also problematical whether they will ever reach old age, it may be quite unwise in some cases for them to

undergo the discomfort of saving much for this purpose, particularly if that would reduce their present industrial efficiency or retard the development of their families. But if, on a calculation of average probabilities of life in that social class, it can be shown that a contribution of a few pence a week from all will suffice to provide for the superannuation of those who do attain a given age, it may be well within the means of most of them to pay on this basis of average probabilities, although it would be unwise to save on the assumption of the extreme possibility of the individual case.

The risk of illness is precisely similar. Any individual may be suddenly stricken down with a long illness or even permanent disablement, and few working men could by private thrift provide against this extreme possibility; while even a brief illness may occur before sufficient has been saved to meet it. But provision for the average probabilities may come within the reach of the vast majority. The mutual insurance of Friendly Societies is based upon this principle of average probabilities; and, while ensuring systematic contributions from each member, it also shares the risk among a large group.

2. **Recent growth of scientific methods.**—Although there has always been implicit in Friendly Society activities some recognition of the principle of average probabilities, the actuarial data by which to calculate the proper contributions and benefits are a late development. The fact that certain contingencies occur with remarkable regularity, when sufficiently large numbers of persons are considered, may be generally known before even approximate estimates of the degree of frequency can be made. But, when account is taken of the further circumstance that mortality and sickness vary according to the occupations, economic conditions, and habits of the people, so that a table which is appropriate to a certain class or trade cannot forthwith be applied without modification to quite a different section of the population, it is scarcely surprising to find that a host of early Friendly Societies worked almost at random, and yielded a dismal story of insolvency and inability to meet the obligations which they had undertaken. For a few years, while the members were mainly at the healthiest periods of life, the Societies would appear to flourish; but it soon became manifest that, as the average age increased, the contributions and levies were insufficient to meet the higher risks, and dissolution precisely at the period when the needs of the members were greatest has been the melancholy experience of thousands of these institutions. Many of them had so little appreciation of the factors to be allowed for in the calculation of risks, that they proceeded on the assumption that a contribution from each member which sufficed to meet the outlay on benefits during the first year would also suffice permanently to cover all claims. It was not understood that the risks are largely prospective, so that even a Society with an accumulated fund might not be actuarially solvent. A valuation of its assets and liabilities might well show a deficiency. A Friendly Society is in a sound financial position only when the sum of its existing funds and the present value of the future contributions of its existing members equals or exceeds the present value of the benefits which those members may be expected to claim in the future, together with any expenses of management. The value of these prospective benefits depends upon appropriate estimates of sickness and mortality, which, again, depend upon such factors as the age of the members; and, similarly, the present value of prospective contributions is dependent upon the expectation of life at different ages, as well as upon the rate of interest. It follows that a premium adequate to cover the risks must vary with the age of the entrant if the Society is to be permanent; and, in order to protect itself from an accumulation of bad risks, a voluntary Society must also refuse to admit individuals who do not give evidence of normal health. Periodically it should make a thorough valuation of its assets and liabilities; and, if this reveals a deficiency, arrangements should be made either to raise the premiums or to lower the benefits, since persistence in the old course will lead to eventual insolvency.

In the light of these general principles it is easy to account for the failures so abundantly manifest in the history of Friendly Societies. Ignorance of the actuarial factors, sometimes combined with dishonesty of officials, led to sad disappointment among the thrifty labouring people who sought to provide against the risk of pauperism through ill-health and old age. There are still many small Friendly Societies in existence which cannot stand before a valuation test, and every year adds a few of them to the long list of disasters. As, however, the long experience of some of the largest societies has been analyzed by competent actuaries and made available to the public, sound statistical data have accumulated, and a proper appreciation of the elements which must enter the calculations has become more widely diffused. On the whole, there has been a marked improvement both in methods and in stability during the last thirty years.

3. **Historical development and legislative recognition.**—The oldest existing Friendly Society is the United General Sea Box of Borrowstounness in Scotland, which was founded in 1634. In England, it is interesting to note that the Societies which can trace their history furthest back are those founded about the beginning of the 18th cent. by the Huguenot refugees in Spitalfields. Some of the earliest Societies were confined to workers in a particular trade, while others had distinctively religious restrictions, as in the case of the Society of Lintot, founded in 1708, in which the members must belong to the church of Lintot and be good Protestants, loyal to Queen Anne. These were all isolated local associations, and before the end of the 18th cent. such Societies had grown up in nearly every part of Great Britain. There are preserved in the British Museum the rules of a large number of these small clubs centring about Newcastle-on-Tyne in the second half of the 18th cent, ; and there is abundant evidence that in most districts such organizations were then meeting at the village ale-houses, and included a large proportion of the population. The social and convivial side appears to have been pronounced, and one of the earliest references to them in the Statute book describes them as 'societies of good fellowship.'

Meanwhile there arose a new class, distinct from the local sick clubs, which has now become in some respects the most important form of Friendly Society, viz. the Affiliated Order, owing its inspiration mainly to Freemasonry (*q.v.*), and borrowing from that movement its rites and ceremonies, secret signs, and gorgeous costumes. Of greater moment is the fact that the Orders adopted the model of Freemasonry in their organization of local branches or lodges; and, though the chief emphasis at first was convivial, by the end of the 18th cent. the Free Gardeners, Oddfellows, Druids, Foresters, and Comical Fellows had developed into Friendly Societies with many branches.

The growing importance of the associations led to a general interest in them and a desire to afford them a better legal status, and to this end in 1793

there was carried through an 'Act for the encouragement of Friendly Societies,' which granted to them valuable privileges on condition of submitting their rules to the approval of the justices in Quarter Sessions. While a large number of local societies were enrolled and obtained a definite legal status under this Act, the Affiliated Orders were being repressed by other legislation aimed at Secret Societies whose members took any oath not required by law. Hitherto the enrolment of Societies under the Act had not restricted their financial management, and there were growing complaints of their instability and failure. In 1819, Parliament attempted to deal with this phase of the problem by requiring the justices, before confirming the tables of contributions and benefits, to see that they had been approved, by at least two persons who were professional actuaries or persons skilled in calculation, as fit and proper according to the most correct calculation of which the nature of the case would admit. Yet this bold attempt to secure financial soundness had little effect in practice. On the one hand, there was nothing to prevent Societies from operating without becoming enrolled by the justices, and any stringent requirements of this nature simply led to a decrease in registration. On the other hand, 'persons skilled in calculation' in practice frequently meant village schoolmasters and others who had no special training for the work, so that numerous Societies were still enrolled without sound financial bases.

In 1829, provision was made for central registration, a barrister being appointed to examine the rules of Societies; while, instead of the approval of the financial tables by two skilled persons, it was simply required that the justices should be satisfied that the tables could be adopted 'with safety to all parties concerned.' This meant, in effect, that the attempt to procure financial soundness by legislation was relaxed; and in 1834 even this mild provision was repealed, so that thereafter the Societies could adopt whatever rules, benefits, and levies they pleased, so long as the barrister certified that they contained nothing contrary to law. After this, Parliament vacillated on the question. In 1846, when a registrar took the place of the barrister, he was required to obtain an actuarial certificate before registering a Society; and it was enacted for the first time that every registered Society should be valued once in five years. But in 1850 these provisions were repealed, and in the amended Act of that year no arrangement for valuation was demanded, while a distinction was drawn between certified and registered societies. The former had their tables approved by a qualified actuary, while others were merely registered; but in point of fact very few Societies sought to obtain certification, and in 1855 a new repealing and consolidating Act abandoned all pretence to regulation of the financial tables of the Societies.

By this time the Affiliated Orders, which had been studiously ignored by the Friendly Society legislation until 1850, began to be recognized, though prior to 1875 they could register only as if each branch were a separate organization. They were the pioneers in securing financial stability by voluntary methods. The Manchester Unity of Oddfellows made a complete valuation of all its branches in 1870, and a partial valuation was made by the Order of Druids, thus paving the way for the provisions of the Act of 1875, which, in spite of later amendments and consolidations, contained almost all the chief legislative regulations affecting Friendly Societies before the National Insurance Act of 1911 came into force. Registration remained optional, and no endeavour was made to impose upon Societies actuarially sound tables. Societies are still registered even if they charge small subscriptions and promise absurdly large benefits. But a registered Society comes under the obligations of making an annual return to the registrar and of undergoing a quinquennial valuation. This publicity conduces in some measure to financial soundness, although a Society which shows a deficiency in its valuation is not struck off the register, and is not compelled to raise its levies or lower its benefits unless the members decide to do so. Yet this method enables the members to ascertain the financial condition of the Society, and to remedy any defects if they so desire. Also, if a certain proportion of the members request it, the registrar must appoint an inspector to examine into the affairs of the Society, or must call a special meeting of members; though, again, the inspector may merely report, and the members are at liberty to disregard his statements or suggestions. If a Society becomes insolvent, members may apply to the registrar to wind up its affairs.

4. Membership and funds.—Although a Friendly Society thus surrenders little of its independence by becoming registered, there are still very many small local Societies which have not taken advantage of the legislation, and it is to be feared that most of them would show serious deficiencies in a valuation. The registered Societies, however, have become stronger, numerically and financially, since the passing of the Act of 1875. A large number of different organizations may register as Friendly Societies, including those which provide by voluntary subscriptions of members against such diverse risks as shipwreck, loss of tools by fire, or insurance of cattle; but these may here be neglected. Three groups of organizations account for 94 per cent of the total membership, and for 96 per cent of the accumulated funds, of all kinds of registered Friendly Societies in the United Kingdom. The growth of their membership and funds from 1877 to 1909 is shown in the following table; but it should be remarked in this connexion that many individuals are counted more than once, since it is not uncommon for a skilled workman to be a member of two Societies.

	Number of Members.		Amount of Funds.	
	1877	1909	1877	1909
Collecting Societies	2,439,988	6,829,164	£1,172,363	£9,117,347
Affiliated Orders	1,528,216	2,703,607	£7,752,050	£27,167,535
Ordinary Societies	1,287,670	3,526,639	£5,211,052	£20,987,352

5. Burial clubs.—The Collecting Societies, which, while registered as Friendly Societies, are also regulated by a Special Act of 1896, may be said broadly to deal with a poorer section of the population than do the other organizations, and to insure only for burial money. In 1909 they were 63 in number, and had a larger membership than the other two groups combined; but their relative importance is diminished if regard is had to the amount of their accumulated funds and to the fact that, as a rule, they do not provide for sickness or old age. Moreover, the majority of the members are young children. The work done by these Societies is very similar to that of the Industrial Assurance Companies, which do an enormous business in petty death policies; and from the standpoint of thrift they are subject to the same criticism of high cost of management. Here, as

in so many other cases, the poor have to pay proportionally much more than the well-to-do for the benefits they receive. The premiums are collected by canvassers at the houses of the insured, and the cost of this and of general administration absorbs about one-half of the contributions, so that for every penny invested for his own benefit the member pays another penny to agents and officials. Three Collecting Societies, the Royal Liver, the Liverpool Victoria Legal, and the Scottish Legal, together embrace about six millions of members, leaving under one million to the remaining sixty Societies. The accumulated funds appear to be very small relatively to the membership, but, in fact, a very high proportion of those who become members cease after a time to contribute, and the membership lapses. Thus, in the year 1909, 2,124,709 new members were admitted to Collecting Societies, 120,041 members died, while no fewer than 1,556,855 members lapsed in the single year. The melancholy conclusion at which the investigator arrives is that a large part of the membership is temporary, and never obtains any return for the premiums. That there is a clamant need for the institution of a system of small insurances for payments at death, in which the poor would receive benefits commensurate with the premiums, is manifest to all who have practical acquaintance with the lives of the poor; but, so long as the contributions have to be collected in pence from door to door every week, there seems to be little chance of meeting this need. Nor are the cost of management and the number of lapses the only drawbacks. Despite the small number of Collecting Societies, there are almost every year some that collapse after obtaining the money of the poor. Speculative assurances on the lives of persons in which the contributor has no real interest are believed to be frequent, although they are contrary to law. Sometimes, too, there is said to be danger to infant life in the practice of insuring babies, though for a child under five years of age the maximum payment at death is fixed by law at £6. Yet it must be granted that the Collecting Societies induce some provision for burial, and for small benefits to survivors, among a poor and improvident class who would otherwise remain untouched by the institutions for thrift.

6. Sickness insurance by Friendly Societies.—The Affiliated Orders provide for sickness as well as sums at death, and frequently for superannuation and other minor risks. Their aggregate funds are higher than those of the other two groups, although their membership is the lowest. They differ from the Collecting Societies in the following important respects. (1) They administer sickness benefits, which it is generally impossible for a Collecting Society to undertake because of the supervision required as a check to malingering. These benefits usually include medical aid, as well as the more important grants of weekly sums to members who are ill and, consequently, incapable of earning. (2) They are organized on a basis of self-government by the insured, while the Collecting Societies are managed by a hierarchy of paid officials. Consequently, the expenses of management are about 10 per cent of the receipts as contrasted with 50 per cent in the Collecting Societies. (3) They permit of a common bond among the members, who meet in the local lodges, courts, tents, or divisions, for social purposes and for the discussion of topics relating to their general welfare.

These advantages are generally found in the ordinary or single Friendly Societies as well as in the Affiliated Orders; but the latter have the distinctive merit of supplementing local independence with a salutary central control. The lodge manages its own affairs in an area sufficiently small to admit of thorough supervision and social life, thus providing an excellent unit for friendly relations, political training, and discussion, as well as for checking malingering; while the lodges are usually grouped into districts in which the claims for funeral money are equalized and the accumulated funds invested to better advantage than could be done by the lodges themselves. It was customary until recently for the district body, composed of delegates from the lodges, to levy sums from the lodges to meet the funeral expenses when they occurred; but latterly this has developed into a system of charging premiums from each lodge in accordance with the age-constitution of the members. Above these there is the central body, or general meeting of delegates from the districts and lodges, which is either held permanently in some city or moves from place to place. This 'high court,' or 'movable committee,' secures capable men for the guidance of the Order, makes general rules which the lodges must observe, often prescribes the rates of contribution, and administers a central fund for the aid of branches that are in difficulties, when it is deemed advisable to render such assistance. This, however, does not amount to a guarantee of the solvency of each lodge by the central body. The relative importance of the different forms of benefit is indicated by the fact that out of nearly £20,000,000 paid to the members of the Ancient Order of Foresters during the thirty years from 1876 to 1905, 72 per cent was devoted to sick pay for the maintenance of members during illness, 12 per cent to medical aid, and 16 per cent to funeral allowances.

The group designated 'Ordinary Friendly Societies' includes a great variety of bodies, from the small local benefit club to the centralized class, the strongest of which is the Hearts of Oak, with a membership of over 300,000 in 1909. The centralized Societies dispense all benefits from the head office, and they are unable to check malingering so efficiently as a local society or branch, since they must depend solely on the medical attendant without the aid of the visitations of fellow-members. Consequently, the rate of sickness, even in the best centralized Society, is in excess of that experienced by the Foresters or Oddfellows, where the local court or lodge provides against fraud. There are also local Societies confined to particular trades, especially among miners and railway servants, Societies of juveniles and of females. Moreover, in addition to the membership shown in the foregoing table, there are a great many village clubs and county Societies that have not registered and, therefore, do not enter the returns.

7. Dividing Societies.—Some of the small Societies still adhere to the primitive method of dividing the surplus each year among the members. They charge weekly sums, frequently higher than those levied by other Friendly Societies, pay sickness benefits to the members who may be ill during the year, and divide the remaining funds among all the members at the end of the year, carrying forward only a small reserve. Such Societies, sometimes called 'tontines' and 'slate clubs,' appeal very strongly to the working classes in some parts of the country; but they obviously lead a precarious existence, from the fact that they have no accumulated funds and virtually begin afresh every year. From the standpoint of insurance this is a very questionable method, for the older members are liable to be left out of the Society precisely when their sickness is greatest. Though there may be no intention to dismiss every year the members who have become burdensome to the funds, it generally happens in practice; for, if they

do not leave the club, the younger and healthier members break away and form another Society of their own, so that the original Society soon collapses. The inadequacy of a Dividing Society is manifest from the fact that, while the expectation of sickness is about one week per annum at the age of 30, at the age of 48 it is two weeks, at 53 it is three weeks, at 57 it is four weeks, and increases rapidly thereafter. Hence insurance against sickness is mainly a provision for the later years of life, and a Society which accumulates no fund can scarcely be said to cope with the chief problem. Despite this disadvantage, however, the Dividing Societies attract large numbers of members, who use them for the purpose of saving for Christmas expenditure as well as for sickness benefits; and since 1875 they have been permitted to register on condition that no division of funds takes place before existing sickness claims have been met.

8. Lapses from membership and deficiencies of funds.—One of the greatest weaknesses attaching to Friendly Societies as a whole, and, indeed, to every form of voluntary health insurance, has been the large number of lapses from membership. In recent years the Affiliated Orders and the Ordinary Societies have experienced about three lapses from membership for every four new members added. Thus in 1905, while 458,854 new members were admitted, 64,528 members died, and 338,235 members lapsed. A large proportion of these lapses were due to temporary difficulty in maintaining the contributions. In the Collecting Societies, as was observed above, the number of lapses is still greater.

The other serious weakness is that a very large proportion of the small Societies still show a deficiency in their periodical valuations: and, beyond ensuring publicity in the case of registered Societies, the law imposes no obligation upon them to take steps towards solvency. A large Affiliated Order is usually financially sound, because the central body not only imposes upon the branches an official valuation, but, if a deficiency is revealed, the branch is compelled to readjust its contributions or benefits. Lacking this salutary control, however, the small independent Societies promise benefits out of proportion to the contributions, which they may succeed in granting for many years when the average age of the members is low, but, as a result, many of them show increasing deficiencies at every valuation, until they finally fall to pieces when the rate of sickness and mortality becomes high.

9. The Friendly Society work of Trade Unions.—Many Trade Unions have undertaken the provision of sickness and funeral benefits, in addition to the more distinctive unemployment and strike benefits. It is estimated that about 1,500,000 trade unionists subscribe for burial money, and about 900,000 for sick pay. But the friendly functions of Trade Unions have been carried on without reference to actuarial calculations, since the primary object has been to have all the funds available for strike purposes at any moment. No adequate reserves have been kept, and from the standpoint of mutual insurance the Unions have always been financially inferior to good Friendly Societies. They have never viewed their contract to pay sickness benefits as binding. They may expel a member at any time if he disobeys orders during a strike or accepts less than the standard wage; and, although he may have paid for years to the sick and superannuation funds, he can claim nothing. They may alter or abolish the benefits in any period when the funds are required for strike pay. In view of the entire absence hitherto of any guarantee that the funds would be reserved to meet the sickness benefits, this system cannot be ranked with the health insurance of Friendly Societies.

10. Effect on Friendly Societies of the National Insurance Act.—The National Insurance Act of 1911, which made insurance against sickness compulsory upon a large proportion of the population of the United Kingdom, is, in the main, being worked through the agency of the Friendly Societies, subject to the approval of their rules by the Insurance Commissioners. This measure has led to a great increase in the membership of the Societies, and to a strengthening of their financial position. Allowing for the many persons who belonged to more than one Friendly Society, and for the overlapping of membership between these Societies and the Trade Unions, it is probable that in 1911 not more than 5,000,000 individuals in the United Kingdom were insured against times of sickness by the voluntary system. The actuaries who worked out the statistical data for the Insurance Act estimated that in 1912 the persons compulsorily insured against sickness would number over 13,000,000, in addition to those who might voluntarily avail themselves of the provisions. From the data now available (Jan. 1913) this estimate seems likely to be realized, the vast majority of this number having already become members of existing Friendly Societies or formed new ones. The conditions attached to approval of Societies under the Act, and the financial supervision by the central Government for which provision is made, should also suffice to afford due protection to the members. Indeed, the plan of finance is so arranged as at the same time to increase the assets and to relieve the liabilities of existing Friendly Societies, thus putting most of the small insolvent Societies on a sound basis as a start, while it will keep them solvent in future by the rules and supervision imposed upon them. It will no longer be possible for a Society to run on indefinitely with a deficit, as it will cease to be approved under the Insurance Act, and so cannot receive the compulsory contributions from the workman, the employer, and the State. The benefits or contributions must be adjusted every three years to the position shown in the official valuations. A Collecting Society can be approved under the scheme of health insurance only if it institutes quite a separate branch for the purpose; while Trade Unions must keep the funds quite distinct from their 'fighting' resources, and must observe all the regulations applicable to other Societies, if they wish to take part in the administration of the Act. See also art. INSURANCE.

Stevens, *The Cyclopedia of Fraternities*, New York, 1899; *Annual Reports of the Chief Registrar of Friendly Societies*, London, 1857–1911.

STANLEY H. TURNER.

FRIENDSHIP.—One of the numerous 'essayers upon friendship' justly observes that 'there is no subject of morality which has been better handled and more exhausted than this' (Addison, *The Spectator*, no. 68). The leading Greek thinkers represent the view of this virtue that prevailed in the ancient world; and perhaps the things they said first on the subject are not only the most original, but the best. Roman friendship was formed on the model of Greek, and the celebrated treatise of Cicero, *de Amicitia*, apart from its attractiveness of style and reminiscence, seems to have been drawn in substance from Aristotle's successor, Theophrastus. The halo thrown around ancient friendship has been dispersed by the ideals of Christianity; and the tie of marriage, wherever social and moral enlightenment has been reached, has in great measure superseded the tie of friend-

ship, which knit together heroic pairs like Achilles and Patroclus in the Homeric age, and bound master and scholar, or like-minded youths, in the gymnasia of Greece. Friendship, as a modern sentiment and force, is directed by ends and motives that were not present in pagan society. We shall see this by considering the subject in some of its historical phases.

I. *PLACE AND DISCUSSION OF FRIENDSHIP IN ANTIQUITY.*—It is the poets, and especially the philosophers, of Greece who present the ancient view of friendship, and from them we see its extraordinary influence in intellectual discourse, and in social life and institutions. The conditions of society explain the rise of this sentiment, and the prominent place it was allowed to fill. Ordinarily the position of woman was inferior, and the State, as in Plato's *Republic*, dwarfed the individual. The traditional religion failed to supply adequate motives for conduct, and thus friendship became a social distinction, a moral safety-valve, and an intellectual and religious inspiration. The citizen or politician who sought an escape from the hardness and corruption of society could say with Socrates, 'I have a passion for friends' (Plato, *Lysis*, 211). Friendship, indeed, touched Greek life and morality with emotion, and acted with 'the expulsive power of a new affection.' Its exercise is a revelation of the Greek mind, and its history is the summary of Greek moral life (Dugas, *L'Amitié antique*, 400). In a delightful essay, which fixes attention on this feature, Harnack points out that 'the history of the Greek schools of philosophy is at the same time the history of friendship' (Excursus on 'Friends,' in *Expansion of Christianity*, Eng. tr., 1905, ii. 25–34). See, further, the following article.

II. *FRIENDSHIP IN THE OT AND IN CHRISTIANITY.*—1. **Dignity and attractiveness of Hebrew friendship.**—Unlike some religions (*e.g.* Hinduism) which tend to repress individuality, the religion of Israel stimulated patriotism and the production of characters of a high and heroic type. At the different and critical periods, therefore, of Hebrew history, men and women were not wanting who could assume the responsibilities of leadership and wield a corresponding influence. It has been rightly said that the key to friendship lies in individuality, and that the OT knows well to appreciate this virtue, as history and circumstances required it (Rothe, *Theol. Ethik*, 1845–48, iv. 68 f.). Both on account of the high and brilliant examples that attract our notice, and the number of wise and sententious utterances that call attention to the importance of this subject, the claim that friendship receives a favourable and prominent place in the Hebrew Scriptures, and in Jewish literature as a whole, is fully justified.

'The historical books of the Bible furnish several instances of genuine friendship; and the pithy sayings of the Wisdom literature, of Talmud, and of Midrash, contain a philosophy of friendship. The Bible endows friendship with a peculiar dignity by making it symbolical of the intimacy that exists between God and man' (*JE* v. 520, art. 'Friendship').

One peculiar and determining consideration has to be mentioned. Under the influence and history of revelation, the consciousness of God as an overruling but gracious Power rose to clearness and intensity in the Hebrew mind. Later, in the schools of Greece, the Divine Being was the object of dim and remote speculation. But already in Israel the faculty of spiritual intuition was being trained, and God's entrance into friendship with men gave rise to a new and astonishing line of experience. Abraham and Moses, the outstanding figures of Hebrew history, not only towered above their fellows in virtue of their leadership, but, on account of the intimate and wonderful intercourse they were admitted to, stood in the unique position of 'friends' of God (Ex 33^{11}, Is 41^{8}). This conception or relationship never entered the mind of a thinker like Aristotle, who held that friendship is destroyed when persons are separated by a wide inequality; and therefore between God and man, or personalities so far removed from one another, friendship or intercourse was not conceivable (*Eth. Nic.* bk. viii. ch. vii. [Grant's notes]).

We may glance at some of the examples contained in the OT. The friendship between Ruth and Naomi, recorded in a charming fragment of literature, is a specimen of what is not often celebrated in classical writings, viz. an independent and beautiful relationship between women. Ruth's expression of affection and loyalty (Ru $1^{16f.}$) corresponds to the warmth and disinterestedness of sentiment incorporated in the Greek and Roman ideals, and exhibits the two component elements which, in Emerson's view (*Essays*, 'Friendship'), make up friendship, and are named *truth* and *tenderness*. That author, in the course of his sparkling and paradoxical essay, describes unconsciously, in defining the end of friendship, the traits that distinguished the friendship of Ruth:

'It is for aid and comfort through all the relations and passages of life and death. It is fit for serene days and graceful gifts, and country rambles, but also for rough roads and hard fare, shipwreck, poverty, and persecution.'

More celebrated and influential is the relationship between Jonathan and David, who form the classic pair, the Pylades and Orestes, of the OT, and whose friendship was formed spontaneously, and pledged deeply and lastingly (1 S 18^{1-4}). Each of these noble characters, in their perfect intercourse and devotion, felt to the other as to himself, and their attachment was, in Aristotle's phrase, applicable to the friendship of the good, 'incapable of being disturbed by accusations' (Grant's *Aristotle*, ii. 259). No friendship on pagan soil can rival the qualities displayed by Jonathan and David: 'the best that Greece and Rome have to show of friendship looks pale beside this' (J. C. Shairp, 'Friendship in Ancient Poetry,' *N. Amer. Rev.*, Nov. 1884). In their case, the 'prelude' or preliminary trial, required by prudent moralists, was unnecessary. As Jeremy Taylor puts it, in a sentence marked by less than his usual amplitude (*Works*, i. 86), 'some friendships are made by nature, some by contract, some by interest, and some by souls.' The beauty of Jonathan's friendship has been immortalized in David's elegy (2 S 1^{26}), and the intercourse of these twin souls stirs fresh admiration in the historian, who sees in it a healthy testimony to the period in which it was realized, and the spectacle of 'a friendship which shines for all ages as an eternal type' (Ewald, *Hist. of Isr.*, Eng. tr., iii.^{2}, 1878, p. 76). In the personal attendants who accompanied and ministered to the Hebrew prophets (*e.g.* Elisha, the servant of Elijah [2 K 3^{11}]), in the band of disciples who gathered round Isaiah as their spiritual leader and guide (Is 8^{16}), and in the circle of godly people who drew together in degenerate and dangerous times (Mal 3^{16}), we see further interesting developments of this principle, and how various are the sympathies and services that test and prove the worth of friends.

What may be termed the 'Directory' of the OT on the subject of friendship is to be found in the Book of Proverbs. Its pointed and scattered sayings crystallize the maxims and warnings drawn from Hebrew wisdom and experience on this topic, and contain a practical philosophy designed to meet some of the duties and dangers connected with friendship and companionship. A few instances will suffice. (1) *Prudence is required in choosing friends*: 'walk with wise men,' etc. (Pr 13^{20}). (2) *Friendship may prove closer and more enduring than natural relationship*: 'a friend loveth at all

times,' etc. (17^{17}, cf. the latter half of 18^{24}). This excellence is noticed also by Cicero: 'whereas you may eliminate affection from natural relationship, you cannot do so from friendship' (*de Amic.* ch. v.). (3) *Plain speaking is sometimes a duty, and is better than flattery*: 'faithful are the wounds of a friend' (27^{6}). (4) *A primary virtue in friendship is loyalty*: 'thine own friend, and thy father's friend, forsake not' (27^{10}); cf. Shakespeare, *Hamlet*, I. iii. 62:

> 'Those friends thou hast, and their adoption tried,
> Grapple them to thy soul with hoops of steel.'

(5) *Intercourse is the life and soul of friendship*: 'iron sharpeneth iron; so a man sharpeneth the countenance of his friend' (27^{17}). Similarly, in Aristotle's judgment (*Eth. Nic.* ix. 12), men brighten each other's powers, and add to the zest of life, by frequently coming together; cf. Tennyson's tribute to Hallam, *In Memoriam*, canto cx., 'Thy converse drew us with delight.' So cordial and practical is the Hebrew appreciation of friendship and its blessings (cf. Sir 6^{16} 'a faithful friend is a medicine of life').

2. Distinctiveness and reality of Christian friendship.—It is an old and almost a stock objection that friendship occupies a subordinate place in the NT, compared with the prominence assigned to it in ancient ethics. Certainly, it is nowhere made the subject of formal discussion and of express precept. This reproach has been traced to the period of the Renaissance and the rise of Humanism, when men turned admiringly to the models of classical art and literature, and when the worship of friendship became a romantic and religious passion. The objection has received attention at the hands of writers on Christian ethics (Rothe, followed by Luthardt, Martensen, and Köstlin), and is reproduced by Aristotle's sympathetic commentator in the passing judgment that 'Christianity ignores friendship' (Grant's *Aristotle*, ii. 250).

The difficulty is hardly solved, in Rothe's manner, by distinguishing between the writings of the NT and Christianity, and still less by the admission that no proper examples of friendship meet us in these writings. It is true that the relationship of Jesus to the Twelve, and in particular to individuals like John and Lazarus, did not contain the element of 'equality' which marks ordinary friendship. But this feature should not be pressed unduly. Jesus welcomed His disciples and followers to the higher platform of His friendship, and made their admission to His confidence and intimacy a matter of distinct recognition (Jn 15^{15}). It is right, therefore, to take the friendships we find in the NT in their natural and honest sense (see Stalker, *Imago Christi*, 1889, ch. v. pp. 93–95, where this objection is vigorously challenged).

But, while Christianity does not ignore friendship, it absorbs it in a deeper current, and creates out of the ancient relationship a special and distinct type. The ordinary category of friendship is no longer prominent, and the virtue characteristic of pagan ethics is transformed. The contrast is noteworthy. The ancient world was distinguished by friendship, which was enjoyed as a privilege by few; the new world originated by Christ and the gospel is distinguished by love, which may become the possession and inspiration of all. While, therefore, Christianity enters into the natural order of society, and assimilates institutions like the family and friendship, it transforms their character and content, and moulds anew the types and ideals that formerly prevailed. Love to Christ is the mainspring of the new moral world, the 'golden thread' which binds men to their Divine Master and to each other; and this friendship, on the part of Christ's followers, is prompted as the response to His own supreme act of friendship, and must be evidenced in each case by the virtues of sincerity and obedience (Jn $15^{13ff.}$).

Apart from this general conception of friendship which distinguishes Christianity, and the use of the term 'friends' in its ordinary and natural sense (Lk 12^{4}, Jn 11^{11}), there are two instances that call for remark. In Ac 27^{3}, mention is made of Paul's friends (*τοὺς φίλους*) whom he was allowed to visit. The expression may be taken as simply synonymous with Christian brethren and disciples, previously known. Again in 3 Jn ^{14} the closing salutation runs: 'The friends (*οἱ φίλοι*) salute thee. Salute the friends by name.' This shows that the primitive communities of the NT, or groups of Christians, constituted an inner circle of disciples and brethren, and that the term adopted by Jesus continued to carry a special and spiritual meaning. But in neither of these cases need we infer that the term is used in a technical sense, or that the first Christians applied this title to each other as it had been used professionally by Greek philosophers or the Epicurean school. Harnack points out that the early Christians, in accordance with the fellow-feeling which animated them, preferred the warm and close term of 'brethren' to that of 'friends,' and that later, in the 14th and 17th centuries, with the rise of the *Gottesfreunde* (see FRIENDS OF GOD) in Germany and of the Quakers (see FRIENDS, SOCIETY OF) in England, the term 'Friends' was appropriated, and acquired its special usage (*Expansion of Christianity*, Eng. tr., ii. 31–34).

III. *QUESTIONS IN THE STUDY OF FRIENDSHIP.*—A few remaining points involved in the elucidation and appreciation of this subject may be presented.

1. Friendship and youth.—It is generally acknowledged that youth is the golden period of friendship. Aristotle did not fail to notice, however, the impulsive tendency of youth to enter on and dissolve friendships in one day (*Eth. Nic.* bk. viii. ch. 3). On this account Cicero observes that such enthusiastic attachments, readily contracted at games, are not to be trusted, and that men must come to maturity before their friendships can be regarded as solid and permanent (*de Amic.* ch. xx.). On the other hand, modern ethical writers (*e.g.* Schleiermacher and Rothe) properly allow that, when the tutelage of the family is left behind, and character is still open and impressible, friendships may be considered not only natural but invaluable. This fact suggests that the friendships of youth should not be arbitrarily hindered, but wisely fostered and directed. The question as to the place of friendship in modern education arises here, and has been commonly neglected. The Greek custom of turning friendship at this stage into a recognized institution, and of laying down rules to guide elder youths who are responsible for those under them, is worthy of imitation (Muirhead, *Chapters from Aristotle's Ethics*, 1900, p. 185 ff.; and E. Carpenter, art. 'Affection in Education,' in *IJE*, 1899, pp. 482–494). In a curious 'Fragment of an Essay on Friendship,' the poet Shelley refers to an attachment, at the age of eleven or twelve, to a school-companion as his introduction to 'the sacred sentiments of friendship.' In this sphere the discipline of healthy moral training is indispensable (cf. Lecky, *The Map of Life*, London, 1899, p. 237).

2. The number and choice of friends.—(1) If friendship is viewed as an example of the concentration of feeling and sentiment, then Aristotle's opinion that a plurality of friends is not possible or desirable seems justified. The classical friendships were in pairs, and it is contrary to human nature to stand the strain of intimacy or intense

occupation with many (*Eth. Nic.* bk. viii. ch. 6, ix. ch. 10). But it is unwarranted to say that we can have but one friend, and that our having many friends is a proof that we have not yet found the true friend (Rothe). On this point Hebrew Wisdom saw the danger of alliance with multiplied friends or advisers (Pr 18[24] [RV]; cf. Sir 6[6]); and Plutarch humorously observed that it is difficult to satisfy the conflicting wishes of a number of friends who would have one go on a voyage, appear at a law-court, and attend a marriage or funeral (Dugas, p. 321). The law of parsimony, or quality rather than quantity of friends, is the true principle. 'The condition which high friendship demands is ability to do without it' (Emerson). 'When a man has six friends, to introduce a seventh is usually hopeless' (R. L. Stevenson, *Letters*, ed. Colvin, ii. 133).—(2) Socrates lamented that men attended to trifling matters, but took so little trouble in choosing their friends (Xen. *Mem.* bk. ii. ch. 4). In the same vein Aristotle valued friendship as the outcome not of passing emotion but of settled moral purpose (*προαίρεσις*). The fact that friendship has this voluntary character, and is specially a bond of our own making, explains the severity of the punishment meted out by Dante to traitors to friends and guests, who have more claim on our loyalty than even natural kinsmen (*Inferno*, canto 33; cf. J. S. Carroll, *Exiles of Eternity*, London, 1903, pp. 429, 453). At the same time, there is a subtle and potent influence at work in friendship which defies analysis. In his sprightly manner, Montaigne (*Essays*, Eng. tr., bk. i. ch. 27) says: 'If a man urge me to tell wherefore I loved him, I feel it cannot be expressed but by answering: Because it was he, because it was myself.' In certain cases like draws to like, or one seeks in another what is wanting in himself (Tennyson, *In Memoriam*, canto lxxix.). But, again, the act of choice may be superseded, and friends come to our door 'unasked, unhoped' (Newman), with whom we associate no particular feeling of gain or advantage, and who rule by the irresistible spell of character and personality.

3. **Types of friendship.**—The varieties of friendship have been enumerated by different writers (see Lemme's treatise, ch. iv., 'Die Formen der Freundschaft'), and are noteworthy. In antiquity the heroic type appeared early and called forth admiration and self-sacrifice on the part of comrades. Among the philosophers and politicians of Greece, friendship assumed also specific forms, which will always find their opportunity in society, and may be classed as friendships of vocation. In modern times the rise in the spirit of friendship, and in the character of the services and benefits which friends seek to render, is mainly due to Christianity. Three standing types may be mentioned. (1) *Sentimental* friendships. This variety blossoms in the season of youth, and was seen in the shallow and romantic attachments that were fashionable in Germany in the 17th and 18th centuries. Feeling, rather than intellect or character, is the cause of their formation, and also of their want of durability.

Perhaps Lessing's light and amusing comedy, *Damon, oder die wahre Freundschaft* (1747), is the best example of this sort of friendship, and hits off admirably its foibles and absurdities. Damon and Leander, two of the principal characters in the play, are such conscientious and devoted friends that neither will claim the hand of the widow with whom they are in love, for fear of disappointing the other. Lessing employs the wit of the widow's maid to explode effectually this dry, lofty, and impracticable notion of friendship.

(2) *Intellectual* friendships. The capacity for friendship was traced by Aristotle to the exercise of man's intelligence or thinking faculty, and modern psychologists agree in holding that sympathy or friendship is in part an intellectual endowment, and cannot flourish under conditions where the requisite amount of intelligence, in individuals or tribes, is not attained (Bain, *The Emotions and the Will*[2], London, 1865, ch. vi. p. 87). In this class, æsthetic, literary, and scientific friendships may be combined. The condition of freshness in these relationships is that minds keep growing, and are always capable of contributing something to enrich the common stock of ideas. To *keep friendships in repair*, in accordance with Dr. Johnson's maxim, is a matter of intellectual as well as social duty and difficulty. The friendship of Goethe and Schiller is a celebrated example of this class, and shows how men of culture come gradually to approach each other, and can subordinate differences of temperament and character to community of aim in pursuit of art and truth (see Carlyle's *Life of Schiller*, pt. ii. and App. no. 3).

(3) *Religious* friendships. Here friendship reaches its highest intensity (Rothe), and friends 'treat of the deepest of human affairs' (Martensen). The respect and reverence due to friends are seen at their best in this circle of relationships, and it is in the practical religious life that the fruits of friendship are most valuable and necessary, viz. 'peace in the affections and support of the judgment' and 'aid and bearing a part in all actions and occasions' (Lord Bacon). A typical example of this class is the friendship of Luther and Melanchthon—another evidence that friendship at its deepest rests not on agreement of opinions, or identity of constitution, but on those underlying principles and convictions that are rooted in a common spiritual experience.

The characteristics and atmosphere peculiar to this type of friendship—a type unknown to the pagan world—are seen in a volume, now rare, published by Delitzsch in 1842, consisting of essays by others, and two by himself, on Christian friendship (quoted below). The titles are such as these: 'The Character of Christian Friendship,' 'The Observance of good Habits in Christian Friendship,' 'On friendly Prayer,' 'Indecent Trifling of God's Children with Friends,' 'The Eternity of Christian Friendship.' One of the authors of these essays was Susanna Cath. von Klettenberg, a friend of Goethe's mother, the 'Schöne Seele' of *Wilhelm Meister* (Carlyle's tr. bk. vi., 'Confessions of a Fair Saint').

Ordinary friendship, as was seen long ago, is rooted in nature and society. This highest type of friendship is rooted in God, and is the goal of man's spiritual experience and endeavour.

LITERATURE.—Plato, *Lysis*; Aristotle, *Nicom. Ethics* (bks. viii. ix. [Grant's commentary, 1874, full and valuable]); Cicero, *de Amicitia*; Kant, *Metaphysic of Ethics*, Clark's tr.[3], 1871, pp. 278–282; H. Sidgwick, *Methods of Ethics*[3], 1884, pp. 255–258; C. E. Luthardt, *Moral Truths*, etc., Clark's tr. 1876, Lect. x.; H. L. Martensen, *Christian Ethics (Social)*, Clark's tr., ii., 1882, pp. 72–77; L. Lemme, *Die Freundschaft*, 1897 [a useful treatise in 5 chapters], and art. 'Freundschaft,' in *PRE*[3]; J. Taylor, 'Discourse,' *Works*, vol. xi.; the *Essays* of Montaigne, Bacon, Addison, and Emerson; F. Delitzsch, *Philemon, oder das Buch von der Freundschaft in Christo*[3], Gotha, 1878; H. Clay Trumbull, *Friendship the Master-Passion*, 1892; L. Dugas, *L'Amitié antique*, Paris, 1894 [a learned and elaborate treatise on philosophic theories and ancient manners]; Hugh Black, *Friendship*, 1897 [popular and suggestive]; artt. 'Friend,' in *IDB*, vol. ii., and 'Friendship,' in *DCG*, vol. i. Of poems inspired by this theme, Milton's *Lycidas*, Schiller's ballad, *Die Bürgschaft*, and Tennyson's classic tribute, *In Memoriam*, are examples. See also Hallam, Lord Tennyson, *Tennyson and his Friends*, London, 1911 [a charming volume].

W. M. RANKIN.

FRIENDSHIP (Greek and Roman).—**1. The Seven Sages.**—Each of the seven sages had his say on the matter. Thales of Miletus admonished men to remember their friends whether present or absent (Diog. Laert. i. 37). Pittacus of Mitylene gave the advice, 'Speak not ill of a friend,' adding, 'or even of an enemy' (*ib.* 78). Bias of Priene suggested 'loving as though one might hate,' giving as his reason that 'most men are bad' (*ib.* 87). Solon's word of wisdom to the world was, 'Get not friends quickly; but, when you have got them, do not reject them' (*ib.* 60). Cleobulus of Lindus said that 'one ought to benefit

a friend, so that he may be more a friend, and to make an enemy into a friend; for one ought to be on one's guard against the censure of friends and the plots of enemies' (*ib.* 91). Even Periander of Corinth had his amiable sentiment on this subject. 'Be the same to friends in their good and evil fortune' (*ib.* 98). Chilon the Lacedaemonian went further, by bidding men be 'more ready to join in the ill fortune than in the good fortune of their friends' (*ib.* 70). Plato (*Prot.* 343 A), in his list of the Sages, substitutes for Periander a very obscure person called Myson, who is not credited with any saying on friendship. It appears to have been alien to his temperament, for the story runs that he was caught chuckling when he imagined himself to be alone, and admitted that it was because he imagined himself to be so (Diog. Laert. i. 108). The reason for the exclusion of Periander by Plato was doubtless the detestation which that philosopher felt for tyrants. Anacharsis the Scythian, who was Greek on his mother's side, is sometimes reckoned as one of the Seven. His remark is uncontrovertible, that 'it is better to have one friend who is worth much than many who are worth nothing' (*ib.* 105). These sentiments of the Sages received general applause, with the exception of that of Bias, which became a scandal to idealists. Cicero makes Scipio single it out for condemnation (*Lael.* 59). Still, when coupled with its counterpart, 'to hate as though you might love,' which, if not said by Bias himself, was added for him (Arist. *Rhet.* ii. 13. § 4), it became part of the general Greek doctrine of moderation, and, as such, received poetical expression both from Sophocles (*Ajax*, 679–683) and from Euripides (*Hipp.* 253–260), and philosophical approval from Philo (ii. 401) and from Aulus Gellius (i. 3. 30).[1] Another remark made by Bias displays the same shrewd practicality. He said that it is better to judge between one's enemies than between one's friends; for in the latter case *one* is sure to become an enemy, in the former a friend (Diog. Laert. i. 87). The Sages lived in the early part of the 6th cent., being referred to the year 586 B.C. as a meeting point.

2. Pythagoras.—Let us now descend to the latter part of the same century, and come to the philosopher Pythagoras (*fl.* 531 B.C.). As Pythagoras instituted a communistic brotherhood, it is natural that the proverbial saying, κοινὰ τὰ φίλων, should be attributed to him.[2] So is another word which goes deep into the heart of the matter—that about one soul in two bodies.[3] No less penetrating is the saying that friendship is equality, which is ascribed to the same source.[4] The addition of the adjective 'harmonious' to 'equality' is peculiarly Pythagorean (Diog. Laert. viii. 33).

3. Socrates (Xenophon, Plato). — The Ionic School was too much occupied with physics to attend to friendship. So we drop at once from Pythagoras to Socrates. He was the first of the Humanists, the first to say in effect that 'the proper study of mankind is man.' This was a reversion to the attitude of the Sages, who, with the exception of Thales, were more occupied with man himself than with his dwelling-place. The views of Socrates on friendship are preserved to us in the *Memorabilia* of Xenophon, and to some extent also in the *Lysis* of Plato. The second book of the *Memorabilia*, with the exception of the first chapter, might be entitled περὶ φιλίας. The second chapter is a homily on filial affection, in which Lamprocles, the eldest son of Socrates, is exhorted to bear with his mother, in spite of her shrewish tongue. He is reminded of all that a child owes to a parent, especially to a mother, and it is pointed out to him that, while the State neglects all other forms of ingratitude, ingratitude towards a parent is punishable by law. As a fitting sequel to this chapter there is a little sermon on brotherly love, which might have been preached from the text:

> 'Behold, how good and how pleasant it is
> For brethren to dwell together in unity!' (Ps 133[1]).

Then, extending his view beyond the family, Socrates dilates in ch. 4 on the value of friendship, and insists that a good friend is the most useful of all possessions. In ch. 5 he even appraises the money-value of friends. Ch. 6 begins with advice as to the choice of friends, and ends with directions as to how to gain them. It appears in the course of it that there is a natural basis for friendship in men's need of one another, in the instinct of pity, in the benefits derived from co-operation, and in the feeling of gratitude (χάρις) which is thereby engendered; but it becomes plain also that friendship is possible only among the good. The rest of the book dwells on certain commercial aspects of friendship, closing with advice to a rich man to buy friends when they are cheap, on the principle enunciated by Horace (*Ep.* I. xii. 24):

> 'Vilis amicorum est annona bonis ubi quid deest.'

Thus we see that the views of Socrates on friendship were, as on other matters, thoroughly utilitarian.

The *Lysis* is a very 'Socratic' dialogue, of the kind known as 'mæeutic' or elicitory. It is designed to stimulate, not to satisfy, inquiry; it discusses everything and decides nothing; opens wide vistas, where we seem to be laying hold of a principle which shall carry us far beyond the immediate subject, and then suddenly blocks our view by interposing some logical obstacle. In its pictorial setting it is among the most charming of Plato's dialogues, but, like others which reach the highest point of artistic perfection, it is poisoned by the taint of perverted amativeness. The Socrates of Plato begins where the Socrates of Xenophon left off. For the first position maintained in the *Lysis* is that whether a person will be loved must depend upon whether he is useful (210 C). Then, after some word-play on the active and passive meanings of φίλος, which lend themselves to verbal contradictions (212, 213), and during which the valuable idea is started that reciprocity is requisite for friendship (212 D), Socrates appeals to the poets as the fathers of philosophy (214 A).[1] Does not Homer authorize us to believe that likeness is the basis of friendship, when he says (*Od.* xvii. 218):

> αἰεί τοι τὸν ὁμοῖον ἄγει θεὸς ὡς τὸν ὁμοῖον?[2]

But this principle, though it falls in with the philosophy of Empedocles (*q.v.*),[3] is soon found to be only a half-truth, since there can be no friendship between the bad. It amounts, therefore, to saying that friendship is confined to the good. Against this, however, there lies the objection that like is of no use to like. Therefore the good are friends to the good, not in so far as they are like, but merely in so far as they are good. But against this, again, there lies the objection that the good man is supposed to be sufficient to him-

[1] This last author attributes it to Chilon: 'Hac,' inquit, 'fini ames, tanquam forte fortuna et osurus, hac itidem tenus oderis, tanquam fortasse post amaturus.'

[2] Diog. Laert. viii. 10. x. 11; Plato, *Lysis*, 207 C; Arist. *Eth. Nic.* viii. 9. § 1, *Eth. Eud.* vii. 2. §§ 33, 38; Ter. *Ad.* 803 f.; Cic. *Off.* i. 51; Mart. ii. 43.

[3] Arist. *Eth. Nic.* ix. 8. § 2, *Eth. Eud.* vii. 6. §§ 7, 8, *Mor. Mag.* ii. 11. § 44; Cic. *Lael.* 81, 92, *Off.* i. 56 ('efficiturque id, quod Pythagoras volt in amicitia, ut unus fiat ex pluribus').

[4] *Eth. Nic.* viii. 5. § 5 (φιλότης ἰσότης), viii. 8. § 5 (ἡ δ' ἰσότης καὶ ὁμοιότης φιλότης), ix. 8. § 2 (ἰσότης φιλότης); Diog. Laert. viii. 10 (εἶπά τε πρῶτος . . . φιλίαν ἰσότητα).

[1] Cf. Philo, ii. 467.

[2] The quotation is put in a more gnomic form than it really possesses in the text of Homer, which reads not αἰεί τοι but ὡς αἰεί.

[3] Cf. *Lysis*, 214 B, with Arist. *Eth. Nic.* viii. 1. § 6, *Eth. Eud.* vii. 1. § 6.

self,[1] and, as such, does not stand in need of friends. Moreover, there is equal authority, both poetical[2] and philosophical,[3] for quite the contrary doctrine, namely, that friendship is between opposites. But against this also there lies a fatal objection. For good and bad are opposites, and the good cannot be a friend to the bad. Perhaps, then, the indifferent is the friend to the good. If so, it must be owing to the presence of evil, before that evil has been able to corrupt the indifferent nature. Hence it is those who are conscious of ignorance that love wisdom, *i.e.*, that are philosophers, not those who possess knowledge, nor yet those who are so ignorant as to think they do (218 A; cf. *Apol.* 29 B) without doing so. And generally it is that which is neither bad nor good that is a friend to the good, in order to rid itself of the bad. This seems to be a conclusion in which all are willing to acquiesce. But a doubt soon suggests itself. For, if one thing is loved for the sake of another, is it not the other thing that is truly loved? From this it would follow that what is truly loved must be loved for its own sake. Furthermore, can friendship be due to the presence of evil, while it might still exist in a world from which evil was removed (221 C)? A new basis for friendship is now discovered in desire. But one desires what one lacks, and one lacks what one has lost. Whence it follows that friendship is for one's own. But if one's own (*τὸ οἰκεῖον*) is identical with one's like, we are back in our old difficulties. If it is not, then either good must be 'one's own' to all, or else good must be 'one's own' to good, bad to bad, and indifferent to indifferent. Either supposition lands the interlocutors in conclusions which seem already to have been refuted. Socrates, however, nothing daunted, is casting round for fresh lines of inquiry, when the pedagogues of the two boys, Lysis and Menexenus, with whom he has been conversing, swoop down upon their charges, and carry them off home. Socrates and the bystanders at first try to prevent them, but they are in no mood to be argued with, having had a little refreshment at the Hermæa. And so the Assembly breaks up, and we are left in perplexity as to the true nature of friendship. Still, many of the ideas have already been brought out which we shall find figuring later in the more systematic treatment of the subject by the Peripatetics.

4. The Cynics, Cyrenaics, etc.—Among the immediate disciples of Socrates we have dealt with Xenophon and Plato, but there remain others who may be spoken of. Antisthenes, the founder of Cynicism, held the two positions which are regarded as inconsistent in the *Lysis*, namely, that the sage is sufficient to himself,[4] and also that 'good men are friends.'[5] Among his numerous works, however, we find no mention of one on friendship. Neither does Aristippus appear to have written expressly on the subject, but we know the general view of the Cyrenaic school to have been that the end of friendship is utility.[6] The followers of Hegesias accordingly denied that friendship is an end in itself (Diog. Laert. ii. 93); so also did those of Anniceris, on the ground that the happiness of a friend is not perceptible to oneself (*ib.* 96), while they risked their consistency by declaring that love for a friend would induce one to forgo pleasure and undergo pain. Diodorus the Atheist, however, was of sterner stuff than his master Anniceris. He denied that friendship exists either among fools or sages. With the former it is a question of utility, with the latter it is superfluous (*ib.* 98). Of Simmias of Thebes, another of the immediate disciples of Socrates, we can say only this, that in his book containing twenty-three dialogues the fourteenth was *περὶ φίλου* (*ib.* 124).

Cicero mentions friendship among other topics connected with moral and political philosophy, which had been treated in ornate and weighty language by 'the old Peripatetics and Academics' (*de Fin.* iv. § 6), whom he always maintained to have been really one school under two names. Plato was succeeded in the Academy by his sister's son, Speusippus, among whose numerous works there was one *περὶ φιλίας* (Diog. Laert. iv. 4). His successor Xenocrates had also a treatise in two books on the same subject (*ib.* 12).

5. Aristotle and his successors.—We come now to Aristotle, to whom, directly or indirectly, we owe the greatest pronouncements of antiquity on the subject of friendship. These are to be found in bks. viii. and ix. of the *Eth. Nic.*; bk. vii. chs. 1–12 of the *Eth. Eud.*; and bk. ii. chs. 11–17 of the *Magna Moralia*. The treatment in *Eth. Nic.* is far more finished than in *Eud.*, but the two treatises proceed ultimately from one mind. The author of the *Magna Moralia* seems to have both the other writers before him.

The Greek word *φιλία*, which we render so inadequately by 'friendship,' corresponds more nearly to 'love.' It means the attractive principle in human nature generally. It is to mind what gravitation is to matter. It has its roots in animal nature, in the instinctive love of parents, especially of the mother, for offspring. It is the bond of the family, the tribe, and of the State, and generally the principle of political cohesion, the main object of the legislator being to bring it about. Just as in Christian ethics 'love is the fulfilment of the law' (Ro 13[10]), so Aristotle remarks that friendship supersedes justice, whereas justice does not supersede friendship (*Eth. Nic.* viii. 1. § 4).

Waiving aside the wider and quasi-physical speculation as to whether it is likeness or unlikeness that produces friendship, Aristotle confines himself to such questions as concern the philosophy of man. Friendships differ in kind according to the several objects of love. Now, there are three things that attract love—the good, the pleasant, and the useful. Hence there are three kinds of friendship according to the end that is sought to be attained. There are also three conditions of friendship: (1) that there should be a feeling of goodwill; (2) that this feeling should be reciprocated; (3) that the object of the feeling should be aware of its existence. Friendships for the sake of the useful and the pleasant are at bottom selfish, and are easily dissolved. The former is found chiefly among the young, the latter among the old. It is the friendship of the good, who love each other because they are good, which alone is lasting. And this includes the characteristics of the other two kinds, since the good are at once useful and pleasant, both in themselves and to one another. Such friendship is naturally rare, and is slow of formation, but, when formed, it is above calumny and distrust. It, therefore, is alone truly entitled to the name. Hence friendship in the highest sense is confined to the good, but the friendships of pleasure and utility are open to good, bad, and indifferent alike. In the highest sense also friendship implies equality and perfect reciprocity, though there are forms of friendship in all three kinds, in which there is a natural superiority on one side. In such forms reciprocity is not to be expected.

Any form of association among men, even dowr

[1] *ἱκανὸς αὐτῷ* is Plato's term here (215 A); *αὐτάρκης* does not occur until the later dialogues.
[2] Hes. *Op.* 25, 26; Arist. *Eth. Nic.* viii. 1. § 6.
[3] Heraclitus. Cf. *Lysis*, 215 E, with *Eth. Nic.* viii. 1. § 6.
[4] Diog. Laert. vi. 11: *αὐτάρκη τε εἶναι τὸν σοφόν.*
[5] *Ib.* 12: *οἱ σπουδαῖοι, φίλοι.*
[6] Diog. Laert. ii. 91: *τὸν φίλον τῆς χρείας ἕνεκα.*

to dining-clubs, is regarded by Aristotle as having its appropriate 'friendship.' And all these lesser associations are included in the great fellowship of the State, which aims at the common interest. There are three normal forms of constitution—kingship, aristocracy, and commonwealth or timocracy; and three perversions (*παρεκβάσεις*) of these—tyranny, oligarchy, and democracy. Among the latter, tyranny is the worst, as being the opposite of the best, and democracy the least evil, as it involves the smallest deflexion from the corresponding normal form. The analogues of the three normal forms of government may be discerned in family relations. Paternal rule corresponds to kingship, the relation between husband and wife to aristocracy, and that between brothers to timocracy. The relation between husband and wife is founded on a natural instinct, and continued on the principle of the division of labour. It involves both profit and pleasure, and its friendship may also be based upon virtue. Children constitute an additional bond; so that childless couples more often separate.

Returning to friendship as existing between individuals, Aristotle lays down that all the characteristics by which friendship has been sought to be defined are drawn from the relation in which a good man stands to himself. For a friend is one who has an effective desire, not merely for the being but for the well-being of another; companionship in life is deemed indispensable to friendship, and so are identity of purpose and sympathy in joys and sorrows. These characteristics are not found in the bad man, who is at war with himself, and cannot be said to have one soul. The good man's relation to himself, then, constitutes, as it were, the ideal limit of friendship, so that a friend is in very truth a second self. The happy man will need a friend, because man's nature is social, and that he may joy in his friend's existence, even as he joys in his own. The essence of friendship lies in loving rather than in being loved.

Theophrastus, who succeeded Aristotle as head of the Lyceum, also wrote a treatise on friendship in three books (Diog. Laert. v. 45), in which he discussed the casuistical question whether one ought sometimes to aid a friend contrary to strict justice, and, if so, to what extent, and on what sort of occasions.[1] He argued that, though rectitude is more valuable in kind than utility, yet on certain occasions a great utility to a friend may compensate a slight departure from rectitude, just as, though gold is more valuable in kind than bronze, yet a great weight of bronze may be of more value than a thin flake of gold. Another topic on which he touched was the inexpediency of recriminations on the part of friends who had become reconciled after a quarrel (Aul. Gell. viii. 6). He also gave the advice which has been crystallized by Seneca with his usual happy terseness—'post amicitiam credendum est, ante amicitiam judicandum.'

6. The Stoics and Epicureans.—The Stoics, of course, had their say upon friendship, but their style was execrable after that of their predecessors. It is told of Zeno that, when asked what a friend is, he replied, 'Another I' (Diog. Laert. vii. 23); but we have seen that the idea was familiar to Aristotle, and that in substance it goes back to Pythagoras.[2] The Stoics naturally confined friendship to the wise, as they did everything else to which they attached value (Stob. *Ecl.* ii. 601, Gaisford). They made friendship to consist in social intercourse coupled with harmony of opinion in relation to life (*ib.* 565). They also displayed their usual verbal subtlety in the distinction of terms on this subject.[1] Cleanthes, who succeeded Zeno in the Porch, is recorded to have written a treatise on friendship (Diog. Laert. vii. 175). Not so Chrysippus, or his great rival Epicurus. But the example of Epicurus on this subject was more powerful than his precept, and the Epicurean school, as is well known, was celebrated for the charm and fidelity of its friendships (Cic. *de Fin.* i. 65). Atticus, the friend of Cicero, inherited its traditions.

7. Cicero.—Theophrastus died in the year 287 B.C. Some two and a half centuries later Cicero, having enlisted his rhetoric in the service of philosophy, selected the work of Theophrastus as the basis of his celebrated treatise 'On Friendship.' The *Laelius, vel de Amicitia*—to give the work its exact title (Aul. Gell. xvii. 5. 1)—was part of Cicero's astonishing literary output during the year 44 B.C., when his dæmon must have warned him that his time was short. Admirable as this work is, it still does not possess quite the charm or the transparent lucidity of diction which characterize the companion treatise *de Senectute*, and therefore it suffers somewhat by comparison. While availing himself freely of the material provided by Theophrastus (Aul. Gell. i. 3), Cicero displayed his discretion by not following that philosopher into the casuistry of a clash between friendship and justice, but by passing the matter over with a vague generality (*Lael.* 61). His purpose in his philosophical writings was always to edify. His practical solution of the problem raised by Theophrastus is 'writ large' in the *pro Milone*. There is reason also to believe that Cicero in this treatise was indebted to Stoic works on the same subject.[2] His obligation to Xenophon in one passage is obvious.[3]

The definition of friendship given in the *Laelius* appears unsatisfactory. For to describe friendship as 'agreement on all subjects sacred and secular, coupled with goodwill and affection' (§ 20), is to put intellect before feeling, where the latter ought to come first, while it also leaves reciprocity out of the account. In his juvenile treatise, the *de Inventione* (ii. 166), Cicero gave a happier definition of friendship when he declared it to be 'the willing good things to another person for his own sake, together with the same will on his part towards you.' Cicero follows the Peripatetics in tracing the origin of friendship to nature, not to utility.[4] There is much in his work that reminds us of Aristotle, yet he has nowhere the air of directly borrowing from him. This fits in exactly with what we know of his relation to Theophrastus. The chapter 'de Amicitia' in Valerius Maximus (iv. 7) is merely anecdotal, after the manner of that writer.

8. Seneca.—Seneca has brilliant passages on friendship scattered up and down his works, especially in the *Moral Epistles*. His sentiments, indeed, are so fine as to suggest the question whether they were quite sincere. You ought to wish for a friend, he tells us, not, as Epicurus said, 'that you may have somebody to sit by your bedside when you are ill, and to succour you in imprisonment or poverty,' but that you may have somebody by whose bedside you may sit yourself, and whom you may rescue from the dungeon of the enemy (*Ep.* ix. 8). Now there are friends who will do these things for one another, without being sages, but even a Florence Nightingale or a John Howard

[1] *εἰ δεῖ βοηθεῖν τῷ φίλῳ παρὰ τὸ δίκαιον καὶ μέχρι πόσου καὶ ποῖα* (Aul. Gell. i. 3. 9).

[2] In phrase even, according to Philo, ii. 659: *τὸ Πυθαγόρειον ῥῆμα . . . ἆρά ἐστι φίλος ἕτερος ὡς ἐγώ;*

[1] *e.g.* *γνωριμότης* and *συνήθεια* (Stob. *Ecl.* 566). The four terms which follow—*ἑταιρία, ξενία, συγγενική*, and *ἐρωτικὴ φιλία*—were four species of friendship recognized by the Peripatetics (cf. Stob. p. 636).

[2] Cf. *Lael.* 28 with *de Nat. Deor.* i. 121.

[3] Cf. *Lael.* 62 with Xen. *Mem.* ii. 4. §§ 1, 2, 4.

[4] *Lael.* 27; cf. *Eth. Nic.* viii. 1. § 3.

hardly regards them as choice-worthy in themselves. No one, however, will challenge the truth or beauty of the maxim which Seneca quotes from Hecaton, a pupil of Panætius, 'I will show you a love-potion without drug or herb or any witch's spell: if you wish to be loved, love' (*ib.* 6). On the loss of friends, which he admits to be the greatest a man can sustain, Seneca, after the manner of his school, is not very sympathetic. Instead of mourning them, he tells us (*Ep.* civ. 11 f.), it is better to make new ones. 'But they will not be the same.' 'Neither will you be the same,' is the rejoinder; 'you are changing every moment of your life.' Yet he allows a measure of tears in one of his terse and glittering antitheses (*Ep.* lxiii. 1):

'Nec sicci sint oculi amisso amico nec fluant. Lacrimandum est, non plorandum.'

Again, in the *Remedies against Accidents* (xv. 2), addressed to his brother Gallio, he has this not very consoling reply to one who complains that he has lost a friend: 'Be of good heart, if you have lost only one: blush, if he is the only one. Were you riding at one anchor in the storm of life?' Of his professed treatise 'On Friendship' there remain only mutilated fragments published by Niebuhr in 1820 from a Vatican manuscript.

9. Epictetus.—Among the discourses of Epictetus, as edited by Arrian, there is one labelled 'On Friendship.' Its theme is that friendship is confined to the wise, and it has a touch of the Cynicism which we trace in the stout-hearted slave-philosopher. You may see puppies, he says, fawning upon and playing with one another, so that you would say, 'How loving they are!' but throw in a bit of meat among them, and watch the result! Even so brothers may have been brought up amid mutual endearments; but throw in between them a pretty girl, or property, or honour, or power, and you will see what their affection is worth. 'For generally (be not deceived) every living creature finds its own interest nearest and dearest to itself.' It is, therefore, only those who identify their own interest with fidelity and justice and right who can be trusted not to pursue it to the detriment of another.

'For wheresoever is the "I" and "the mine,"
Thither the creature must needs incline.'

This is Epictetus' way of saying: 'For where thy treasure is, there will thy heart be also' (Mt 6^{21}).

10. Marcus Aurelius.—In the *Meditations* of Marcus Aurelius Antoninus there is much about forbearance and consideration for others, but no word on friendship. Was it part of the tragedy of that crown of thorns that the monarch who would fain have been a friend to all was himself without a friend?

LITERATURE.—The original sources have been cited in the article. Cf. also the preceding art. and the Literature appended to it.

ST. GEORGE STOCK.

FRIENDS OF GOD.—A name current, chiefly in the 14th cent., for individuals and groups of individuals who aimed at cultivating a deeper piety and a closer spiritual fellowship than did those around them in the Church, or than the Church encouraged. What distinguished them from others was not anything in their mode of worship, creed, or dress, but aloofness of spirit from the world, and simple devotion to the will of God. Hence they were not a sect. As a rule, they remained within the bosom of the Church—not consciously disloyal to its dogmas, discipline, or practice. They were much rather a spiritual brotherhood comprehending men and women of all social grades, stages of culture, and forms of experience. Love of God—predominantly mystical in some cases or mainly practical in others—was the uniting bond.

1. **Historical antecedents.**—Any direct connexion with previous movements in the Church is not traceable. But in the 12th cent. the name 'Friend of God' is applied to Bernard of Clairvaux. It was suggested by Jn $15^{14f.}$, but also by Ps 138^{17} (LXX) and Ja 2^{23}. In this last sense the word meets us in the German literature of the 12th and 13th cents. as an epithet for the Evangelists and Apostles, for OT heroes like Moses, and in general for all saints and pious people in heaven and earth. In the 13th cent., moreover, the expression *ausgewählter Gottesfreund* has already become a current one as applied to the pious and faithful believer. But not till the 14th cent. is the same expression reserved as a sort of formula for the ideal of a soul elevated through Christ out of slavery into the friendship and sonship (*Kindschaft*) of God (Jn 1^{12} 11^{52}, Ro 8^{14} 9^{8}).

It has been asserted that there are documents of the Middle Ages in which the name 'Friends of God' is given to the Vaudois; and that, at any rate, the Friends of the 14th cent. were in secret union with the Waldenses. But this, as Gieseler says (*Eccles. Hist.*, 1853, iv. 177, note 1), is a mistake, due most likely to statements met with about the somewhat legendary Nicholas of Basel, and is inconsistent with the submissive attitude of the Friends to the visible Church—the Waldenses, on the contrary, being its declared antagonists.[1] But it is true that the spiritual attitude of the two was alike, and that the impulse which proceeded from the Waldenses—as well as from their precursors, the order of the Humiliates—would tend to produce an atmosphere in which the Friends flourished. Much the same may be said of the impulse derived from the Mendicant Orders.

2. **Chief centres.**—The foci of the movement were Strassburg, Cologne, Basel; but its circuit included the Rhine Valley, from Brabant up to the high valleys of Switzerland, with the upper regions of the Danube. It was in favour from the first with the Preaching Orders on the upper and lower Rhine. Among the nuns of their convents it found many adherents to whom especially some of the leaders addressed themselves—*e.g.*, Tauler and Henry of Nördlingen to those at Basel, Nicholas of Strassburg to those at Freiburg, Suso to those at Zürich, etc. Two nuns in particular, Margaretha Ebner (of Maria Medingen, near Nuremberg) and Christina Ebner (abbess of the convent of Engelthal, near Nuremberg), stand out as devotees—the correspondence of Henry of Nördlingen with the former being 'the most important and reliable source of information respecting the Gottesfreunde of the South.' But its members were even more numerous among the laymen; and, if most of these were of the peasant class, they also included men of good station like Henry of Rheinfeld in Aargau, a knight of Pfaffenheim from Upper Alsace, a knight of Landsberg and his wife from Lower Alsace, Rulman Merswin, merchant of Strassburg, etc.

3. **General characteristics of the movement.**—(*a*) 'It was distinctly a *laymen's* movement, and there is an evident purpose in the literature of the Friends of God to exalt the ordinary lay Christian, and to show how the Church can be saved and the ministry purified by unordained persons; but these men do not show any spirit of revolt from the ancient system, they have not gained the Protestant temper, and they never dreamed of dispensing with the mediation of the Church, though they occasionally admit that spiritual life is possible without such mediation.'[2]

Nevertheless, the prominence given to 'unordained persons,' whose authority as guides lay simply in the fact that they had been taught of God, marked a radical divergence in principle from the Church—a divergence which did not become 'Protestant' only because it had not yet become explicit.

(*b*) The movement was necessarily *supranaturalistic*. In this respect the Friends of God were children of their age. They shared the common belief in the virtue of relics, the objective reality of visions, the power of every sense—sight, touch, smell, taste, and hearing—to be the medium of a

[1] Harnack, however, points out (*Hist. of Dogma*, Eng. tr., 1894–99, vi. 90, note 1) that one section of the Waldenses, viz. the Lyonnese Poor, as distinguished from those of Lombardy, were less sharply opposed to the Church.

[2] Rufus Jones, *Studies in Mystical Religion*, London, 1909, p. 254.

Divine revelation. Visions especially were looked for and often experienced—visions which declare themselves at once as hallucinations born of the abnormal psychic conditions into which the subjects of them were brought by their too rigorous treatment of the body.[1]

(*c*) It was strongly *apocalyptic*. The influence, on the one hand, of the 'great German prophetesses' St. Hildegarde, St. Elizabeth of Schoenau, and St. Matilda of Magdeburg—of which there are marked traces—and, on the other hand, the state of Christendom around them account for this. As to the latter, it was the period of 'the Babylonish Captivity,' when (from 1309 to 1377) 'the papal seat was changed to Avignon, and the popes were more or less puppets of France'[2]—a period followed by the Great Schism (1378–1417), during which each of two rival popes demanded the allegiance of the Church. In addition, there were the terrible social evils due to the great civil war which followed upon a double election of Emperors. Finally, these human terrors were accompanied by what seemed to be dreadful signs of the Divine wrath—notably the 'Black Death.'[3]

The effect of such phenomena upon the Friends of God was such as might be expected from the simplicity and fervency of their faith. It made them seers and prophets of the End.[4]

(*d*) *Asceticism* was a prominent feature in the practice of the Friends of God, but not so much for its own sake as for the sake of the higher stages of spiritual experience to which it was supposed to open the way. Asceticism disciplined the soul through the body, and formed the lowest round of that mystical ladder whose top reached to the enjoyment of God by clear vision and perfect union. The leaders of the Friends, at least, were mystics of the usual mediæval type—with their idea of God as a Being absolutely transcendent, with their notion of the way to Him as a process of complete self-emptying, and with their yearning for those occasional leaps into immediate and vital contact with Him which were called ecstasies.[5]

(*e*) But the chief note in leaders and followers alike was not this or anything else abnormal. It was *inwardness*—a life of simple faith, hope, and love derived from personal fellowship with God and flowing out in all the moral virtues. What they sought and found was a first-hand spiritual experience. They believed in the living actual educative work of God in the soul. They were pupils in the 'upper school of the Holy Spirit'[6]—a school to which every one of humble and sincere heart may have free access.[7]

4. Leaders.—(1) For the friends of God the leader *par excellence* intellectually and spiritually was *Heinrich Eckhart* (see MYSTICISM [Christian]). He was so, at least in two respects: (*a*) in the first place, by his constant emphasis on the capacity of the soul for God in virtue of its very nature. Not merely in the soul of prophet, priest, or scholar, but equally in the soul of 'every man,' there is something which is Divine. It may be designated 'the ground of the soul,' or 'the spark,' or 'the soul's eye,' or 'right Reason.' Names do not matter. The essential point is that there is in man what can rise to God and know Him and enjoy the bliss of friendship with Him. (*b*) In the second place, the type of piety prevailing among the Friends of God was Eckhart's. For he taught them to think of religion as something practical as well as something inward and spiritual. He 'was a highly practical man, who did his day's work with fidelity and telling effect.'[8] Similarly, Eckhart proclaims liberty from the restrictions of local and ceremonial worship.[1]

(2) One who was a Friend of God to his inmost soul, and may well be described as the 'spiritual splendour' of the movement, owed much to Eckhart—especially to his good sense at a time of crisis when good sense was the best counsellor. This was *Heinrich Suso* (*c.* 1300–65)—the 'Minnesinger of the Friends of God'—whose life-story was written down by his spiritual daughter, Elizabeth Staglin. He was a beautiful soul full of tender sympathy, 'not only with men, but with every little beast and bird and all the small creatures God had made.' After repeated painful spiritual crises, he went to Eckhart for comfort, and the latter 'set him free from a hell which he had long been enduring.'[2] He knew nothing of Eckhart's so-called heresies, and was impervious to his philosophy. What the Master taught him was to believe in the love of God, and prefer God's yoke to any of his own invention. So he became no longer a servant, but—to use his own phrase—the knight of God; and entered upon that later stage of his career in which may be seen one of the brightest examples of the practical love for men which is inspired by an enlightened love for God.[3]

(3) Another of Eckhart's disciples was probably *John Tauler* (see MYSTICISM [Christian])—though the relation of the two has sometimes been reversed. He had opportunities of hearing him both at Strassburg and at Cologne, and in one sermon at least he quotes him (13th after Trinity, 2nd sermon). But perhaps disciple is hardly the right word—unless it be taken to mean no more than that Tauler derived from Eckhart his best impulses and his most characteristic view of the spiritual life. There is little trace in Tauler of Eckhart's philosophy or subtlety.

5. 'The Friend of God from the Oberland.'—According to a story printed in all the editions of Tauler's sermons from 1498 onward, there came a momentous break in his life, occasioned by the visit to him at Strassburg of a mysterious person known as 'the Friend of God from the Oberland.'

His visit was made, it is said, in obedience to a Divine intimation that a certain Master of Holy Scripture preached there whom it behoved him to hear. He heard him five times and perceived that the Master was 'a very loving, gentle, good-hearted man by nature, and had a good understanding of the Holy Scripture, but was dark as to the light of grace.' So the man persuaded the Master to preach a sermon in order to show how one may attain to the highest and utmost in spiritual things. This the Master did, and the man took down the sermon word for word. Then, coming with it to the Master, he said: 'You are a great clerk and have taught us a good lesson in this sermon, but you yourself do not live according to it.' At first the Master resented such words, especially from a layman. But presently he discerned his right to speak as one taught of God, and put himself under his direction. Hereupon the man convinced him: (*a*) that in the sense of being a self-pleaser he was so far a Pharisee; (*b*) that his deepest need was conversion, to which end he must at once break through all his ways and habits. With deep humility the Master followed the layman's counsel. Renunciation was the keynote; and the Master was put to the test by being enjoined to renounce 'all his proud ingenious reason which he has through his learning in the Scripture.' He was for a time neither to study nor to preach, though he must continue to fulfil his daily duties as a monk, and must yield obedience in all faithfulness to his superiors. The Master consented; and at a cost of great and varied suffering—foretold by his director—he persevered. At length, after two years, as he lay in his cell utterly weary and sad 'but fully awake, he heard with his bodily ears a voice saying: Stand fast in thy peace, and trust God, and know that, when He was on earth in human nature, He made the sick whom He healed in body sound also in soul. Straightway when these words were uttered, he lost his senses and reason, and knew not how, or where, he was. But, when he came to himself again, he felt within himself that he was possessed of a new strength and might in all powers outward and

inward, and had also a clear understanding in those things which aforetime were dark to him, and he wondered greatly whence this came.' His Friend assured him that now at last he had received the light of the Holy Spirit; and that thus illumined he would possess a much clearer insight into the Scriptures than he had before. He might now begin again to preach. He tried, and was overcome by emotion. This made him a laughing-stock. But, being allowed to deliver a lecture in Latin to the brethren only, the result was 'such an excellent lecture as they had never heard in their lives before, so grand and deep and godly was his doctrine.' Next, therefore, he was permitted to preach in the church where he was 'wont to preach.' He did so with amazing power. Thereafter for 'full eight years' the Master 'preached both to clergy and laity,' his influence growing all the time. Thus he drew to his end. For more than twenty weeks he suffered sorely. His last hour was laden with dreadful and amazing anguish, which the Master himself, in an appearance to the Friend three days after his death, explained as his purgatory.

This picturesque story was first questioned in 1719 by Quétif and Echard, who, in their *Scriptores ordinis prædicatorum*, treated it as an allegory. More than a century later this view was accepted by Weiss in the *Biographie universelle*, art. 'Tauler' (1826). But the traditional view held its ground until H. S. Denifle, the great Dominican scholar, published his pamphlet (Strassburg, 1879) entitled *Taulers Bekehrung kritisch untersucht.*[1] Here he worked out the following conclusions:

(1) The epithet 'Master' means Master of Holy Scripture. This Tauler was not. (2) The Master's two years of seclusion (*Zurückgezogenheit*) are placed between 1346 and 1352. Tauler during this time was active as a preacher. (3) The Master died in the Dominican convent. Tauler died outside. (4) The Master shows himself (*bekundet sich*) a very second-rate, inexperienced, unimportant preacher. Tauler is seen in his sermons to have been the reverse of this. (5) The Master exhibits a distracted nature. Tauler is a harmonious personality. (6) The Master disowns any gift of eloquence in his style. Tauler in his appears as one of the great German speakers of his time. (7) The Master was not identified with Tauler until a hundred years after his death, and then as the result of conjecture, not evidence.

Who, then, was the Master? Had he really existed? Denifle at this time did not fear contradiction when he identified him either with the 'Gottesfreund' himself or with Rulman Merswin. Merswin certainly was a historical personage, a native of Strassburg, belonging to an important family of the city, and born in 1307. At the age of 40 he retired from his business as a banker with a large fortune, and devoted himself entirely to Divine things. Though married—to Gertrude of Bietenheim—he resolved to live henceforth as a celibate. But he did not give away his money; he kept it 'to use for God' as He might direct from time to time. In 1348, John Tauler became his confessor. In 1366 he found occasion for a pious use of his money in building a house for the Brethren of St. John on an island at Strassburg called the *Grünenwörth* ('Green Meadows'). In 1382 he died. A document entitled 'das Büchlein von den vier Jahren seines anfangenden Lebens,' purporting to be autobiographical, not only tells the story of the 'stages of spiritual experience' through which he passed during the first four years after his conversion, but also relates the first appearance of the Gottesfreund, and how, at his instigation, the book was written.

By Merswin the Friend is represented as the son of a rich family, who had spent a dissipated youth, was suddenly changed by the grace of God, withdrew into solitude and drew to him others like-minded, and by the illumination of the Holy Spirit became able, in the space of 30 weeks, to understand the Scriptures as thoroughly and speak as good grammar as if he had studied all his days in the best university. He appears at the castles of nobles and knights—even in the palace of the Pope—holding up to all alike, in writing and speech, a mirror of themselves; and effecting 'conversions' everywhere from the love of this vain transitory world to the inner mystic love of God. Such a man surely could not be hid. Yet apparently he was. Though he visited Strassburg in 1346 and converted the Master, nothing was seen of him. Though he visited Merswin and sent frequent letters to him, none but Merswin was aware of it. In connexion with the purchase of the 'Green Isle' and the constitution of its convent, Rulman Merswin planned nothing and did nothing apart from the advice of his friend; but no hint of this came to the eyes or ears of the Brothers for whom he was acting. Nor did they at all realize till after his death that the good Merswin had been living so God-devoted a life—the life of a saint. Only when they discover his own account of the 'vier Jahren' in a sealed casket are they enlightened and made to wonder at his great humility.

The story bears upon the face of it suggestions of romance; and Denifle's final belief that Merswin was the romancer is not surprising.

But, meanwhile, quite another line had been taken by the Strassburg professor, Karl Schmidt, who in the years from 1839 to 1866 published, in almost unbroken succession, a series of writings which consisted chiefly of extracts from original documents found in the convent of St. John at Strassburg (*Die Urkundenbücher des Johanniterhauses*), and assumed by him to be those of the 'Gottesfreund' and Rulman Merswin. Not only did he identify the unnamed Master (of the *Meisterbuch*) with John Tauler, and credit the whole story of his conversion by the 'Friend,' but he also convinced himself that he had discovered the original of the latter in a certain Nicholas of Basel of whom nothing is otherwise known except that he was burnt as a Beghard at Vienne, near Poitiers, after 1382.[1]

Schmidt's views carried the day for a time, even Denifle being among his adherents. At this time, however, Denifle, *e.g.*, had to base his judgment entirely on the documents adduced by Schmidt. But before long the process of historical criticism brought to light the fact that Schmidt had exercised a quite arbitrary choice in his editing of the sources, and had—without due indication—altered rubrics and text in accordance with his own opinion. The first to reject Schmidt's identification of the Gottesfreund with the layman Nicholas of Basel was Preger (1869). Denifle's rejection, the result of still wider and deeper investigation, came next (1870, 1876). Schmidt did not retract. In 1875 he published his *Nikolaus von Basel, Bericht von der Bekehrung Taulers*, reaffirming his view. This brought about a complete refutation of it during the years 1879–81—mainly by Denifle, who came step by step to the conclusions already described. Denifle's work was so thorough and convincing that Schmidt's, on the chief point in question, was completely undermined. Even A. Jundt—whose *Les Amis de Dieu* (Paris, 1879) took the old ground to the extent that it still assumed the objective existence of the Gottesfreund—though identifying him with John of Chur (Coire) instead of Nicholas of Basel, was driven to concede the main point, viz. the fictional character of the Gottesfreund. But he was unwilling to think of Merswin as a conscious deceiver; and, in order to clear him of this charge, he suggested that 'Merswin was a "double personality," of a pathological type now well known to all students of psychology. In his *primary state* he wrote the books ascribed to him and experienced the events recorded in his autobiography; while in his *secondary state* he became the person known as "the Friend of God from the Oberland," and in this state he wrote the books, treatises, and letters ascribed to "the

[1] Printed separately also as pt. 36 of *Quellen und Forschungen zur Sprach- und Culturgesch. der german. Völker*, Strassburg, 1879.

[1] See Gieseler, *Eccles. Hist.*, iv. 186.

Friend of God."'[1] In 1893, Preger (in the third part—'Tauler, der Gottesfreund vom Oberlande"—of his *Gesch. der deutschen Mystik*), armed with some new material, made a fresh attack on Denifle's results, but utterly failed to do more than emend or correct them in details. Their foundation has stood sure. In fact, Denifle's view as to the non-existence of the Gottesfreund may be said to have found general acceptance among German scholars. See especially P. Strauch's art. on 'Rulman Merswin,' in *PRE*[3].

A completely new standpoint has been taken up by an equally eminent authority on the subject, viz. Karl Rieder, first in two magazine articles,[2] and then in an elaborate essay.[3] According to this, Merswin had nothing to do with the unknown Friend. He was a fiction, but one not due to Merswin. The inventor of him was Merswin's trusted secretary, Nicholas of Louvain, who, after his master's death, falsified and forged documents in order at once to glorify him, and, by a heightened portrait of their founder, to stimulate the pious devotion of the Grünenwörth brothers.[4] As to Merswin himself, it is certain that no one knew, while he lived, of his being so favoured a friend of God (*ein so begnadeter Gottesfreund*). Nicholas says this expressly. Nor, apart from Nicholas, did any suspicion of the fact come to light after his death. He was not the impostor (*Betrüger*) he is made out to be by the theory which makes him the author of the writings in question. In their composition he had no part at all. We may picture him as a man who shared the deep, inward faith characteristic of the mediæval age—a faith intent upon good works and pious foundations. In order to create a home for himself, the childless man, in the days of his sickness and old age—a home and also an oratory and last resting-place—he acquired possession of Grünenwörth. Then, further, he conceived the plan of fashioning it into a house which should be a pattern of its order (*ein Meister-Ordenshaus*)—a house where laymen as well as clerics should have a voice in affairs. And, if to reach his end he did not scruple to use some of the cunning and hardness which are peculiar to a man of wealth (*Geldmann*), we need not wonder. On the other hand, the devoted attachment of Nicholas to his early master is a beautiful feature, which reflects a certain glory upon the character of the latter.

Strauch showed himself sceptical of Rieder's view, when it first appeared, in his articles of 1902.[5] When he developed his own view in the *PRE*[3] art. already referred to, he had not seen Rieder's larger work.[6] In a supplement, however, to that article he takes account of it; and he gives it as his opinion that even a superficial examination is enough to stagger belief, by reason of its difficulties and contradictions. Still, no difficulties can stand before a demonstration; and Strauch promised to test, later, Rieder's claim to have produced one. He redeemed his promise in the *Zeitschrift für deutsche Philologie*, Jan. 1907. Here he considers with great care and thoroughness how far, if at all, Rieder's argument may be taken as valid. His conclusion, which is all we need give here, is as follows. Rieder's zeal and research are admirable, and not less so his penetration as regards particular points. But his investigation has not gone deep enough, and he has set out from rash and preconceived positions which are palpably untenable, and not likely to survive the second thoughts even of the author. Rieder does not claim to have dealt with the whole subject exhaustively, and only professes to have laid a foundation—though a sure foundation, and one upon which all subsequent inquiries must be built. Strauch denies this. The decisive test is not (as Rieder assumes) historical; it is stylistic and linguistic. It is, *e.g.*, whether Nicholas, a man born and bred in the Netherlands, could compose all he did in Alsatian (Strassburg) German without disclosing a trace anywhere of his native speech. It is, again, whether there is unity, or difference, of style between the Tracts and the historical parts of the memorial-books—not merely in the case of the revised Tracts as we have them, but also in the case of their precursors, viz. those anonymous Tracts with which Rieder makes so free. Rieder, indeed, does not dare to evade this test altogether, and makes an occasional use of it. But he fails to see its decisive importance; and so his use of it is far too restricted. He must condescend to such a use of it as is thoroughly systematic before he can hope to reach a satisfactory solution of his problem.

Here the controversy rests for the moment. None but an expert can venture to decide between two such champions of their respective views; but the present writer may add that he finds it hard to see how the detailed evidence of Rieder is undermined by Strauch's objections, and even less how these invalidate the general soundness of his method.

[1] Rufus Jones, p. 252. He adds: 'This view, if proved sound, would surely make Rulman Merswin one of the most interesting psychological "subjects" in the entire range of history.' Cf. Rieder, *Der Gottesfreund vom Oberland*, Innsbruck, 1905, p. 12.

FRIENDS OF LIGHT. — See DEUTSCH-KATHOLICISMUS.

FRIENDS OF THE TEMPLE (*Tempelfreunde, Templer*). — A sect which originated in Württemberg in 1861; now Unitarian, with headquarters in Palestine, where the colonists form an important economic factor. It was derived from Pietism, as developed in Württemberg by J. A. Bengel, with a chiliastic trend. Early last century this gave rise to a scheme outlined by J. M. Hahn, and sanctioned by the king on the advice of G. W. Hoffmann. It contemplated new settlements, exempt from control by the Church authorities, where colonists should live model lives, morally, socially, and educationally. Germany has been prolific in such plans—the mediæval monasteries, the Bohemian Brethren, the Anabaptists in Moravia, the Moravians at Herrnhut being familiar instances. The first of the new colonies was planted in 1819 at Kornthal, seven miles from Stuttgart, and was governed with much success by G. W. Hoffmann till his death in 1846. In its strongly chiliast atmosphere, under the influence of Philip M. Hahn, grew up his son,

Christoph Hoffmann (b. 1815). His experience as head of the Crischona College, near Basel, saddened him by the conventional morality and the dead formality of the State Church. He therefore founded a new college at Salon; and, when elected delegate to the Diet at Frankfort, sought to bring about a reform within the Church. The effort failed; and at length he was expelled its communion in 1859, whereupon he prepared to organize independently, spreading his views by lectures and by the press.

Hoffmann recognized God's judgments on dead churches in the victories of Islām and the revolt under Luther. He commended Baptists and Methodists for their freedom and their life. Forecasting the future, he emphasized the Return of Jesus Christ, and studied the conditions precedent. He concluded that the time of bearing witness was expiring, and that the Return might take place in a generation or two—when Kornthal was founded, a limit of 17 years had been expected. Penetrated with a sense of the value of the OT prophets, and of the types in the Jewish ritual dealing with circumcision, offerings, temple, priesthood, kingship, he elaborated a theory as to the Spiritual Temple which Christ would build. He recognized that this would be independent of nationalities and places, and that worship would be everywhere. To this ideal he saw an actual obstacle in that under Muslim rule all extension of Christian worship was illegal, and Jerusalem in particular was impossible as the capital of that kingdom where Christ might reign. The removal of this obstacle now became the object of his efforts.

First he thought of obtaining a firman permitting Christian colonies to be planted in Palestine. He failed to obtain political support in Germany, and a visit to Palestine convinced him that his scheme of 1855 would need serious change. He continued lecturing and publishing, chiefly in Stuttgart, and formulated a Confession in 1864. The first overt act was to establish a settlement at Kirschenhardthof, where G. D. Hardegg († 1879) was put in control of the civil side, Hoffmann and twelve elders being the spiritual authority.

By 1868 a second step was possible. Since the Treaty of Paris the old Ottoman methods were largely abandoned, and the admission of Turkey to the European Concert seemed to bring the peaceful penetration of the East by the West into practical politics. An American colony under Adams settled at Jaffa, actuated by the same general idea of transporting a body of Christians, assured of local autonomy under the Treaty, destined to extend, and to leaven the native population. It might have been expected that this would fare better than the 1849–53 migration led by Mrs. Minor, also with the intention of preparing for the Return of Christ. But both American schemes collapsed, and Hoffmann saw his opportunity. Negotiations were opened through Basel, whence a previous German colony had gone to Jerusalem with slightly different aims; and by 1868 the Friends of the Temple acquired the Jaffa property. It was soon occupied, and a second plantation was opened at Sarona, a few miles away; also a new one close to the north-west of Haifa, which seemed better as a port, being sheltered by Mount Carmel, and lying at the mouth of the valley of Esdraelon, with easy access to the lake and to Damascus. These model villages absorbed most of the Kirschenhardthof adherents; and, whereas in 1869 they had been the most numerous of all dissenters in Württemberg, though hard run by the Baptists, that centre rapidly sank to be little more than a recruiting and forwarding depôt, so that Hardegg resigned in 1874. New colonies were planted at Nazareth and Tiberias, at Beirut and Ramleh, and even at Alexandria. To secure immigrants, other depôts were opened in Saxony and Russia, while the United States[1] furnished an even better seed-plot. Finally, the headquarters were transferred to Jerusalem itself, and this phase of the movement closed with the death of Hoffmann in 1885. Under his guidance the theology had become Unitarian.

Eight years later, his son Christoph became Guardian of the Temple, and the movement received an impulse from the visit of the German Kaiser in 1898. The colonies are an important German asset in the complicated politics of Syria; their economic value seems now to exceed their religious interest. After overcoming the legal difficulties as to holding land, they have settled down to steady work. Their example in agriculture and viticulture has greatly altered native methods. They have introduced new industries —brewing, improved milling, soap-making, woodcarving, silk-spinning, and good hotels. The settlements are laid out as garden cities, with substantial stone buildings; the colonists have built good roads to link Nazareth and Jaffa with Haifa. Here the community numbers 360, with church and school of its own; the total number settled in Palestine is variously estimated at 1200–1400.

W. T. WHITLEY.

FRIENDS, SOCIETY OF.—1. The name.—The first Friends called themselves 'Children of the Light'—a name used by the oldest Quaker community at Mansfield in 1648; and 'Friends in the Truth' or 'Friends'—a term used as early as 1652. These unsectarian names correspond with the universal scope of the early Quaker message. The narrower title 'Society of Friends' is later. It occurs, though hardly yet as a formal title, in an anti-Quaker tract of 1665, John Wiggan's *Anti-christ's strongest Hold overturned*, p. 49: 'matriculated or registered into their Sotiety of *Friends*.' Later in the century, Friends referred to themselves as a Christian society, but the form 'Religious Society of Friends' was not adopted till about 1800. The terms previously in general use were 'Friends,' 'the body of Friends,' and 'the people called Quakers.' In America the usual name is simply 'the Friends,' or, in some cases, 'Friends' Church.' The nickname 'Quakers' was given by a Puritan magistrate, Gervase Bennett, at Derby in 1650. In 1647 a sect of women from beyond sea, who shivered and shook under religious excitement, were known as 'Quakers' (see word in *OED*), and the trembling of Friends under 'the power,' as they called it, led to the term being applied to them.

2. Fundamental principles.—Quakerism is the product of the spiritual experience known as the Inward Light. The 'opening' came to Fox,

'that Every Man was enlightned by the Divine Light of Christ, and I saw it shine through all; And that they that believed in it came out of Condemnation and came to the Light of Life, and became the Children of it; But they that hated it, and did not believe in it, were condemned by it, though they made a Profession of Christ. This I saw in the pure Openings of the Light, without the help of any Man, neither did I then know where to find it in the Scriptures, though afterwards, searching the Scriptures, I found it' (*Journal*, 1694 ed., p. 22).

This great affirmation, which was a thing of first-hand experience to the early Friends, conflicted with the Puritan disbelief in immediate revelation, and with current doctrines of election and reprobation. The Quaker, following the Inward Light,

[1] In the United States the sect is now known as the 'Temple Society in the United States.' In 1906 it returned 376 members in 3 congregations.

felt that Christ was come to teach His people Himself, and to call them away from the world's ways and teachers to His own living teaching. The indwelling life of Christ became to him the supreme fact of religion.

The far-reaching consequences of this experience, with respect to worship and ceremonial and ministry, and to the practical cross-bearing of daily life, are vividly shown in the following from Edward Burrough, who was 'convinced' in 1652:

'In all things we found the Light which we were inlightned withall, and all mankind (which is Christ) to be alone and onelie sufficient to bring to Life and eternal salvation. . . . And so we ceased from the teachings of all men, and their words, and their worships, and their Temples, and all their baptismes, and Churches, . . . and we met together often, and waited upon the Lord in pure silence, from our own words and all men's words, and hearkned to the voice of the Lord, and felt his word in our hearts to burn up and beat down all that was contrary to God, and we obeyed the Light of Christ in us, . . . and took up the Crosse to all earthly glories, Crowns and wales, and denied our selves, our relations and all that stood in the way betwixt us and the Lord. . . . And, while waiting upon the Lord in silence, as often we did for many hours together, . . . we received often the pouring down of the spirit upon us, . . . and our hearts were made glad and our tongues loosed and our mouths opened, and we spake with new tongues, as the Lord gave us utterance and as his spirit led us, which was poured down upon us, on Sons and Daughters, . . . and the glory of the Father was revealed, and then began we to sing praises to the Lord God Almighty and to the Lamb for ever, who had redeemed us to God, and brought us out of the captivity and bondage of the world, and put an end to sin and death, and all this was by and through and in the light of Christ within us' (Epistle to the Reader, prefixed to Fox's *Great Mistery*).

In such a passage we see how naturally the 'distinguishing views' of Friends flowed as corollaries from the main proposition—their distrust of an instituted ministry, their position as to the non-necessity of all outward ordinances, their views as to a worship of creaturely silence and spiritual spontaneity, their encouragement of the ministry of women, their nonconformity to the customs of the world, their determination to make life a walking in the light. Seldom has a great spiritual truth been followed along its untried consequences with more resolute steps. In the indwelling Light of Christ, the whole of life became sacramental and incarnational, penetrated with religion of the prophetic type, which draws its strength and its vision from intercourse with God. The cardinal principle of the Inward Light was, however, very imperfectly formulated, even by the Quaker Apologist, Robert Barclay, and has to be studied in experience rather than in statement. It was also held by Ranters and other mystical groups, who sometimes believed themselves freed thereby from all law. But the Quakers were 'children of the Light,' and from the first safeguarded the experience on the ethical side by insisting that there could be no real presence of Christ apart from a walking in the Light. In other respects their conception was seriously limited by the mental outlook of the age.

'They tried in vain to express this [the Divine] immanence in terms of the Augustinian dualism which had moulded the religious thinking of the Western world. So long as God and man were placed in separate chambers of thought, the light was necessarily either wholly human or wholly Divine. To make it human meant denial of the need for both revelation and salvation; hence it was claimed as absolutely Divine. But this involved the infallibility of each person to whom the Light was given, and the ousting of human faculties from any place in dealing with the things of God. Man had no religious faculty requiring cultivation; religious instruction was needless; the more his mind was emptied—the more it became 'like a sheet of blank paper'—the cleaner would it be for the writing upon it of Divine oracles' (Edward Grubb, *Authority and the Light Within*, p. 88).

The 'Light' or 'Seed' was, in Barclay's words, 'not only distinct, but of a different nature, from the soul of man and its faculties.' Especially was it to be distinguished from reason. As God gave two lights, the sun for day and the moon for night, 'so hath He given man the light of His Son, a spiritual Divine Light to rule him in things spiritual, and the light of reason to rule him in things natural' (Barclay, *Apology for the True Christian Divinity*, prop. vi. sec. 16). As a result of this faulty conception of the Inward Light, the early Friends depreciated learning, and, in the sense of enhanced personality which came to them, thought themselves freed from human error and ignorance; and they were betrayed into extravagances of speech and conduct. Nayler's fall (see below) and other painful instances made them recognize the fallibility of the individual, which they sought to correct by bringing in the corporate judgment of the community. This had dangers of its own, especially at periods when the corporate enlightenment of the Society was low, though group-guidance proved of high value when it came from those who were spiritually alive and alert. The distrust of intellect long continued, and was a chief cause in bringing in a period of traditionalism, rigid in discipline but barren in vitalizing teaching and inspired leadership. In spite, however, of faulty formulation and intellectual sterility, the experience of the Inward Light maintained itself with the help of the prescribed ways of sober Quaker life, and the introspective silence of the Meeting for Worship. But the absence of a teaching ministry and systematic Bible study led, at the beginning of the 19th cent., to the merely subjective spirituality of Elias Hicks (see below), and then, in the evangelical reaction from such teaching, to official statements of belief which minimized the central Quaker experience.

It is, in fact, only under modern conditions of thought that this central experience has found adequate expression. Quakerism now sees no opposition between the human and the Divine, and, alike in the Scriptures, the Church, and individual experience, it expects to find the Divine illumination in partnership with human faculties. It recognizes the need for correcting personal illumination by the Light which has come to the race in science, history, and literature. It is beginning to realize that the prophetic type of religion calls in an especial degree for a broad and expansive education. A Society which has no ordained clergy or prescribed forms of service needs to be richly equipped with prepared men and women. It must live not by institutional strength, but by inspiration, by that personal and group-intercourse with the Divine which enriches man's highest faculties with the Light and Life of Christ.

3. **Congregational principles and organization.**—The Church is regarded as a body of disciples of Jesus Christ, *plus* Jesus Christ Himself, as its very life and Head, the whole forming together 'one flock, one Shepherd' (Jn 10^{16}). Friends do not practise water-baptism as a condition of Church membership, lest it obscure the necessity for the vital spiritual experience (see art. BAPTISM [Later Christian] in vol. ii. p. 405^a), and they find their spiritual food and communion in Christ Himself, and not in the use of symbolic bread and wine. They distrust formal creeds, and their doctrinal statements have been intentionally framed with a close adherence to Scripture language. The earliest of these was put forth by the Quaker Mission to New England in 1657; the latest is the Declaration of Faith issued in America by the Richmond Conference in 1887. For Robert Barclay's *Apology*, see art. CONFESSIONS, in vol. iii. p. 888. Membership in the Society is now either by 'convincement' of the spiritual truths to which Friends witness, or, in England, by birth if both parents are Friends. Many American bodies give these children at first only an associate membership.

For fifty years or more after the founding of Quakerism there was no regular membership; those who were 'grown in the Truth' were invited to sit in the business meetings, and lists of such persons were kept. In 1787, in connexion with poor relief, a rule as to settlement was set up by the London Yearly Meeting, which incidentally directed 'the wife and children to be

deemed members of the Monthly Meeting of which the husband or father is a member, not only during his life, but likewise after his decease, until they shall gain another settlement elsewhere.'

The Society is opposed to sacerdotalism, believing that all true disciples—men and women—are channels through which grace may flow to others (Jn 7^{37-39}). This involves a responsibility upon the whole membership to be good stewards of the manifold grace of God. Persons—men and women—whose gifts are approved by the Church may be 'recorded' as ministers, but they have no salary or separate duties. The spiritual stimulus of Quakerism has at many periods been provided mainly by ministers itinerating 'under religious concern,' and their expenses are then always gladly borne. The Meeting for Worship is characteristic of the Friends. Here there is no ritual or pre-arrangement; the Meeting gathers on a basis of silence, or, more accurately, of waiting upon the Lord, with freedom for the offering by any of prayer or praise, ministry or teaching, under the guidance of the Spirit. Where the group-fellowship and worship of such a meeting are strong, the spiritual communion is a very real thing; but other types of meeting for teaching and evangelistic purposes are also found helpful, now that the Society is again expanding its borders. In them all, group-fellowship, wide-spread responsibility, and spiritual guidance are usually emphasized. In many parts of America, however, a pastoral system has been established under the stress of local conditions.

The Quaker movement had at first little organization; it depended mainly on group-life and inspired leadership. General meetings of neighbouring groups were held, and each group had its local leaders or 'elders,' and received occasional visits from the itinerating leaders or 'Publishers of Truth.' In 1653 business meetings for county districts began in the North, and by 1660 we find a general business meeting for the whole country held at Skipton. This incipient organization did not survive the storm of persecution after the Restoration, and the present system is due to the labours of Fox in 1667 and succeeding years. The Monthly Meeting, consisting of a group of meetings, is the executive unit of government, receiving and 'disowning' members, appointing 'elders' and 'overseers,' and caring for the meetings composing it. A superior meeting held quarterly links together a group of Monthly Meetings, while the Quarterly Meetings form the Yearly Meeting, which legislates for the whole body and does centralized executive work through its own committees, the name of its general executive committee, 'the Meeting for Sufferings,' taking us back to the old days of persecution. These Church-meetings are now open to all members, both men and women, and questions are not decided by voting, but by the 'Clerk' recording 'the sense of the meeting' in a minute that expresses the weight of spiritual judgment on the matter in hand. The practical result is conservative and unifying, for minorities are respected, and there is no cleavage into parties.

4. **Antecedents.**—The first Friends spoke of their experience as the revival of primitive Christianity after a long and dark night of apostasy. R. M. Jones, in *Studies in Mystical Religion*, has pointed out how the Separatist sects of the Long Parliament period were the product of centuries of striving after an inward way to God. 'There was in England . . . a real *contagion* of the idea of God as indwelling' (p. 469). The Familists and Boehmists on the one hand, and the General Baptists on the other, show many points of affinity to Quakerism, although the proof of direct connexion is forthcoming only in the case of the Baptists (see below). In *Journ. Friends' Histor. Soc.* viii. 104–106, A. Neave Brayshaw shows, out of Edwards' *Gangræna* (1646–47), that all the distinguishing views of Friends are found somewhere or other in Edwards' list of 'errors, heresies, and blasphemies.' 'It was as if George Fox had put a magnet into a mass of rubbish and drawn out what few bits of iron there were in it.' The 'Seekers' (cf. the parallel Dutch 'Collegiants') were the direct forerunners of Quakerism. They were persons who had used the new religious liberty of the time to make a quest after truth, and, having found no rest in current forms or doctrines, were waiting, in a fellowship of prayer, for a further revelation and a new demonstration of the Spirit. The message of Fox found a quick response in the honest and good ground of their hearts. See SEEKERS.

5. **History.**—George Fox, of Fenny Drayton, in Leicestershire (1624–1691), the founder and prophet of Quakerism, learnt the trade of a shoemaker, and developed a singular purity and sincerity of character. He spent some years, from 1643 onwards, in a fruitless quest for truth; no man could satisfy his search.

'And when all my hopes in . . . all Men was gone,' he says, 'so that I had nothing outwardly to help me, nor could tell what to do, then, O then I heard a Voice which said, There is one, even Christ Jesus, that can speak to thy Condition; and, when I heard it, my Heart did leap for Joy. . . . For, though I read the Scriptures, that spake of Christ and of God, yet I knew Him not, but by Revelation, as He who hath the Key did open, and as the Father of Life drew me to His Son by His Spirit' (*Journal*, 1694 ed., p. 8).

A direct experience of truth came to Fox through these 'openings,' as he called them, and the Light and Life within him gave the young prophet a spiritual outlook on the whole of life, and sent him forth with a burning message. At Mansfield, in 1648, a company of 'shattered' Baptists accepted his message, and became the first group of 'Children of the Light.' In 1651 he gathered Quaker groups in Yorkshire, especially among Seekers at Balby, near Doncaster, and at Wakefield, where William Dewsbury (1621–1688) and James Nayler (1618–1660) were 'convinced.' But June 1652 was the creative moment in the history of Quakerism. Fox found 'a great people in white raiment,' waiting to be gathered, in a large community of Seekers in Westmorland, who had meetings throughout the district, and who met from all parts once a month, for religious fellowship, at Preston Patrick. They were men of deep religious temper and wide Bible knowledge, and many hundreds of them, under the influence of a few powerful meetings, won for themselves the same first-hand experience of a Living Christ which Fox enjoyed. Their leaders, Thomas Taylor (1617–1682), Francis Howgill (1618–1669), John Audland (1630–1664), Edward Burrough (1633–1663), and others, furnished the movement with the 'Publishers of Truth' who, with help from the Yorkshire Seekers, carried the message through the North of England in 1653 and 1654, and then, in the summer of 1654, spread over the South, paying special attention to London, Bristol, and Norwich. By the end of 1655, Quakerism had run like fire through England, and was being carried to Ireland and Scotland. It was readily accepted by many Seekers and some Baptists, but roused the dominant Puritan sects to great hostility.

'Satan,' say the Cumberland and Westmorland ministers, 'desgorgeth from his hateful stomack a swarm of Quakers; these . . . came upon us like a furious Torrent: all is on fire on the sudden, many are unsetled, the foundations shaken, and some apostatize: here we are beaten off, and are forced to lay other things aside, that we might more fully binde ourselves to quench these flames' (*The Agreement of the Associated Ministers*, etc., 1656, cited from B. Nightingale, *The Ejected of 1662 in Cumberland and Westmorland*, Manchester, 1911, i. 98).

Extravagances of conduct attended the beginnings of the movement, especially in the disturbance of ministers, virulent and aggressive controversy, and unwise testifying by signs, culminating in Nayler's Messianic entry into Bristol in October 1656, in sign of the cardinal Quaker experience that Christ was come and was revealed in His saints.

In spite of much sporadic persecution, the qualified religious freedom of the Commonwealth gave the ardent itinerating 'Publishers of Truth' their opportunity, and Quaker groups multiplied throughout the land. The storm of suffering in the early years of the Restoration period cut off many of the first leaders, and left the body weakened and distracted. Fox himself, during his imprisonment at Lancaster and Scarborough (1664–1666), was 'as a man buried alive.' On his release he devoted himself to binding Friends together in corporate life, especially by organizing 'Monthly Meetings' throughout England. Opposition, known as the Wilkinson-Story controversy from its two chief leaders, showed itself from those who distrusted all human arrangements; it lasted from 1673 till after 1700, but at the time the strengthening of organization greatly assisted the Friends, and their numbers increased in spite of persecution. Some men of great ability joined the movement: Isaac Penington (1616–1679), convinced in 1658; William Penn (1644–1718), convinced in 1667; Robert Barclay (1648–1690), also convinced about 1667; and George Keith (1638–1716), who about 1692 led a separation from Friends. With the passing of the Toleration Act (1689) a period of prosperity and traditionalism set in, during which the Society devoted itself to its discipline instead of to the raising of spiritual leaders and the aggressive work of the Church. In 1751, Samuel Bownas (1676–1753) wrote: 'The young generation of this age don't seem to come up so well as could be desired. The church seems very barren of young ministers to what it was in our youth, nor is there but very little convincement to what was then.' But signs of revival showed themselves before the end of the century. John Fothergill (1712–1780) had founded Ackworth School in 1779, and Friends were being interested in education, while John Woolman (1720–1772), 'the consummate flower of American Quakerism,' was profoundly stirring Friends on both sides of the Atlantic to a living witness on great human causes, such as anti-slavery.

Friends, at their first entrance into America in 1656, had met with fierce hostility from the Puritan rulers of Massachusetts, and in 1659 and the following years four Quakers were hanged on Boston Common—William Robinson of London, Marmaduke Stephenson of Yorkshire, Mary Dyer of Rhode Island, and William Leddra of Barbados. Quakerism, however, gained great importance in the New World. Rhode Island welcomed the message, and for more than a hundred years Friends were continually in office. They came into possession of West Jersey in 1674, and of East Jersey a few years later; and in 1681, William Penn began the 'holy experiment' of Pennsylvania. North Carolina also owed much to their influence, while in other colonies, and even in Massachusetts, they became a growing power.

'Their failure to appreciate the importance of the fullest expansion of human personality by *education* is the primary cause of their larger failure to win the commanding place in American civilization of which their early history gave promise. Their central Principle, properly understood, called for a fearless education, for there is no safety in individualism, in personal responsibility, or in democracy, whether in civil or religious matters, unless every individual is given a chance to correct his narrow individualism in the light of the experience of larger groups of men. . . . The absence of constructive leaders, the later tendency to withdraw from civic tasks, the relaxing of the idea of reshaping the world, were due in the main to the lack of expansive education' (R. M. Jones, *The Quakers in the American Colonies*, xxvi. f.).

This same failure, leading to lack of Bible knowledge and of teaching ministry, paved the way for the serious 'Hicksite' division in America (1827–28). Elias Hicks (1748–1830) was a Quaker minister of commanding personal influence, whose emphasis on the 'spirit and power of God in the soul of man, as his Creator, Preserver, Condemner, Redeemer, Saviour, Sanctifier, and Justifier' (*Journal*, 1832 ed., p. 330), caused him to put into the background the person and work of Christ. Towards the close of his life he came into conflict with the section of Friends who held 'evangelical' views with regard to Christ and the Scriptures. In 1827 and 1828 a division took place in Philadelphia and some of the other American Yearly Meetings, in consequence of action by the 'elders' against Hicks, those who withdrew not necessarily identifying themselves with his views, but taking the position that God alone is Sovereign of the conscience, and that this inalienable right must be preserved 'unfettered by the hand of man and unalloyed with prescribed modes of faith, framed in the will and wisdom of the creature' (see Thomas, *Hist. of Friends in America*, 134 f.). The Society in America was cleft in twain, and each portion lost the balancing influence of the other. English travelling ministers had supported American Friends of the 'orthodox' school, and the separations powerfully reacted on the London Yearly Meeting. In 1829 a declaratory minute was passed, affirming belief in the inspiration and authority of the Bible and in the person and work of Christ. In 1835, Isaac Crewdson (1780–1844) of Manchester, a strong 'evangelical,' went beyond this by publishing *A Beacon to the Society of Friends*, in which he freely criticized the writings of Elias Hicks. The attack developed into a rejection of the central doctrine of Quakerism regarding the work of Christ in the heart; and, in 1836, Crewdson and about 300 other Friends left the Society. London Yearly Meeting, meanwhile, adopted a mediating position, asserting on the one hand, in 1835, the value of the writings of the early Friends, and on the other, in 1836, its faith in the authority of the Scriptures. The Society in England followed, as a whole, the leadership of men like Joseph John Gurney (1788–1847), an ardent philanthropist and Bible student, of evangelical but spiritual views, though a visit he paid to America in 1837 caused opposition from John Wilbur (1774–1856), who distrusted his views and his 'creaturely activities,' and led to a series of small 'Wilburite' secessions in some of the American Yearly Meetings. That in Ohio, in 1854, carried with it the sympathies of many Friends in the important Yearly Meeting of Philadelphia, which gradually retired into the semi-isolated position with respect to the other Yearly Meetings which it has since occupied. During the last half-century there has been much expansion and change in the group of Yearly Meetings styled 'Orthodox' in the United States Census, and a Pastoral System with arranged Services has gained great hold. This group has found a unifying and conserving force in a representative Five-years Meeting and a uniform discipline, which date from 1902, but sprang out of a Conference held at Richmond, Indiana, in 1887. Education is now provided for in a number of good schools and colleges, of which Haverford, Pennsylvania, is the best known. Philadelphia Yearly Meeting preserves a somewhat conservative type of its own. The so-called Hicksite bodies have declined in membership, but are now showing signs of fresh life, especially in philanthropic and educational directions. The

'Wilburite' bodies, though reinforced by other Friends who disliked innovations made in some of the 'orthodox' Yearly Meetings, are reduced in numbers and have little outlook.

In England, a great recovery of liberty has taken place as the fruit of a large tolerance. The fenced-in life of a peculiar people has passed away, and the spiritual experience and message of Friends have freely expressed themselves in home and foreign mission work, in philanthropy and education, in the service of business and public life, in the earnest study of social conditions, and, perhaps most characteristically, in the great 'Adult School' movement with a membership of over 100,000, which bears throughout the impress of its Quaker origin. The Manchester Conference of 1895 showed that the Society was receptive to the fresh life and thought of the age, and a strong educational and spiritual stimulus has been given through Summer Schools and the Woodbrooke Settlement at Birmingham.

Irish Quakerism, begun by William Edmondson (1627–1712) in 1654, became organized as Dublin Yearly Meeting. In the Rebellion of 1798, Friends maintained their peace principles and succoured the distressed at the cost of great peril and suffering. In the following year a separation took place, associated with the influence of an American travelling minister, of rationalistic views, Hannah Barnard. In more recent years the Society has responded to the same influences that have been at work in England.

Scotland forms part of London Yearly Meeting, which also includes some groups of Friends in Australia, New Zealand, and South Africa. Friends in Canada have their own organization.

English and Irish Friends have important foreign mission work in India, Madagascar, Syria, China, Ceylon, Constantinople, and Pemba, mainly under the care of the Friends' Foreign Mission Association which was begun in 1868. American Friends have work in Alaska, Mexico, Cuba, Jamaica, Palestine, Africa, and Japan.

Conscription has almost crushed out Quakerism in France and Germany. Holland at one time had a number of Quaker groups, and produced the Quaker historian, William Sewel (1654–1720). There are several small groups of Friends in Denmark and Norway.

6. Ethical and social features.—Quakerism has been called 'practical mysticism,' and has always had 'a moral earnestness and a social intensity which saved it from the easy pitfalls of mystical quests.' Fox laid constant emphasis on walking in the Light. Seeking to see the Light and to obey it, Friends gained clear vision on great moral issues. Their use of 'thee' and 'thou' to all ranks of men, and their refusal of 'hat-honour' and of oaths, were parts of their witness for reality in life and for a single standard of conduct before God and man. The Children of Light lived, as Fox said in 1651, 'in the virtue of that life and power that took away the occasion of all wars,' and the Society of Friends has steadily maintained the unlawfulness of war to the Christian. Friends were among the first champions of liberty of conscience, and kept their public meetings in the Restoration period in the face of terrible persecution, refusing to conceal or forgo their meetings, 'for such practices are not consistent with the nobility of the truth, and therefore not to be owned in the Church of Christ' (Yearly Meeting Minute, 1675). They were the first Christian body to free themselves from complicity in slavery, and became the back-bone of the anti-slavery agitation both in England and in America, and, later, of the anti-opium movement. They have taken a leading part in prison reform, temperance work, and popular education; they have originated and shaped the 'Adult School' movement, and are keenly interested in the investigation and improvement of social conditions. In the American colonies, especially in Rhode Island, New Jersey, and Pennsylvania, they attempted the difficult task of righteous government, and have no reason to be ashamed of their record. The following states their present standpoint as to the duty of public service:

'Our conviction of the unlawfulness of war to the Christian, which prevents us from giving the military service to our country gladly rendered by many, should specially call us to voluntary service in other ways, even at the cost of much personal sacrifice. Those who devote themselves with public spirit to the building of national character, the shaping of righteous policy at home or abroad, or the manifold tasks of local or central government, are doing work of high value for the kingdom of God. But we feel the need in such service of continual watchfulness against bitterness of party-spirit, self-seeking, and disloyalty to the truth' (*Book of Christian Practice*, London, 1911, p. 126).

In private life, Quakerism has tended to produce a definite type of character—strong, straight, and serious—which has resulted from the habit of bringing the conduct of life to the test of the Inward Light, and from the personal responsibility in matters of religion thrown upon each individual member. The type stands out supremely in such men as John Greenleaf Whittier (1807–1892) and John Bright (1811–1889), and such women as Elizabeth Fry (1780–1845). The wide influence exercised by Friends seems primarily due to this cultivation of a spiritually enlightened judgment and an alert conscience.

7. Problems.—In this section especially, the writer cannot do more than give expression to his own personal views. The Society of Friends has to-day an opportunity not unlike that which it enjoyed at its rise, owing to the existence of numbers of earnest-hearted seekers after truth, to whom the sacerdotal and institutional forms of religion make little appeal, but who long for the help that comes from group-fellowship, penetrated by the living Spirit of Christ. At their best the Friends have this to offer; but, while they are now alive to the adequate intellectual presentation of their message, its actual embodiment in worship and in life is often feeble. The two pressing problems which are now being faced are (1) to re-interpret Christian discipleship under the social and intellectual conditions of the 20th cent., and (2) to give this group-discipleship free scope in moulding the meetings and other corporate activities of the Society. The social conditions and the aspirations of the age challenge such a body as Friends to a new taking up of the cross in daily life. George Fox in 1656 laid bare what has proved to be the besetting weakness of modern Christianity (*Ep.*, no. 131):

'There is the Danger and Temptation to you of drawing your Minds into your Business and clogging them with it, so that ye can hardly do anything to the Service of God, but there will be crying, My Business, My Business, and your Minds will go into the things and not over the things, and so therein ye do not come into the Image of God, in which is Dominion.'

As Friends open their hearts to see and obey the Light on the great social and moral problems of the day, their witness for truth will acquire fresh vigour, and they will be made 'friends of God and prophets.' Truer discipleship of this kind brings with it a kindling of group-fellowship which will make the meetings for worship and the other meetings of the Society glow with a new life. Thus only can Friends vindicate their great witness for the freedom and spirituality of the gospel order.

8. Statistics.—The following statistics relate to members only: there is also a large number of adherents. The figures in most cases are for the year ending 31st Dec. 1910.

EUROPE—	
Great Britain	18,840
Ireland	2,405
Denmark, France, Norway, Germany, Turkey	200
ASIA—	
Foreign Mission stations in Syria, India, Ceylon, China, and Japan	902

Canada " " Orthodox branch	1,060
" " " Wilburite "	200
Foreign Mission stations in Alaska, Mexico, and Jamaica	2,872
AUSTRALIA and NEW ZEALAND	645
	147,085

LITERATURE.—A substantially complete bibliography up to 1892 is contained in three important works by Joseph Smith: *A Descriptive Catalogue of Friends' Books*, 2 vols., London, 1867, *Supplement to a Descriptive Catalogue*, do. 1893, and *Bibliotheca Anti-Quakeriana*, do. 1873. The following works will be found of special value:

(1) *POLITY.*—Robert Barclay, *An Apology for the True Christian Divinity*, Lat. 1676, Eng. 1678, and later editions; see also his collected works, 1692; various treatises of Isaac Penington, collected works, 1681; do. of William Penn, collected works, 1726; Jonathan Dymond, *Essays on the Principles of Morality*, London, 1829, and later editions; John S. Rowntree, *The Society of Friends, its Faith and Practice*, do. 1901; *Christian Discipline of the Society of Friends*, do. (Doctrine) 1883, (Practice) 1911, (Church Government) 1906. For the Inward Light, see Caroline E. Stephen, *Quaker Strongholds*[4], do. 1907, and *Light Arising*, do. 1908; Edward Grubb, *Authority and the Light Within*, do. 1908; J. Rendel Harris, *The Guiding Hand of God*, do. 1905; W. C. Braithwaite, *Spiritual Guidance in the Experience of the Society of Friends*, do. 1909; and the religious poems of J. G. Whittier.

(2) *JOURNALS.*—Records of service undertaken under religious exercise are the most characteristic form of Quaker literature. Among the most important are those of George Fox, 1694, etc., the original draft of which for 1650–1676 has been edited, with full illustrative notes, for the Cambridge University Press by Norman Penney, 2 vols., 1911; George Whitehead (1636–1723), *Christian Progress*, 1725; Thomas Ellwood (1639–1713), *Life*, 1714, etc.; Thomas Story (1662–1742), *Journal*, 1747; John Woolman, *Journal*, Dublin, 1776, etc., esp. ed. with J. G. Whittier's preface, London, 1900; Stephen Grellet (1772–1855), *Memoirs*, London, 1860; Elizabeth Fry, *Memoir*, 1847, and *Life* by Georgina K. Lewis, do. 1910; Joseph John Gurney (1788–1847), *Memoirs*, do. 1854.

(3) *HISTORY.*—The Friends' Reference Library, Devonshire House, Bishopsgate, London, contains the largest collection in the world of MSS and printed materials. Its librarian, Norman Penney, is one of the secretaries to the Friends' Historical Society, which publishes a quarterly *Journal*, 1904 ff., and valuable *Supplements*. The Friends' Historical Society of Philadelphia, founded 1904, also publishes a *Bulletin* (ed. Allen C. Thomas). For sufferings, see Joseph Besse, *A Collection of the Sufferings of the People called Quakers*, 2 vols., London, 1753. For general history: William Sewel, *Hist. of the Rise, Increase, and Progress of the Christian People called Quakers*, London, 1722, etc.; Samuel M. Janney, *Hist. of Friends*, 4 vols., Philadelphia, 1859–67; James Bowden, *Hist. of the Society of Friends in America*, 2 vols., London, 1850–54; Allen C. Thomas and Richard H. Thomas, *Hist. of the Friends in America*[4], Philad. 1905; T. Edmund Harvey, *The Rise of the Quakers*, London, 1905; Elizabeth B. Emmott, *The Story of Quakerism*, do. 1908. A history, planned by the late John Wilhelm Rowntree, which should adequately exhibit Quakerism as a great experiment in spiritual religion, and should be abreast of the requirements of modern research, is now in course of preparation and publication. Three volumes have been published: Rufus M. Jones, *Studies in Mystical Religion*, London, 1909, dealing with pre-Quaker mystical movements; Rufus M. Jones, assisted by Isaac Sharpless and Amelia M. Gummere, *The Quakers in the American Colonies*, do. 1911; and W. C. Braithwaite, *The Beginnings of Quakerism*, up to 1660, do. 1912. For other historical studies, see Maria Webb, *The Fells of Swarthmoor Hall*, London, 1865, and *The Penns and Peningtons*, do. 1867; Robert Barclay, *The Inner Life of the Religious Societies of the Commonwealth*, do. 1876; Thomas Hodgkin, *George Fox*[2], do. 1897; H. G. Wood, *George Fox*, do. 1912; John Wilhelm Rowntree, *Essays and Addresses*, do. 1906; John S. Rowntree, *Life and Work*, do. 1908. For the Adult School Movement, see J. W. Rowntree and Henry B. Binns, *Hist. of the Adult School Movement*, do. 1903. For the distribution of the Friends in the United States of America, see *Special Reports of the Bureau of the Census, Religious Bodies* (1906), Washington, 1910, i. Index, *s.v.* 'Friends,' ii. 294–306.

G

GABARS.—The name popularly applied to the Zoroastrians still residing in Persia, in contradistinction to their co-religionists in India, the Parsis (*q.v.*).

1. The name.—The term 'Gabar,' 'Gabr,' or 'Guèbre' is of uncertain origin, but is connected by some Persian lexicographers with the Arab. *kāfir*, 'infidel,' which sense it bears, signifying both 'infidel' in general, and 'Zoroastrian' in particular (Vullers, *Lexicon*, Bonn, 1855–64, ii. 950). The abstract derivative *Gabrī* accordingly denotes 'the religion of Zoroaster'; the Perso-Turkish *Gia(v)ūr* (popular Turkish *Kiavūr*), which is given as the source of *Gabar*, is itself derived from *kāfir*. Other variants of the Pers. form *Gabr* are *Gāvr* and *Gaur*. It is also noteworthy in this connexion to observe that in Balūchī *gaur* denotes 'infidel,' and in Kurdish the corresponding loan-words *gebir* and *gāvir* connote 'Armenian' and 'Russian' respectively (Geiger, in *ABAW*, I. Cl. xix. [1891] section 2, p. 449), thus favouring the derivation of the Pers. *Gabr* from the Arab. *kāfir*. The view sometimes advanced that *Gabr* represents the book-Pahlavi *gabrā*, 'man,' is far less likely. It should also be noted that for *kāfir* the Kirghiz say *keuz*, first noted by Vambéry as the name of an unidentified people who inhabited Turkestan in the pre-Islāmitic times (Radloff, *Versuch eines Wörterbuches der Türkdialekte*, St. Petersburg, 1889–98, ii. 51). Though in modern travellers the appellations 'Guèbres,' 'Gaures,' 'Gauvres,' and 'Gaori' are found, the latest English form is 'Gabar.' The Gabars designate themselves, however, as *Zardushtiān*, 'Zoroastrians,' or *Bih-dīnān*, 'those of the good religion,' and also *Pārsīs*, from Fārs or Pārs, the old province of Persia Proper. *Gab'ar*, on the other hand, is a derogatory term not used among Zoroastrians.

2. Statistics.—It was impossible before the beginning of the 19th cent. to form an idea of the numbers of the Persian population who, after the Arab conquest, remained faithful to the old Zoroastrian creed. From this time, however, we can refer to some approximate censuses taken by European travellers. Dupré (1807–1809) and Kinneir (1813) give an estimate of 4000 families; Trezel (1807–1809) mentions 8000 Gabars at Yazd and in the surrounding villages; Christie (1809) and Frazer (1821) 3000 families in the whole of Persia; Abbot (1845) 800 families at Yazd and in the neighbourhood; Petermann (1854) registers 3000 families in Persia, of which 1200 were at Yazd; Goldsmid (1866) 4500 at Yazd and Kirmān; Evan Smith (1870) 3800 families, etc. (cf. Houtum-Schindler, *ZDMG* xxxvi. [1882] 54).

If we consult the censuses taken in 1854 by order of the Persian Zoroastrian Amelioration Fund of Bombay, the first shows a total of 7711 individuals, distributed as follows: 6658 at Yazd (3310 men and 3348 women); 932 at Kirmān; 100 at Teheran; and 21 at Shīrāz (cf. Houtum-Schindler, p. 56).

In October 1879, Houtum-Schindler obtained the following figures: total population, 8499 individuals (4367 men and 4132 women), distributed as follows: Yazd 1242, and in the neighbourhood 5241; Kirmān 1498, and in the neighbourhood 258; Bahrāmābād 58; Teheran 150; Kāshān 15; Shīrāz 25 Bushire 12 (cf. *op. cit.* p. 55).

In the month of February 1892, Kaikhosrū T. Khorsend, Agent of the Persian Zoroastrian Amelioration Fund, after having visited Yazd, Kirmān, and the other localities inhabited by Gabars, gave the exact number of the Zoroastrian population in Persia as amounting to 9269.

In 1902, Ardashir Edalji, the Teheran Agent for the Parsis of Bombay, furnished Jackson with statistics (*Persia, Past and Present*, p. 425) which show that the total number of Gabars in Persia was about 11,000. The figures, as Jackson states, indicate that the number of Zoroastrians is increasing slightly instead of declining.

3. Ethnography.—Ancient authors are agreed in placing the Persians, especially the women, amongst the most beautiful types of the human race (*e.g.*, Xenoph. *Anab.* iii. 2. 25; cf. Brisson, *De regio Persarum principatu*, ed. Lederlin, Strassburg, 1710, pp. 561–563). The sculptures of the Achæmenian and Sasanian periods have fixed the features not only of the Persians but also of the conquered races—evidence which allows of the establishment of valuable comparisons. After the Muhammadan conquest one can follow the intermixture of races which have successively obtruded themselves upon Persia through conquest or invasion—the Semites with the Arabs, the Turanians with the descendants of Tamerlane; under the Ṣefavid dynasty (15th–17th cents.) the Georgian and Armenian element prevailed and played a preponderating part in the crossings of race. It was only in the 19th cent. that Persia became restricted to its own national resources.

As for the Gabars, the isolation caused by their religious faith and by persecution must have created special conditions for them and perhaps assured the persistence of the type, if one could be perfectly sure that, in conformity with the sentiment which opposed marriage with non-Zoroastrians, legitimate or illegitimate unions were never contracted between the Gabars and the other nationalities. Travellers who have met them have often described them. It seems that the fine Persian type—absolutely Aryan with the Gabars of Yazd—has suffered because of their persecutions, their difficult life, and their toilsome occupations. The amelioration of their material welfare will naturally tend to the physical elevation of the race.

4. History.—The battles of Buwayb and Qādisiyya (A.D. 635–37) and the last defeat of Nihāwand (641) put an end to the great Sasanian empire which had lasted more than four centuries (226–652) (see art. SASANIANS). The king Yazdgird III. escaped, and after painful struggles at last fled for refuge to Merv, where he was murdered by a miller who coveted his jewels (651–2) (Ṭabarī, tr. Zotenberg, Paris, 1867–74, ch. lxviii.). The Arab conquest did not spread at once throughout the whole kingdom; the Persians continued for some time to resist, entrenched in different countries, especially in Fārs, the heart of the dynasty and kingdom, and in the northern and hilly region of Tabaristān where the Ispahbads, or military governors of the Sasanian rulers, maintained their independence till 760. It was probably from this region that the Zoroastrians who settled in India came (see art. PARSIS). The results of the conquest were neither so rapid nor so complete as is generally supposed. The choice between the Qur'ān and the sword was not strictly imposed on the population. The Zoroastrians shared the same fate as the Christians and the Jews, and were allowed to profess their religion on condition of paying the *jizya*—a just arrangement, on the whole, as the non-Muslim subjects of the Khalīfs were exempt from military service and the alms (*ṣadaqat*) obligatory on the Prophet's followers. According to al-Balādhurī, it was a rule (see below), but it did not prevent the storming of citadels, bloodshed, and all the evils inseparable from military expeditions; hence the miserable fate of the conquered race, over which historians have always lamented.

If the position of the natives, including not only Zoroastrians, but also Jews and Christians, immediately after the conquest, was fairly tolerable, it grew worse under the Umayyad Khalīfs; war had degenerated into raids, and strict orders from Damascus obliged the Governors of the Persian provinces to grind down the populations and to drain money from them. The subject races suffered much on account of that policy, and the burden of the exactions fell chiefly on the peasants, who were unable to make their complaints listened to by the rulers.

The old aristocracy and landed proprietors (*dihqāns*) were able to preserve power, money, and property by embracing Islām and serving the conquerors, who could not dispense with their administrative talents; but it was not so for the humbler class. As is pointed out by Van Vloten, the ambition and social pride of the Arabs, combined with their greed, offered an insuperable obstacle to the amelioration of their lot. The non-Arab Muslims were regarded by the Arabs as no better than slaves.

'Nothing,' says Ṭabarī—in speaking of the revolt of Muktar (683–87), whose supporters consisted to a great extent of clients—'so exasperated the (Arab) Kūfans as to see Muktar assign to the clients their share of the spoil. "You have taken from us our clients," they said, "who are the spoil which God hath destined for us, with all this province. We have liberated them, hoping for a reward from God, but you do not trouble yourself about this and cause them to share in our booty"' (*Recherches sur la domination arabe . . . sous le khalifat des Omayades*, Amsterdam, 1892, p. 16).

Under the cruel government of Ḥajjāj ibn Yūsuf, converts to Islām were compelled to pay the *jizya*, which caused great discontent among them, and led them to join a rebellion which was quenched in blood. The non-Arab Muslims were sent to the villages with their names branded on their hands. Their discontent was further increased by the loss of the hope of ever becoming the equals of their conquerors, and greatly contributed to the fall of the Umayyads and the rise of the Abbasids, in spite of the efforts of the tolerant and enlightened Umar ibn 'Abd-al-'Azīz.

This really pious man used to rebuke his officials when they complained of the large number of conversions in Egypt, as it was a loss to the revenue of the State, saying that God had sent His prophet to act as an apostle, not as a tax-collector. He gave almost the same answer to the governor of Khorasan, who also complained that the people embraced Islām in order to be exempt from the *jizya*, and avoided circumcision, again saying that God sent Muhammad to make known His true faith unto men, and not to circumcise them (cf. Dozy, *L'Islamisme*, Leyden, 1879, p. 180 f.).

The revolt of Sindbād the Magian (755–56) is connected with the Shī'ite movement, and is considered as the last effort of the Persian nation to recover its independence.

Sindbād was a great friend of Abu Muslīm, a pious and upright man who had embraced the cause of the Shī'ites and helped to raise the Abbasids to the Khalifate, but was most ungratefully treated by the latter, and finally murdered by al-Manṣūr. Though a great propagandist (he had converted many *dihqāns*), he was not intolerant, as is shown by his friendship with a Gabar and from the support given to him by the Magians. Sindbād started from Nīshāpūr, his native place, under the pretext of avenging Abu Muslīm's murder, collected a numerous troop of followers, occupied Rai, where he took possession of Abu Muslīm's treasures, and then declared that he was bent on Hijaz and the destruction of the Ka'ba. His army was composed of heterogeneous elements—Magians of

Tabaristān, Shī'ites, and others, whom he persuaded that Abu Muslim was not dead. Sindbād was defeated and killed by an Al-basid chief, and so ended that insurrection which had lasted seventy days according to some, seven years according to others.

The fall of the Umayyad Khalīfs marked the end of the purely Arab period, and the accession of the Abbasid Khalīfs inaugurated a new era, in which the Persian element played an important part. The seat of the Khalīfate was transferred from Damascus to Iraq, and the administration was more and more entrusted to the Persians. Some of the old customs were revived; the festival of the *Naurūz* (first day of the Persian year; see FESTIVALS AND FASTS [Iranian]) was resuscitated; on the coins a Khalīf appeared clothed in the true Persian fashion, while the Persian garb was the official court-dress. During fifty years a family (some say, of Zoroastrian origin), the Barmecides (752–804), wisely directed the affairs of the Khalīfate, till the jealousy of Hārūn ar-Rashīd led him to destroy the grandsons of Barmak and many members of that family. The Barmecides gloried in being the descendants of the Magian Barmak, the high priest of the temple of Nawbahār at Balkh; and during the time of their favour the Zoroastrians enjoyed a sort of protection, since the Barmecides clearly retained a certain partiality for their former co-religionists (cf. L. Bouvat, 'Les Barmécides, d'après les historiens arabes et persans,' in *Revue du monde musulman*, Sept. 1912, pp. 3–131).

It was in the 9th cent. that some provinces began to separate from the Khalīfate, and local dynasties were founded. The Ṭāhirids (820–872) made themselves independent in Khorasan; the Ṣaffārids (872–902) were succeeded by the Sāmānids (902–999), who were the grandchildren of Sāmān, a Zoroastrian converted to Islām by a governor of Khorasan; the other ruling families of Bulwayhids (932), Ghaznavids (973–1038), and Seljūqs (1038–1194) disappeared one after the other.

The murder of the last Abbasid Khalīf and the sack of Baghdad (1258) by the Mongols under Hūlāgū Khān, the grandson of Jenghiz Khān, put an end to the Khalīfate. Next came Tīmūr and the horrors of his savage inroad. It is supposed that the small Zoroastrian communities of Gujarat were reinforced by the fugitives who fled before the invasion. Gabars and Muslims alike contributed to Tīmūr's ghastly pyramids of heads so often alluded to.

During this long period the Persians had gradually embraced Islām, and the number of the faithful worshippers of Ahura Mazda yearly decreased. The Zoroastrians were still quartered in Fārs and Kirmān, but down to the present day their history is shrouded in obscurity. It was only under the Ṣefavid dynasty, after the conquest of Khorasan by Shah Ismā'īl (1510), that Persia recovered for the first time a political unity. Under Shāh 'Abbas we find the Gabars at Isfāhān, and we can obtain some particulars about them through the accounts of the European travellers who visited the Ṣefavid court. Shāh 'Abbās had sent for them and allowed them to settle in the outskirts of the city beyond the river Zandah Rūd. We owe to Pietro della Valle a good description of that settlement (1616–25):

'A few days ago I went to see their new town [that of the Gabars], which was near the new Ciolfa [the suburb Julfa] inhabited by the Christian Armenians. The new Tauris, or Abbas Abad, inhabited by the Muhammadans brought from Tauris, touches Isfahan as a suburb, and, though it is at present separated by gardens, yet, in course of time, the number of the inhabitants daily increasing in a wonderful way, Isfahan and that residence of the Gabars with the two aforesaid will form but one place. That is the reason why I do not know whether I can call them either separate citadels, or suburbs, or rather considerable sections of that same town of Isfahan. Like the region beyond the Tiber and the borough of our Rome, that place of the Gabars has no other name that I know of than "the residence of unbelievers," just as we call the place inhabited by the Jews "the Ghetto." It is well built; the streets are large and straight, handsomer by far than those of Ciolfa, because it was built more carefully; but all the houses are low, one-storeyed, and plain, quite in keeping with the poor condition of the tenants. In that respect they differ from Ciolfa, which are very good and well kept, because the Gabars are poor and destitute; at least they appear to be so' (ed. Paris, 1661, ii. 104).

Don Garcias de Silva y Figueroa, in his description of Isfāhān (*L'Ambassade de Don Garcias de Silva y Figueroa en Perse*, tr. Wicquefort, Paris, 1667, p. 179), mentions the four settlements outside the town, and gives a sketch of 'Gabrabad,' which was 'within a musket shot' of the building where the Ambassador had put up. He estimates the number of the houses at about three thousand, forming several long, broad, and straight streets, in some places shaded by trees to protect the people against the heat of the climate, so that it passed for a large and handsome borough, and even for a pretty town, though it was only ten years since the king of Persia had obliged the Gabars [called *Gavres* by Don Garcias] to leave their native land and to come and live near Isfāhān. (This gives the approximate date of the foundation of Gabrabad, Figueroa being in Persia in 1618.)

Tavernier, later on, referring to the bridge of the Gaures (Gabars) at Isfāhān, says that it was built partly for the Gabars, 'who had their own ward beyond the river, in order to prevent them from passing through the great avenue of the Tchar-bag, and to allow them on their way home to take the shortest cut and reach their dwellings more rapidly.' That ward was simply a big village of which the first houses were not far from the river. The avenue which led from Isfāhān to that bridge was larger and longer than that of the Tchar-bag, and was equally planted on both sides with a handsome row of trees, but without any channel in the middle (cf. Tavernier, *Six Voyages en Turquie, en Perse, etc.*, i. 409).

Chardin registers the destruction of that prosperous place. Besides the suburbs of Isfāhān (already described by him), he mentions two others beyond the river, built on its banks and connected with it by two bridges; one of the suburbs, Sadat Ābād, 'the abode of Felicity,' was the place where the Gabars were first quartered. They were expelled from it in order to turn their borough into a place for pleasure, with bazaars, baths, mosques, and palaces. It had been built by Shāh 'Abbās II., who transferred the Gabars to the other end of Julfa (cf. Kaempfer, *Amœnitatum exoticarum, etc.*, p. 164). Chardin explains that 'Abbās the Great had brought to Isfāhān the Armenians and Gabars, but had located them outside the town, because they were artisans. Those families (Chardin says 1500) had come from Kirmān, and at 'Abbās' death many returned to their country (*Voyages en Perse et autres lieux de l'Orient*, iii. 75–77, etc.). Daulier still mentions Gabrābād as a handsome village. It was, of course, the new one (*Les Beautez de la Perse*, pp. 51–53). Its vestiges still existed in the early twenties of the 19th century.

Ker Porter mentions the settlement as follows: 'The liberal spirit of Shah Abbas tolerated the existence of the Gabars at Isfahan, where afterwards the Afghan Mahmud gave them a mart and enlarged the suburb still called "*Guebrabad*," but, like that of the Armenian colony at Julpha, it is fallen to decay: nothing now inhabiting its ruined streets, but houseless dogs and the refuse of the people' (*Travels in Georgia, Persia, etc.*, ii. 46).

No trace of Gabrābād can now be found. Three hundred yards below the bridge of Julfa, and at about the same distance above the Pul-i-Khaju, the river is crossed by the Pul-i-Jhubi, a brick bridge of fourteen arches—a sort of aqueduct to convey water to the palace of Haft-dast on the northern bank. The suburb upon the southern bank at this spot was known as Gabristān because it was inhabited by the Zoroastrians; but the ground was cleared by 'Abbās II., who transformed the place into a royal residence (see above) which was named Sadat Ābād, or 'Abode of Felicity,' where he kept his seraglio. The name alone has survived. Another souvenir of the Gabar suburb is preserved in one of the many appellations of the Pul-i-Khaju; it was called 'Bridge of the Gabars,' because it led to the suburb of Gabristān and was built by 'Abbās II., in order that the Gabars might not pass across the main bridge of Julfa (Curzon, *Persia*, ii. 47–49).

The condition of the Gabars under the Ṣefavid kings, if not enviable, was still respectable; but it grew worse after the Afghan invasion. Mir Vā'iz having taken possession of Qandahār, the Persian king sent him emissaries who were treated with contempt, and Mir Vā'iz's son and successor, in order to invade Persia, took advantage of the opportunity which occurred when the Afghans of Herat threatened the N.E. frontier of the

kingdom and the Arab prince of Muskat settled on the shores of the Persian Gulf. That invasion caused the direst calamities to the Zoroastrian communities, Maḥmūd having chosen Kirmān rather than the deserts of Sīstān. Kirmān and Yazd were the places where the bulk of the Zoroastrian communities were still important. Tavernier says (*op. cit.* p. 431) that, when he visited Kirmān (1654), there were ten thousand Zoroastrians there. Slaughter and enforced conversion distressed the faithful.

At the time of the second invasion of Maḥmūd, the prince persuaded the Zoroastrians of Yazd and Kirmān to join his troops and to avenge the wrongs they had sustained for centuries (Hanway, *The Revolutions of Persia*, ii. 149). The simple Gabars were easily persuaded, and enlisted under the banner of their old enemies. Their fate, after the siege of Isfāhān (21st Oct. 1722), is unknown. One of the captains of a Gabar corps bore the Musalmān name of Nāsīrallāh, but Hanway considers him as a Parsi or Gabar (*op. cit.* p. 152). Under Nādir Shāh and his successors enforced conversions, exactions, and slaughter again harassed the Zoroastrians.

The siege of Kirmān by Muhammad Āghā dealt them a deadly blow, and they shared the general fate of the native population (1794). In 1810, H. Pottinger saw a pyramid of six hundred skulls, a trophy of the Kadjar eunuch's victory. As for Timūr's old trophy, skulls of Gabars were certainly blanching in the same pile with those of the Muhammadan victims. The ruin of the quarter of the Gabars is ascribed to that time as well as the loss of their valuable MSS. Khanikoff says that their number amounted to at least 12,000 individuals (*Mémoire sur la partie méridionale de l'Asie Centrale*, p. 193).

Ker Porter, who visited them after those awful calamities, describes the Gabars 'with eyes bent on the ground and pouring tears for lustral water on their dishonoured shrines.' Yazd still contained four or five thousand faithful, and, from the comparative respectability of so considerable a body, 'they more openly exercised the offices of their religion there, and from the same reason at Kerman, than is ever attempted by the poorer Gabars in the villages about.' But, on the whole, the condition of the Kirmānīs was not so good as that of the Yazdīs (*op. cit.* p. 56).

At all times the fallen condition of the former lords of the land had impressed travellers. We may quote the opinions of some of them.

Pietro della Valle, who saw them in their suburb of Gabrābād under the tolerant rule of the Ṣefavid princes, describes them as poor, simple husbandmen, carrying on no trade, earning their livelihood (*op. cit.* p. 104). They were all dressed in the same manner and in the same colour, similar to the cement made of bricks (p. 105). Figueroa, at Gabrābād also (p. 179), points out the gentleness of their manners; the women were quite free, and used to sit at their doors, spinning and weaving. At Kirmān they had retained their old mode of living, dress, and religion (p. 177).

According to Thévenot, they were easily recognized by a dark yellowish colour that the men had adopted for their garments and the women for their veil; besides, the Gabar women, most of whom had fine features, never covered their faces (*Relation d'un voyage fait au Levant*, ii. 216).

Chardin thinks them not so well made or so white as the Muhammadan Persians (*op. cit.* p. 127). The men, however, were lusty, of a lofty stature, and had a good complexion. The women were coarse-looking, of a dark and olive-coloured complexion, which he ascribes to their poverty rather than to their nature, some of them having handsome features. The men had long hair and a full beard; they wore a short tight jacket and a cap of fine wool, very much like a hat. They dressed either in linen and wool stuffs or mohair, preferring the brownish or feuille-mort colour as being more suitable to their fallen condition. The women were coarsely dressed, and Chardin emphasizes his remark by saying that he had never seen anything that was so ungainly and devoid of elegance. In fact, he thought that the dress of the Gabars was so much like that of the Arabs that one would be inclined to think that the Arabs had borrowed it from them when they conquered the land. They were agriculturists, workmen, fullers, or furriers, and they made carpets, caps, and stuffs of a very fine wool.

Daulier (*op. cit.* p. 52) describes them as clad in a woollen stuff of a tawny colour; the dress of the men was of the same shape as that of the other Persians, but the women's dress was totally different. The latter used to go out unveiled, and wore on their heads a scarf loosely twisted up (*façotés à la négligence*) with another veil which covered their shoulders, after the fashion of the Bohemians. Their trousers were like the Swiss breeches which go down to the heels. Most of the materials worn by the Gabars were made at Kirmān.

The chief occupation of the Gabars was agriculture. According to Chardin (*op. cit.* p. 127), they considered it not only grand and innocent, but also noble and deserving—a view quite in keeping with their sacred books. Their manners were gentle and simple; they lived under the rule of their elders, who were their magistrates, recognized by the Persians (*op. cit.* p. 128).

That taste for agriculture was to be their chief characteristic up to the 19th century. Ker Porter found them employed as labourers and gardeners. At Teheran they were for a long time gardeners in the precincts of the Seraglio on account of their strict morality (Dosabhoy Framjee, *The Parsees*, p. 32).

In the middle of the 19th cent. the poll-tax (*jizya*) had become more and more onerous to the non-Muhammadan subjects, not to speak of the Armenians and Jews. As regards the Zoroastrians, the annual taxation (it has been verified) amounted to the sum of 660 *tomāns* (£330), but, since the governors and collectors used to increase it, in order to make a profit, it was raised to nearly 2000 *tomāns* (£1000). According to statistics, a thousand Zoroastrians were compelled to pay; two hundred could do it easily; two hundred with difficulty; and the rest were utterly unable to pay, even under the threat of death. Considering the prosperous position of the Zoroastrians of India and the renewed intercourse between the two communities, it was highly desirable that something should be done through their influence in favour of their Iranian brethren.

The position of the latter was, in the main, as follows: they were branded with the appellation of 'Gabars' (infidels), and had to bear the same vexations as those experienced in India by the 'Mahars' at the hands of the high-caste Hindus. Houtum-Schindler, before the abolition of the *jizya*, stated (*op. cit.* p. 56) that the position of the Gabars was better than that of the Jews at Teheran, Kāshān, Shīrāz, and Bushire, while at Yazd and Kirmān the status of the Jews was preferable. The chief grievances of the Zoroastrians were the following: they were threatened with forced conversion; the property belonging to a Zoroastrian family was forfeited for the use and benefit of the proselytes, in spite of the rights of the legitimate heirs, and property recently acquired could be taxed to the advantage of the *mullahs* up to the fifth of its value; it was forbidden to build new houses or to repair old ones; the merchants were subjected to taxes besides the ordinary customs-duties. The murder of Zoroastrians was not punished; and their sanctuaries were often desecrated. The Gabars could not wear new clothes or ride a horse; they were obliged to put on dull yellow garments—a permanent reminder of the disabilities which had been equally shared by the Jews and Christians who, under the reign of Muttawakil, were compelled by enactments (A.D. 850) to wear honey-coloured gowns, parti-coloured badges, and caps and girdles of certain ignoble patterns; to ride only on mules and asses, with wooden stirrups and saddles of strange construction. Again, any intercourse with the Gabars being pollution, all lucrative occupations were forbidden to them. Besides, the inequality of the law in any Muhammadan country, which gives only the Faithful help and assistance, but denies it to unbelievers, is well known.

The Parsis of India, whose lot had been so different, could not see the miserable destiny of their brethren without trying to better it. In the middle of the 19th cent. a Bombay Parsi wrote:

'Can we ourselves do nothing for our unfortunate co-religionists in Persia? Our community possesses considerable weight, and includes amongst its members names known all over the world for their exertions in the cause of humanity, and the amelioration of the condition of their countrymen generally. A deputation, therefore, of our race to the Persian court, duly accredited by the English government, and presented by the British Ambassador at Teheran, might, we believe, remonstrate with success against the cruelties now practised upon our Zoroastrian brethren in Persia. The amount raised by the capitation-tax now levied upon them, and which is attended by circumstances of so much cruelty, must be to the Imperial revenue insignificant in the extreme, and it is not improbable that a dignified representation on the subject made by a suitable embassy from the Parsis of India might succeed in abolishing it. Persian princes seldom know the true state of their subjects, and we cannot but think that our countrymen would reflect honour upon themselves by an adequate effort to relieve the miseries of our Zoroastrian brethren in the fatherland' (Dosabhoy Framjee, *op. cit.* p. 49).

The Persian Zoroastrian Amelioration Fund was started in 1854, and the trustees sent an agent, Manakji Limji Antaria, who left India on 31st March and was soon able to communicate a report, which was quite calculated to rouse the general feelings of the Bombay Parsis. A meeting held under the presidency of Manakji N. Petit took place in January 1855, in order to pass resolutions according to this report. In spite of the numerous grievances and disabilities which were made known in that report, the abolition of the *jizya* was deemed the most urgent reform, and efforts were made towards it, although it took twenty-five years to bring it about (1857–1882). During that long period no opportunity was neglected to stir up public opinion in favour of the unfortunate Gabars.

Manakji Limji Antaria took advantage of the friendly disposition of Henry Rawlinson, British Ambassador at Teheran, to have an audience with the Shah and describe to him the miseries of his Zoroastrian subjects. Rawlinson obtained a reduction of 100 *tomāns* annually wrung from Yazd and Kirmān.

Another interview with the Shah was granted to a few members of the Bombay community, supported by E. B. Eastwick and Henry Rawlinson, at Buckingham Palace, in June 1873. The Shah was pleased to give a sympathetic attention to the memorial presented by the Parsi deputation, and 'if he finds,' says the reply, 'that your co-religionists are subject to any undue severities, he will take care that redress is afforded them.' But, in spite of the kind dispositions of the prince, no change took place, and even a pressing appeal through the medium of the British Ambassador at Teheran did not reach the royal ear.

It was only in 1882 that Dinsha Petit, the President of the Persian Zoroastrian Amelioration Fund, received through R. Thomson, of the British Embassy, the welcome news that the royal firman abolished the *jizya*-tax and relieved the Zoroastrian communities of its payment, beginning with 21st March 1882. The firman was given at Teheran in the month of August 1882. Thus ended their long campaign of twenty-five years, which had cost the Persian Amelioration Fund more than ₹109,564 (£10,000) (for all particulars on the abolition of the *jizya*, see B. B. Patel, *Parsee Prakash* [Gujarati], pp. 657–662).

The devoted agent, Manakji Limji Antaria, died in 1890. His successor was Tir Andaz Khorsend, an Iranian by birth, who died three years later. He worked at Yazd and Kirmān, where he started the *Anjuman naseri*. After him the Committee appointed Ardashir Edalji, who worked till 1896. From that time there has been no paid agent. The affairs of the Iranian community are now managed by small committees appointed by the Bombay Fund, which has a capital of 287,600 rupees, and issues reports.

At Bombay there is a *dharamśāla* ('inn') at Chaupati for the use of destitute Iranians who come to India to find employment and help (1881); and an *agyārī* ('fire-temple') for the exclusive benefit of the Persian Zoroastrians. The head-priest is an Iranian *mobed*, and the ritual is purely Iranian.

5. Religion.—The Zoroastrians having lost for ever their political independence, we have now to describe the conditions under which they were allowed to outlive their national liberty and profess their religion.

At the time of the Arab invasion, Zoroastrianism, divided by sectarian controversies, was exposed to the risk of perishing. The contact of Christians and Jews had created religious feuds and quarrels, and the primitive Zoroastrian doctrine was altered to such an extent that modern scholars have much difficulty in distinguishing the pure elements of the Mazdæan creed from foreign ones. To those sectarian controversies must also be added the intolerance of the Zoroastrian priesthood towards Persian sects such as the Manichæans and Gnostics—an intolerance which made them hateful.

'Persecution had stirred up feelings of bitter hatred against the established religion and the dynasty that supported its oppressions and caused the Arab conquest to appear in the light of a deliverance' (cf. T. W. Arnold, *The Preaching of Islam*, London, 1896, pp. 177–184).

Zoroastrianism did not disappear at once; the Magians were tolerated and treated like 'the people of the book.' In support of this statement, we may quote al-Balādhurī:

'It seems that the Caliph Umar had some doubts as to how he ought to deal with them, but 'Abdu'r-Raḥman b. Awf sprang to his feet and cried: "I bear witness of the Apostle of God that he said: Deal with them as ye deal with the people of the Book"' (ed. de Goeje, Leyden, 1866, p. 267).

We have another example in the treaty concluded with the people of Dabil in Armenia. The safety of the lives of the Christians, Magians, and Jews was guaranteed as well as their property, churches, temples, and city-walls, as long as they consented to pay the land- and the poll-tax. Conversions, it seems, were not compulsory at first; some were quite free, especially in the higher classes, and took place even before the conquest, such as that of Salmān, one of the very first converts and a revered companion of the Prophet, to whom he was most serviceable at the siege of Medina on account of his talents in engineering and military science. He gave up Zoroastrianism, forsaking his father and his luxurious home at Isfāhān. The bent of his mind had led him to study religions, and in his youth he had frequented Christian sanctuaries.

After the defeat of Qādisiyya, four thousand soldiers from the shores of the Caspian Sea embraced Islām, joined the Arabs, whom they helped in the conquest of Jalūlā, and settled afterwards among Muslims in Kūfa. It seems that the great influx of Persian converts made Omar anxious, as he could not reasonably trust them. His forebodings were unfortunately fulfilled; he died the victim of a Persian convert.

The great number of converts is explained by Arnold (*op. cit.* pp. 177–180), who points out the simplicity and elasticity of Islām, the numerous eschatological ideas borrowed from Zoroastrianism, and the relief from the purifications and elaborate ritualism imposed by that religion; and it is quite certain that the bulk of the conversions were voluntary. But all converts were not sincere; the famous Ibn al-Muqaffa appears to have been a bad Muslim, and, speaking of Mihyar, a native of Daylam, al-Karim ibn Buhran remarked that by embracing Islām 'he had merely passed from one corner of hell to another' (Ibn Khallikān, tr. de Slane, London, 1842–71, i. 432 and iii. 51) (8th cent.). Ibn al-Muqaffa was one of the ten most eloquent writers of Arabic, and with this combined a thorough knowledge of Pahlavi. He was put to death about A.D. 760.

E. G. Browne has admirably defined the period of the two or three centuries which followed the Arab conquest; that period is generally supposed to be a blank page in the intellectual life of the people.

'It is, on the contrary,' he says, 'a period of immense and unique interest, of fusion between the old and the new, of transformation of forms and transmigration of ideas, but in no wise of stagnation or death. Politically, it is true, Persia ceased for a while to enjoy a separate national existence, being merged in that great Muhammadan Empire which stretched from Gibraltar to the Jaxartes, but in the intellectual domain

she soon began to assert the supremacy to which the ability and subtlety of her people entitled her' (*Literary History of Persia*, London, 1902 ff., i. 204).

In fact, the Persian converts were to give firmness and strength to Islām (Dozy, *L'Islamisme*, p. 156). The Arab and Persian scholars have at their disposal ample materials for that study, but as regards the status of the Zoroastrian communities the information is meagre and disappointing. The historian has simply to register the rapid decline of the creative faculties in their members, and to be grateful that, in spite of the most terrible persecutions and centuries of ignorance, some fragments of their religious literature have been preserved down to the present time.

At first, as we have already remarked, liberty of worship was not denied to the Zoroastrians. The fire-temples, even when their destruction was ordered by law, were not much injured, and severe punishments were sometimes inflicted by the Muhammadan authorities upon those who attempted to overthrow or damage them. The high-priests were still important personages; the Pahlavi literature continued to be cultivated for several centuries; and, if the most valuable books of the Sasanian period disappeared through the carelessness of the priests and the contempt of the Arabs, some souvenirs of that period have been preserved, and we can glean from the post-Sasanian literature information as to the position of the proscribed religion.

As an example we may cite from the Pahlavi *Dāṭistān-ī Dīnīk* the opinion of Mānūščihar, son of Yūdān-Yim, the high-priest of Fārs and Kirmān in the 9th century. According to another Pahlavi work of the same century, the *Dīnkarṭ*, the high-priest, 'the *mobed* of *mobeds*,' was a sort of supreme pontiff, whose decisions were listened to by the Faithful (*Dīnkarṭ*, ed. Sanjana, Bombay, 1874 ff., Eng. tr. p. 69). We can trust Mānūščihar to disclose to us the real status of the communities.

'That which you ordered to write about the way of knowing and understanding not being for any one else but for your servant, was owing to your affection, and for the sake of kind regard; but on account of the importance of truth it is more expressly to be regarded as being proper to write also to other spiritual men, as to the learning which is more fully studied by them. For, even with the perplexing struggle of the fiend, and the grievous devastation and collapse which have happened to religious people, after all, through the persistence of the sacred beings even now there are pontiffs, priests, high-priests, judges, and also other religious leaders of those of the religion in various quarters. Moreover, the other priests and spiritual men here enumerated have well considered the commentary (*zand*) of the text (*mānsar*) which is muttered, are acquainted with opinions explaining the religion, and are, in many places, the cause of preferring good works' (*Dāṭistān-ī Dīnīk*, i. 5–7, tr. West, *SBE* xviii. [1882] 5 f.).

Passing over three centuries, we shall now turn our attention to the northern part of Persia, Azarbaijan, at Rai, the capital of ancient Media, the *Ragha* of the Avesta (*Yasna*, xix. 18; *Vendīdād*, i. 15), one of the most flourishing cities of the East, next to Baghdad. It had been the theatre of Muhammadan sectarian struggles: Khanifites, Shāfi'ites, and Shī'ites had killed each other in its streets. In 1220 it was pillaged by Jenghiz Khān's hordes. In spite of all these evils, the small Zoroastrian community had endeavoured to maintain its integrity (13th cent.). The high-priest had still retained the title of *Maubad Maubadān*, and had among his disciples the author of a Persian poem on Zoroaster's life, who is our best informer.

This author was young Zartusht, son of Bahrām, son of Pajū. Bahrām himself was a well-read *mobed* and an astrologer; as for Zartusht, he was conversant with the Pahlavi language, and could read a book wherein were recorded the chief events of the world, and the great deeds of the ancestors and kings, along with the explanation of Avesta and Zend and an account of the birth and events of the life of the prophet Zoroaster (cf. Rosenberg, *Zarātusht Nāma*, St. Petersburg, 1904, p. 2).

That book, however, had grown old, and men were no longer able to read it, and an old *mobed* advised the young man to put it into verse; lest the traditions—the origin of which nobody could remember, no one being able to understand their writing—might be lost.

'Thou wilt do well to turn them into verse,' says the old man, 'in a pure style and in Persian writing. Thou wilt adorn this holy law with thy skill and restore rites and holy laws.'

We see how much rites and laws had suffered in the 13th cent.; they were doomed to suffer still more through Tīmūr's invasion.

It was in the end of the 15th cent. that the intercourse with the Parsis of India was renewed. The exodus of the little band of refugees to the shores of Gujarat had not been the only one (8th cent.); others had fled to foreign countries in quest of security and liberty of conscience, but all record of them is lost; no one can trace the place of their settlements or tell the sad tale of their vicissitudes and collapse. Now and then the historian catches a glimpse of the intercourse of Iranians with India.

In the 14th cent., Māhyār, a traveller from the city of Uchh, on the Indus, stayed six years with the herbads of Sistān; he was taught by them the Zoroastrian faith and returned to India. He brought with him a copy of the *Vendīdād* which had been made in Sīstān in 1205, by one Ardashīr Bahmān. From this copy other copies were made. The oldest now extant are copies made on a Cambay MS of the *Vendīdād* brought by Māhyār (14th cent.).

Westergaard says (*Zend-Avesta*, Copenhagen, 1854, Introd. p. 22) that the Parsis never troubled themselves with the books on which their faith was based. Had it not been for the communication with Persia in modern times, Anquetil would probably not have found in India a vestige of a book. It is said elsewhere that, if those books had not been brought to India before the siege of Kirmān, none would have survived in Persia.

It was at the suggestion of Changah Shāh, the *dāvar* ('head-man') of the Parsis of Navsari, that messengers were sent to Persia in order to obtain a satisfactory solution of several questions concerning religion and forms of ceremonies. In the year A.D. 1478 the Parsis of Navsari, Surat, Broach, Cambay, and Ankleswar agreed to send Narīmān Hōshang, a layman of Broach, to the learned *dasturs* and *mobeds* of Persia. Some passages of the answers transmitted by the Iranian brethren help us to see the position of the Zoroastrian communities at that time under the rule of the Turkomans. The Iranians pathetically declared:

'From Kayômars up to this day, no time has been harder and more calamitous than the end of this millennium; and neither the period of Zohāk Tāzī, nor that of Afrāsyāb, nor that of the Sorcerer Tūr, nor that of Alexander the Greek,—of whom the Creator Hormazd says that they are gross sinners—no period has been worse than the end of this millennium, of which Hormazd has made mention, of which 847 years have already passed. Moreover, at this time the faithful have little help to perform meritorious actions in the path of Hormazd; and only a little of Nīrang, Barsam, Purification, Purity, and Abstinence has remained; the rest has gone out of use' (Patel, in *Cama Memorial Volume*, Bombay, 1900, p. 171 f.).

In a letter brought by Narīmān, they similarly deplore their condition:

'Among us, poor persons, there are four or five individuals who know their way in Pahlavi writing. But which is original is not known, for this reason, that, owing to oppression and tyranny, our fortunes, bodies, and clothes have all been contaminated' (Bombay University MS of Darāb Hormuzdiār's *Rivāyat*, i. fol. 13b, ii. 6f.).

One of the messages—the first—concludes with a pressing invitation.

'We wish that two intelligent priests may come hither, and study the Pahlavi writings, and distinguish the proper from the improper.' The traveller is carefully guided. 'As to the route, the land-route is short, and from Kandahār to Sistān the distance is short, and from Sistān to Yezd there is no fear' (Patel, *op. cit.* p. 172).

Narīmān Hōshang seems to have enjoyed the journey, as in 1486 he went a second time to Persia in order to elucidate new questions. It is stated in this reply that,

'since many years the Faithful of Persia, who are few in number, are very anxious and desirous, that they may receive some clue to the existence of the Faithful in any other country (Patel, *loc. cit.*).

In 1511 a third epistle came from Persia. The Zoroastrians of Iran had found their co-religionists' silence very long.

'Until the decline of the Arab dynasty and the succession of the Turks, we did not know whether the Faithful existed in the country of India. . . . Thirty-five years previous to this date, the late Narîmân Hôshang came here, bringing with him letters addressed to us by the late Behrâmshâh, and Changah Shâh, and by the assembly of the Faithful and the head-priests. We had sent our reply twenty-nine years ago, written by Nôshîrwân Khusrû and Marzbân Aspandyâr. You have not written to us anything during this long interval of years, and we do not know anything of the condition of the Faithful on your side' (Patel, *op. cit.* p. 172 f.).

Inquiries and explanations were made in this way down to the year 1768. The collection of the replies or explanations is named *Rivāyats*, or reports. Twenty-two such *Rivāyats* were formed out of the explanations brought from Persia from 1478 to 1768. These *Rivāyats* form our most precious source of information on the customs of the two communities, and through them old works, fragments of the most precious books of sacred literature, found their way to India, jumbled up with questions of pure ritualism or social life. Now and then Persian travellers happened to come to Gujarat. Two Persians, Kāūs and Asfad, visited Navsari in 1536 and wrote a poem, a copy of which is in the Mulla Firoz Library at Bombay. Later on Ardashīr Kirmānī was summoned to the Mughal court by Akbar in order to help the compiler of the *Farhang-i Jahāngīri* (end of the 16th cent.). In 1614 a *dastur* named Azar Kaivān bin Azar Gosp died at Patna at the age of 85. He had disciples, and Muhammadans and Hindus are said to have joined the latter (cf. *Dābistān*, tr. Shea and Troyer, Paris, 1843, i. 87, 88, 89). In the 18th cent. (26th Nov. 1720) a *mobed*, Jāmāsp Vilayati, came to India. He vainly attempted to enlighten his co-religionists in matters of religion (Patel, *Parsee Prakash*, p. 23; Anquetil du Perron, *Zend Avesta*, Paris, 1771, Prelim. Discourse, p. 327). He brought several religious books, a Pahlavi *Vendīdād* which served Anquetil's teacher, Dastur Dārāb, and is the one from which his famous translation was dictated. Jāmāsp found that there was a difference of one month between the Persian and the Indian Zoroastrians in the *roz mah* ('calendar') reckoning. It is the starting-point of the *kabīsah* or 'intercalation' controversy (see art. CALENDAR [Persian]). He was able to teach Avesta to three intelligent priests—Dastur Dārāb Coomana of Surat, Dastur Jāmāsp Āsā of Navsari, and a *dastur* of Broach (probably Dastur Fardunji); then he went back to Persia. In 1736 a *bihdīn* named Jamshīd, conversant with astronomical calculations, took up the reform of the Indian calendar. During the long discussion of the *kabīsah*, which lasted for more than a century, applications were often made to Muhammadan authorities, *e.g.* Ḥājī Nasham Isfāhānī and Āghā Muḥammad Shūstarī. All this shows that the Gabars were not absolutely ignorant.

The Gabars, who were so communicative with their Indian brethren, carefully kept aloof from the non-Zoroastrians. All the travellers have recorded this reserve, which was based upon the principles of self-defence.

'Never,' says Chinon, 'was the Cabbala of the Jews so averse to disclosing its secrets or so jealous of unveiling the mysteries of its science as the Gaures, or ancient Fire-worshippers, are careful to conceal their religion from those who ask for information. I have been obliged, in order to learn from them the little I know of it, to go many times to their place and to dissemble, lest they might suspect the design I had' (*Relations nouvelles du Levant*, Lyons, 1671, p. 429). 'They know by heart a big book written in characters differing from those of Persian or Arabic. They could read it, but they used to say that they did not understand it, and therefore held it in still greater reverence, stating that it sufficed that the words of their prayers to God could be heard by Him alone' (*ib.* p. 437).

It was with a Gabar of Yazd that Chardin was able to converse, and almost to obtain the sacred books. That Magian was one of the most erudite among the Isfāhāni Gabars. He used to read some passages to the stranger every day out of a book for which he asked '1500 *livres*.' Chardin was allowed to keep the manuscript for three months, and, as he would not spend so much money on its purchase, the man disappeared (*Voyages en Perse*, iii. 128). Daulier found the Gabars so reserved about their religion that it was difficult to obtain any certain information (*Beautez de la Perse*, p. 52). Sanson was able to ascertain that the tenets of their religion were consigned to parchments, the contents of which their Magians, or priests, read to the community on some occasions, and they considered it a point of religion not to show them to any one. Their mysteries and creed were known only to their Magians, who were not more clever than the bulk of the community (*État présent du royaume de Perse*, p. 257). Chardin was, in fact, the most successful of the travellers, and he lost a unique opportunity of securing the Avesta books.

We have no reason to be surprised at the care taken to conceal the teachings of their religion, or at the obscurity in which their beliefs are involved, in view of the oblivion of their sacred language. It was in a sense the logical consequence of some of their religious injunctions. If we consult the old treatises, we find in them strict regulations to confine the teaching of the sacred language and the tenets of their religion to adepts alone. Some very curious things are said in the *Ṣad Dar* on this subject.

The characters of the Avesta had to be taught to those of the good religion 'in the presence of priests and teachers, so as to read, and that no error may continue in the *Nyāyišes* and *Yašts*' (ch. xcviii.; tr. West, *SBE* xxiv. [1885] 359 f.).

The incompetence of the priest in teaching is referred to in the following verses, such incompetence being considered as a sin, according to the words of Ormazd to Zoroaster:

'As to every priest and teacher who commits a blunder in teaching those of the good religion, I make him just as far from heaven as the width of the earth' (*ib.*).

The priests, moreover, were not allowed to teach Pahlavi to every one.

'Zaratušt enquired of Hōrmazd thus: "To whom is it proper to teach Pahlavi?" And Hōrmazd, the good and propitious, gave a reply thus: "To every one who is of thy family, an officiating priest, a high-priest, a spiritual chief, and every one who is an intelligent priest. Besides these that I have mentioned, if one teaches it to others it is a great sin for him; and if he has performed many duties and good works, the end for him may still be hell"' (*ib.* xcix. 2-4).

We can easily understand that the more the Zoroastrians were persecuted, the more they kept aloof from the non-Zoroastrians. In fact, any intercourse with the latter was forbidden to the true believer. About that we find in the *Rivāyats* injunctions which were as useful to the brethren of Persia as to those of India, who had just experienced the effects of the conquest of Gujarat by the Muhammadans; the main point was to keep the faith of the forefathers. A *Rivāyat* of Shāpūr Bhārūcha tells that, if a Zoroastrian was forced to become a Muhammadan with his family, it was better for him to poison himself and his family than to give up his religion. But if, after the Zoroastrian had changed his religion, he wished to be re-admitted among his co-religionists, he should be received after making him pray a *patēt* and giving *barašnūm* (*Narīmān Hōshang Rivāyat*, 15th cent.). Yet conversion to Zoroastrianism was allowed. A non-Zoroastrian could be admitted to the Zoroastrian religion if willing to observe carefully its laws, and provided that no harm was thereby done to the community (*Kāūs Māhyār Rivāyat*, 16th cent.). The last sentence is suggestive, and shows a great deal of discrimination in the leaders. Above all, the Zoroastrian was enjoined to guard himself against contact with a non-Zoroastrian. A Zoroastrian should purify himself with cow's urine (*nīrang*) after touching a non-Zoroastrian (*Kāmdīn Shāpūr Rivāyat*, 16th cent.). Some other regulations, such as the following, have even a polemic character: a Zoroastrian should not partake of any food prepared by a non-Zoroastrian, even when travelling (*Kāūs Māhyār Rivāyat*), neither of *ghī* (clarified butter), nor of honey prepared by non-Zoroastrians (*ib.*); fruit touched by the latter has to be washed before it is eaten (*Narīmān Hōshang*

Rivāyat); even so, a Zoroastrian should not use an earthen or copper utensil made by a non-Zoroastrian except after having washed it three times; and a *dastur* must not cook food in an earthen vessel made by a non-Zoroastrian (*Kāūs Māhyār Rivāyat*). It was necessary, therefore, for the Faithful to protect themselves against the impure, mischievous non-Zoroastrians, or *Darvands*. At the end of the 15th cent. and on the eve of the 16th, we find in the *Rivāyat* of Narīmān Hōshang the following privilege allowed to the Indian brethren—a privilege used, no doubt, by the Iranians during their daily life of struggle and misery.

'If a non-Zoroastrian is committing great sins and causing harm to Zoroastrians and does not listen to reason, and if a Zoroastrian kills him, he shall not be considered guilty of murder' (for all these references, see the Bombay University MS of Dārāb Hormuzdiār's *Rivāyat*).

The correspondence with the brethren of India, so active during the rule of the Ṣefavid kings, slackened during the Afghan invasions. The last messenger in the 18th cent., Kāūs Rustam Jalāl of Broach, took with him his son, the famous Mullā Fīrūz, who has left an account of his journey (*Derich kerde manjumi*). The siege of Kirmān put a stop to that literary and to all religious intercourse.

6. **Social and religious customs.**—The Zoroastrians are divided in Persia, as in India, into two classes—laymen (*bihdīns*) and priests (*athornans*). We have seen their unhappy fate, and the ruin of their national life. Their social life was a failure. In many cases they were obliged to conceal their religious faith and to feign to adopt Islām. Even in the *Rivāyats* we find permission to practise dissimulation. 'If a man is obliged to become a Muhammadan by force and if he has no faith in the Muhammadan religion, he cannot be called a Muhammadan'; and we have seen that the re-admission of the renegade into the community was easily granted. Some of the *bihdīns* sent their children abroad in order to have them brought up in their own faith.

i. LAYMEN (*bihdīns*).—The *modus vivendi* of the Iranian Zoroastrians has in general improved since the middle of the 19th cent.; yet at Yazd and Kirmān they continue to live in separate quarters, and are still kept at a distance by the Muhammadans. Their position, in the main, is respectable; they are no longer agriculturists only, but merchants; and their trade with India has been the source of fortune to some of them, and has even added (at least at Yazd) to the commercial reputation of the city, although they still labour under certain restrictions—being forbidden, for example, to sell food in the bazaars.

They occupy (at Yazd), says Lord Curzon, a position not unlike the Chinese *compradores* and agents in the Treaty ports of Japan, the bulk of the foreign trade passing through their hands (*Persia*, ii. 241). Some of them are naturalized British subjects. E. G. Browne has given many interesting details of their life, which he was able to learn during the time he resided amongst them at Yazd and Kirmān (cf. *A Year amongst the Persians*, chs. 13, 14, 15, 16). Other travellers have added valuable information since 1887 (cf. Jackson, *Persia, Past and Present*, pp. 353–400, and Malcolm, *Five Years in a Persian Town, passim*).

At Yazd the head of the community is [1912] Ardashīr Mihrabān, a wealthy merchant. He is the President of the *Nasr-i-Anjuman* of Yazd, and an influential representative of the Irānī Zoroastrians. Ardashīr Mihrabān was obliged to become a naturalized British subject to obtain certain liberties; in 1907, Arbāb Jamshīd, a merchant at Teheran, was elected deputy of the National Persian Assembly. It is known that the elections have been made by colleges: (1) of the provinces, (2) of the communities. The political inequalities of the Gabars have totally disappeared, and the Zoroastrians are gradually regaining all their civil rights and their equality before the law and further liberty of cult.

(*a*) *Ceremonies.*—The chief ceremonial occasions in a Gabar family are the same as in a Parsi family (see art. PARSIS). For a description of them we must refer to the accounts of the first European travellers, although we cannot place much reliance on them, the Occidentals being always more or less inclined to tax the Gabars with an exaggerated degree of ignorance or superstition. As regards their religious practices, intimately connected as they are with their social customs, we may refer to their *Rivāyats*, or correspondence with their brethren in India; for, though these *Rivāyats* contain no graphic account, they are still the best and surest source of information in matters of their own faith.

The ceremonies which mark the life of a Gabar are:—(1) The investiture of the *sudra* and *kustī*, called the *naujot* in India, and *sudra kustī dādan* in Persia (cf. Jackson, *op. cit.* p. 380 f., where it is stated that the wearing of the *sudra*, and even the formal investiture of the *kustī*, are not common at Yazd).—(2) The *marriage ceremony*, stripped of the Hindu finery and pageant imposed on the Persian refugees by the Rāna of Sanjan, and reduced to prayers and admonitions (Jackson, pp. 384–386). Any marriage with non-Zoroastrians is still strictly prohibited, as Chardin has pointed out. The Gabars, he says, could not marry wives of another faith; they asserted that the wife was to be by education and birth of the same religion and race as the husband (*Voyages en Perse*, iii. 128).—(3) *Funerals.*—The funeral rites are conducted in Iran, as in India, according to the pure Avesta form (Jackson, 387–398). Most of the questions sent to Iran by the messengers of the Parsi *anjumans* of Gujarat referred to funeral rites, prayers, purifications, and disposal of the dead on the platforms of the *dakhmas*. These *dakhmas* have been described by many travellers, who have even seen the inside and have given us particulars as to their structure. In Persia, the Zoroastrians could not ensure the inviolability of their *dakhmas* and keep at a respectful distance the curious wayfarers or mischievous Muhammadans, as their co-religionists endeavoured to do in India, and at last succeeded in doing under British rule.

The *dakhmas* in Persia are not numerous: at Yazd, there are 6—4 old ones and 2 in use. At Kirmān we have to note a cluster of 9 towers: 3 are in use; 6 are old and out of repair. At Teheran there is a *dakhma* built at the expense of the Bombay Fund (A.Y. 1231=A.D. 1861). There is likewise a very ancient *dakhma* near Rai, about 30 feet high, but with neither door, *bhandār* (or central pit to receive the bones), nor *sagri*. The *pāvis* are arranged in rectangles instead of wheel-fashion (from the census of the Persian Amelioration Fund; cf. Browne, *A Year amongst the Persians*, 88 f., and Jackson, 439 f.).

(*b*) *Dress.*—The dress of the modern Zoroastrians in Persia is carefully described by Houtum-Schindler (*op. cit.* 68 f.). The people still retain the custom of wearing dark colours pointed out by ancient travellers. The men wear the turban, or *dastar*, rolled up around a small cap; the *kolā*, or black wool cap of the Persians, is adopted only at Teheran, Kāshān, Shīrāz, and Bushire; they put on the *penāra* (mod. Pers. *pīrāhan*), 'shirt,' over their *sudra* ('sacred shirt'), and tie the *kustī* ('sacred thread') on their naked body; the trousers are called *tonbūn*. There are three other garments: the *dotāī*, a mere jacket, short and wadded; the *alkalyk*, another sort of jacket worn under a third called *kēma*. A *shal* (mod. Pers. *sal*) is passed over the *kēma*. The stockings and shoes have Persian names.

The women retain the ancient custom of winding pieces of cloth around their head, 'fagotées à la négligence,' as Daulier says (p. 51), and of using the same 'nippes colorées' mentioned by Raphael du Mans (*État de la Perse en 1660*, p. 43). They wear five different head-cloths: the thin *jul-shivsar* is bound round the head like a cap and kept in place by the *lachek* (which is a ribbon rather than a cloth) tied under the chin. The *dastmāl-sar* falls on the shoulders, and is fastened under the chin; in fact, the head of a woman is visible only from the eye-brows to the chin; the brow is covered by the *maknō*. The women wear the *kustī* over the

shoulders on the under shirt, which is not the *sudra*, but is called *shiv-kustī*; over the *shiv-kustī* is worn the short shirt or *penāra*. The women do not wear petticoats, but trousers called *shelvar*, made of coloured cloth, either wadded or light, according to the season; they are broad and loose, but are drawn in tightly about the ankles. The tight-fitting jacket with narrow sleeves is called *mināsūkh*. The other jackets have Persian names.

The women of rank, when they go out, throw over themselves a veil of striped stuff, blue and white, called *chādar*, which is worn only by the poorest Muhammadans. The other women, viz. the townswomen, go out unveiled; a Muhammadan never looks at them, as he considers them impure.

(*c*) *Education.*—After having so often alluded to the ignorance of the Gabars, let us consider their intellectual status during the great campaign made by Manakji Limji Antaria in favour of the amelioration of the lot of his co-religionists. Houtum-Schindler gives reliable information (p. 82). At that time very few Irānī Zoroastrians could read the Avesta characters; in the province of Kirmān there was only one man, the *dastur*, who could read Zend; at Yazd there were several. All except the agriculturists could read and write modern Persian; many had some knowledge of Arabic. Among the women it would have been hard to find one who could either read or write. Some laymen were conversant with astrology, and knew as much of astronomy as was required for astrological calculations. They could, with the help of the astrolabe, find the latitude of a place within a degree. They had limited notions of geography; all their knowledge of history was derived from Firdausī. A few could study the *Avesta*, *Dasātīr*, *Dābistān*, *Dīnkart*, and such other works, but quite superficially. All the class-books and the Qu'rān came from India. A Kirmānī or Yazdī Zoroastrian was not permitted to attempt to read the Qu'rān in the presence of a Muhammadan, and no copy would be sold to him. The improvement, even since the beginning of the 20th cent., is notable. Now there are 9 schools in Yazd, Kirmān, and Teheran. At Yazd there are 6 schools: a large *madrasa* built at the expense of Ardashīr Mirhabān's father (149 pupils); another where Avesta and English are taught (53 pupils); Khurramshah (84 pupils); Taft (24 pupils); Sarfābād (32 pupils); Mubarka (no pupils). These six schools are branches of the Yazdī *madrasa*. At Kirmān are two schools, one near the Ātash-Bahrām (32 pupils); and one at Zufar (19 pupils). At Teheran there is one school built by N. M. Petit (13 pupils).

ii. PRIESTS (*athornans*).—The modern Iranian priesthood is the humble representative of the great clergy of the Sasanian period, but one would hardly recognize in the persecuted *mobeds* of Yazd and Kirmān the *dasturs* and advisers of the mighty kings of Persia. Immediately after the Arab conquest, the priests were not ill-treated by the Muhammadans; we have seen that in the 9th cent. there were still *mobeds* and *ervads* who had learnt the *mantras* and studied the commentaries. They were men of position, and were allowed to take a share in the religious discussions held in the presence of the Khalīfs themselves. This is proved by the *Ulamā-i-Islām* (ed. Mohl, *Fragmens relatifs à la religion de Zoroastre*, Paris, 1829, pp. 1–10; tr. Vullers, *Fragmente über die Religion des Zoroaster*, Bonn, 1831, pp. 43–67), in which is preserved a controversy between Mazdæan priests and Muhammadan doctors in the presence of Ali; and again by the *Mātigān-ī-gujastak Abālish* (ed. and tr. Barthélemy, Paris, 1887), which relates another controversy between a Zendik called Abālish and the Zoroastrian high-priest Ātūr Farnbarg before the great Khalīf al-Mā'mūn, whose taste for disputes on the merits of different religions is attested by al-Mas'ūdī (*Prairies d'Or*, ed. Barbier de Meynard, Paris, 1861–77, i. 30).

The presence of the Zoroastrian priests was thus tolerated at the court of the Khalifs, and their evidence was even accepted in lawsuits—that of a *mobed* in the case of Afshīn the heresiarch (9th cent.) (cf. Browne, *Lit. Hist. of Persia*, i. 331 f.); but this toleration gradually disappeared, and the Zoroastrian priests were taught to expect obedience and respect from true believers only. The priesthood continued to form a class separated from the rest of the community and to recruit new members from itself.

Nevertheless, an example of the possibility of admitting a layman into the priestly class is found in the 17th century. One *dastur*, Rustam Gushtāsp Ardashīr, is said to have sprung from the laity and not from a priestly family (*SBE* v. [1880] Introd. p. xxxiii). In the time of this *dastur*, the Muhammadan king of Persia had ordered a general massacre of Zoroastrians, unless they proved that they were not idol-worshippers. Rustam Gushtāsp, though a layman, proved this to the satisfaction of the king, and he was made a *dastur*. It is quite in keeping with the old tradition of the division of men into four classes, restored by king Ardashīr, with the exception of those who, by special merits for examinations, were qualified for a profession different from that of their forefathers. Such was the case of this Rustam Gushtāsp Ardashīr.

In the 17th cent., the head-quarters of the priestly class was still Yazd. According to Chardin (*op. cit.* p. 131), the great pontiff had settled there, and was called *Dastur Dasturān*; he was an example to the other priests who lived with him, and to the students who formed a seminary under his auspices. The Muhammadans allowed this liberty, since the officers derived handsome presents from such toleration.

The ignorance of the priests is emphasized by the travellers, but in many cases that reputation is due to the ignorance of the travellers themselves. Yet, as with the laity, so with the priestly class, a general darkening of the intellect was but too real, especially after the siege of Kirmān (1794). Westergaard, at Yazd and Kirmān, noted that Pahlavi had been almost forgotten; Houtum-Schindler, as already stated, found in Yazd some priests who could read the Avesta characters, but at Kirmān only one—the *dastur*.

There is now at Yazd a *madrasa* where Persian and Avesta are taught, whilst in the village schools Khorda-Avesta and Persian only are taught. A certain number of young men come to study at Bombay. As a learned and distinguished priest, we must mention Dastur Tīr Andaz Ardashīr, who has translated the *Khorda Avesta* into Persian.

The initiatory ceremonies for priesthood are the same as in India—*navar* and *martab*, with some slight differences in the ritual (cf. art. PARSIS).

At Yazd the *mobeds* live in a separate quarter; the *bihdīns* are spread over different villages and localities. Their duties consist in keeping up the sacred fire, the performance of the offices and religious ceremonies, and the like. For the distribution of the work and fees, they proceed as follows. Once a year, all the *mobeds* hold a meeting at the house of the high-priest and assign all the *bihdīns* of the different places to as many divisions as there are *mobeds*. They write down the names of the different villages on small slips of paper, which are folded and distributed by a young *mobed* to the *mobeds* as in a lottery. The religious ceremonies of the locality inscribed on the paper are performed by these *mobeds* and by no one else. Many of the *mobeds* appoint others to their place or ask others to help them; but they must always give their permission for any substitution.

A *mobed* who has just been made a *navar* cannot be employed until three years have elapsed after the ceremonies have been performed. The distribution of work is made yearly, and according to the increase or decrease of the number of the *mobeds*.

Temples.—Fire, the symbol of the Mazdæan faith, after having burnt in the Zoroastrian temples of the Sasanian period with all pomp and majesty, is now hidden, in Persia as well as in India, in dwellings whose outside does not differ from that of other houses. It is the worship of, or rather reverence for, fire professed by the Parsis and Gabars that has earned them the appellation of *ātash-pārastān*, or 'fire-worshippers,' given to them by travellers. Before the abolition of the *jizya*, their sanctuaries were desecrated daily. The history of the post-Sasanian temples has still to be written; the remains of the old temples are very few, and the poor modern *ādarāns* have nothing to remind us of the splendour of the former.

It is said that after the battle of Nihāwand, King Yazdagird fled from Rai and took with him the sacred fire that was revered in that place, one of the oldest *pyræ* of Persia. He went to Isfāhān, then to Kirmān, Nishāpūr, and Merv, where he erected, in a place two parasangs from the town, a *pyra*, where he enthroned the sacred fire that he had brought with him. The *pyra* was surrounded by gardens (Ṭabarī, tr. Zotenberg, ch. lxviii.).

At first the Muhammadans seem to have given a real protection to the fire-temples and to have prevented their destruction. Thus in the 9th cent., under the reign of al-Mu'taṣim (833–842), priests and doctors were flogged because they had destroyed the temple of Sugdh and built a mosque in its place (Arnold, *Preaching of Islam*, p. 179).

At the time of Mas'ūdī (9th cent.) *pyræ* were to be found in Iraq, Fārs, Kirmān, Sīstān, Khorasan, Ṭabaristān, Azarbaijan, etc. (Mas'ūdī, ed. Barbier de Meynard, iv. 86); but on account of the invasions and wars the number of the Zoroastrians decreased, and the sanctuaries fell into decay. Travellers have all recorded how carefully the Gabars concealed their fire from the eye of non-Zoroastrians. The exceptions are few. Chinon went to the temple, but could not see the fire (p. 448), although Careri saw it (*Giro del mundo*, 1699, p. 134). In modern times, E. G. Browne and Jackson were introduced into the sanctuaries of Yazd and Kirmān (*A Year amongst the Persians*, pp. 373 f., 441 f., and *Persia, Past and Present*, pp. 366 f.). One of the first duties of the Persian Amelioration Fund was to repair the fire-temples.

7. Language.—All the travellers noted that the Gabars had a language of their own; they had retained the Avesta characters and their scriptures, but the Pahlavi language and literature had gradually disappeared and were replaced by a sort of jargon, unintelligible to strangers and different from the New Persian. The modern dialect of the Persian Zoroastrians is the *Gabrī*, spoken at Yazd, Kirmān, Rafsinjan, etc. It seems that Hyde knew of the existence of the Gabrī (*Veterum Persarum . . . religionis historiæ*, Oxford, 1700, pp. 364–429; cf. Anquetil du Perron, *Zend-Avesta*, ii. 429). There has been no literary activity amongst the Persian Zoroastrians of Yazd and Kirmān in recent times; and, though among themselves they continue to speak the peculiar Gabrī dialect, their speech in mixed society scarcely differs from that of their Muhammadan fellow-citizens, and their letters are entirely copied from the ordinary models. E. G. Browne studied it at Yazd. He says that the *Dārī* (as he calls it) is used by the Gabars only among themselves. When they speak their own dialect, even a Yazdī Muhammadan cannot understand what they are saying, or can understand it only very imperfectly; it is not written.

Cf. Houtum-Schindler, pp. 57–82, etc.; E. G. Browne, *A Year amongst the Persians*, pp. 187, 189, 388, 389; Huart, 'Le prétendu Dêri des Parsis de Yezd,' *JA* xi. [1888] 298–302; E. G. Browne, *A Literary History of Persia*, i. 43, 86, 109; Geiger, in *GIrP* i. ii. [1896] 381 f., 404 f., 422; E. G. Browne, 'A Specimen of the Gabri Dialect of Persia,' *JRAS*, 1897, pp. 103–110.

It is also interesting, in this connexion, to note that the Iranian pronunciation of Avesta differs considerably from that current in India. The spirants are either despirantized or changed to aspirates (*δ* becoming either *d* or *d'*, etc.; *t* becomes *d*, and *ht* becomes *nk*). Besides becoming *t* or *t'*, *θ* is frequently interchanged in pronunciation with *s*; and the vowels *a*, *o*, *u* are often confused, while there is a tendency to monophthongize diphthongs. On the other hand, anaptyxis and epenthesis are strictly observed. Knowledge of the metrical structure of large portions of the Avesta is lost, and all is read as prose (Jackson, *op. cit.* pp. 363–366).

LITERATURE.—i. HISTORY, ETC.—Foucher, 'Sur le Manichéisme et les Guèbres,' in *MAIBL* xxxi. (1884); B. B. D. MENANT.

GAELS.—See CELTS.

GALLICANISM.—Under this name two doctrines are designated, which were once current in France, but which are quite distinct. The one was directed against the claims of the clergy, the other against the Papacy. The first, which was odious to the clergy, was supported by kings and parliaments, and may be called 'royal *or* parliamentary Gallicanism.' The second had the sympathy of the episcopate and of the French clergy, and is known as 'episcopal Gallicanism.' Each of these two doctrines, which have often been confused, has its own history, and they ought therefore to be separately treated.

I. *ROYAL OR PARLIAMENTARY GALLICANISM.*—Royal or parliamentary Gallicanism comprises three maxims. (1) The first proclaims the right that civil society possesses to defend itself against

the invasions of the clergy. It may be formulated thus: the clergy ought to be confined to the spiritual domain. (2) The second affirms the superiority of civil over religious power. Its formula is: the king is the head of the Gallican Church. (3) The third teaches that, to defend civil society against the encroachments of the clergy and to impose his authority on the latter, the king (represented by Parliament or the King's Council) should act in a practical manner, viz. by appeal by writ of error, which entails various penalties, notably the seizure of temporalities.

1. Defence of civil society against the encroachments of the clergy.—This is the very soul of the disputes which broke out from time to time between laymen and ecclesiastics. Profiting by the disorder caused by the invasion of the barbarians, the Church, in the 6th cent., had placed herself at the head of the social services. She had left her spiritual domain and invaded the domain of things temporal. But the day came when society became conscious of its growing strength. Then it thanked the Church for her past services and announced that it would henceforth look after its own administration. The Church, however, did not see things in the same light. She claimed a Divine sanction for rights which she owed to circumstances, and which she was unwilling to abandon. Hence arose the disputes which broke out as early as the reign of Charles the Bald, but more especially in the 13th century. In 1205, under Philip Augustus, then in 1225, under Louis VIII., the French barons formed a coalition to drive back the clergy into their spiritual domain and rescue laymen from their tribunals. At this latter date the Duke of Brittany, Pierre Mauclerc, assembled his vassals at Redon, urged them to work towards this end, and made them promise to brave the censures of the clergy. At the Assembly of Saint-Denis (1235) the most powerful lords of France discussed the matter again, and wrote to Pope Gregory IX. asking him to put an end to the continual encroachments of the bishops. Finally, in 1246, another League was formed—this time at the instigation of the Emperor Frederick II.—which proposed to limit the jurisdiction of the Church over laymen to cases of heresy, marriage, and usury. All these attempts failed. In 1235, Gregory IX. informed the lords that they were making an attempt against the 'liberty of the Church,' and threatened them with all sorts of penalties. Innocent IV. went still further: he excommunicated the members of the League of 1246. The bishops, supported by Rome, continued to bring before their tribunals a great number of civil affairs. The laymen, who thought themselves capable of administering their own affairs, continued to revolt against the humiliating guardianship to which they were subjected. During the whole of the 13th cent. matters underwent no change.

But, although the conflict went on as far as laymen and the Church were concerned, the interests of the former were no longer, towards the year 1300, entrusted to the same hands as formerly. At the time of Philip Augustus and Saint Louis, the opposition against the usurpations of ecclesiastical jurisdiction began with the barons. At the approach of the 14th cent. the attack came from the king, Philip the Fair, an imperious man and a great organizer, who proposed to entrust the execution of justice to lay officers nominated by himself, and to relegate the Church to the spiritual domain. The success of this project, however, was hampered by the king's quarrels with Boniface VIII., which compelled him to conciliate the clergy in order to secure their support. In fact, he had to concede to the Church unlimited jurisdiction in civil affairs. At the same time he instituted a body of royal legists and notaries who should represent the lay spirit and form a kind of fortress of anti-clericalism. In the 14th cent. a power arose over against the Church—that of the legists—which had always an open eye for the ambitious schemes of the clergy and was ever ready to thwart or curb them. To the attacks to which she had to submit the Church replied with excommunication, but the legists seized the temporal belongings of the author of the ban and did not let their prey escape until the censures were cancelled. These ever-renewed disputes gave rise to a chorus of mutual recrimination. The Church complained that her 'liberty' had been violated; the legists, on their side, complained that the clergy interfered in the regulation of sale contracts, estates, etc.—in a word, that they interfered with many things that were altogether outside the spiritual sphere.

King Philip of Valois imagined that this discontent was occasioned by misunderstandings, and that, if light were thrown on the question of the jurisdictions, harmony between the laymen and the clergy would be re-established. In order to obtain the necessary light, he called an assembly of the prelates and barons of his kingdom, and each of the two parties was invited to state its side of the question with absolute freedom. The Assembly (well known as the *Assembly of Vincennes*) met in December 1329.

Pierre de Cugnières, Knight and King's Councillor, took up the defence of the interests of the laymen. He contended, enforcing his arguments by frequent reference to Scripture texts, that God had established two jurisdictions, the one temporal, the other spiritual; and that these could not be in the same hands; from which he concluded that the Church, which had received spiritual jurisdiction, could not exercise temporal jurisdiction. Then, descending from the region of principles to the realm of facts, he enumerated the abuses committed by the clergy who encroached without scruple on the domain of temporal jurisdiction.

The argument was replied to by Pierre Roger, Archbishop of Sens, and Pierre Bertrand, Bishop of Autun. These two advocates of the clergy argued that the two jurisdictions, the spiritual and the temporal, could be united without any inconvenience in the same person, and that, as a matter of fact, the Church had received the power of judging temporal as well as spiritual affairs. They admitted that abuses might have slipped in here and there, and promised to do what was necessary to correct them.

The most obvious result of this great debate was to show that the legists were separated from the clergy, not by misunderstandings, but by views irreconcilably opposed, and that any concessions by either must be imposed by the authority of the king. But Philip refused to take part in the strife. He made fair promises both to the clergy and to the legists, and left the quarrel where he had found it. It is not till the reign of Charles V. that we find the intervention of royal authority—and that on the side of the laymen. At this time the usurpations of the clergy were more irritating than ever to the laymen, whose discontent found vent in a curious book entitled *Le Songe du Verger*. Charles, who had inspired the book, justified its claims by the Ordinance of 8th March 1372, in terms of which the bishops were in future to have nothing to do with 'real' actions, *i.e.* with the sale of landed property, heritages, etc., and the royal officers were to prevent, by seizure of temporalities where necessary, all action of the ecclesiastical tribunal in such matters.

The Ordinance of 1372 was the first measure taken by the king of France to stem the flood of ecclesiastical power. It was confirmed, in the reign of Charles VI., by the Bill of 1385. Then came the Ordinance of Villers-Cotterets of 1539, and the Edict of 1695, which restrained ecclesiastical power in other directions. Jurisprudence, on its side, devoted itself to a similar task and obtained important results. In the 17th cent. the State had recovered possession of most of its essen-

tial privileges which had formerly been usurped by the Church. Nevertheless, the clergy still possessed the registers connected with civil affairs, and retained the monopoly of education. It was the Revolution which deprived them of these privileges. On 19th June 1792 the Legislative Assembly decided that births, marriages, and deaths should be registered in the Meeting Hall of the municipality. Several years later, the Convention, and afterwards the Empire, gave the management of education to laymen. The clergy were, by these measures, expelled from two positions which they had held for many centuries. In the course of the 19th cent., however, they had the consolation of partially repairing the losses which the Revolution had inflicted upon them in the domain of intellectual affairs. In 1833 they were authorized to provide, in line with the University, elementary education. To this first authorization a second was added in 1850—that of providing secondary education. Finally, in 1875 they obtained the liberty of providing higher education. The Church, then, even at the present day, may give instruction, but only under State control: education has been secularized.

2. **The authority of the king over the Gallican Church.**—The king of France considered himself head of the Gallican Church, the guardian of its teaching and discipline. We may add that he supervised it in order to prevent the great force at its disposal from being turned against the monarchy. His authority was exercised by several means: the nomination of bishops, the convocation of councils, the *regale*, the taxes, the control of doctrine and worship.

(*a*) *The nomination of bishops.*—Clovis, Charles Martel, Charlemagne, and some others encountered no obstacle in the exercise of this right. But complaints and grievances made themselves heard not infrequently. These varied according to circumstances. Sometimes they were confined to protesting against the choice of incompetent bishops, and the shameful traffic which went on in this connexion. Such was the attitude of Pope Gregory (in his letters to Brunehaut and to the Frankish princes), of Boniface (742–744), and of the Council of Paris of 829. At other times a return was demanded to the electoral régime which had held sway before the coming of the Franks (Council of Paris of 614, Abbé Wala in the Council of Aix-la-Chapelle of 828, the *False Decretals*, Hincmar, Gregory VII.). Or, again, a compromise was resorted to, and the king was authorized to confirm the choice of the electors (Council of Orleans of 549). It was this compromise which, theoretically, finally prevailed (the first time under Clothaire II. [615], then in the middle of the 9th cent.)—theoretically only, for in practice the elections were corrupted by official candidature. The king thrust his candidate upon the electors; the electoral régime was only a mask to disguise the royal nomination. Moreover, the bishops, before obtaining episcopal consecration, had to receive investiture from the king and take an oath of allegiance to him. This oath of allegiance, however, soon dwindled to a simple promise of fidelity, which, instead of preceding the episcopal consecration, followed it, and so lost much of its value. Nevertheless, during the whole of the 13th cent. the king was still, so to speak, recruiting officer of the episcopate. With Boniface VIII. the Papacy proposed to reserve to itself the nomination of the French bishops, and little by little it made considerable progress in this direction. The Great Schism modified the situation. It was then, in fact, that the French clergy tried to re-establish election, and it succeeded, thanks to the *Pragmatic Sanction* of Bourges, 1438. But its success was fleeting, for the king gradually recovered lost ground and, in spite of the *Pragmatic Sanction*, nominated his bishops as often as he could. Finally, he completed and consolidated his victory by the Concordat of 1516. From this time onwards the king directed the appointment of the French episcopate under the control of the Pope, who confined himself to giving them canonical orders. This was not a complete return to the tradition of the early Middle Ages, seeing that at that period the nomination of the bishops was completed without any intervention from the Pope; but it was all that the recent increase of Papal power would permit. So in the Concordat of 1801, Bonaparte, who reserved for the civil power the right of nominating the bishops, accepted the conditions prescribed by the preceding Concordat, and granted the Pope the right of confirmation.

(*b*) *The convocation of councils.*—During the whole of the Merovingian period the councils did not assemble except by order, or, at least, with the authorization, of the king. From this fact arose the formulæ which we meet so frequently: for instance, 'A council of bishops assembled in the town of Orleans by order of His Most Glorious Majesty, King Clovis' (Council of Orleans of 511); 'By order of Their Most Glorious Majesties, we assembled in the town of Orleans to deliberate to the glory of God upon the observation of the Catholic law' (Council of Orleans of 533), etc. It was the same in the time of Pépin, of Charlemagne, and of Louis le Débonnaire. But, in 843, the Empire fell to pieces with the Treaty of Verdun. Then the Pope, who had become powerful, took the place of the kings, who were weakened by internal strife. As early as 846 the Council of Paris was assembled by Sergius II., who was on this occasion, however, merely the instrument of the Emperor, Lothair. Several years later, Nicholas I., acting in virtue of the superior rights of the Papacy, convoked the Councils of Metz (863), Soissons (866), and Troyes (867). Yet the Carolingian prince had not renounced the right exercised by his ancestors. He asked his bishops to meet in conciliar assemblies, and they obeyed. At least they still obeyed in 871 (Council of Douzy); for, in 876, it was as 'vicar' of John VIII. and 'in virtue of the Apostolic authority' that Charles the Bald convoked the Council of Ponthiou.

To find French councils again convoked by the king of France we must come down to the end of the 10th cent., when we see Hugues Capet assembling the Councils of Saint-Basel near Rheims (991) and of Chelles (993). This action is rendered still more curious by the fact that these Councils supported Hugues in his struggle against Rome. In the 12th cent., King Louis le Gros assembled the Council of Étampes (1130). Then at the time of the Great Schism, Charles VI. convoked in Paris the Councils of 1395, 1398, 1406, and 1408. Next appears the Council of Bourges, assembled by Charles VII. (1438). On this last occasion it was a question of adopting a definite attitude in the struggle which had arisen between the Council of Basel and Eugenius IV. In 1130 it was a case of deciding between two competing Popes. And it is well known that the Councils of Charles VI. had as their object the restoring of Christianity to unity of obedience.

On the whole, the king of France for many centuries did not convoke councils except in times of strife. In normal times he seemed to have forgotten the right which his Merovingian and Carolingian predecessors exercised. Yet, if we look into the matter closely, we find that he had not forgotten it, but had merely modified its use. From 1561 onwards, he periodically assembled the pre-

lates and the principal ecclesiastics of the kingdom to demand money from them. The councils of former times were succeeded by the 'Assemblies of the Clergy,' which were also convoked by the king and charged with finding supplies for the royal exchequer. These 'Assemblies' often relegated to the background the financial questions, which were the only reason of their existence, and concentrated their attention on problems of a theological or disciplinary character. They were, indeed, councils without being called by that name. In 1811, Napoleon, who was at strife with Pope Pius VII., reinforced the old tradition and convoked the Council of Paris.

(*c*) *The 'regale.'*—The king, who nominated his bishops and convoked the councils, also administered the property of the vacant bishoprics. He took possession of them through the medium of his officers, he managed them, and collected the revenues as long as the vacancy lasted—and it did not expire till the day when the new titulary had registered his oath of fidelity at the Court of Accounts. Further, during the whole time of the episcopal vacancy, the king took the place of the bishop and filled up all vacant benefices that the latter had the right to confer. The king's collecting of the revenues of episcopal property during the vacancy was called the temporal *regale*; the collation of the benefices which chanced to become vacant during this time was called the spiritual *regale*. Both are testified to as early as the 12th cent., and no doubt go back still further. For a long time they gave rise to no difficulty. The spiritual *regale* was accepted as the logical consequence of the temporal *regale*, which itself appeared to belong to the king, inasmuch as he was the virtual owner, or, in any case, the guardian, of the property of the Church.

Not infrequently the king's officers plundered the property which they were commissioned to manage. These misdemeanours caused complaints, which found expression as early as 1274 in the second Council of Lyons (can. 12), and from that time onwards they were periodically renewed. As always happened, dissatisfaction did not long remain confined within its original limits. After the abuses of the *regale* had been protested against, a protest was next registered against the *regale* itself. In order to satisfy the complaints of the clergy in the 15th cent., Charles VII. promised to give the proceeds of the *regale* for some time to the chapter of the Sainte-Chapelle in Paris. But this temporary edict, rendered perpetual by Charles IX., was probably only a clever trick to deceive the public. In reality, the king of France, far from depriving himself of his right of *regale*, strove to extend it and introduce it into provinces that had not yet submitted to it. It was thus that Brittany was, after 1598, included under the common law. At the beginning of the 17th cent., four provinces were still exempt, viz. Languedoc, Provence, the Dauphiné, and Guyenne. Louis XIV. put an end to their privilege by the Edict of 1673, which imposed the right of *regale* on all the bishoprics of the kingdom.

The measure of 1598 which brought Brittany under the yoke was accepted without a murmur by the episcopate as well as by Pope Clement VIII. The measure of 1673 was also accepted by Pope Clement X. then reigning, and by all the bishops of the provinces affected except Pavillon, Bishop of Aleth, and Caulet, Bishop of Pamiers. It did not at first seem as if it would be a difficult task to reduce these two to reason; but, contrary to all expectation, they defied the government of the king, and, in 1678, Pope Innocent XI., whose help they demanded, sent to Louis XIV. two briefs of complaint, followed by a third threatening brief (29th Dec. 1679). Although irritated by the attitude of the Pope, the king attempted to avoid a rupture. He negotiated with Rome, made fair promises, and relied on time to put everything right. But all his diplomacy was set at naught by a fourth brief—that of 1st Jan. 1681—in which Innocent excommunicated the Archbishop of Toulouse and all the ecclesiastics who had sided with this prelate in favouring the introduction of the *regale* into the diocese of Pamiers. Even bishops thought that the Church of France could not let this challenge pass without reply, and the convocation of a General Assembly of the Clergy was decided upon. It met in Paris at the end of October 1681, and opened its proceedings with the eloquent discourse of Bossuet on the *Unité de l'Église* (9th Nov. 1681). On 3rd Feb. 1682 it gave a decision in favour of the claims of the king. The same day it advised Innocent XI. to come to terms. The Pope replied by the brief of 11th April, in which he annulled the Assembly's decision; but the brief had no effect.

(*d*) *The taxes.*—Ecclesiastical wealth was, during the feudal period, the property of the king and the lord who gave the use of it to the bishop. Gregory VII., thanks to the quarrel about the investitures, managed to obscure this idea without absolutely abolishing it. After him and through his influence, the clergy began to foster sentiments of independence which found vent in the maxim that ecclesiastical property is exempt from the royal tax. This maxim, which remained uncontested in theory, was without effect in practice. In 1146, Louis VII., to provide for the expenses of the Second Crusade, imposed a tax on all his subjects. The clergy yielded on this and many other occasions, for Louis returned again to the charge. But they soon grew tired of paying, and in the Council of Tours of 1163 demanded that no subsidies on their property should be deducted without their being previously consulted. Philip Augustus accepted this condition. He asked the clergy for permission to take their money; but he took a great deal of it, notably in 1188 ('Saladin tithe'). Then Rome intervened. In the Lateran Council of 1215, Innocent III. forbade laymen to tax the property of the Church; he authorized bishops, however, in certain grave cases to come to the help of the country, but never without having first consulted the Apostolic See. Henceforth the ecclesiastical 'tithe'—so called because the king deducted the tenth part of the revenue of the clergy—was a contribution authorized by the Pope, who made this concession public in a Bull. But Philip the Fair, after 1294, freed himself from this humiliating subjection, and demanded a subsidy from the clergy without first obtaining the Pope's sanction. Boniface VIII. then launched the Bull *Clericis laicos*, which forbade princes, on pain of excommunication, to levy taxes on ecclesiastical property without the authorization of the Apostolic See, and prohibited ecclesiastics, under the same penalty, from paying any tax not authorized by Rome (24th Feb. 1296). A year later, Boniface, terrified by the threats of the king of France, retracted (in the Bulls *Romana mater* and *Etsi de statu*, 1297; there was already a veiled withdrawal in the Bull *Ineffabilis amor*, Sept. 1296). But on 5th Dec. 1301, he resumed the offensive by the two Bulls *Salvator mundi* and *Ausculta fili*, in which, as lord of the ecclesiastical property, he forbade all levy of subsidies on that property without his authorization. Boniface, however, was thwarted; his successors apologized to Philip the Fair, and the Bull *Ausculta fili* was suppressed. But further, scarcely had the above dispute begun when Boniface turned it into another channel (the Bull *Ineffabilis* of Sept. 1296) by

claiming to control the political authority of the king of France. It was this claim, accentuated in the *Ausculta fili*, and still more in the *Unam sanctam*, which led to the defeat of the Papacy. As to ecclesiastical property, it remained in the position in which it had been placed by the Lateran Council of 1215. Thus in 1337 we find Philip of Valois demanding tithes from Pope Benedict XII., who did not render them till 1340. And, in 1356, Innocent VI., hearing that the States General of Paris had collected a tithe from the clergy, recalls that 'these impositions are illicit without the permission of the Apostolic See.'

In the middle of the 14th cent., then, the king of France was still theoretically bound to ask permission from the Pope to demand money from the clergy. In practice, however, he had begun to free himself from this bondage; and soon the Popes, taking their cue from a state of things which they could not remedy, ceased to protest. The king, when he taxed the clergy, no longer needed to take Rome into account. But he had to take into account the unwillingness of the clergy, who claimed that the sacredness of their calling placed them above the financial burdens common to the rest of the nation. In 1489, Charles VIII., who had demanded a tithe from the clergy, received nothing. As a last resort, he had recourse to the Pope, and begged him to impose the tithe himself on the Church of France. It was not until the 16th cent. that the clergy finally submitted to the tax. But even then, to protect their principles, they strove to give their contribution an air of spontaneity. They promised the king a gift of money each year for a period of ten years. When the ten years had elapsed, they renewed their agreement for another period of ten years. The king, whose chief desire it was to be paid, allowed this innocent fiction to pass. He seemed to have forgotten the time when, as the owner of the bishoprics and abbeys, he conceded the right of occupying them to those whom it pleased him to make his feudatories.

But, if the king had forgotten the past, others remembered it. In the States General of 1560 the nobility and the *Tiers État* declared that ecclesiastical property belonged not to the clergy, who were only the usufructuaries, but to the king, and that he could in consequence transfer it. This idea was expressed in 1639 by Richelieu; in 1749, by the Comptroller of Finance, Machault. In 1788 the Minister of Justice formulated it again. Finally, in 1789 the *Assemblée Constituante* adopted it and everything it involved; the property of the Church was given back to the nation, which indemnified the ecclesiastics by giving them a salary.

(*e*) *The control of doctrine and worship.*—The king of France looked after the purity of faith and discipline. In 556, Childebert, hearing that Pope Pelagius had become implicated in the affair of the *Three Chapters*, submitted him to two successive examinations on orthodoxy, to which the Pope willingly consented. In the middle of the 8th cent., Pépin le Bref, on the advice of Boniface, abolished the Gallican liturgy and substituted for it the Roman liturgy; Charlemagne completed the work begun by his father, and in addition assembled several councils to deal with the Adoptianist heresy. In 811 he commanded all his archbishops to set forth in writing the true doctrine on the subject of baptismal vows. In 813 he commissioned the councils to work towards the reform of the customs of the Church. In 790, since he was of opinion that the Second Council of Nicæa and Pope Hadrian had taken up a wrong attitude on the question of images, he ordered their arguments to be refuted in the *Caroline Books*. He governed the Frankish Church.

The disorders which closely followed his death put an end to this state of affairs for a long time. For several centuries the king of France, weakened by feudalism, and kept in check by the triumphant Papacy, gave up all attempt to hold that place in the Church which his predecessors had occupied. It was not until the middle of the 13th cent. that he again claimed the right of control in the domain of religion. It was Saint Louis who formulated this claim. His demand was but a modest one. Summoned by the clergy to force all excommunicated persons to give satisfaction to the Church, he was quite willing to obey, but on condition that the justice of the sentences should first be examined (1263). Forty years later, Philip the Fair went still further. He desired Clement V. to admit that Boniface VIII., in his dispute with the king of France, had been guilty of abuse of power. He obtained entire satisfaction, for Clement confirmed the absolution which his predecessor Benedict XI. had already granted Philip, annulled all the innovations contained in the Bull *Clericis laicos*, and exempted France from the orders contained in the Bull *Unam sanctam* (1305).

Since the time of Charlemagne, however, no king of France had penetrated the domain of doctrine properly so called. Philip of Valois renewed the tradition.

Hearing in 1333 that Pope John XXII. held very questionable views on the subject of the Beatific Vision, he consulted the most enlightened scholars, and received information from them as to the position of the matter; then, when he was thoroughly convinced on the subject, he wrote to the Pope and demanded that he should abandon the false position he had taken up (1334). In a word, he defended orthodoxy against the Pope.

Two centuries later, Philip's successors fulfilled their task with great vigilance. Protestantism had made its appearance in France; the object now was to get rid of it.

Francis I. proceeded with great vigour against heretics and had them burned at the stake (from 1534). His son, Henry II., was still more ferocious (Edict of Chateaubriant, 1551). Catherine of Medici, after having accorded the Protestants a provisory liberty by the Edict of Jan. 1562, had them massacred on St. Bartholomew's Eve (1572). Henry IV. promulgated in their favour the Edict of Nantes (1598), which guaranteed them safety; but this Edict was revoked by Louis XIV. in 1685. Not until the eve of the Revolution did Protestants recover their liberty (Edict of Louis XVI. of 14th Nov. 1787).

While the king of France was striving to preserve his subjects from heresy, he was attempting at the same time to free them from the yoke of Rome. It was towards this goal that the institution of the *placet* tended—a measure which subjected to royal authorization the circulation of Papal Bulls in France. In the memorandum of 1247, Saint Louis complained bitterly of Papal administration and of the harm it did to the French; but at the same time he took no measures against this scourge. In 1302, Philip the Fair burned the Bull *Ausculta fili*: this is an example of a violent *placet*. In 1423, Charles VII. placed an interdict on all the Papal Bulls which granted benefices in France: here we have the *placet* raised to the height of a legislative act. This act of legislation was developed by Louis XI. (Ordinance of 1475); after this date it was made use of by all succeeding governments in France down to 1870. It was on it that Catherine of Medici, Henry III., and Henry IV. relied when forbidding the acceptance of the decrees of the Council of Trent relating to reform. In 1639 the King's Council had recourse to it in order to set aside a decree of the Parliament of Bordeaux, which had registered briefs from Rome. In 1802, Bonaparte inserted it in the *Organic Articles* which followed the Concordat. In 1865, Napoleon III., taking as his authority the *Organic Articles*, forbade the French bishops to publish the Syllabus.

The king of France, who supervised Rome, also supervised her bishops and priests. He repressed the Jansenist theories which were spreading among

the clergy; he repressed the quietism of Fénelon. Although, as a rule, he only seconded the action of the Pope, sometimes he anticipated it.

In 1697, Louis XIV. asked Innocent XII. to condemn Fénelon. In the following year (Dec. 1698) he reproached the Pope with his slowness, and declared that he desired without further delay a 'clear and well-defined' condemnation. Some months later (March, 1699), hearing that Rome was trying to conciliate Fénelon, he expressed his violent displeasure with the Pope, and ordered him imperiously to do his duty. Finally, he had the joy of seeing the Pope obey, and launch against the Archbishop of Cambrai the condemnation which had been extorted from him. In 1705 he again pestered Rome, and demanded from Clement XI. a solemn Bull against the Jansenists. Clement, like Innocent XII. before him, yielded, and drew up the Bull *Vineam Domini*. Being pressed by the king a second time to issue a Bull against Quesnel, he again obeyed, and drew up the Bull *Unigenitus*.

The anxiety which the civil power evinced to maintain orthodoxy took an unexpected turn in the 18th century. Parliament then protected the Jansenists, and protected them against the clergy, who, from time to time, refused these unfortunate men the last sacrament when they were dying. Each time that an act of this kind came to the knowledge of Parliament, they condemned it and forced the bishops either to dispense the last sacrament themselves or have it dispensed by their priests to all Christians who asked it. In 1731, Parliament drew up a measure in this direction, which was followed by other measures of a similar kind in 1749 and in 1752. The king tried to resist; but his resistance, though energetic at first, gradually grew weaker, and finally he capitulated. After 1754 the refusal of the sacrament to Jansenists who asked for it was forbidden by civil law.

3. Seizure of temporalities: appeal by writ of error.—In the exercise of the rights which he possessed over the Church of France, the king was often in conflict with the clergy. He was then reduced to employing violent measures, the chief of which was the seizure of temporalities.

In 869, Charles the Bald, to avenge himself on Hincmar of Laon, confiscated the property of his church. In 1092, Philip I., who was dissatisfied with Ives of Chartres, gave the belongings of his bishopric over to plunder. In 1107 the same king pillaged the property of the church of Rheims to avenge himself for the insult that had been done him in the rejection of Gervais, his candidate for this church. In 1142, Louis VII. prevented Pierre de la Châtre from taking possession of the bishopric of Bourges. In 1232, Blanche of Castille seized the temporalities of the Archbishop of Rouen, of whom she had cause to complain, and resisted Pope Gregory IX. when he tried to make her yield. In 1302, Philip the Fair seized the temporalities of the bishops who had gone to the Council of Rome in spite of his prohibition.

Towards the end of the Middle Ages the seizure of temporalities was divested of the brutal character which it had possessed for several centuries; it was preceded by a legal act which was called the appeal by writ of error. Of obscure origin, this appeal by writ of error came into more extensive use after the *Pragmatic Sanction* of 1438. It gained full force in the time of Jansenism.

Under Louis XV. the appeals by writ of error were frequent and effective. The curé of Paris, Bouettin, was put in prison (1749). The Archbishop of Paris, de Beaumont, and the Archbishop of Aix were exiled. The Bishops of Vannes and Nantes submitted to the penalty of confiscation (1754).

In 1802 the appeal by writ of error was inserted by Bonaparte in the *Organic Articles* which followed the Concordat: 'There will be recourse to the Council of State in all cases of abuses on the part of superiors and other ecclesiastical persons.' It remained in force till the day when the law of separation put an end to the Concordat (1905).

It has been said that royal Gallicanism was hateful to the clergy. It could not help being so from the fact that it proposed to limit the power of the ecclesiastics and put an end to their encroachments. In the 9th cent., Hincmar of Rheims presented a long memorandum to Charles the Bald, in which he accused the king of France of having, by his conduct with regard to the Bishop of Laon, violated the privileges of the clergy. Complaints of the same nature were brought by Pope Gregory IX. (1232, 1233, 1238), by the Bishop of Angers, Guillaume Lemaire, in petitions addressed to Philip the Fair (1294 and 1299), and by ecclesiastical orators of the *Assembly of Vincennes* (1329). The clergy claimed that their 'liberties' had been crushed by civil society, and were determined to defend them. But civil society also claimed a right to defend her liberties against the invasions of the clergy. The disputants were thus quite irreconcilable. The controversy became still more grave from the day when Pierre Pithou published his treatise on the *Libertés de l'Église gallicane* (1594), which Dupuy completed by the *Preuves des libertés de l'Église gallicane* (1639). Emboldened by this exposition of the rights of civil society, Parliament took measures for the defence of the laymen, which did not meet with the approval of the clergy. Fénelon writes that 'the liberties of the Gallican Church are real servitude' (letter of 3rd May 1710 to the Duke of Chevreuse). Bossuet declares that the liberties claimed by the clergy have nothing in common with the liberties of which the magistrates talk (*Defensio declarationis*, ii. 10; letter of 1st Dec. 1681 to d'Estrées). In the middle of the 18th cent. the complaints became more bitter. In 1755 the Assembly of the Clergy denounced Parliament before the king for having arrogated to itself the right of legislating on the administration of the sacrament. In 1765 the Assembly published a theological dissertation entitled *Actes du clergé* to prove that the teaching of religion and the administration of the sacrament are not under the control of laymen. It will be seen later what the attitude of the episcopate was in 1790 with regard to the Civil Constitution. After the Revolution, the clergy accepted the situation laid down by the Concordat of 1801, and confined themselves to raising intermittent protests against the *Organic Articles*. But the hope of recovering the advantages of the past has led many of the clergy to take part in the attempts to restore the monarchy which have been made since the war of 1870.

II. *EPISCOPAL GALLICANISM.*—Episcopal Gallicanism imposes two limits on Papal authority: the one, from the side of the monarchy, rescues political authority from Pontifical jurisdiction; the other, on the side of the General Council, places the latter above the Roman Pontiff. It comprises, then, two fundamental maxims, which may be stated as follows. (1) The Pope may neither depose kings nor exempt their subjects from the duty of obedience; in other words, kings are independent of the Pope. (2) In the domain of spiritual things the supreme authority belongs to General Councils and not to the Pope, who, on the contrary, must obey their canons. It would occupy too much space to illustrate these two maxims in full historical detail; consequently we shall study Episcopal Gallicanism only from the year 1682 onwards.

We have seen (above, p. 159) that the Assembly of the Clergy of 1682 was brought together to solve the matter of the *regale*, and that it gave full satisfaction to the king on this point (3rd Feb. 1682). It must be noted here that the prejudices of the clergy carried them still further. They saw in the dispute between the French monarchy and Rome an opportunity for cutting short in a painful but salutary way the doctrinal and juridical pretensions of the Papacy; and they did not mean to let this opportunity slip. 'The Pope laid hands on us, he will repent of it,' said de Harlay, Archbishop of Paris; and this expressed the sentiment of the other prelates. They wished it to be understood that Pontifical omnipotence was rejected by the Church of France; and, in

order that Rome might not remain in ignorance of this fact, they charged Bossuet to draw up, in the name of the whole French clergy, a profession of faith combating this omnipotence. They intended the statement to be violent and radical—schism was hanging in the balance; but Bossuet drew it up with calculated moderation. This document was the famous *Declaration of 1682*. It comprised four articles, of which the following is the substance. (1) Popes may not depose kings, for the reason that their authority concerns only things spiritual and does not extend to things temporal. (2) Even in the domain of things spiritual, the authority of Popes does not extend beyond the limits fixed by the Council of Constance. (3) In so far as it is legislative and judiciary, this authority is—conformably to the decisions of the Council of Constance—limited by the canons and also by the usages and constitution of the kingdom of France. (4) In so far as it is doctrinal, it is subordinate to the judgment of the Church, which may reform it.

The Church of France rallied round her king. The king, to show his gratitude, established the Declaration as a law of the State, and made the teaching of it compulsory throughout the kingdom (Edict of 20th March, 1682, registered 23rd March). The French clergy and their king offered combined resistance to Rome. But Rome well knew how to return the blows which were dealt her. Innocent XI.'s first idea was to condemn the Declaration (Bossuet, letter of 28th Oct. 1682 to Dirois; letter of 30th Oct. to de Rancé); but, changing his tactics, he decided to refuse canonical institution to those among the new bishops who had, as simple priests, sat in the Assembly of 1682. By this boycott he hoped to force the king to withdraw his edict. But the king, by way of retaliation, forbade those among the new bishops whom the Papal measure did not affect to provide themselves with their Bulls of investiture.

The hostilities, opened in 1682, had lost nothing of their acuteness in 1688. They were even more violent than ever, for it was at this date (24th Sept. 1688) that Louis XIV. ordered the Procurator General to lodge an appeal with the coming Council against all the procedures taken or to be taken by the Pope against him. The Church of France was not a handsbreadth from schism. But, at this moment, the king, who was at war with the whole of Europe, was obliged to have recourse to political intrigues of which Rome alone could ensure the success. And then he remembered very opportunely—his counsellors recalled it to his memory—that he owed to the Concordat of 1516, *i.e.* to an agreement with Rome, the right of nominating his bishops himself, and that a schism, by restoring the episcopal elections so highly recommended by the *Pragmatic Sanction*, would favour the emancipation of the clergy. Obedient to the voice of his own interest, he conciliated the Pope and entered into negotiations with him. His first advances, the motive of which was clearly discerned at Rome, were coldly received; and, further, Alexander VIII., the successor of Innocent XI., annulled the Declaration without, however, branding it with any censure (30th Jan. 1691). Finally, under Innocent XII., matters were arranged. In a letter addressed to the Pope (14th Sept. 1693), Louis XIV. renounced his edict; in other words, he gave up making the doctrine of the Declaration compulsory. The same day those of the nominated bishops who had taken part in the Assembly of 1682 sent a letter to Rome, the ambiguous and cleverly chosen expressions of which might be construed either as a doctrinal retractation or as a simple apology. Innocent XII. was content to let bygones be bygones, and refused no one canonical investiture.

Peace had been made; but each of the rival parties held to its old position. In 1695 the Spanish prelate, Roccaberti, made a violent attack on Gallicanism in three volumes, to which Rome gave approving briefs. Immediately Bossuet presented a memorandum to Louis XIV., in which he proposed that the king should forbid the sale of Roccaberti's work in France and demand from Innocent XII. 'explanations as to the intention of his briefs.' By a royal edict of 20th Dec. 1695, the sale of Roccaberti's book was forbidden. The Pope probably did not explain why and in what sense he approved of the work. In return, eighteen years later (1713) he asked the king for explanations as to the freedom with which Gallican maxims were circulating in France. The king replied that he had in 1693 given up enforcing these maxims as laws of the State, but that he had never undertaken to interdict them. Bossuet, who in 1682 had undertaken the *Défense de la Déclaration*, laboured till the end of his life to complete this important work. Fénelon, who strove to conciliate Rome, admitted nevertheless that she had 'too great pretensions' (letter of 3rd May 1710 to the Duke of Chevreuse); he even maintained that the Popes 'had desired to crush the episcopate' (*De summi pontificis auctoritate*, 4). And in 1705 the Assembly of the Clergy, called to receive the Bull *Vineam Domini*, adhered to it only after having submitted it to a thorough examination.

From all these and other indications, Rome could see that the French episcopate had, at the beginning of the 18th cent., remained faithful to the doctrines of the Declaration of 1682. But a new proof of this was given in 1728. At this date Pope Benedict XIII. extended to the Universal Church the observance of the festival of Gregory VII., and inserted in the breviary prayers for this Pope—most warlike prayers, in which Gregory was lauded for having deposed the Emperor Henry IV. On 27th July 1729 the Parliament of Paris—followed shortly afterwards by the Parliaments of Brittany, Metz, and Bordeaux—passed a statute suppressing the leaf containing these prayers, and prohibiting its use in public under penalty of the seizure of the temporalities of the Church. Six Jansenist bishops hastened to take advantage of this occasion to rebel against Rome. They joined the campaign of Parliament, and solemnly condemned the cult of Gregory VII. The great majority of the episcopate, without being so violent, were equally unprepared to submit to it. They did not condemn the cult of the Pope who had deposed Henry IV., but they rejected it as well as the prayers which had come from Rome. It was a case of revolt; but, instead of being violent like that of the Jansenists, it was silent (see, in the Assembly of the Clergy of 1730, the address to Louis XV.).

In 1790 the *Assemblée Constituante* established the *civil constitution* of the clergy, which broke the Concordat of Francis I., and reinforced the *Pragmatic Sanction*, but at the same time suppressed several bishoprics, overturned the dioceses, and restrained the authority of the bishops. This new state of affairs was in accordance with the wishes of the lesser clergy and of the *tiers état*. But the bishops, with four exceptions, began to wage war against it. To give to their hostility an air of disinterestedness, they discovered most opportunely that the spiritual jurisdiction of the Pope over the Church of France was a dogma, and they defended their action under the name of orthodoxy. These clever tactics made an impression on the people, and even on a considerable

part of the lesser clergy. By their means, the *civil constitution* of the clergy was rejected with horror by pious laymen, and in the ecclesiastical world it did not gain the support of more than a third of the curés. Eleven years later, when Bonaparte concluded the Concordat of 1801 with Rome, it was seen what the theological dissertations of 1790 were worth. Many of those bishops who were so attached to the Pope when their own interest demanded that they should rally round him refused to resign their office for Pius VII., when he required them to do so (15th Aug. 1801). Thirty-six out of the eighty remaining bishops rose in rebellion against Rome. And, among those who gave up their property, more than one did so on a promise of advancement.

The episcopate of Napoleon I. was Gallican, and so were his clergy, with a few exceptions, amongst those of lower rank. Sixty years later, the French bishops and priests rejected most of the maxims of 1682. In the space of two generations the Church of France had changed its point of view. The evolution began from the bottom, with the clergy of the second rank. The principal workers were Lamennais, the Jesuits, and Veuillot. The work of Lamennais was violent and brilliant. That of the Jesuits was silent, hidden, but more profound. Yet it was not more profound than that of Veuillot, who from 1839 onwards, through the medium of the daily paper, *L'Univers*, never ceased from inculcating the maxims of Rome into the mind of the clergy. The Concordat of 1801, by the prestige it gave to the Pope, may have had a certain influence, which, however, some historians have exaggerated. Finally, the books of Joseph de Maistre, *Du Pape* and *L'Église gallicane* (1820), did not fail to render some service to the Papacy.

Whatever was the reason, when the Vatican Council assembled (Dec. 1869) the Gallican doctrine of the superiority of Councils over Popes had only a small number of defenders in France, the best known of whom were Darboy, Archbishop of Paris; Dupanloup, Bishop of Orleans; Maret, Titular Bishop of Sura and Dean of the Faculty of Theology in Paris; Gratry, oratorian and member of the French Academy; Loyson, Carmelite and preacher at Notre-Dame in Paris; Montalembert, a layman. These defenders were vanquished, for in its fourth session (18th July 1870) the Vatican Council assented to the Pope's infallibility and full jurisdiction over the whole Church. Henceforward Episcopal Gallicanism became a heresy, and its upholders had either to repudiate it or leave the Catholic Church. Loyson chose the latter course, and tried unsuccessfully to found a national Church. A few priests left the ranks of the Catholics and took refuge in Switzerland, where they were admitted into the party of the Old Catholics. Montalembert died before the decision. The other Gallicans submitted to the Vatican Council. Episcopal Gallicanism was dead, and in its place the maxims of Rome reigned. As a matter of fact, these maxims have since made some concessions to circumstances. Pontifical omnipotence, which, before the French Revolution, embraced the political as well as the religious world, has, since the Revolution, allowed the political world to slip from its grasp. The Popes of the 19th cent. did not talk of deposing kings. No doubt they did not renounce the right, but they no longer exercised it (Pius VII., who excommunicated Napoleon in 1809, says in his Bull that he does not mean to pass judgment against temporal power and the obedience of subjects); they did not even dare to formulate it except in terms which were purposely vague (Proposition xxiv. of the Syllabus). On the whole, it may be said that French Catholics—like those of other countries—think that they may be Gallican on this point without violating orthodoxy.

LITERATURE.—A. INDEPENDENCE OF KINGS IN THEIR RELATION TO THE PAPACY.—O. Delarc, *Saint Grégoire VII. et la réforme de l'Église au XIe siècle*, 3 vols., Paris, 1889–90; P. Dupuy, *Hist. du différend entre Boniface VIII. et Philippe-le-Bel*, do. 1655; P. Féret, *Henri IV. et l'Église*, do. 1875, *Le Cardinal Du Perron*, do. 1877; H. JOSEPH TURMEL.

GAMBLING.—1. Diffusion of the practice.—Games of chance are as old and as wide-spread as humanity (see art. GAMES). They are probably derived from the various methods of divination (*q.v.*) by which primitive man seeks to gain knowledge of the future, some of them serious, like the throwing or drawing of lots; some of them more playful, like the Greek *kottabos* and the 'willow bough' (Hall Caine, *Manxman*). The game of chance is a kind of secularized divination. In order to give zest to the game, the players stake some possession on the turn of chance. The N. American Indians bet on the different colour of pips or stones, the Siamese on the musselfish, whether the opening turns upwards or downwards; the Greeks already in Homer had their ἀστράγαλοι (knuckle-bones from the hinder feet of sheep, goats, and calves) marked with numbers on four sides to serve as dice. Later came the six-sided dice (κύβοι, derived, according to Hyde, from Arab. *qāb, qa'b*). Among the Romans, children played at 'heads or tails' (*caput aut navis*) with coins; there was also dice play, and the game of *morra* (*micare digitis*). Knuckle-bones are found in Egyptian excavations as far back as the XVIIIth dynasty,

and imitation knuckle-bones for gaming purposes were made of glass and shell. A gaming-board of gold and silver inlaid with crystal, ivory, and *kyanos*, discovered in Crete, dates back to between 1800 and 1650 B.C. Six-sided dice have also been found in pre-historic remains of Hradischt in Bohemia. In Babylonia, headless arrows were used for gaming as well as divination ('belomancy,' Ezk 21^{21}); these have a very wide distribution over both hemispheres. The principle of the roulette is found in the spinning coco-nut (Tylor, *PC* i. 80) and the spinning dice of the Chinese. Card games are a later introduction; they give scope for calculation and skill. There is no mention of gambling among the Israelites until the days of the Exile (Is 65^{11} 'forsaking Jahweh and forgetting my holy mountain, preparing a table for Luck and filling up mixed wine to Fortune'; cf. FORTUNE [Biblical and Christian]). The Israelites used the drawing of lots to ascertain the Divine will in regard to such matters as assignation of lands (Nu $26^{55f.}$), choice of an officer (Ac 1^{26}), determining the rotation of office (1 Ch 24^{5}, Lk 1^{9}), or to identify an offender (Jos 7^{16}, 1 S 14^{42}, Jon 1^{7}); but, so long as they remained agricultural, they seem to have been singularly free from the evil of gambling. In Babylon they became mercantile, and mixed with people among whom games of chance were part of regular ordinary life. The gambling habit infected the purity of the early Christians. Instruments of gambling are found in their tombs. Councils of the Church forbade it to the clergy. Christian preachers denounced it as worldly. 'If you say that you are a Christian when you are a dice-player, you say you are what you are not, because you are a partner with the world' (cf. Tertullian, *de Spectaculis*, xvi.; Clem. Alex. i. 325 [Charles's tr.], p. 29 [Potter's tr.]).

On the Aryan races gambling has had a special hold. A famous hymn of the Rigveda (x. 34) vividly sets forth the woe of the ruined gambler, and the length to which gambling was carried in India is well illustrated by the episode of Nala and Damayantī in the *Mahābhārata* (iii. 59–61) where the prince loses all that he has. The Sanskrit drama *Mṛchchhakaṭikā* (tr. Ryder, *The Little Clay Cart*, Cambridge, Mass., 1905) contains in its second act a lively picture of a gambler's quarrel, and Sanskrit literature abounds in allusions to the evils of play (Böhtlingk, *Ind. Sprüche*, St. Petersburg, 1870–73, nos. 615, 750, 1246, 1618, etc.; on gambling in ancient India generally, see Zimmer, *Altind. Leben*, Berlin, 1879, pp. 282–287; von Schroeder, *Mysterium und Mimus im Rigveda*, Leipzig, 1908, pp. 377–395; Lüders, *Würfelspiel im alten Indien*, Göttingen, 1907). For Greece, reference may be made to the picture of the ruined gambler presented by Alciphron (iii. 42). Greek boys gambled away their mothers' money (Herondas, *Mimes*, 3; Isocrates, *Areiop.* 149 CD). The Germans, according to Tacitus (*Germ.* 24), when they had the dice in their hands, knew no bounds, and were ready to gamble away even that which they valued above everything else in the world, their personal freedom. Generally speaking, it may be said that gambling has its chief hold on races which exist by hunting, and also on the pastoral, military, and mercantile types of culture. These modes of life are by nature less stable, and seem to generate a craving for sudden and exciting reversals of fortune, without which life seems colourless. The peasants, on the other hand, who have to work hard and steadily for their sustenance, are comparatively free from the habit.

2. Motives of gambling.—The demonic power of the passion seems due to three main causes: (*a*) the desire for gain, (*b*) the desire for excitement, (*c*) the instinct of combativeness.—(*a*) *The desire for gain.* Human nature is impatient of the delays of regular work. It wants to acquire at one stroke, without trouble, and without the laborious accumulation of little by little.—(*b*) *The desire for excitement* is in one sense a revolt against the narrowness, the limitations, the ordinariness of existence. Man craves for intensified life; and gambling, with its risk, its suspense, its thrill, its hope, and its shock of surprise, supplies all the necessary catastrophic elements. Hence it is, on the one hand, the last resource of the *blasé* who wishes to goad his jaded senses; and, on the other hand, the outlet of the energetic and adventurous nature which finds ordinary peaceful existence too humdrum and lacking in sensation.—(*c*) In betting, a man backs his own powers, his judgment, or his luck. In a game of pure chance men *pit themselves against each other*, and, if there is no deception, each has an equal chance.

> 'If Hercules and Lichas play at dice
> Which is the better man, the greater throw
> May turn by fortune from the weaker hand:
> So is Alcides beaten by his page'
> (Shakespeare, *Merchant of Venice*, II. i. 32).

Even when all seems lost, a sudden overmastering victory is still possible. Success lends a sort of supernatural glory to the winner, who is regarded as a 'favourite of fortune'; defeat does not wound the self-respect of the loser.

3. Cost of gambling.—The extent to which gambling prevails at the present time is difficult to assess with any approximation to accuracy. Most of it is centred in horse-racing. J. M. Hogge (*The Facts of Gambling*) calculates that, allowing for Sundays, there are only 10 days during the year in which there is no horse-racing of some kind in England. On every other day there are either one or more steeplechases or flat races. In all, there is an equivalent of 542 days' racing in the year. The amount of money which changes hands can be estimated only indirectly. The returns from the *totalisateurs* on two race-courses at Paris come to £5,000,000 yearly. The total amount of money betted through the *totalisateurs* in France is stated as £13,000,000 for the year 1910. It is within the mark to assume that there is, in England, at least three times the amount of racing that there is in France, so that a very moderate estimate of the betting on English race-courses would be twice the French total, viz. £26,000,000. But for every bet made on the race-course, there are probably two made by those who are not present, on the 'starting-price' system, so that, if the amount spent on the race-course is doubled, we have a moderate estimate of the amount of money which changes hands in gambling on horse-racing alone, viz. £52,000,000 per annum. To this must be added the coupon-betting on football, which is diligently fostered by many newspapers and weekly journals, especially in the North, under the guise of 'Skill Competitions.' A great deal of betting goes on also in connexion with professional bowling, cycle-racing, and other sports. There are the 'gambling schools,' chiefly found in the mining districts, where a glorified kind of pitch and toss is played on a large scale, and everything depends on the spin of a coin. There are, again, all the private bets, and the money which changes hands over cards, especially Bridge. On the whole, it may be safely asserted that little short of £100,000,000 changes hands every year in England in connexion with gambling transactions.

When money changes hands it is clear that the winners do not gain as much as the losers lose. At Monte Carlo the rate of profit made by the Bank works out, according to the published Balance-Sheets, at 1·4 per cent of the turnover. Stock-

brokers charge usually ·25 per cent. In horse-racing the percentage is much higher, and in football betting, according to Ainslie Robertson (see Literature at end), the brokerage charge is more exorbitant still. It is, therefore, clear that, if one keeps it up long enough, the element of probability will even itself out. Any one, however long his purse, is bound to be ruined by the mere continual payment of brokerage. The brokerage mounts up steadily with the amount of play and eats up the gains, which have no tendency to increase with the amount of play.

That the practice is on the increase is clear from the large amount of space devoted by the evening and morning papers to the publication not merely of sporting but of betting intelligence. There is also a notable increase in the number of papers devoted entirely to sport, many of which circulate only through the post. At the time of the 'Limerick' craze, no fewer than 170,000 sixpenny postal orders were issued in one day, and one publishing firm received £41,586 in a single month in connexion with Limerick competitions.

Gambling has exploited most successfully for its own propagation the improved means of intercourse afforded by modern civilization, viz. the Post Office, the Telegraph, and the Printing Press. It exploits also the work of the schools, for without universal education it would be unable to carry on its business.

4. Legislation affecting gambling.—The vicious tendency of gambling has never been called in question. Lord Beaconsfield spoke of it as 'a vast engine of national demoralization.' Side by side with the betting odds and betting tips, the newspapers record the tragic results on those who yield to the temptation. In 12 years (1895–6 to 1906–7) there were 156 suicides or attempted suicides in England assigned to this cause, as well as 719 cases of theft or embezzlement, and 442 bankruptcies. In view of these facts, it is not surprising that, in all civilized countries, gambling is subjected to definite legislative restraints.

The earliest English statute in 1542 prohibited 'sundry new and crafty games' of a gambling nature, and prescribed that no folk of the working class should 'play at the tables, tennis, dice, cards, bowls, clash, cloyting, loggetting or any other unlawful game.' The purpose of this statute was to arrest the decay of archery, but the preamble alludes also to impoverishment, crime, neglect of Divine service. The first act directly aimed at gambling, apart from playing games, was in 1665. In 1698 lotteries were made illegal. Other Acts were passed in 1710 and 1751. The Acts of 1845 and 1853 were directed towards the suppression of public gaming-houses (though they did not touch private clubs like Tattersall's). Also, in 1854, it was made an offence to publish advertisements showing that a house was kept for the purpose of betting. The Act applied only to ready-money betting, and did not cover bets by letter, telegram, or telephone. The Act of 1868 prohibited the playing of pitch and toss in the streets, which had become a nuisance in the colliery districts, and the Vagrancy Act of 1873 extended the prohibition to all kinds of betting and wagering in public places. Municipal Boroughs and County Councils in some cases adopted by-laws for the repression of betting in public places. In 1892, Lord Herschell's Act made it a misdemeanour to send to an 'infant' any paper inviting him to enter into a betting or wagering transaction. In 1901 a Select Committee of the House of Lords was appointed 'to inquire into the increase of public betting among all classes, and whether any legislative measures are possible and expedient for checking the abuses occasioned thereby.' The inquiry brought to light the enormous increase in the numbers of the professional bookmakers (estimated at over 20,000), and in the practice of betting among working classes—a practice which, when carried to excess, they found to be opposed to the true interests of sport, injurious to the general community, and apt to degenerate into one of the worst and most mischievous forms of gambling. The Committee considered that the best method of reducing the practice was to localize it as far as possible, by restricting it to race-courses and other places where sport is carried on. With a view to effecting this, they considered the advisability of (*a*) the licensing of bookmakers, and (*b*) the establishment of the *totalisateur* system. But they rejected these expedients, because either would imply legal recognition of the bookmaker, and necessitate the making of betting debts recoverable by law.

The law does all it can to discourage gambling, without attempting the impossibility of prohibiting it. Betting or gambling in a private house has never been treated as an offence at law, but no gambling debt can be enforced at law. The contract is void; it is not illegal. In bankruptcy, all claims of 'debts of honour' are struck out. All moneys deposited as cover before an event with turf commission agents or bookmakers having an address in the United Kingdom, whether deposited with them or with their bankers, can be recovered with costs (Lennox *v.* Stoddart, and Davis *v.* Stoddart, 1902).

The present state of the law in Great Britain is defined by the Street Betting Act of 1906. The object of the Act is to suppress betting in streets and public places. It is a criminal offence to frequent or loiter in a street or public place for the purpose of bookmaking, betting, wagering, agreeing to bet or wager, paying or receiving bets, or settling bets. This applies to all persons, whether acting for themselves or on behalf of another. Any constable may take into custody, without a warrant, any person committing an offence under the Act, and may detain all books, cards, papers, and other articles relating to betting which are found in such person's possession. The public places coming within the definitions of the Act include all regular football and cricket fields, and generally places where outdoor sports are carried on. But race-courses and the ground adjacent are exempt from the operation of the Act on the days when horse-races take place. The exemption applies only to horse-racing. The penalty for a first offence is a fine not exceeding £10; for a second offence, not exceeding £20; for a third or any subsequent offence, (*a*) under the Summary Jurisdiction Acts the penalty is a fine not exceeding £30, or imprisonment with or without hard labour for a term not exceeding 3 months; (*b*) on conviction on indictment, the penalty is a fine not exceeding £50, or imprisonment for a term not exceeding 6 months, with or without hard labour. It is made a special offence to bet with any person under 16 years of age; and, if it is proved that any person, whilst committing an offence under the Act, had 'any betting transaction' with a person under 16 years of age, he is to be treated as an offender for the third time, and is liable to the penalties above scheduled.

The Betting and Gambling Bill of 1912 proposed to suppress all gambling advertisements, and betting tips in newspapers and other publications; also all incitements to gambling by means of football coupons and gambling competitions.

Among the Redjang of Sumatra, gambling is prohibited—excepting cock-fights at certain times—under penalty of a fine of $50, a sum which is also exacted from a householder who permits gambling on his premises. Games of chance are for-

bidden in China; the keeper of a gambling house is liable to punishment, and his establishment is confiscated by the State; while in older Japanese law the gambler appears to have been liable to capital punishment. Islamitic law forbids gambling. On the other hand, gambling agreements were valid in Aztec law if the parties making the agreements were legally competent to enter into compacts of any nature. By early Teutonic law, gambling agreements were legally valid—a situation which changed only by degrees to strict prohibition. See, in general, Post, *Grundriss der ethnolog. Jurisprudenz*, Oldenburg, 1894–95, ii. 412 f., 684 f., and the literature there cited.

5. Ethical bearings of gambling. — That the results of immoderate gambling are deplorable, no one will dispute. But, apart from the effects, it remains to inquire into the morality of the act in itself when kept within bounds. *Usum non tollit abusus.* The economic aspect needs no discussion. Gamblers add nothing to the wealth of the community. They may claim that gambling provides a form of recreation and pleasure which is not only legitimate but helpful, so long as the sums staked are such as a man can afford to lose. But (*a*) such a contention draws a line of distinction between rich and poor; what is right for the rich man is pronounced wrong in the case of the poor man. (*b*) The argument implies that the wrongness of gambling consists in losing the money staked; it is right, if one wins, because one can afford to win; but it is wrong, if one loses, because one cannot afford to lose. Any argument based on prudential grounds is only an appeal to enlightened self-interest, and the spirit of selfishness cannot cast out selfishness. (*c*) Though it is in society that the temptation comes, gambling itself is anti-social. It is, as Herbert Spencer says, a kind of action by which pleasure is obtained at the cost of pain to another. The happiness of the winner implies the misery of the loser. This kind of action, therefore, is essentially anti-social; it sears the sympathies, cultivates a hard egoism, and so produces a general deterioration of character. It is a habit intrinsically savage (see his *Ethics*, pt. iii. ch. 7, 'Amusements,' § 227; *Facts and Comments*, 'Essay on Rebarbarisation'). In an atmosphere of brotherhood no form of gambling could exist. In some cases, success appears to depend on superiority of judgment; but this is fallacious. It is never possible to be certain of a result, because all the factors which go to produce that result are not known. When the odds are 4 to 1 on a horse winning a particular race, and these odds are supposed to be 'fair,' the man who accepts the adverse odds does so because he relies upon the unknown factors of the problem; in fact, his appeal is to the unknown and incalculable element in human affairs, which men call chance. The appeal to chance implies a negation of all the nobler powers of man—reason, skill, the sense of justice and responsibility. In the habitual gambler, these higher faculties, through disuse, become atrophied, and his life, out of touch with honest labour, intoxicated by the excitation of his favourite passion, becomes besotted and depraved.

The Christian view of property exacts a still higher standard. Though in relation to his neighbours each man may be regarded as the proprietor of his goods, yet in relation to God he is only a steward. This higher view, by destroying the right of property relatively to God, gives the true basis for its use in the relations between man and man. A man may not claim to do as he likes with his own, because what he possesses is not his own, and he must render exact account for his use of it; he must also respect the property of his neighbours, because it does not belong to his neighbour, but to God, who entrusted him with it.

It has been urged that Herbert Spencer's condemnation applies only to the after effects of gambling, and not always then, because many losers feel no 'pain,' being so well off that they are not affected by the loss of the stake. This is true; but an act must be judged by its general tendency, and not by its effect under specially selected circumstances. It is also urged that what the loser pays for is the pleasure of excitement and anticipation he feels before the wager is decided. This argument will not stand, because the winner experiences an equal pleasure without paying for it—indeed, he receives in addition the forfeited stake.

But the immorality of gambling may be argued on higher grounds than a calculation of pleasure. (*a*) Every gambling transaction involves a transfer of property in one shape or another. When the gambler is asked why he stakes his money on a game or a race, his reply is, 'To add an interest to the game.' The interest thus added is, simply stated, the interest of acquisition. If the real object were, as is claimed, merely the sport and the excitement, then men might just as well wager counters, or, for the matter of that, agree to hand over all winnings to public charities. But this is not done. The transfer of property, in one shape or another, is essential to the act. There are only three ways in which property can be legitimately acquired—by gift, by labour, and by exchange. Gambling stands outside all of these. (*b*) Its motive is, however carefully disguised, covetousness. It is an attempt to get property without paying the price for it. It is a violation of the law of equivalents. It is a kind of robbery by mutual agreement; but it is still robbery, just as duelling, which is murder by mutual agreement, is still treated as murder. It is begotten of covetousness; it leads to idleness. (*c*) It is, moreover, an appeal to chance. If in any contest skill comes in, odds are given or handicaps arranged so as to equalize the chances as far as possible. To make chance the arbiter of conduct is to subvert the moral order and stability of life. (*d*) It concentrates attention upon lucre, and thereby withdraws attention from worthier objects of life.

Captious analogies have been drawn between gambling in sport and commercial speculation. There is, it is true, a kind of speculation which is merely betting on prices. Men buy or sell cotton or corn for future delivery, without ever intending to handle or distribute the actual commodities, but merely with a view to closing the contract before it is due, and profiting by the fluctuation of prices. A man may buy and sell stocks and shares in the same way. But there is also a commercial speculation which is necessary and legitimate. The merchant has to make provision for a social need, and, in buying ahead, chance must inevitably enter into the calculation. The gambler's business is wholly self-centred; he subserves no need of the community. The merchant's whole policy is to eliminate risk as far as possible. The gambler desires risk. No special legislation has been devised in Great Britain to restrict this commercial speculation; but Chief Baron Palles, in the King's Bench Division Court, Dublin, ruled that in the case of a contract for the purchase of any commodity, whether shares or not, if the real intention of the parties was that the commodity sold should never be delivered, and that the whole price of it should never be paid, but that at some future time the difference in value should be ascertained, and the excess or deficiency paid by one party or the other, then that contract was a gambling transaction, and was void under the Gaming Acts. Legislation to prohibit gambling in 'options' and 'futures' and margins in prices has been attempted

in Switzerland (1881), Canada (1892), Germany (1894 and 1896), Russia (1893–1895), Belgium (1896), Norway (1904), Austria (1903). [See Board of Trade Returns, 1904.] In the same way, it is said that to insure one's life or one's property is to make a bet with the Insurance Company. But the whole object of insurance is the very opposite of the gambler's; it does not create risk, it counteracts the inevitable chances of life, and equalizes them by wide distribution. These risks are ascertainable in their aggregate incidence, though not ascertainable in any individual case. The general effect, therefore, of insurance is to add to the stability of life. The general effect of gambling is to destroy that stability.

LITERATURE.—*Report of Select Committee on Betting*, London, 1902; J. M. Hogge, *Facts of Gambling*, do. 1904; B. S. Rowntree, *Betting and Gambling*, do. 1905; J. Percival, 'Speculation,' in *Church Congress Report*, 1904; W. D. Mackenzie, *Ethics of Gambling*, London, 1905; C. Booth, *Life and Labour of the People in London*, do. 1889–97, see Index; Ainslie Robertson, *Football Betting* (and other pamphlets), National Anti-gambling League, York. The effect of Gambling on character is studied in various novels: Walter Scott, *Fortunes of Nigel*; W. M. Thackeray, *Virginians*; H. Fielding, *Amelia*; R. L. Stevenson, *Kidnapped*; A. Colbeck, *The Fall of the Staincliffes*; G. Moore, *Esther Waters*.

On the question of commercial speculation, see S. J. Chapman, *Transactions of the Statistical Society*, June 1906; also art. 'Cotton,' in *EBR*[11], 'Marketing and Supply.'

J. L. PATON.

GAMES.—1. Definition and classification.—A game is an organized occupation, undertaken by two or more persons, the primary intention of which is not utility but pleasure or pastime by means of the exhibition of the skill or good fortune of the players. It proceeds according to definite rules, and sometimes necessitates special instruments or apparatus. Games may be broadly divided into three classes—games of skill, games of chance, and games of imitation. The rules of games of skill are framed to bring out the various qualities, physical, mental, or moral—strength, agility, quickness of the senses, rapidity of calculation and induction, endurance, patience, and so on—of the players. Games of chance, on the other hand, regard only the luck of the players, and are decided by events, such as the fall of dice, over which they have no control. The rules, therefore, are arbitrary conventions, designed to emphasize coincidences. Many games combine the elements of chance and skill in varying proportions. In games of imitation the rules are prescribed by the actions to be imitated—limited, however, by certain conventions appropriate to the circumstances of the players; and the result is measured by the verisimilitude of the performance as thus limited. Such games involve the germ of Drama (*q.v.*). Both in games of chance and in those of skill there is a contest. In games of imitation there is often little or none; and the pleasure sought is attained by co-operation, rhythmic movements, and song.

Games as thus defined are social institutions, owing their origin to the inherent restlessness of human beings and the necessity for constant use and practice in order to the development and preservation of their physical, mental, and moral powers. They enter very early into the life of the individual, and are of incalculable value in the training of children for the graver pursuits of adult years. To the adult—especially the adult savage—they are little less important; and from the lowest plane of culture upwards, games, either in the form of contest or of rhythmic movement (dances), are among the commonest activities.

2. Ceremonial (religious and magical) significance; origins.—Like other human institutions, games have grown from vague and undefined beginnings. Their vague beginnings contained also the germs of ritual, dance, and song. It is but gradually that they have been differentiated from these; even yet, as we shall see, complete separation has not been achieved. Games of imitation bear obvious witness to this origin. It is impossible (the observation is trite) to watch the games of children, whether savage or civilized, without being struck by the fact, on the one hand, that ceremonies are the favourite subject of imitation, and, on the other hand, that rhythmical movement and the utterance of a set form of words, rhythmical also and married to musical notes, are essential features. In the game of 'Jenny Jones,' common throughout England, Scotland, and Ireland, for instance, the ritual of courting, death, and burial is the subject; while in some places the game becomes a regular drama, which ends with the restoration of the heroine to life, or her reappearance as a ghost, to the pretended terror of her companions. The dialogue is throughout sung to a tune. Nor is the distinction between ritual and games everywhere clear even in the case of adults.

'It is not altogether easy,' remarks Rivers (*Todas*, London, 1906, p. 596), 'to draw the line between Toda games and Toda ceremonies.' Among the Eskimo it is usual, when a stranger comes to a settlement, to receive him with a feast. In the south-eastern tribes of the Central Eskimo 'the natives arrange themselves in a row, one man standing in front of it. The stranger approaches slowly, his arms folded and his head inclined toward the right side. Then the native strikes him with all his strength on the right (*sic* / left?) cheek and in his turn inclines his head awaiting the stranger's blow. While this is going on the other men are playing at ball and singing; and thus they continue until one of the combatants is vanquished.' Among other proceedings a wrestling match and the game of 'hook and crook' are recorded as played by various tribes. The latter is a trial of strength, at which the victor has even the right to kill his opponent; but generally, we are told, the feast ends peaceably. The account given by the Eskimo themselves is that 'the two men in meeting wish to know which of them is the better man' (Boas, *6 RBEW* [1888], 609).

Here we have contests of strength and skill, which possibly, as Frazer suggests (*GB*[3] iii. ['Taboo'], 1911, p. 108), have a magical significance, which in any case are ceremonial, yet which appear to be regarded by the people themselves as not entirely serious, but games leading up to a hospitable entertainment.

Many nations, in fact, play ceremonial games. These games, though the element of pleasure is large, are essentially rites of religious or magical import. Either the aborigines of America are specially addicted to such performances, or our information is unusually full on the subject of their games. The Zuñi inhabit an arid tract of country in New Mexico. Rain is a prime necessity of life; but it comes rarely, and the droughts are long. The object of the games the Zuñi play is, therefore, the bringing of rain, that their crops may grow. We read of races, ball games, games of chance played with split reeds corresponding to our dice, round games, and others.

Sholiwe, a game of chance, was esteemed by the rain-priests so efficacious in bringing rain that 'they organized a fraternity which they called *Showekwe* ("Arrow-reed people"), for the express purpose of playing the game for rain.' The fraternity in question has now degenerated into a body of professional gamblers; 'but the game is still played by the priests and others in all sacredness for rain' (*23 RBEW* [1904], 328 ff.).

The Omaha, a Siouan tribe dwelling in what is now the State of Nebraska, whither it had migrated, according to tribal traditions, from the east, was divided into two sections called the 'sky-people' and the 'earth-people.' The ten *gentes* of which the tribe was composed were distributed between these two sections. In their ceremonial encampments they were ranged in a circle with the entrance to the east, the earth-people on the southern side, and the sky-people on the northern. 'In former times a ball game used to be ceremonially played between the young men of the two divisions.' It was the duty of a member of the Wind sub-gens of the Konçe gens (one of the earth-people) to start the ball. A circle with two lines crossing each other at right angles towards the points of the compass was drawn on the ground,

and the ball was placed at the centre. It was first rolled towards the north along the line drawn from the centre to the edge of the circle, and then back on the same line to the centre. It was then rolled in a similar way successively towards the east, south, and west, and back. On returning to the centre from the west, it was tossed into the air, and the game proper began. 'The game is said to have had a cosmic significance, and the initial movements of the ball referred to the winds, the bringers of life. It was played by the two divisions of the *huthuga* [tribal circle] as representatives of the earth and the sky' (*27 RBEW* [1911], 198). But we are not told what, if any, significance attached to the victory. The Wichita, a tribe of the Caddoan stock settled on the Red River in Oklahoma, however, played a game of shinny, which beyond all reasonable doubt represented the contest of winter and spring, and was played in the spring, doubtless for the purpose of assisting by magical means in the conquest of the evil power of winter and the renewal of life. Tradition declared that it was originally played by Afterbirth-boy and his brother, two mythical heroes of the tribe, against a headless monster, who used a black shinny-stick and black ball; and the stakes were the lives of the players. The tribal heroes tried to stipulate for the use of their ball, which was green; but the monster refused. So they knocked his ball to pieces, and thus compelled the use of their own. With it they succeeded in winning the game, and the monster was put to death. They played with green sticks as well as a green ball, representing, we are expressly told, the spring of the year. 'Since that time the shinny game is played in the spring, under the power of Afterbirth-boy' (Dorsey, *Myth. of the Wichita*, Washington, 1904, p. 99). The Central Eskimo play a game resembling cup and ball, in the spring, to hasten the return of the sun. In the autumn, on the other hand, when the sun is going southward, they play cat's cradle to catch the sun in the meshes of the string and prevent his disappearance (*Bull. Am. Mus. Nat. Hist.* xv. [1901–7] 151, 422). The Kai of German New Guinea also play cat's cradle ceremonially, but for a different purpose. It is played after the yams are set, that their foliage may sprout luxuriantly and may become green and spread widely. Every figure in the game has its name (Neuhauss, *Deutsch Neu-Guinea*, Berlin, 1911, iii. 125, 256).

Indeed, wherever we find games played at a special season of the year, we may suspect that now, or at one time, they have, or had, a ritual value. In our own island the game of football, though doubtless not unknown at other times, used to be regarded as proper to Shrovetide. Sometimes it was played between two rival parishes. More usually, as in the parish of Scone, Perthshire, it took the form of a match between married and unmarried men. In the parish of Inveresk, in the county of Midlothian, it was reported in the latter years of the 18th cent. that 'on Shrove-Tuesday there is a standing match at Foot-ball between the married and unmarried women, in which the former are always victors' (Brand and Ellis, *Pop. Antiq.*, London, 1813, i. 76), quoting *Statist. Acc. of Scotland*, Edinburgh, 1795, xvi. 19). This implies that the victory of the married women was pre-arranged, and consequently that the game was not a real contest, but rather a piece of ritual. The object of the game was probably, like that of the shinny played by the Wichita, to aid in the conquest of winter by spring. The unmarried men and women represent the barren winter, and the married men and women the fruitful season ushered in by the spring. A similar ball-game, sometimes analogous to our football, sometimes to our hockey, is widely played in Algeria in the spring. It is called *koura*. In Morocco it is equally prevalent; but in many districts it is reserved to the *tolba*, or those learned in the Muhammadan law; and, even where not so reserved, the *tolba* often play apart or in a special manner. Though played more particularly in spring, in case of persistent drought games of *koura* are organized, the playing of which is believed, at Miliana, Laghouat, and other places, to bring the rain (Doutté, *Magie et relig. dans l'Afr. du Nord*, Algiers, 1910, p. 554).

As an example of a ceremonial game of another kind, mention may be made of that played by the Khāsi, a hill-tribe of Assam, for the purpose of expelling demons.

'The ceremony takes place in a fixed month of the year, and part of it consists in a struggle between two bands of men who stand on opposite sides of a stream, each side tugging at the end of a rope which is stretched across the water' (Frazer, *GB*[3], 1900, iii. 95).

This is what we call 'the tug of war.' Frazer (citing Bastian) suggests that the men on one side represent the demons. Comparison, however, with the ceremony as practised by the related tribe of the Syntengs, at their annual festival for driving away disease, renders it doubtful whether this explanation quite hits the mark. The Syntengs first cut down long poles, and, holding them across the stream where the goddess Aitan dwells, jump on them to break them. A pole is then fixed across the stream, and the players divide into two parties contending for its possession. The successful party is supposed to gain health and prosperity for the coming year (P. R. T. Gurdon, *The Khasis*, London, 1907, p. 157). The contestants thus appear to be purely human, striving for superiority in luck. The tug of war is applied in the Tanembar and Timorlaut archipelagoes in the Moluccas as a rain-charm whenever the westerly monsoon comes in without a fall of rain. Hymns are sung to Dudilaa, the male principle resident in the sun, for rain. The assembly then divides into two parties—those of the eastern side of the village, and those of the western side. The rope is a rattan of about 30 metres in length. Men, women, and children all join and pull with all their strength. Those of the eastern side must, we are told, put forth more strength than those of the western, as if to draw forth the west wind which brings the rain (Riedel, *Sluik- en kroesharige rassen*, Hague, 1886, p. 282). (Cf. the Burmese game, *ERE* iii. 26.) The same game is, in fact, played for analogous purposes in both Eastern and Western hemispheres.

In many of these half-serious contests clan is pitted against clan, or community against community. Numerous examples are found in N. America; the Omaha game has already been cited. By no means all of them are regarded as having any magical influence—at least, if our information be complete. In California a game resembling shinny is played by the Hupa, village against village, 'or tribe against tribe.' It seems to have no greater result than our football or cricket played between team and team (Goddard, *Life and Culture of the Hupa*, Berkeley, 1903, p. 60; cf. pp. 149, 214). Such cases are to be found all over the world, in Great Britain as well as elsewhere; and every reader's memory will furnish him with illustrations. The games so played may take their origin from racial or tribal distinctions; they may be relics of old enmities; or they may be magical ceremonies. The facts are usually so blurred by the process of time and the progress of civilization that it is impossible to read their primitive meaning. One thing only stands out clearly: the game is something more than a game; it is a ritual, the recurrence of which at stated seasons is imposed on the rival social units by force of custom and tradition, though its real meaning has been lost.

Games consecrated to special seasons are very common. In addition to those already mentioned, a few other typical instances may be adduced. In the south-west of England it is common to play thread-the-needle all down the street on Shrove Tuesday, or, in some places, on Easter Monday. There can be little doubt that it once had a religious or magical significance. Syrian and Armenian immigrants at Boston have been found addicted to a game with eggs at Easter. It is played by two persons, each having an egg. One holds his egg, and the other player strikes with his. The game is a contest similar in principle to those which boys play in England with chestnuts (*JAFL* xii. [1899] 107, xvi. [1903] 138). At the solemn harvest festival of the Natchez a game of ball was played for a prize by two parties, each estimated by an eye-witness on one occasion at 800 men (Swanton, *Bull. 43 BE*, 117, 119, citing du Pratz and Dumont). By way of concluding the Green Corn, the Harvest, and the New Year festivals, the Iroquois used to play in the public council-house a betting game with a bowl and peach-stones, in which the peach-stones were dice (Culin, *24 RBEW* [1907], 114). The Tigua of New Mexico also played a game with a species of dice all night on 'the day of the dead,' Nov. 3 (*ib.* 195). There appears to be no tradition recording its connexion with the day. Its meaning must probably be sought among the rites celebrated for the benefit of the departed. When the crops are ripe, the A-Kamba of British East Africa meet, hold dances, and play *mutingwano*, a game somewhat like what we call knuckle-bones or dibs (Hobley, *Ethnol. of A-Kamba*, Cambridge, 1910, p. 55). Among the Valans, a fishing caste of Cochin, the adult girls play a swinging game on the Thiruvathira festival in Dhanu, the month corresponding to our Dec.–Jan. (Anantha Krishna, *Cochin Tribes and Castes*, Madras, 1909, i. 257). At an early date after the accession of a new king of the Baganda, he paid a ceremonial visit to Nankere, a chief of the Lung-fish clan, who was never permitted to see the king on any other occasion. The object of the visit was the performance of a rite to prolong the king's life. This involved the putting to a cruel death of Nankere's son. The king then went to another chief. On the way he stopped to play a game of spinning the stones of a wild fruit-tree. It is played ordinarily by two children, who spin their stones together, and the stone that strikes the other and knocks it down is called the winner. The king played with one of his attendants; and on reaching the chief's house he played with him. The next morning he would again call for fruit-stones to play the game; but 'whoever ran to bring them would be caught and speared to death on the spot, with the object of giving the king long life' (Roscoe, *Baganda*, London, 1911, p. 210 ff.). Here the game is not played at a definite season of the year, but in connexion with the king's accession, and as one of the rites to procure him a long life. Funeral games have been discussed in art. DEATH AND DISPOSAL OF THE DEAD, vol. iv. p. 437.

To games a Divine origin has sometimes been ascribed. Thus the Olympic games were variously attributed to the Idæan Herakles or to Zeus himself, who was said to have wrestled at Olympia with Kronos, or to have instituted the games to celebrate his victory (Pausan. v. 7. 4). Whether the divinity in such a case was held to have invented or first taught the specific games, or whether he merely appointed the occasion on which they were to be played, may be arguable. In the belief of many of the N. American tribes they were indebted for the games themselves, as well as for the occasion, to Divine or quasi-Divine beings. The Micmacs ascribe the invention of one of their dice-games to their hero Glooscap, and of another to one of his supernatural companions (*24 RBEW*, 76). The Wichita game of shinny was first taught to the people by one of their mythological characters; and, as we have already seen, it is played in a special fashion in the early spring, in accordance with the example and 'under the power of' another, for the purpose of accelerating the revival of Nature and the victory of vegetation. Other examples might easily be adduced.

3. Ritual surviving as amusement.—But, even if held to be of Divine origin, and though played for ceremonial purposes, games fall back into mere amusement, or are abandoned to children, when the stage of civilization proper to such beliefs or to such purposes is passed, or under the influence of the overmastering desire for excitement in gambling. Thus several of the games of British children have been conjectured by Lady Gomme to owe their origin to religious or magical rites, and others have been shown by her to be degenerate representations of ancient social customs and conditions. The game of London Bridge, in which two of the children hold up their hands to form an arch, and the others pass below it in long line holding one another's waists, 'remains unexplained by any appeal to modern life.' The children all sing a rhyme beginning, 'London Bridge is broken down,' and going on to inquire 'How shall we build it up again?' Silver and gold, iron and steel, wood and clay, and other materials, according to the version, are mentioned only to be rejected. Finally the arms of the two children forming an arch fall down on the string of players as they pass beneath; the last one is captured struggling, and thenceforth stands out of the game. This is interpreted as a reminiscence of the foundation sacrifice (see art. BRIDGE, vol. ii. p. 850 ff., and FOUNDATION, vol. vi. p. 112). The refrain of the song, which has usually to do with 'a gay lady,' seems to render the interpretation fairly certain (Lady Gomme, *Traditional Games*, i. 333; Haddon, *Study of Man*, 347 ff.). The game of 'Eller Tree' is one of several in which one of the children represents a tree, and a tree is the subject of the song. The children all take hands singing, and wind round the 'tree.' Usually it ends with a rough and tumble; but in at least one case the string of players unwinds, under the direction of youths with long leafy branches in their hands as standards; and the operation is said to be performed 'with almost military precision.' As thus played it is performed at St. Roche and some of the adjacent parishes in Cornwall, at the annual feast in the second week of June (Lady Gomme, ii. 386). Lady Gomme refers it to 'some religious observance, such as encircling sacred trees or stones, accompanied by song and dance.' Again, many games turn on love and marriage, and some of them doubtless enshrine archaic ritual, such as bride-capture. One of the most striking of these is called in Scotland 'Babbity Bowster' (Dance with the bolster). There is evidence that it actually used to be the last dance at weddings and merry-makings. Lady Gomme's conjecture is probably right that it was pre-eminently the nuptial dance at a wedding, and that the bride and bridegroom on performing their part in it retired from the company to their own chamber. But, if so, it was even then the degenerate representative of a rite by which the bridegroom took forcible possession of his bride in spite of her real or pretended reluctance (*op. cit.* i. 9, ii. 486).

Nor is it only in Britain that the process is found. Sicilian boys also play a game called *A vola vola lu mortu*, in which one of them feigns death and lies stretched on the ground, another

stands at his head as a magician and utters incantations to restore him to life, four others stand round him and, with a low continuous whistle made by drawing in the breath, extend their hands above the corpse, gradually raising them with a slow movement. The game is to keep up this movement and whistling while the incantation is repeated seven times without interruption by the magician. It is said to be the children's firm belief that in this way the corpse becomes as light as a feather, and that he ought to be able to raise himself in the air and there remain suspended so long as the whistling proceeds, but that with any interruption for the purpose of taking breath by those who perform the spell, he again becomes heavy and falls. The game, begun with more or less solemnity and secret terror, frequently ends with some trick upon the corpse, and laughter, or blows, and a quarrel (Pitrè, *Bibl. Trad. Pop. Sicil.* xiii. 263). But probably one of the most convincing examples is a game played by the children in Java. It presents the conjuring of a spirit, called Nini Towong, belonging to the ancient Javanese mythology, into a puppet, and its cult with prayers for help and protection. The serious worship of Nini Towong has ceased; the significance of the ceremony is no longer understood by the people; and the ceremony itself has become degraded to a puerile amusement (*ARW* vii. [Leipzig, 1904] 512).

Before quitting the subject, it may be observed that the bull-roarer (*q.v.*), one of the most sacred religious implements of the lower savagery, employed to produce sounds which the uninitiated are taught are the voice of a supernatural being, and carefully concealed at all times from the sight of women, suffers the same fate as society passes away from the stage of civilization which gave rise to its ceremonial use. Among the Bangala of the Upper Congo there is still, on the part of the elders, some aversion to its use as a plaything, while among the Kikuyu of British East Africa, as among ourselves, it is purely a toy (*JRAI* xl. [1910] 427, 446).

Games of chance are usually played with instruments of the kind familiar to us as playing-cards and dice. In more barbarous states of culture the instruments are the stones of fruits, pebbles, shells, split reeds, and so forth, marked in different ways. They are drawn from a promiscuous heap, or tossed in the air and allowed to fall on the ground or on some other flat surface. According as they fall (or are drawn) the player scores. This process is precisely the same as that by which divination is practised and auguries obtained in almost all parts of the world. Indeed, the very instruments used are the same, even in Europe, where fortune-tellers habitually exercise their profession by means of playing-cards. There is, therefore, a very large body of evidence in favour of Tylor's theory that the primary purpose of the appeal to chance was augury, and that games with the same or similar instruments are secondary. Many American tribes employ games of chance as well as games of skill for divinatory objects. One example may stand for all. The Onondaga play with peach-stones tossed up from a bowl or dish struck on the floor. It is common at the New Year's, or White Dog, feast.

'Clan plays against clan, the Long House against the Short House, and to foretell the harvest the women play against the men. If the men win, the ears of corn will be long like them; but, if the women gain the game, they will be short, basing the results on the common proportion of the sexes.'

This game is said to be intensely exciting. It was once much used in divination. It is, like other games, also still played for the sick; but, whereas it was formerly supposed to be a means of healing, it is now regarded more as a diversion of the patient's mind. In fact, it is ordinarily at the present time a merely social amusement (*JAFL* ix. [1896] 270), though specially played for divination at the New Year's feast.

In India, where, as has been shown in the art. GAMBLING, dicing was carried to extremes, the casting of dice was employed not merely to divine the future, as is exemplified by the Skr. *Pāśaka-kevalī* (ed. Weber, *MBAW*, 1859, pp. 158–180, Schröter, Borna, 1900; tr. Weber, *Ind. Streifen*, i. [1868] 286–307), but also as a part of the ritual of the kindling of the *sabhyāgni*, or 'fire of the assembly-house' (it is highly significant in this connexion that *sabhā* means especially an assembly-house for gamblers), which formed a portion of the *agnyādheya*, or setting up of the sacred fire.

According to the *Āpastamba Gṛhyasūtra*, v. xix. 2 f., a gaming table was set in the midst of the *sabhā* and sprinkled. Dice were thrown on the table, and gold was cast on them, and all were mixed up and then spread out; after two sacrifices had been made, the dice (100 in number) were given to the sacrificer with the words, 'Play for the cow against the rice,' etc. (see Hillebrandt, *Ritualliit.* [*GIAP* iii. (1897) 2], p. 108, *Ved. Mythol.*, Bonn, 1891–1902, ii. 119–121). It is plausibly suggested by von Schroeder (*Mysterium und Mimus im Rigveda*, Leipzig, 1908, p. 385) that the famous 'gambling hymn' of the Rigveda (x. 34) is intended for this portion of the ritual; and Hillebrandt holds, with good reason, that this ritual gambling was 'probably the survival of an old dice oracle connected with the new moon' (*Rit.* 106). In the ceremonial of *rājāsūya*, or consecration of a king, ritual gambling is an important feature. Here the dice are cast on gold, with the injunction that, 'vying with the sun's rays, they make the king become the firm centre of the people'; and later on in the *rājāsūya* a second game of dice of minor importance is played (Hillebrandt, *Rit.* 146).

A large number of children's games are either themselves used for divination or contain divinatory formulæ. This is especially noticeable in the 'counting-out,' which is preliminary to many games. By the process of 'counting-out' it is determined who is to take a certain part in the game. Simple though it generally is, the number of children concerned and the positions they take in the counting series are so variable that to the players, who do not stop to calculate seriously, the result seems a chance. Nor is it only the counting-out formulæ that betray a divinatory origin; games of skill are often referable to the same source. Lady Gomme assigns various ball-games (including cricket) to this source, and Pitrè reckons no fewer than sixty games of Sicilian children, or one-third of the entire collection he has made, as based upon 'the sacred processes of divination' (*op. cit.* xxxv.).

4. **Prizes and stakes: gambling.**—The winning of games, whether of chance or skill, is among all nations frequently rewarded with prizes. By an easy and natural gradation the prize passes into the bet, and games are played for stakes. This enhances the excitement, and, therefore, the pleasure of a game. Gambling is a passion confined to no race or country, to no rank of society, to no plane of civilization. The savage hunter is as much addicted to it in his hours of ease as the civilized stockbroker or horse-racer in his hours of business. No peoples were ever more passionate gamblers than the N. American Indians, both men and women. Throughout the length and breadth of the great continent they occupied, gambling was the favourite pastime. They betted on their games of chance, they betted on their games of skill, they betted on their most solemn ceremonial games. They even ascribed to gambling a Divine origin, and believed that it was the common occupation of the departed in the spirit-world. We may expect to find that so wide-spread a passion as gambling originated in very early times. The famous deposit of painted pebbles in the cave of Mas d'Azil may be conjectured to yield evidence pointing in this direction. If so, something more than a respectable antiquity may be claimed for the practice. For hardly had the Ice Age and the reindeer disappeared when the men of the south of France were

preparing their rude dice or counters, and enjoying the excitement of staking the produce of their more serious activities on games of chance. Certain it is that those of the pebbles that represent numbers must have been painted with some end in view other than an introduction into the mysteries of the higher mathematics (*L'Anthropologie*, vii. [Paris, 1896] 385, and the accompanying atlas of plates).

Gamblers are proverbially superstitious folk. Every gambler has his amulet or his prescribed observance, on which he depends for his luck. In this he does but emphasize a more general habit. But the emphasis is probably the natural product of his dependence on chance in his favourite amusement. Everywhere in N. America gambling is the subject of practices which are not merely superstitious—that is, performed with an unreasoned expectation of benefit—but distinctly religious. The gambler fasts and prays, he seeks supernatural aid in dreams, he observes continence, he burns tobacco in honour of his *manitou*. Where the interest or the glory of a village or tribe is at stake, the whole community join in a religious ceremony. Fetishes ('medicine'), of course, are universal. The intimate connexion of gambling with ceremonial games already alluded to may be thought to be responsible for such a development. The N. American Indians, however, are by no means singular in seeking supernatural aid for victory in their games. To take only a single instance—the Fijians play a game of skill called *tiqa*. It consists in throwing along a course a ball with a pointed end like the head of an eel, and a tail formed of a reed one metre in length. It is played by two sides, often two villages or two tribes, and causes much excitement. Before playing, the Fijian weeds the graves of his ancestors and offers sacrifice to their *manes*, to render them propitious. The stakes are a feast of pork, which the losing party gives to the victors (*Anthropos*, vi. [1911] 476).

Almost everywhere games have been played for stakes involving the entire possessions of the players, their wives and children, their freedom, their life itself. Not many years ago a Cheyenne, having lost all his property, put up his sister as the stake in a game of cards. He lost her. Though the occurrence aroused great indignation throughout the tribe, nobody suggested that the unfortunate girl should not go and live as the wife of the man who had won her (*JAFL* xi. [1898] 301]. This is a modern instance of an event which has formed the basis of many a folk-tale east and west. In Irish legend, Mider, the fairy chief, plays with king Eochaid Airem for his queen Étáin. In the great Indian epic of the *Mahābhārata*, Yudhiṣṭhira loses to Śakuni all his property, and finally Draupadī, the joint wife of the five brethren. In a Korean tale the hero is made to play chess for his bride (*JAFL* x. [1897] 291). The incident of playing for life or freedom is also common in folk-tales. A greater stake still—that of future happiness—is occasionally represented in European tales. A supernatural monk is said to haunt the *mielles* (dunes) of Normandy and play with passers-by for their souls (*RTP* xii. [1897] 304, quoting Souvestre, *Les Derniers paysans*, Paris, 1852, p. 79). More remarkable still is a dramatic ceremony annually performed at Lhasa for casting out the demon of ill-luck. In the course of the performance the Grand Lama is represented playing at dice with the demon, to prove the truth of his teaching. But the dice are false: the Lama can throw nothing but sixes, the demon nothing but ones. Consequently the demon is hopelessly beaten and chased away, to the no small amusement, comfort, and edification of the faithful (Waddell, *Buddhism of Tibet*, London, 1895, p. 512).

In view of the grave evils undoubtedly entailed on society by the practice of gambling, it may not be deemed impertinent to call attention to its utility at an early stage of culture. This can hardly be better done than in the words of the accomplished author of the *History of the New World called America*, whose untimely death a few years ago left the great work he had projected and partially executed no more than a precious fragment. He says:

'From invoking the decision of chance [by divination] as to whether a hunting expedition shall be undertaken, and who shall take part in it, the transition is easy to the distribution of its produce by this method; gaming does but extend the same process to the distribution of property in general between man and man. Gaming, as it develops, involves number in three different ways. Number enters (1) into the system and implements used in the game, (2) into the mode of scoring, and (3) into the reckoning of the stakes or forfeits; and, as gaming is the natural pastime of barbarism, it may fairly be assumed to have been a powerful factor in the development of arithmetic. The same counters and the same tables serve as the instruments of gaming and of ordinary calculations; in Mexico, as in Europe, calculation generally and some favourite game of chance bore the same name' (Payne, *Hist. Amer.*, Oxford, 1892–99, ii. 279).

See, further, art. GAMBLING.

LITERATURE.—On games in general, E. B. Tylor, art. 'The History of Games,' in *Fortnightly Rev.*, May, 1879; A. C. Haddon, *Study of Man*, London, 1898, chs. viii.–xv. On games of chance and some other games: Tylor, *Primitive Culture*, London, 1872 [4 1903], i. 65–75, and *JAI* viii. [1879] 116–131, ix. [1880] 23–30 (it must, however, be stated that the illustrious author's conclusions as to derivation of the Mexican game of *patolli* from the Hindu game of *pachisi* are by no means generally accepted). On games of special areas: A. B. Gomme, *Traditional Games of England, Scotland, and Ireland*, 2 vols., London, 1894, 1898; W. W. Newell, *Games and Songs of American Children*, new ed., New York, 1903; G. Pitrè, *Biblioteca delle Trad. pop. Siciliane*, xiii. 'Giuochi fanciulleschi Sicil.,' Palermo, 1883; S. Culin, *24 RBEW*, 1907, 'Games of the N. Amer. Indians'; E. Falkener, *Games ancient and oriental, and how to play them*, London, 1892.

E. SIDNEY HARTLAND.

GAMES (Hebrew and Jewish).—For the purpose of the present article it will be convenient to divide the entire range of Hebrew-Jewish history into Biblical, Talmudical, and post-Talmudical times, the Biblical period extending, roughly speaking, to the age of the Maccabæan rising; the Talmudical commencing at the epoch just named, and ending about A.D. 500; and the post-Talmudical reaching down to the present day.

1. **In Biblical times.**—The games and other amusements that were prevalent among the ancient Hebrews could not have been prominently bound up with the popular cult and the moral habits of the race; otherwise the authors and compilers of the Hebrew Scriptures, who were guided throughout by a religious and ethical purpose, would naturally have introduced, with more or less frequency, some detailed references to these pastimes and recreations of their countrymen. The games and diversions indulged in were merely, as for the most part they are everywhere now, so many ways of recruiting strength and whiling away an idle hour in a pleasant and attractive manner; and all that can be found in the OT on these matters consists of some general references and a number of more or less definite allusions to certain amusements and sports that were in vogue among the Hebrews of those days. Our task, therefore, in this part of the article is to collect the extant data in some orderly and serviceable manner.

The Hebrew verbs expressing something approximate to our idea of playing games and engaging in other social diversions are פָּנַע and its synonym פָּנַס (infin. *śaḥēḳ*, *ṣaḥēḳ*). The use of the last-named form in Ex 32^6 (in connexion with the rejoicing at the making of the golden calf) is quite indefinite, and may possibly be best translated by 'to make merry.' But quite definite is the mention of a kind of tournament (or possibly best described as a game-of-war) in 2 S 2^{12-16}, where the verb פָּנַע is employed. Abner said to Joab: 'Let the young

men arise and play before us,' and there seems to be no reason to doubt that a mere soldierly trial of skill and strength[1] was originally intended, and not a prelude to a battle on a large scale, although the hostile passions which were aroused by it quickly led to a disastrous result.

Other exercises requiring the employment of physical strength or skill mentioned or alluded to in the OT are *the lifting of stones* (Zec 12^3), *slinging stones* (*e.g.* Jg 20^{16}, 1 S $17^{40.\ 49.\ 50}$, Zec 9^{15}), *ball-games* (Is 22^{18}, where—judging from the later use of the word, as can be seen from the Rabbinical dictionaries—the term for ball is גְּדוּר, and not הדר), *archery* (1 S $20^{20ff.}$, Job 16^{12}, La 3^{12}), *racing* (Ps 19^6 [EV 19^5], 2 S 1^{23} 2^{18}), and *jumping* (Ps 18^{30} [EV 18^{29}]). One may also assume that the way in which Samson had to amuse the assembled Philistines at Gaza (Jg 16^{25}, where both the roots שחק and צחק are used) was by exhibiting feats of physical strength. More popular than any other kind of physical exercise was naturally *dancing*. A reference to children's dances is found in Job 21^{11}, and to that of adults on various occasions—*e.g.* Jg 21^{21} ('the daughters of Shiloh' to be captured, whilst dancing, as wives by the Benjamites), 1 S 18^6 (the women saluting Saul and the victorious David), 2 S 6^{14} (David dancing before the ark).

With regard to the amusements of children, there is, besides the mention of dances already referred to, the significant fact that in Zec 8^5 the vision of happiness in a restored and prosperous Jerusalem is made complete by the picture of boys and girls playing in its streets. The kinds of games indulged in are not mentioned, but one may safely fill in the canvas with frolicsome dances, racing, a primitive and quite innocent form of dice (see F. Sellin, 'Tell Ta'annek,' *DWAW*, vol. l. [1904] 112), and diminutive terra-cotta figures of horses, dogs, and other animals (see H. J. Van Lennep, *Bible Lands*, London, 1875, p. 573 ff.). It is also possible that there is a reference to character displaying itself in children's games in Pr 20^{11} ('even in his doings does a child make himself known, whether his work be pure, or whether it be right'). Another interesting though very vague reference to the diversions of young people is that contained in Job 40^{29} (EV 41^5): 'Wilt thou play with him (*i.e.* Leviathan) as with a bird? *or wilt thou bind him for* (or unto) *thy maidens?*'[2] The vagueness of these two forms of amusement is in no way diminished by a reference to Ps 104^{26} and Bar 3^{17} ('They that had their pastime with the fowls of the air').[3]

Instrumental music would naturally accompany dancing. Vocal music (and, of course, instrumental also) is, as may be expected, mostly referred to in the OT in connexion with religious services; but there are also a few passages relating to purposes of amusement, so particularly the 'men singers and women singers' spoken of in 2 S 19^{36} [EV 19^{35}] and Ec 2^8.

As for amusement by means of *dramatic performances*, it is difficult to say to what extent—if at all—the ancient Hebrews engaged in it; but it is certain that their imaginative talent was lyrical rather than dramatic. If, indeed, the Song of Songs and the Book of Job are to be regarded as compositions of a more or less dramatic character, these great literary works would themselves justify the proposition just indicated; for it is in their lyrical element and vivid impressionism that their greatness consists rather than in elaborate dramatic representation.

The *proposing and solving of riddles* (חִידָה, pl. חִידוֹת) as an intellectual pastime finds an illustration in Jg $14^{12ff.}$ (Samson's riddle). The riddles proposed to Solomon by the Queen of Sheba (1 K 10^1) are not specified in the Biblical text, though the elaboration contained in later Jewish writings[1] may possibly embody some early amplifications. Akin to riddles proper is a certain kind of *māshāl* (simile), as exemplified in Ezk $17^{2ff.}$. It has also been supposed that riddles lay originally at the base of Pr $30^{15ff.}$.

2. In the Talmudical period.—As the ancient Hebrews do not appear to have been addicted to games of chance,[2] one may assume that such games were adopted by them from their neighbours during the Greek and Roman overlordship in Palestine and the adjacent countries. In agreement with this supposition is the fact that ethical considerations in relation to games are first met with in Talmudical times. The Mishna declares in two different places (*Rōsh hash-Shānāh*, i. 8; *Sanh.* iii. 3) that dice-players and participants in pigeon-racing are disqualified to act as witnesses in a court of justice. The principle underlying the enactment is that the winner is, in the Rabbinic sense of the term, guilty of robbery, and that, therefore, the mere act of participation is tantamount to engaging in a criminal act. The general designation of dice in all its varieties is קוּבְיָא (*κυβεία*). In modern works פַּסִּים (*ψῆφος*, *ψηφίς*) is often spoken of as another game of chance lying under the same condemnation, but it is in reality merely the principal variety of קוּבְיָא, other varieties named in *Sanh.* 25*b* being nut-shells and pieces of orange peel, each of these objects having been used in a manner analogous to the throw of dice as known in modern days. The participants in pigeon-racing are called מְפָרְחֵי יוֹנִים, but it is explained in the same passage of *Sanh.* that racing on a similar principle carried on with בְּהֵמָה חַיָּה וְעוֹף (domesticated quadruped, wild quadruped, and any kind of bird) involves the same disabilities on its participants.

The introduction of Greek athletic games into Jerusalem about 170 B.C. is recorded in 1 Mac 1^{14} and 2 Mac 4^{9-15}. 'A place of exercise' (gymnasium) was built 'according to the customs of the heathen' close to the Temple, where men and boys forthwith ardently engaged in wrestling, boxing, archery, swimming, and other exercises; and 'such was,' according to the account given in 2 Mac., 'the height of Greek fashions, and increase of heathenish manners, . . . that the priests had no courage to serve any more at the altar, but . . . hastened to be partakers of the unlawful allowance in the place of exercise.'

The restoration of a conservative type of Judaism by the Hasmonæans naturally resulted in the abolition of these games and feats of strength, which were so revolting to the purer Hebraic spirit, partly on account of their close connexion with foreign cults, and partly because most of them were practised *in puris naturalibus*. But

[1] Thus, *e.g.*, Solomon Yiṣḥāḳī (known as Rashi): דֶּרֶךְ שְׂחוֹק ('by way of amusement'). H. P. Smith, *ICC*, *in loco*, remarks that the verb is 'used nowhere else of fighting'; but this consideration is alone sufficient to decide one against his opinion 'that the proposition was to have a combat of picked men as a prelude to the main battle.'

[2] 'Most commentators quote in illustration of this from Catullus, ii. 1, *Passer deliciae meae puellae*' (Gibson, *Oxf. Com.*, *in loco*).

[3] In the *Variorum Apocrypha*, C. J. Ball, *in loco*, refers for comparison to 'the hunting scenes of Assyrian sculptures, and the tributes of rare and curious foreign animals depicted and recorded on such monuments as the obelisk of Shalmaneser.'

[1] In the Second Targum on Est 1^3 only three such riddles are recorded, but nineteen are given in a MS from Yemen published in *FL* i. [1890] 349–58.

[2] The primitive kind of dice found at Tell Ta'annek (see above) was probably of a very innocent infantile kind. The spreading of sacrificial tables to Gad and Meni (deities of luck and destiny), referred to in Is 65^{11}, may, indeed, be taken to suggest a tendency to seek fortune by methods of chance rather than by hardy exertion; but it must be noted that the prophet, writing from the true Hebraic point of view, condemns the worship in question, which, besides, may have come in late in post-exilic times (see, further, FORTUNE [Biblical and Christian]).

about a hundred years later the same un-Hebrew practices, under a different form, were introduced by Herod the Great. The pre-Hasmonæan high priests built gymnasia to please Antiochus Epiphanes, and, similarly, Herod established circuses and theatres in order to ingratiate himself with Augustus. Both the theatre at Jerusalem and the 'very great amphitheatre in the plain,' writes Josephus (*Ant.* XV. viii. 1; see also ix. 6, and XVI. v. 1), 'were opposed to the Jewish customs; for we have had no such shows delivered down to us as fit to be used and exhibited by us; yet did he celebrate these games every five years, in the most solemn and splendid manner.' The general Talmudical attitude[1] towards these innovations may be described as an intensification of the opinion expressed by Josephus. In Jerus. *'Aboda zara*, 40*a* (ed. Krakau, 1609), the view is taken that attending a circus is equivalent to an act of murder; in the Bab. recension of the same tractate (18*b*) the close connexion of theatres and circuses with idolatrous worship is emphasized; and in Jerus. *Berākhōth*, 7*b*, col. 2 (ed. Krakau, 1609), a thanksgiving[2] is offered by a pious Rabbi for having had his lot cast 'in the house of learning and the house of prayer,' and not 'in theatres and circuses.'

It must not be supposed, however, that strict Hebraism laid all athletic exercises indiscriminately under a ban. The pious spirit fostered and developed by Talmudism regarded, indeed, everything as trivial in comparison with the study of the Torah; but the Jews were at the same time sensible enough to countenance a reasonable amount of amusement and recreation—so long as the un-Hebrew and heathen element remained excluded. In his Com. on Zec 12[3] (mentioned in § 1), Jerome relates that, when visiting Syria in the 4th cent., he saw 'large heavy stones which Jewish boys and youths handled and held aloft in the air to train their muscular strength.' In Bab. *Nedārīm*, 104*a*, a reference is found to games, practised by women, with nuts and apples (apparently arranged in a heap, the object of the player being to hit and upset it), which were forbidden only on the Sabbath. Archery is referred to in Mishna *Kelim*, xii. 1, where קורת החצים (*i.e.* the target for arrows; see Bacher, *REJ* xxvi. [1893] 63–68) is spoken of. That the art of swimming was practised is proved by the account given by Josephus in *Vita*, § 3, of how he, with a number of others, saved himself by swimming 'all the night'[3] after a shipwreck, until taken up by another ship (cf. Ac 27[42f.]).

A picture of Judæan children engaged in mimic performances in the market-place (cf. Zec 8[5], referred to in § 1) is found in Mt 11[16. 17] ('We piped unto you, and ye did not dance; we wailed, and ye did not mourn') (see also Lk 7[32]). The nature of the game named אסקנדרי mentioned in *Nedārīm*, 25*a*, *Ḳiddūshīn*, 21*b*, has not yet been satisfactorily determined;[4] possibly it may have had affinities with what is known as skittles (Abrahams, *Jewish Life in the Middle Ages*, p. 379). Dancing, swimming, and other forms of diversion are referred to in Bab. *Bēṣāh*, 36*b* (forbidden on the Sabbath day as well as on festivals). In Jerus. *Ḥagīga*, 7*b* (ed. Zitomir, 1866), jumping and dancing are mentioned as having been indulged in at the circumcision of Elisha b. Abūyāh. Worth noting also is the extraordinary feat of a chief like Simon b. Gamaliel I., who, by way of amusing the people on the occasion of the Water Feast at Jerusalem, engaged in a grotesque dance with eight lighted torches in his hands (Bab. *Sukkah*, 53[9]); cf. art. FEASTING (Heb. and Jewish), vol. v. p. 806[b]. Hunting is put into the same category as attendance at theatres and circuses in Bab. *'Aboda zara*, 18*b*. This is, of course, in agreement with the ancient Hebrew view of the sport, Esau having been a man of the chase, whilst Jacob was given to agricultural and pastoral pursuits, though it should not be forgotten that Nimrod is described as 'a mighty hunter *before Jahweh*' (Gn 10[9]). Herod's proficiency as a hunter (see Jos. *BJ* I. xxi. 13) cannot, of course, be properly regarded as a Hebrew characteristic.

It had been supposed that chess was mentioned in the Talmud under the name of גרדשיר (Bab. *Kethūbōth*, 61*b*), but the idea is no longer prevalent.[1] The subject must therefore be treated in the next section. The Jews were, however, at all times fond of intellectual pastimes, as is evidenced, *e.g.*, by their love of riddles in all periods of their history. The Talmud and Midrash contain a fair number of enigmas; so, for instance, *Gen. Rabba*, lxvii. 6 (in a conversation between Marcus Aurelius and Rabbi Yehūdah han-Nāsī),[2] and Bab. *Shabbath*, 152*a* ('Two are better than three,' *i.e.* two young legs are better than two old ones with a staff in addition). The Rabbinical elaboration of the riddles proposed to Solomon by the Queen of Sheba has been referred to in § 1.

3. In post-Talmudical times.—Strict Rabbinism from the 6th cent. onwards down to the present day has continued to regard games, sports, and other amusements from a severely ethical point of view, treating with indifference or benevolent toleration amusements and physical exercises of a harmless nature, but unhesitatingly condemning gambling as well as sports and amusements involving cruelty, or likely to excite the passions.

Dice continued to exercise its baneful attractions, and in addition the Jews adopted from their Gentile neighbours such games of chance as 'Odd and Even' and 'Back or Edge,'[3] besides lotteries and various kinds of betting. At the beginning of the 14th cent.[4] the Jews fell, moreover, under the dangerous fascination of card-games. Rabbinical ordinances, entitled *takḳānōth*,[5] were from time to time issued with the object of checking the evil in its divers forms, and prominent teachers and authors employed both satire and admonition of a more direct form in the hope of counteracting the destructive tendencies to gambling among their people (thus, against the earlier forms of it, Maimonides in his *Yad*, הלכות גוילה, vi. 7–11; Kalonymos b. Kalonymos in his אבן בחן, composed in 1322); but the most pathetic means resorted to were the self-imposed vows of individuals, solemnly undertaking to abstain from games of chance either in perpetuity or

[1] References to a milder view are found, *e.g.*, in *Bābā ḳāmā*, 83*a*, *Genesis Rabba*, lxxx. 1. In the first-named passage the general reference is to חכמת יונית ('Greek wisdom,' including manners and customs).

[2] This thanksgiving is still printed in several editions of the Jewish Prayer-book (at the beginning). In Bab. *Berakhōth*, 28*b*, קרנות ('street-corners') is substituted for 'theatres and circuses.'

[3] No doubt an exaggeration, however.

[4] For different forms of the word, see the Dictionaries (Buxtorf, Levy, and Jastrow). In Fischer's ed. of Buxtorf (Leipzig, 1869–82), the suggestion is made that the origin of the word is ὀστρακισμός. Levy renders *kleine Steinchen oder Scherben*. Jastrow derives the word from the Persian *iskodar* ('despatch-bearer'), and thinks that it was a kind of chess.

[1] Rashi († 1104) explains גרדשיר by אישקקיש, 'chess.' The word was therefore used in that sense in his day: but Franz Delitzsch (in 'Über das Schach,' in *Orient*, Jan. 1840, pp. 42–53) shows that the term could not have denoted chess in the Talmud, as the Persians, from whom the Jews might have learnt the game, did not know it themselves before the close of the 5th century. Levy (*Neuheb. u. chald. Wörterbuch*, Leipzig, 1876–89) translates the word by 'chess'; but Jastrow (*Dict. of the Targumim*, New York, 1903) renders 'checkers.'

[2] The identifications are, however, by no means certain (see L. Ginzberg, art. 'Antoninus in the Talmud,' in *JE* i. 656).

[3] 'This game was played with a knife, which apparently was thrown in the air, and the decision depended on which side fell uppermost' (Abrahams, *op. cit.* p. 391, note 2).

[4] Card games (קלפים) are already mentioned in 1322 as being passionately engaged in (see Kalonymos in the work entitled אבן בחן).

[5] For an interesting account of such *takḳānōth*, see Abrahams, *op. cit.* p. 394 ff.

for a given number of years. Conscience tried in this way—and not always successfully—to protect itself against the inroads of overpowering temptation. Such vows of abstinence are found written on the fly-leaves of sacred and cherished MSS in the possession of those wishing to free themselves from the ruinous vice, thus adding pathos to the intensity of their desire for reform.

An example of a vow to be binding in perpetuity is found in fol. 200*b* in the British Museum Additional MS 17,053. The entry is dated in the year 1535, and the resolution 'not to play in any manner whatsoever' was taken in the presence of several witnesses. As an example of a vow limited to a given period of time may be quoted the entry on fol. 294*b* of the British Museum Additional MS 4709. The entry is dated the 1st of April 1491, and the person concerned pledges himself by an oath on the Ten Commandments neither to play, nor to engage any one to play for him, any game except 'the game of the board' (צחוק המבלי, apparently draughts or chess), and to play even that game only occasionally, during the next ten years. No fewer than five persons were witnesses of the oath.

One of the most prominent Jewish victims to the attractions of card-games was Leon di Modena, who was Rabbi at Venice at the end of the 16th and the beginning of the 17th century. He must have been well aware of the dangerous tendency within him in his early youth, for he composed an interesting dialogue against gambling (entitled תלמיד צחקן or סור מרע, 'The gambling Scholar,' or 'Depart from Evil') when but fourteen years of age (see, *e.g.*, H. Gollancz's English rendering in *Translations from Hebrew and Aramaic*, London, 1908). He was, however, never able to free himself from the vice. In 1628 the Rabbis of Venice published an order of excommunication against any member of the community who should indulge in card-playing within six years from the date of the decree, which, though not necessarily directed against Leon alone, must have been calculated to affect him as the most prominent offender. But he unfortunately defended the habit with great dexterity, and remained confirmed in it (see Abrahams, *op. cit.* p. 392).

Passing on to the game of chess, which, though not very prevalent among the Jews until the 12th cent., was, no doubt, known for several centuries before, one may remark that the fondness of so many of them for the game and their frequent skill in playing it may be regarded as an additional testimony both to their sense of strategy and to the high degree of intellectual clearness to which they are often able to attain.[1] The attitude taken up towards the game by Rabbinical authorities varied considerably. Maimonides († 1204) places persons who play chess[2] for money in the same category as dice-players and participants in pigeon-racing (Com. on the Mishna *Sanh.* iii. 3), thus declaring them unfit to give evidence before a court of justice. If by the word נרדשיר[3] Kalonymos b. Kalonymos (in his work אבן כחן already named, ed. Cremona, 8*b*) meant the game of chess, he clearly intended to express, in satirical form, an even severer judgment than that of Maimonides. From Isaac Lampronti's פחד יצחק, iii. 54*a*, col. 1, we learn that in the year 1575 three Rabbis of Cremona decreed, in consequence of a plague, that neither man nor woman, and not even young persons, from the age of ten upwards, living in that city should for a given time play any game except chess, provided that the latter was not played for money. In שבט מוסר (beginning of ch. 42) of Elijah Kohen of Smyrna († 1729), on the other hand, chess is disapproved of absolutely on the ground that it is a waste of time, and that the mental energy spent on it should be reserved for sacred study. The preponderant view was, however, in favour of the game as an intellectual pastime, and it was, as a matter of fact, often played without compunction even on the Sabbath, when, in honour of the day, chessmen made of silver were used (see Abrahams, *op. cit.* p. 388).[1]

The Jews have also produced a number of interesting works on chess, the three most important compositions in Hebrew being חרוזים, or rhymes on the game, attributed to Abraham ibn Ezra,[2] a poem by Bensenior ibn Yaḥya (14th or 15th cent.), and a work entitled מערכי מלך ('Delights of the King'), which Steinschneider is inclined to attribute to Leon di Modena, the talented Rabbi already referred to in this part of the article.[3]

An adequate idea of Jewish interest in chess-playing in our own time may be obtained from parts of the article 'Chess' in *JE*; see particularly the page giving portraits of ten 'Eminent Jewish Chess Masters,' and the list of tournaments ranging from 1851 to 1902. It may in addition be mentioned that it was through chess-playing that Moses Mendelssohn gained the friendship of Lessing. Another interesting, though legendary, point to note is that in *Das Leben Elchanans oder Elchonons* (Frankfurt a. M., 1753; see also, *e.g.*, the English presentation of it by G. H. Händler, *Elchanan: The Legend of a Jewish Pope*, London, 1910) Rabbi Simeon recognizes the Pope as his son, in the course of a game of chess, through a particular move which he had taught him in his youth.[4]

The ethical considerations militating against games of chance, and, if played for money, also in a minor degree against chess, were, of course, absent in the case of amusements of an innocent athletic character. We thus find that in the 12th and 13th centuries ball-playing was engaged in on festivals on public grounds (see *Tōsāfōth* on Bab. *Bēṣāh*, 12*a*, near the bottom of the recto, where children's games appear to be referred to). In Joseph Caro's *Shulḥān 'Arūkh*, part *Oraḥ Ḥayyīm*, § 308[45], on the other hand, ball-playing is prohibited on Sabbaths and festivals (the more lenient view of it being at the same time mentioned in a note). Among other amusements borrowed by Jewish children from their neighbours, and specially mentioned in the sources, were skittles, blind-man's buff, and leap-frog (see Abrahams, *op. cit.* p. 379 f.).

Of hunting a decidedly adverse view was taken, the sport not only involving cruelty to animals, but also being incapable of yielding a direct advantage to Jewish participants, who were by their law precluded from eating the meat obtained in the chase. The severest judgment ever passed on the sport is found in a decision of Meir Rothenburg († 1293): 'He who hunts game with dogs, as non-Jews do, will not participate in the joy of the Leviathan' (*i.e.* take part in the great meal of the righteous off the flesh of Leviathan in the Messianic kingdom).[5] Another cause which in most countries strongly operated against Jews taking part in the chase was the frequent prohibitions against the carrying of arms by them (so, *e.g.*, in an enactment of 1181 in England; see Joseph Jacobs, *The Jews of Angevin England*, London, 1893, p. 260). Jews are, however, occasionally found participating in this and other hardy sports, even including duelling (see Depping, *Les Juifs dans le moyen-âge*, Paris, 1834, p. 182).

[1] It might at first sight seem strange that chess should have been popular among Jewesses also (see Schudt, *Jüd. Merkwürdigkeiten*, 1714–18, iv. ii. 381); but one should bear in mind that indoor games generally were in the Middle Ages chiefly engaged in by Jewish women, no doubt partly because they had more leisure than the men.

[2] שמרנג, *shitranj*, borrowed by the Arabs from the Persians. It must be stated, however, that the point is not sufficiently clear, for Maimonides appears to give שמרנג as one of the renderings of קוביא.

[3] Even if the word does not mean chess in the Talmud, it at any rate in some quarters acquired that sense later (see the previous note on the word, showing that Solomon Yiṣḥāḳi already understood it to denote chess).

[1] For some further account of Rabbinical opinion for and against the game, see *JE* iv. 19. It is, however, not correct to say that in the *Sefer Ḥasīdim* ('Book of the Pious,' 12th–13th cent.) the game is strongly recommended (*ib.* p. 18, col. 1). It is, indeed, very far from certain that chess is even meant by 'the piece of wood wherewith one plays' in the paragraph referred to (§ 400); see Steinschneider, *Schach bei den Juden*, p. 6.

[2] Steinschneider (p. 7 ff.) denies the authorship of Ibn Ezra, but the early date of the poem remains unquestioned. English readers may refer to the translation by Nina Davis (now Mrs. Salomon) in *Songs of Exile*, issued in Philadelphia and London in 1901. In the *JE*, art. 'Chess,' the translation is reproduced, with the addition of remarks on certain special 'moves' indicated in this early composition.

[3] For a fuller list of works, see Steinschneider, *op. cit.*; for modern Jewish publications on the game, see *JE* iv. 20. The three Hebrew works here named were printed, with Latin translations, in Hyde's *De ludis orientalibus*, Oxford, 1694.

[4] Steinschneider, *op. cit.* p. 36, holds that the origin of the story can be traced to the beginning of the 14th cent., though the Rabbi Simeon of the work is probably meant to represent a famous Rabbi who lived about the beginning of the 11th century.

[5] See Abrahams, *op. cit.* p. 376.

The drama as a species of literary art, and as calculated to rouse the emotions and inform the intellect, does not concern us here. It can only be referred to as a means of amusement and diversion. The pious Jew of the Middle Ages disliked the theatre quite as much as did his ancestors during the Roman domination of Palestine. He regarded everything connected with it as frivolous and indecent. There were, however, two occasions in each year when he allowed himself considerable licence, though not indeed by way of attending the theatrical performances of his neighbours, but by means of certain dramatic productions of his own. One of these occasions was the Feast of Purim, which falls in March; and the other was the Day of the Rejoicing of the Law (שִׂמְחַת תּוֹרָה), following the Feast of Booths (סֻכּוֹת) in October. Besides the Ahasuerus Play, which, of course, was specially designed for Purim, representations of the sale of Joseph and of the encounter of David with Goliath were particularly popular.

'The synagogal merry-making on these anniversaries,' moreover, writes Abrahams (p. 262)—for the Synagogue itself was often the scene of these festive amusements—'sometimes included dancing, the introduction of amusing effigies, the playing of musical instruments, the burning of incense, and even the explosion of fireworks. Pageants, approaching very closely the real drama in its pantomimic phase, thus early fell within the scope of Jewish recreations.' Cf., further, DRAMA (Jewish).

Riddles, popular—as we have seen—both in Biblical and Talmudical times, continued to be cultivated in the period now under consideration, the Jewish intellect having always loved to seek occasional relief from the severer tasks before it in the quibbles, quips, and cranks which are part and parcel of the constructing and solving of riddles.

As prominent authors who seem to have taken a delight in composing riddles may be mentioned Moses ibn Ezra (11th–12th cent.): Abraham ibn Ezra,[1] already referred to; Yehudah Ḥarizi († 1235); and Immanuel of Rome (14th cent.).

Special mention should be made of a series of enigmas on the numbers 1 to 13 at the end of the Passover-night domestic ritual (beginning: 'One who knoweth? One I know: One is our God in heaven and earth,' and ending: 'Thirteen who knoweth? Thirteen I know: thirteen are the attributes of Deity' (*i.e.* the thirteen attributes of mercy counted in Ex $34^{6.7}$).

Special mention should also be made of the trick of *Gematria* (גימטריא), consisting in the manipulation of words in accordance with the numerical values of their letters. This kind of arithmetical amusement (for it can, in many instances, hardly be called by any other name) is common both in Talmudical and in post-Talmudical times. As an example may be given the counting up of the full number of Haman's children by adding together the values of the letters in ורד (=208) in Est 5^{11}, ורב בניו, the multitude of his children). There is also a possibility of *Gematria* having been employed in Biblical times as well (see *ZATW*, Giessen, 1896, p. 122, where the number of sayings contained in Pr 10^{1}–22^{16} is shown to be 375, *i.e.* numerically equal to שלמה [Solomon] occurring in 10^{1}; and the 136 sayings comprised in chs. 25–29 are similarly believed to be indicated in חזקיהו [Hezekiah] named in 25^{1}).

LITERATURE.—Most of the sources used for this article (including parts of the OT and the Apocrypha, Talmud, Midrash, Josephus, early Commentaries, Talmudical Compendia, and other works in different languages) have been already mentioned. In the chapters on 'Games and the Theatre,' in I. Abrahams' *Jewish Life in the Middle Ages*, London, 1896, which has been frequently referred to in § 3, an additional number of both mediæval and modern authorities will be found. The art. 'Spiele bei den Hebräern,' in *PRE*[3], though not covering the entire field, and worked on a different principle, has been found very useful. On the subject of chess, M. Steinschneider's *Schach bei den Juden* (originally published as part of A. van der Linde's *Gesch. u. Litt. des Schachspiels*, Berlin, 1874) is still indispensable.

G. MARGOLIOUTH.

[1] One of the best known riddles of Abraham ibn Ezra is that on the grammatical use of the letters אהוי.

GĀṆAPATYAS.—The name of this Hindu sect is derived from Skr. *Gaṇapati*, one of the many names of the Hindu god Gaṇeśa, the eldest son of Śiva (see BRĀHMANISM, in vol. ii. p. 807). Gaṇeśa is considered to be the leader of the *gaṇas*, or attendants on Śiva, and first appears in Hindu literature as a creator of obstacles, and, as such, hindering success.[1] He was thus primarily worshipped in order to induce him to abstain from impeding; but in modern practice, especially at his festival in August–September, he is looked upon as the remover of difficulties, the god of wisdom, and the guardian of the public ways. His image stands in nearly every well-to-do Hindu house, and there are numerous temples in his honour, not only in Benares,[2] but scattered over India. His image is also found in temples dedicated to Śiva. Every Hindu book commences with the words *Gaṇeśāya namaḥ*, 'Reverence to Gaṇeśa'; and in parts of Southern India, such as Travancore (*State Manual*, ii. 51), children on being put to school begin their writing lesson with the invocation *Hariḥ, Śrī-Gaṇapataye namaḥ*, 'Hari, Reverence to the holy Gaṇapati,' instead of the more usual *Oṁ, namo Nārāyaṇāya*, 'Oṁ, Reverence to Nārāyaṇa.' In Travancore there are special shrines, called *homapuras*, in which *homas*, or sacrifices, are daily offered to Gaṇeśa for the prosperity of the country; and, occasionally, *mahā-Gaṇapati-homas*, or great sacrifices to Gaṇeśa, involving considerable expense and trouble, are performed.[3] Although the god is venerated and worshipped throughout Northern India, and is often adopted as a guardian deity, his cult among the general population is not so direct and public as it is in the South, and especially in Travancore.

Wherever we go in any part of India, there are few traces of any special sect devoted to the cult of Gaṇeśa in preference to that of other Hindu deities. The close connexion between Gaṇeśa and Śiva was, however, responsible for the existence of a group of sects in ancient India, classed together under the title of *Gāṇapatya*, which transferred the adoration of the worshippers from the latter to the former. Our authority for the tenets of these Gāṇapatyas is chs. xv.–xviii. of a work entitled the *Śaṅkara-vijaya*, claiming to be from the pen of one Ānandatīrtha, and to have been written in the 10th cent., but probably pseudonymous and of much later date. According to it (xvii.), the Gāṇapatyas were divided into six sects—the worshippers of Mahā-Gaṇapati, Haridrā-Gaṇapati,[4] Uchchhiṣṭa-Gaṇapati, Navanīta-Gaṇapati, Svarṇa-Gaṇapati, and Santāna-Gaṇapati, respectively. These differed mainly in the form or title under which the god was adored, and in the words of the *mantras*, or initiatory formulæ, which were taught to converts. They all agreed in looking upon Gaṇeśa, and not Śiva, as the great First Cause, who alone exists eternally, and through whose *māyā*, or illusion, Brahmā and the other gods are created (xv.). Gaṇeśa, therefore, although endowed with personality, fills much the same position as the Bráhma of the Vedānta philosophy of Śaṅkara. In the *Śaṅkara-vijaya*, Śaṅkara is introduced arguing with and confuting each of these sects.

The one sect that deserves particular notice is that of the worshippers of Uchchhiṣṭa-Gaṇapati. They followed some Śaiva sects in adopting the

[1] See the article above referred to; also Hopkins, *Religions of India*, London, 1896, p. 451. A common name given to Gaṇeśa is Vighneśvara, 'Lord of obstacles.'

[2] See E. Greaves, *Kashi, the City Illustrious, or Benares*, Benares, 1909, pp. 63, 81, 84.

[3] For details, see *State Manual*, *loc. cit.*

[4] For the legend connected with this name, see Ward, *View, etc.*, i. 59. The same author (58) remarks that those Hindus of Bengal who adopt Gaṇeśa as a guardian deity are called 'Gāṇapatyas.'

so-called 'left-hand' worship, considering Devī as the *śakti*, or energic power, of Gaṇeśa, not of Śiva. Their esoteric section, the Hairambas, abrogated all obligatory ritual, distinction of caste, and the marriage tie. Promiscuous intercourse of the sexes was to them the highest act of worship, the male worshipper identifying himself with Heramba, *i.e.* Gaṇeśa, and the female with his *śakti*. The name of the deity worshipped by this sect — Uchchhiṣṭa-Ganapati, 'left-food- or orts-Gaṇeśa'—has been variously interpreted. The *Śaṅkara-vijaya* (xvii.) states that he is so called because his followers follow the foul left-handed path; but, according to Colebrook (*Misc. Essays*, i. 212), the origin of the name is the fact that the worshipper pronounces his prayers with his mouth full of victuals, apparently in pursuance of the theory of abrogation of all solemn ritual. The same authority states that the distinguishing sectarian mark of the Gāṇapatyas was a circlet of red minium on the forehead.

The principal scriptures of these Gāṇapatyas were the *Gaṇeśa-khaṇḍa* of the *Brahma-vaivarta Purāṇa*, and the *Gaṇeśa Purāṇa* (one of the Minor- or *Upa-purāṇas*). For an account of the former, see Wilson, *Essays on Sanskrit Literature*, London, 1864, i. 103. It narrates the birth and actions of Gaṇeśa in a series of legends. It is noteworthy that in a subsequent section of the *Brahma-vaivarta Purāṇa* dealing with Kṛṣṇa's life and adventures, his spouse, Rādhā, is represented as adoring Gaṇeśa (Wilson, 117). For the *Gaṇeśa Purāṇa*, see the analysis by Stevenson in *JRAS*, 1846, p. 319 ff. Besides containing, like the *Gaṇeśa-khaṇḍa*, a series of legends,[1] it describes two ways of worshipping the god. In one, he is identified with the Supreme Spirit, Paramātmā, and is to be worshipped by mystical contemplation alone. In the other, an image of the god is crowned with flowers, and has offerings made to it on the occasion of the annual festival in his honour. Śiva himself is represented as waiting on him with the most austere devotion for ten years, and as thereby winning from him the boon of victory over the demon Tripurāsura.[2] Monier Williams (*Indian Wisdom*, London, 1875, p. 139) also mentions a *Gaṇeśa-Gītā*, which is identical in substance with the *Bhagavad-Gītā* (*q.v.*), the name of Gaṇeśa being substituted for that of Kṛṣṇa. In both the *Gaṇeśa Purāṇa* and the *Gaṇeśa-Gītā*, the important doctrine to be noted is that Gaṇeśa is identified with the Supreme Deity, and is superior even to Brahmā, Viṣṇu, and Śiva.

The worship of Gaṇeśa, though not at the present day the cult of a particular sect, is, as we have seen, specially popular in Southern India. He seems to have been originally a Dravidian sun-god[3] adopted into the Hindu pantheon. A well-known verse, attributed by tradition to the sage Manu, but not occurring in the lawbook associated with his name, says that Śambhu (*i.e.* Śiva) is the god of Brāhmans, Mādhava (Viṣṇu) of warriors, Brahmā of the mercantile classes, and Gaṇeśa of the Śūdras, or aboriginal population,[4] and it is probably more than a coincidence that the rat, on which, according to Hindu mythology, Gaṇeśa rides, is a totem of at least one Dravidian tribe, the Oraons.[5]

We meet relics of the old special cult still in Southern India. The Travancore *homas* have been already mentioned, but much more striking is the celebrated case of the human shrine of Gaṇeśa in the village of Chinchvad, near Poona in the Bombay Presidency. The story runs that some three hundred years ago a pious youth named Morobā was an ardent worshipper of Gaṇeśa. As a reward the god came to him in a dream, and promised to live in him and his descendants for seven generations. Thenceforward the family was believed to possess miraculous powers, and the temple founded by Morobā became richly endowed, even the Emperor Aurangzīb giving the family a hereditary grant of eight villages. The representative of the seventh generation died childless in 1810, and a distant relative of the deceased was set up in his place by the priesthood in order to preserve the valuable grants to the temple. The present representative, although not a descendant of Morobā, is still venerated as a deity.[1]

LITERATURE.—The scriptures of the ancient sect have been noticed above. The only account in English of their tenets is to be found in H. T. Colebrooke's *Miscellaneous Essays*. London, 1837, i. 212. The *Saṅkara-vijaya* has not been translated. The text is published in the *Bibl. Indica* (Calcutta, 1868). The sections devoted to the Gāṇapatyas will be found on p. 106 ff. Aufrecht gives an analysis of their contents on p. 249 of his *Catalogus Codicum Sanscritorum*, Oxford, 1864.

For the modern worship of Gaṇeśa and the so-called Gāṇapatyas of the present day, see H. H. Wilson, *Religious Sects of the Hindus*, London, 1861, i. 266; *Aurangabad Gazetteer*, 1884, p. 348; *Poona Gazetteer*, 1885, i. 246; *Mysore Gazetteer*, 1897, i. 469; and *Travancore State Manual*, 1906, ii. 51. It will be observed that, with the exception of the first, all these refer to Southern India. For Northern India, the worship of Gaṇeśa is so much mixed up with that of other, and more prominent, divinities that no separate notices have been recorded concerning his cult. Cf., however, M. A. Sherring, *Hindu Tribes and Castes*, Calcutta, 1872–81, i. 10, 12, 13, 253. W. Ward, *View of the History, Literature, and Religion of the Hindoos*[3], London, 1817, i. 56 ff., may also be consulted.

There are many accounts of the human shrine at Chinchvad. The earliest and fullest is that of E. Moor, written in the year 1800, during the lifetime of the sixth of the seven incarnations, and published in *Asiatick Researches*, vii. [1801] 383 ff. Another account will be found in the *Poona Gazetteer*, 1885, iii. 125 ff The latter quotes as authorities the *Transactions of the Literary Society of Bombay*, ii. [1820] 69; Murray's *Handbook of the Bombay Presidency*[2], 1881, p. 178; G. A. Valentia's *Voyages and Travels, 1802–1806*, published London, 1809 and 1811, ii. 152; and Maria Graham's *Residence in India*, Edinburgh, 1812, p. 270.

G. A. GRIERSON.

GANDHĀRA.—The Sanskrit name for the modern District of Peshawar (British India). It is a vast undulating plain, almost entirely surrounded by a girdle of mountains which is linked in the S.E. by the right bank of the Indus. These mountains separate Gandhāra on the S. from the District of Bannu; on the N. and N.E. from the Swāt and Būner valleys, which were formerly known as Udyāna. On the Afghanistan side they are inhabited by the tribes of the Orakzais in the S.W., the Afridis in the W., and the Mohmands in the N.W.—all equally under the control of the Anglo-Indian Government. The district is watered by the Kabul-rūd (the *Kubhā* of the Indians, the *Kōphēn*, *Kōphēs*, or *Kōas* of the Greeks) and by its tributaries, which are only temporary torrents, with the exception of the river Swāt (*Suvastu*, *Souastos*). Beyond the immediate banks of these watercourses, which are the richest and most populated parts of the country, the scourge of drought has everywhere laid hold on the shadeless plains and on the classic bareness of the hills. Whatever may be the cause, the climate of Gandhāra has lost the moisture which used to be so much praised in the old texts, and the springs have completely deserted a number of sites where the ruins of buildings of considerable size prove that they used to flow. The English administration, however, is now employed in restoring its old fertility to the country by the opening of canals, some of which can be traced back to the Indian

[1] These are reproduced by Rice in the *Mysore Gazetteer*, 1897, i. 469.

[2] Both Stevenson and Rice look upon this legend as an allegory representing the former ascendancy of Buddhism, and its overthrow by the revival of the worship of Śiva. The details are too numerous to quote here. Compare the similar theory regarding Gayāsura (see GAYĀ, § 4).

period, but had been allowed to fall into disuse by the Paṭhāns. The greater part of the land, indeed, belongs at the present moment to the Yūsufzai, Mohamedzai, and Gigiani clans of the Paṭhān Khakhai tribe, which is supposed to have spread over the district in the 15th century. In spite of the persistence, in the village bazaars, of the commercial castes of the old Hindu population and the recent immigration of Hindkis (as the Paṭhāns call the natives of India proper), more than half of the 600,000 inhabitants are of Afghan race, and 90 per cent speak Pūshtū (Afghan) in the native country of Pāṇini, the great authority on Sanskrit grammar.

At all epochs the district has been traversed from W. to E. and from S. to N. by two main roads. The former is the great trade route and the road taken by the invasions of former times. Emerging from the famous Khyber Pass beside Peshawar (Puruṣapura), it used to run through Puṣkarāvatī (Peukelaōtis, now Charsadda) and Po-lu-sha (now Shāhbāz-garhī), and finally reached, at Udabhāṇḍa (Und), the vast bed of the Indus, which was crossed in winter by a ford and in summer by a ferry, and from which Takṣaśilā (Taxila) was reached by three stages. This natural road has been abandoned in modern times, owing to the exceptional facilities offered by the narrow gorge of Attock (several miles down the river from Und) for the construction of a permanent bridge, either one of boats or an iron one; but nothing could be more artificial than the actual route of the Grand Trunk Road and the railway, all composed of bridges and embankments across marshes and ravines—a triumph for the straight line and a feat of engineering skill. Similarly the Swāt was reached either from Puṣkarāvatī, along the river, through the District of Haṣṭnagar, or 'the Eight-Towns,' or from Po-lu-sha by the great Pass of Shahkoṭa, which the natives still call the Elephants' Neck; but now the new Swāt, Dīr, and Chitrāl road—which, branching off at Nowshera and passing through Hoti-Mardān and Dargai, reaches the Malakand Pass, while alongside of it a little narrow-gauge railway runs as far as the foot of the mountains—has completely supplanted its old rivals on the right and on the left. Nevertheless, the country still remains what Nature made it, the anteroom of India, and the meeting of the ways to and from Upper Asia and the West.

It will readily be understood that the possession of this frontier-country was long disputed by the two races, the Indians and the Iranians. Going back to the earliest mention of it that we can trace in history, we find that Gandhāra was one of the Indian conquests of Darius Hystaspis (521–485 B.C.). According to the chroniclers of Alexander, India, at the time of his raid in 326, still began at the Indus. Twenty years later, by a treaty with Seleucus, the Emperor Chandragupta annexed, along with Gandhāra, a good part of Ariana on the right bank of the river. His grandson, Aśoka, had his pious edicts engraved there about 257–6 B.C. But, fifty years later, the Greek kings of Bactria regained the upper hand in a most decided way and conquered N.W. India. From the hands of Demetrius and Menander it passed into those of the Indo-Parthian satraps—one of the last of whom is said to have been the Gondophares who was visited by the Apostle Thomas about A.D. 50—and then into the hands of the chiefs of Indo-Scythian hordes. Peshawar became the winter capital of Kaniṣka and, after him, of his successors; for, although the country had been utterly ruined at the beginning of the 6th cent. by an invasion of the Huns, a Turushka dynasty of Buddhist religion had kept its ground there under the traditional title of 'Śāhis.' This dynasty was supplanted, about the year 900, by a minister of Brāhman caste, but his line in its turn was destined to perish a hundred years later, under the blows aimed at it by Maḥmūd of Ghazna. From that time onward, Gandhāra shared the fate of the Musalmān kingdoms of N.W. India. After the Persians, the Greeks, the Parthians, the Scythians, the Turks, the Huns, and the Afghans, it saw the passage of the armies of Muhammad Ghorī (1175), Tīmūr (1398), Bābar (from 1505), Nādir Shāh (1738), and finally Aḥmad Shāh, of the Afghan clan of the Durrānīs (1748). It was from these last that, at the beginning of the 19th cent., the European generals in the service of Ranjit Singh re-conquered the district, which, at the time of the annexation of the Panjāb (1849), passed directly from the Sikhs into the hands of the British administration. Such is, in short, an account of the vicissitudes experienced by this unfortunate country, which always had so much to suffer from the fact that it was situated on the great land-route of the conquerors of India.

In the present work, Gandhāra is specially worthy of notice on account of its importance in the history of Buddhism. If we judge by the terms of his 5th rock-edict, Aśoka still considered it as a country which had to be evangelized; if we believe the Sinhalese Chronicle it already was so, even in Aśoka's reign, through the working medium of the monk Madhyāntika. The one thing certain is that the doctrine of Buddha here met with exceptional and lasting success. In the eyes of the Chinese pilgrim Fa Hian and his companions, about the year 400 of our era, Gandhāra was now on the same footing as Central India, and had become the second 'Holy Land' of Buddhism. It must be admitted that no one had dared to locate there the great events of the last life of the Master; but his previous existences were seized upon, and in the territory of Gandhāra or its immediate neighbourhood there were counted 'four great pilgrimages' to the four *stūpas*, now in ruins, which marked the places where the future Buddha had formerly dispensed in charity his eyes, his flesh, his head, and his body. Finally—not to speak of the great religious foundation of Kaniṣka in the neighbourhood of Peshawar, the relic-deposit of which was excavated in March 1909 by the Archæological Survey—the country was covered 'with one thousand monasteries'; their ruins still slumber for the most part either in the hollows of the hills, or on the stony mountain spurs, or under the enormous tumuli which everywhere break the level of the country. If we bear in mind that Gandhāra, in virtue of its geographical situation, has been from all time the region of India most open to Western influences, we shall easily understand the double rôle which it has filled in the evolution of Buddhism when this religion crossed the frontiers of its native country. On the one hand, many of its learned monks contributed to the transformation of the old rational, but egoistic, doctrine of the *arhat* into the theory, more actively charitable but at the same time more metaphysical and devout, to which its followers gave the name *Mahāyāna*. On the other hand, by using the resources of Hellenistic art for the decoration of their buildings, its lay donors created the centre from which Buddhist iconography afterwards spread over the whole continent of Asia. At least it is from the soil of Gandhāra that a small number of excavations, unfortunately at first indifferently conducted, have drawn the vast majority of the so-called Græco-Buddhist sculptures, the best collections of which are preserved in the museums of Lahore, Calcutta, Berlin, London, Paris, and, in recent years, Peshawar.

A. FOUCHER.

GANDHARVA.—See BRĀHMANISM, VEDIC RELIGION.

GAṄGĀ, GANGES (Skr. *Gaṅgā*, possibly from rt. *gam*, 'to go').—The great river of N. India, draining the lower Himālayas and the N. and E. slopes of the Vindhya range. It is held sacred by a larger number of worshippers than any other river in the world.

1. Geography.—Under the name Bhāgīrathī, the river rises in the Tehrī State (lat. 30° 55′ N.; long. 79° 7′ E.) from an ice-bed near Gangotrī (*q.v.*), 13,800 feet above sea-level. After receiving the Jāhnavī and the Alaknandā (*q.v.*), it enters the plains, passing Hardwār (*q.v.*); and lower down its course, with the Jumnā which joins it at Allāhābād (*q.v.*), it encloses the fertile tract known as the Doāb or Antarvedi, 'the region between the two rivers.' In the United Provinces its chief tributaries are the Rāmgangā, Jumnā, Tons, Gumtī, and Gogrā. When it reaches the frontier of Bengal, it is joined by the Gāgrā, and near Patnā (the Pāṭaliputra of the ancient Hindus, the Palibothra of early Greek travellers) by the Son; lower down by the Gandak; and, when it approaches the Bay of Bengal, by the greatest of its

affluents, the Brahmaputra. The total length of its course is 1557 miles. From a religious point of view, the most important cities and towns situated on its banks are Hardwār, Kanauj, Allāhābād, Benares, Patnā, Sonpur (*qq.v.*); with Sāgar Island (*q.v.*) at the mouth of the Hooghly.

2. Early allusions and legends.—The sanctity of the river does not date from the earliest Vedic period. According to the oldest traditions, the Hindus (then settled in the E. Panjāb) regarded with special reverence the Sindhu or Indus, and the Sarasvatī, which at the present day, partially lost in the Rājputāna desert, joins the Ghaggar within the Patiālā State. The Ganges is mentioned only twice in the Rigveda: in one passage (vi. 45. 31) its high banks form the subject of a simile; but in the hymn to the rivers (x. 75. 5) it is invoked with the Yamunā (Jumnā), Sarasvatī, Śutudri (Sutlej), Paruṣṇī (Rāvī), Asiknī (Acescines, Chināb), Vitastā (Jhīlam), and Arjīkīyā (Biās) (J. Muir, *Original Skr. Texts*, pt. ii., London, 1860, p. 355 f.; A. A. Macdonell, *Vedic Mythology*, Strassburg, 1897, p. 86 ff.). When the Hindus moved eastward along the Ganges valley, their Holy Land was fixed between the Ganges and the Jumnā (*Vasiṣṭha*, i. 12; *Baudhāyana*, i. 1. 2, 10 [*SBE* xiv. (1882) 3, 147]). In the *Mahābhārata* the sanctity of the river and its holy places is fully established.

'In this age Ganges is holy' (iii. 85, 90). 'He who bathes in Ganges purifies seven descendants. As long as the bones of a man touch Ganges water, so long that man is magnified in heaven.' 'No place of pilgrimage is better than Ganges' (iii. 85, 94–96; see E. W. Hopkins, *The Religions of India*, London, 1902, p. 372 f.).

Buddhist writers naturally pay little attention to the river, though its cult must have prevailed in their time. Buddha uses the pilgrim's attempt to reach its source as an emblem of the unreality of earthly things, and the obstructions in its channel represent the many miseries experienced in the course of re-birth (*Jātaka*, Cambridge tr., ii. [1895] 179; H. C. Warren, *Buddhism in Translations*, Camb., Mass., 1896, pp. 153 ff., 440). Anchorites live on its banks (*Jātaka*, i. [1895] 156, iii. [1897] 283). The 'heavenly' Ganges is mentioned, and the river is spoken of as 'Mother of rivers, known among men as Bhāgīrathī' (*ib.* iv. [1901] 263, v. [1905] 51, 64). The earliest knowledge of the river gained by the people of the West was due to Megasthenes (Arrian, *Indika*, iv.), who describes the river as greater than the Indus and possessing seventeen tributaries, which Pliny (*HN* vi. 22 [18]) raises to nineteen. Strabo (xv. 35) calls the river (ὁ Γάγγης) the greatest in the three continents, next to it being the Indus, Danube, Nile; he states that the Indians worship Zeus Ombrios, 'the rainy' (Indra), the river Ganges, and local deities (see J. W. McCrindle, *Ancient India as described in Classical Literature*, London, 1901, p. 77, *Ancient India as described by Megasthenes and Arrian*, Bombay, 1877, p. 186 ff.; W. Smith, *Dict. Greek and Roman Geog.*, London, 1856, i. 972 ff.).

Many legends naturally gathered round the sacred river. In the *Rāmāyaṇa* (i. 42) the royal saint Bhāgīratha, descendant of Sagara, performs austerities to induce Gaṅgā to descend from heaven and purify the ashes of the sons of Sagara, who had been destroyed by the offended sage Kapila, and thus to elevate them to Paradise. On his failure, Brahmā advises him to propitiate Śiva, who alone could sustain the shock of the falling Gaṅgā. Accordingly Śiva ascends the Himālaya and calls upon the goddess to come down. In her rage she tries to sweep the god down with her to Pātāla, the nether world. But Śiva compels her to circle for ages in the labyrinth of his matted locks, perhaps the icicles at the river source. Hence he is named Gaṅgādhara, 'Ganges-supporter.' At last, being again propitiated by Bhagīratha, Śiva allows her to flow to the sea and purify the ashes of Sagara's sons (J. Muir, iv., 1873, p. 365; R. T. H. Griffith, *Rāmāyaṇa*, Benares, 1895, p. 51 ff.). Later bards endeavoured to associate the heroes of the *Mahābhārata* with the earlier Nature-gods, describing, for instance, Bhīṣma as son of Gaṅgā by Śāntanu. A curious tale is told by Plutarch (Περὶ ποταμῶν, ed. Paris, 1624, p. 1151 f.), in which the name of the river is explained by the tale that the nymph Kalauria bore Indus a son named Ganges, who committed incest with his mother, and in remorse threw himself into the river Chliaros, which was called after his name (see G. Oppert, *Original Inhabitants of Bharatavarṣa or India*, Madras, 1893, p. 126 f.; for other legends in the Purāṇas, see E. T. Atkinson, *Himalayan Gazetteer*, Allahabad, 1882–84, ii. 286 ff.).

3. Cult-titles, temples, images.—(*a*) The cult-titles of Gaṅgā are numerous. She is called Jāhnavī, because she was drunk up by the offended sage, Jahnu; Varanadī, 'excellent river'; Devabhūtī, 'flowing from heaven'; Haraśekharā, 'crest of Śiva'; Mandākinī, 'gently flowing'; Bhāgīrathī, 'brought down by Bhagīratha'; Tripathagā, Trisrotaḥ, 'triple-flowing,' *i.e.* in heaven, earth, and hell, under the respective titles of Mandākinī, Bhāgīrathī or Gangā, and Bhogavatī (see J. Dowson, *Classical Dict.*, London, 1879, *s.v.* 'Gangā'; B. Ziegenbalg, *Genealogy of the S. Ind. Gods*, Eng. tr., Madras, 1869, p. 57). The primitive, animistic spirit of the river is now completely anthropomorphized. — (*b*) Temples dedicated to Gaṅgā are found in many places, especially at the sacred places along the river-bank, of which one of the most important is that at Hardwār (*q.v.*). But in many places she is identified with Pārvatī, or one of the other forms of the Mother-goddess, like Annapūrṇā, goddess of food at Benares; and many of the goddesses worshipped by the non-Aryan-speaking tribes have been adopted as her manifestations. Thus Tuimā, the river-goddess of the Tipāras of E. Bengal, who is worshipped in Agrahāyaṇa (Nov.–Dec.), by stretching from the nearest bathing-place to her shrine a thread which no one may cross, is now identified with Gaṅgā (E. A. Gait, *Census Rep. Bengal*, Calcutta, 1901, i. 186 f.).—(*c*) Her images appear in many of the W. cave-temples (Fergusson-Burgess, *Cave Temples of India*, London, 1880, pp. 326, 439, 455, 460, 470); and her image and that of Jumnā guard the entrances of Gupta temples, that is to say, they are in process of admission to the orthodox pantheon (V. A. Smith, *Hist. of Fine Art in India and Ceylon*, Oxford, 1911, p. 32; and see a photograph of her image from Besnagar in Bhopāl, *ib.* 160, fig. 112; for a photograph of the Hardwār image, *PR*[2], 1896, i. 35). In S. India she is represented as a siren, half-woman and half-fish, swimming in water and folding her hands as if in prayer; on her head she wears a crown, and on her forehead the Śaiva mark in holy ashes; she is covered with jewellery (Ziegenbalg, 56). In Bengal she is represented by a white woman, crowned, sitting on the sea-monster *makara* (a kind of crocodile), having in her right hand a water-lily, in her left a lute (W. Ward, *The Hindoos*[2], London, 1815, ii. 206). At the great temple of Rāmnagar near Benares the three goddesses, Gaṅgā, Jumnā, Sarasvatī, have each a separate niche; and in another temple at the same place Gangā is represented by a richly-dressed image in white marble, seated on a crocodile, with a crown on her head; she has four hands, one hanging down, the second uplifted, the third grasping a lotus flower, the fourth holding a brass vessel (M. A. Sherring, *The Sacred City of the Hindus*, London, 1868, pp. 170, 174).

4. The place of the Ganges in popular worship.—Gaṅgā is everywhere regarded as benign, the giver of health, children, and other prosperity, the great purifier from the pollution of sin. This is specially the case at the points of junction with her tributaries, and in particular those with the Jumnā, Son, and Gandak. Though, according to the *Bhāviṣya Purāṇa*, her sanctity was fated to disappear in 1895 and to be replaced by that of the Narbadā, the prophecy has not been fulfilled (*PR*[2] i. 40). The pollution of her waters is regarded as a heinous outrage on Hindu feeling, as was shown in the strange scenes of general mourning and penance which followed the Benares riots in 1809 (*ERE* ii. 466; Sherring, 193 f.). According to Ward (ii. 212), many Brāhmans will not cook while sailing on the river, or throw saliva into it, or wash themselves or their clothing. Though attempts have been made at Hardwār and other places to connect the cult of Gaṅgā with that of the orthodox gods, she remains non-sectarian, and all castes seek purification and blessings by bathing in her waters. To those who have been present at one of the great bathing-fairs nothing is more impressive than the reverence and fervour with which the wearied pilgrims greet the first view of the river, shouting *Gaṅgājī ki jai*, 'Victory to Lady Ganges!' She is commonly addressed as Gaṅgāmā, 'Mother Ganges.' Besides the bathing at auspicious moments prescribed by the local Brāhmans, a special rite is the shaving of the pilgrim and the dedication of his hair—a form of initiation whereby the physical bond between him and the deity is reinforced (cf. W. R. Smith, *Rel. Sem.*[2], 1894, p. 327 ff.; J. G. Frazer, *Totemism and Exogamy*, London, 1910, iv. 230, who suggests that it is intended to increase the resemblance of the neophyte to that of a new-born babe; for dedication of hair to rivers, see *GB*[3], pt. ii. [1911] p. 261). The special festival of the goddess is Gaṅgā Saptamī, 'Ganges' Seventh,' held on the 7th light half of Baisākh (April–May), or in Benares on the 7th of the following month, Jeṭh. On the 10th of this month, at Benares, her birthday is celebrated by bathing and bestowal of alms; little girls, probably as a rain-charm, float their dolls down the river, and for the next four months refrain from using dolls or other playthings (Sherring, 216; cf. Frazer, *Adonis, Attis, Osiris*[2], London, 1907, pp. 183, 195). In Bengal, with the exception of some special prayers to the goddess, most of the rites at the daily ablution are in honour of the greater gods. Bathing in the months of Vaiśākha (April–May), Jyaiṣṭha (May–June), Kārttika (Oct.–Nov.), and Māgha (Jan.–Feb.) is specially efficacious. After bathing, the attendant priest says prayers and pours offerings into the water; at this time, if a worshipper places ten kinds of fruit on his head and immerses himself in the river, the sins of ten births will be removed (Ward, ii. 210 f.). At Hardwār, every twelfth year, when Jupiter enters the sign of Aquarius, one of the great bathing-fairs is held (A. Cunningham, *Rep. Arch. Survey*, Calcutta, 1871, ii. 236).

We have records of the merit of bathing in the Ganges from the time of the Buddhist pilgrim Hiuen Tsiang (A.D. 634), in the Purāṇas, and Muhammadan historians, to the present day (S. Beal, *Si-yu-ki*, London, 1884, i. 198; H. H. Wilson, *The Vishnu Purāna*, do. 1840, p. 228; H. M. Elliot, *Hist. of India*, do. 1867, i. 49 f.). The superintendence of these bathing-festivals is in the hands of a special class of local Brāhmans, known as *Gaṅgāputra*, 'sons of Ganges,' who have an evil reputation for roguery and rapacity (W. Crooke, *TC*, Calcutta, 1896, ii. 387 ff.). Bathing at eclipses removes the tabu (see the remarkable account by F. Bernier, *Travels in the Mogul Empire*, London, 1891, p. 301 f.; *BG* ix. pt. i. p. 395; *PR*[2] i. 22 f.). Many springs are supposed to have an underground connexion with the Ganges, and bathing in them is regarded as equally efficacious with that in the river itself (*Āīn-i-Akbarī*, tr. H. S. Jarrett, Calcutta, 1891, ii. 224; *Rājputāna Gazetteer*, 1891, iii. 219; M. A. Macauliffe, *The Sikh Religion*, Oxford, 1909, iii. 26). The other holy rivers, including the Ganges, are believed to come to bathe in the Godāvarī (*q.v.*) when Jupiter enters the sign of Leo (*BG* xvii. 527).

The river plays an important part in the domestic rites of the Hindus. If possible, the dead are cremated on its banks; or, if death occurs at a great distance, the ashes are dispatched to be thrown into its water, special priests arranging to perform this duty, if the ashes are sent by the Government parcel-post. Pilgrims at Gayā (*q.v.*), the most suitable place for the performance of death-rites, offer to Gaṅgā the first rice-cake (*piṇḍa*) in the name of the ancestors (E. A. Gait, i. 190). The water is carried to all parts of India by pilgrims or professional carriers; it is used as a charm to repel evil spirits, dropped into the mouths of the dying, sprinkled at marriages over bride and bridegroom, poured into new tanks which thus become sacred, and used as a medium for taking oaths. In Bengal, at a cremation, the water is poured round the pyre, and a trench is cut in the ground so that it may flow back into the river (Ward, ii. 199). Suicides, with the object of gaining eternal felicity and freedom from grievous disease, were common on the banks of the river, and still sometimes occur. The sick are often taken to die near the river, and in former days what is called the *Gaṅgājātrā*, or 'Ganges rite,' was common, when the moribund were immersed, river mud was spread on the breast, and a friend wrote on it with his finger the name of some god (Ward, i. 195 f., ii. 313; N. Chevers, *Manual of Med. Jurisprud. for India*, Calcutta, 1870, pp. 625, 628 ff.). As a propitiation for grievous sin, such as the killing of a cow, offenders perform the rite of walking, by the left bank, from the mouth of the river to its source, and return by the right bank, this movement being known as *pradakṣiṇa*, 'going to the right,' the *deasil* of the Scotch, or *parikrama*, 'circumambulation' (*q.v.*); the same rite is also performed at the Narbadā (*BG* ii. 349; *PR*[2] i. 10 f.). In Bengal, some women worship Gaṅgā after childbirth, and ascetics spend every night in the month of Māgh (Jan.–Feb.), seated stark naked on a platform erected over the river, engaged in such prayer and meditation as their sufferings from the cold will allow (E. A. Gait, i. 190). A male spirit, sometimes regarded as a consort of Gaṅgā, Koilā Bābā, 'Father Charcoal,' an old grey-bearded personage, is worshipped as the navvy (*beldār*) of the river, who swallows whatever opposes her current (J. Wise, *Notes on the Races, Castes, and Trades of E. Bengal*, London, 1883, p. 347; H. Risley, *TC*, Calcutta, 1891, i. 296).

LITERATURE.—For the geography and general particulars, see *IGI* xii. [1908] 132 ff. The legends connected with the course of the Ganges in the Himālaya are given by E. T. Atkinson, *Himalayan Gazetteer*, Allahabad, 1882–84, and E. S. Oakley, *Holy Himalaya*, London, 1905. The earlier narratives of exploration are still worth reading: T. Skinner, *Excursions in India*[2], London, 1833; H. T. Colebrooke, 'On the Sources of the Ganges in Himadri or Emodus'; and F. V. Raper, 'Narrative of a Survey for the purpose of discovering the Sources of the Ganges' (both in *Asiatick Researches*, vol. xi., 1812). Further information will be found in the Gazetteers of the Districts through which the river passes. For the references in the *Mahābhārata* see S. Sörensen, *Index to the Names in the Mahabharata*, London, 1904 ff., p. 297 ff. The remaining literature has been fully quoted in the course of the article.

W. CROOKE.

GAṄGAIKANDAPUR, GAṄGAIKONDAPURAM (Tamil, *Kangaigandappuram*, 'city obtained from the Ganges,' believed to be so called

from the well in the temple precincts, which is supposed to have underground communication with that river; but the name is really a corruption of *Gangai-konda-chola*, 'the Chola king who conquered the lands near the Ganges,' a title of Rājendra Chola I. [A.D. 1064–1113]).—A town in the Trichinopoli District of the Madras Presidency, lat. 11° 12′ N., long. 79° 28′ E., containing one of the most remarkable temples in S. India. It has been fully described by B. R. Branfill, who regards it as 'the largest and best specimen of a S. Indian temple proper'; roughly speaking, it is a facsimile of the temple at Tanjore (*q.v.*); and is possibly its prototype, but perhaps more probably a copy of the latter. But, as it has never been restored, and was built of very hard stone, it retains more of the pristine design and purity which are wanting at Tanjore. It consists of a sanctuary-steeple 100 ft. square, the dimensions of that of Jagannāth (*q.v.*) at Purī and that of Tanjore being 80 and 82 ft. respectively. Its height is 174 feet. It stands on a terrace decorated with a rail-ornament below, the upright posts being engraved with griffins, and on every third or fourth post an elaborate scroll-enveloped animal or figure. The double storey below the pyramid and immediately above the terrace is vertical, with five compartments, or towers, in each face of the temple, separated by four deep recesses, each containing a fine sculptural decoration. The figures are chiefly Śaivite, but important Vaiṣṇavite representations are also found; and the plain intervals of the flat wall are covered with what pretend to be historical scenes of *ṛṣis* (ancient Hindu saints), kings, worshippers, and attendants, celestial as well as terrestrial, in low relief. Above the double storey rises the pyramidal steeple in seven storeys to the neck, which is spacious, and supports, as at Tanjore, four bulls below the dome and semi-dome. The whole building is of stone, and the domed top is carved to represent a copper tile or leaf-pattern covering, like that of the five halls (*sabhā*) at Chidambaram (*q.v.*). The only ornaments of the pyramidal tower are the square and oblong cells of 'car' (*rath*) or 'spire-roofed' pattern, with elaborate fan-shaped windows, like spread peacocks' tails. East of the great tower is the high court, a three-storeyed portico or transept, covering the cross-aisle between the N. and S. entrances to the temple. This, as at Tanjore, is built to match the *vimāna*, or pyramid-tower. To the E. is the outer court, planned on the most magnificent style, but never completed. The courtyard is 610 ft. E. and W., by 350 ft. N. and S., with a fine entrance-tower (*gopura*) on the E., not half the height of the temple itself. 'The architecture,' says Branfill, 'struck me as grand, simple, and pure, with many traces of the wooden construction of which it is, in many respects, a copy.' The town was probably once an important city, one of the principal seats of the Chola kings. Fergusson fixes the date of the Tanjore temple in the beginning of the 14th cent., which is approximately the date of this edifice.

GAṄGOTRĪ (probably *Gaṅgā-avatāra-purī*, 'the sacred manifestation of the Ganges').—A temple and place of Hindu pilgrimage, situated in the Tihrī District of Native Garhwāl; lat. 31° N., long. 78° 57′ E. At a short distance below the temple the Kedār Gaṅgā river meets the Bhāgīrathī at a place called Gaurīkuṇḍ ('the pool of the goddess Gaurī,' spouse of Śiva), where pilgrims wash away their sins in the holy river. There is a small temple dedicated to Gaṅgā, the goddess of the Ganges, which was built by a Gurkhā officer in the 18th cent.; and another of Bhairoṅ, one of the non-Aryan gods elevated into the Hindu pantheon, who is, like all gods on their promotion, regarded as the warden (*dvārapāla*) of the greater gods who have their seats here. The real source of the sacred river is called *Gaumukh*, 'the cow's mouth,' a glacier cavern from which the head waters of the river issue as the ice and snow melt. But Gaṅgotrī itself is regarded as the source of the river, and few pilgrims venture higher up its course, though it is a popular error to suppose that the route is impracticable.

'Though this ablution,' writes Frazer (in Atkinson, iii. 235 *f.*), 'with due donations to the officiating Brāhmans, is considered to clean from all offences, the number of pilgrims is not considerable, in consequence of the great length and ruggedness of the journey, and the difficulty of procuring subsistence by the way. Flasks and similar vessels are filled at Gaṅgotrī with the sacred water of the stream, and, being sealed by the officiating Brāhman, are conveyed to the plains, where they are highly prized.'

GARHMUKTESAR (Skr. *Gaḍa-mukṭīśvara*, 'fort of the Lord of liberation,' a title of Śiva).—A celebrated bathing-place on the Ganges, in the Meerut District of the United Provinces of Agrā and Oudh, lat. 28° 47′ N., long. 78° 6′ E., a town of considerable antiquity, and popularly supposed to have been a ward of the capital, Hastināpur (*q.v.*). But the place now pointed out as the site of Hastināpur is 25 miles distant. The chief temple, like the place itself, is named after Muktīśvara Mahādeva, and is dedicated to Gaṅgā, the goddess of the Ganges. Bathing-fairs are held here, and it is a favourite place for the cremation of the dead or for the disposal of their ashes in the sacred river. No fewer than 80 *satī*-pillars commemorate widows who in the old days immolated themselves on the funeral pyre of their husbands. The local cultus is now entirely devoted to Gaṅgā, who possesses four shrines, two on the Ganges cliff and two below it, in which her image, formed of white marble and clothed in brocade, is worshipped, especially at the great bathing-festival held at the full moon of Kārttika (Oct.–Nov.).

GAUṚ (Skr. *Gauḍa*, 'prepared from sugar or molasses,' the name being possibly derived from the characteristic product of that region).—A ruined city, the site of the ancient capital of Bengal; lat. 24° 4′ N., long. 88° 8′ E. The ruins, known also by the name Lakhnautī, or Lakṣmaṇāvatī, are situated 8 miles E. of Angrezābād, or 'English Bazar,' the chief town of the Māldah District of Bengal, and on the E. bank of the Bhāgīrathī, a stream which joins the Ganges below Gaur.

The city was not in existence in the time of Ptolemy; but he indicates the site (M'Crindle, *Ancient India as described by Ptolemy*, Calcutta, 1885, p. 215). The Hindu history of the city is lost, save that it was the metropolis of the Hindu kings of Bengal, and all that is known is that the name

was more strictly applied to the surrounding region than to the city itself. In A.D. 1194, or in 1198—the latter the date fixed by Blochmann (*JASB* xliv. 276)—it was conquered by the Muhammadans, and it was under them that it attained its magnificence. The Portuguese historian, Faria y Souza, in the 16th cent., states that it contained 1,200,000 inhabitants, and that its streets were so crowded that at religious festivals and processions numbers of people were trodden to death. It is now a scene of ruin, the destruction of the city being largely due to vandalism.

'There is not a village, scarce a house in the district of Mâldah, or in the surrounding country, that does not bear evidence of having been partially constructed from its ruins' (Ravenshaw, p. 2).

The original walled city was probably about 10 miles long by ½ mile broad; but the environs extended to 20 by 3 or 4 miles, and it was surrounded by immense embankments faced with masonry. At present, the whole country within the fortifications and for many miles round is wild, studded with numerous reservoirs, generally overgrown with grass and reeds, and abounding in alligators.

The chief religious buildings now standing complete, or in a partially ruined condition, are: (1) the pretty tomb of the saint Makhdûm Akhî Sirâj-uddîn, who died in A.D. 1357, built in 1510; (2) an elegant mosque of embossed brick, known as Jân Jan Miyân, after a lady builder of that name, and dated A.D. 1534–5; (3) Sa'adullahpur Chât, the only place connected with Hinduism now used for the cremation of the dead; (4) Bârahdwârî ('twelve-gated'), or Great Golden Mosque, perhaps the finest monument of Gaur, 180 feet long, 80 wide, with eleven arches on either side of the corridor, and one at each end (whence its name), built by Ḥusain Shâh, and completed by his son, Nuṣrat Shâh, apparently in A.D. 1526; (5) Qadam-i-Rasûl mosque, so called because it contains a stone bearing the impress of the foot of the Prophet, said to have been brought from Medina by Ḥusain Shâh, the sanctity of this relic having ensured the safety of the building, which is dated A.D. 1530; (6) the fine *minâr*, or pillar, 80 feet high, which Fergusson (*Hist. of Indian and Eastern Architecture*, p. 550) dates between the years 1302–1315; he considers it to be a *jaya-stambha*, or 'pillar of victory'; but, according to Ravenshaw, it was erected as a place to call the faithful to prayer, and was probably built about A.D. 1487–9; (7) Tântipâra, or 'the weaver's mosque,' dated about 1475; (8) the Lattan, or painted mosque, beautifully decorated with encaustic tiles of vivid colours, of which Francklin (see *Arch. Surv. Rep.*, 1902–03, p. 51 ff.) says: 'I have not myself met with anything superior to it for elegance of style, lightness of construction, or tasteful decoration in any part of Upper Hindustan'; it is supposed to have been built by Yûsuf Shâh, A.D. 1474–81; (9) the small Golden Mosque, better preserved than most of the Gaur ruins, which has been called 'the gem' of the city; oblong in form and roofed with fifteen domes, supported by massive pillars of hornblende stone, of which the whole building is constructed. The inscription is obliterated, but it is known to have been erected in the reign of Ḥusain Shâh (A.D. 1494–1524).

The series of inscriptions on the buildings of Gaur are in the Tughra character, and in two of them the penmanship is described by Blochmann as unrivalled. They date from A.D. 1369 to 1535, and are most important in fixing the chronology of the rulers of Bengal and as illustrations of the progress of Arabic caligraphy in the early centuries after the Hijra, or flight of the Prophet. Reproductions of these beautiful works of art are given by Ravenshaw (p. 69 ff.).

The last king of the Musalmân dynasty of Gaur was Fîrûz Shâh III. (A.D. 1532–7). It was sacked by the Afghâns in 1537. From that time its decay began, and its ruin is said to have been completed by an outbreak of plague about 1575. But this story is discredited by Buchanan Hamilton, who states that the city was occupied from time to time by the Musalmân viceroys of Bengal, until the capital was removed to Râjmahâl by Shâh Shuja', brother of Aurangzîb, after 1639, when the place was deserted. On the other hand, Hedges, Governor of the English Factories, who visited the place in 1683, found the chief buildings standing, and describes the 'Pallace, which has been (as appears by ye gates of it yet standing), in my judgment, considerably bigger and more beautiful than the Grand Seignor's Seraglio at Constantinople, or any other Pallace that I have seen in Europe' (*Diary*, i. 88).

GAUTAMA.—See BUDDHA.

GAYÂ.—The name of a south-Gangetic District in the Bihâr Province of British India, and also of its chief town. The area of the District is 4712 square miles, with a population (1911) of 2,159,498. It is bounded on the north by the District of Patna, on the east by the Districts of Monghyr and Hazârîbâgh, on the west by Shâhâbâd, and on the south by the plateau of Chotâ Nâgpur. As an administrative area the Gayâ District is of late origin, dating only from the year 1865. Before that it formed part of the District of Bihâr, and the whole roughly corresponded to the ancient kingdom known as Magadha (*q.v.*). At the present day the District is composed of two tracts—a northern and a southern—with very distinct characteristics. The northern half of the District,[1] together with the present District of Patna, is still known as 'Magah,' a corruption of 'Magadha,' and is well irrigated and fertile. The southern half, which locally bears the name of 'Râmgaṛh,' is imperfectly irrigated and covered with forest. Magah, or Magadha, received its Aryan civilization from the North and West, and was the area from which Buddhism spread over India. Râmgaṛh has received such civilization as it possesses from the South and South-West. Although the religion has long disappeared, Magah to the present day is a Buddhist country. It is covered with ruins of Buddhist shrines, and Buddhist images are frequently turned up in fields by the plough. Buddhism seems never to have penetrated Râmgaṛh. During the times of Magadha sovereignty that country must have been a dense forest, inhabited only by wild tribes and by a few solitary hermits—outposts of Aryan civilization. It is now dotted over with remains of rude forts which local tradition attributes, and no doubt rightly, to the Kôls, or aboriginal tribes of Central India. In later years clearances were made by enterprising immigrants from Râjputânâ, who were the ancestors of such Râjpût families as those of Deo and Chandragaṛh. Magah is Buddhist, ancient, highly cultivated, and thickly populated. Râmgaṛh is

[1] The boundary line runs east and west about ten miles south of Gayâ Town, and a mile or two south of Bodh Gayâ.

Hindu, modern, half-cultivated, and sparsely populated.

1. History.—It will thus be seen that it is unnecessary to give any detailed account of the history of the District. The history of Magah is merged in that of Magadha, of which the capital cities, Rājagriha and Pāṭaliputra, were in what is now Patna District; for further information the reader is referred to the article MAGADHA. No historical events of importance have occurred in Rāmgarh.

2. General aspect of the District.—From the Chotā Nāgpur plateau, which forms the southern boundary of the District, a number of ridges and spurs project into Rāmgarh. These here and there attain to an altitude of nearly 1800 feet above sea-level. As one goes north towards Magah, the country becomes a plain, with a decided slope, averaging four feet to the mile, towards the north. From this plain there stand out numerous semi-isolated hills and ranges; and, still farther north, separate ridges and wholly isolated rocky peaks crop up at irregular intervals.

'The most remarkable of these long, low, outlying ranges is the Ganjās-Bhindās-Jethian range, which extends from near Bodh Gayā north-eastwards for a distance of forty miles with only two breaks, and rises at the Handiā Hill to a height of 1472 feet. The other ranges seldom exceed 1000 feet, and few of the isolated peaks are of any great height, the highest being the Mahēr Hill (1612 ft.). . . . Of the other hills the most notable are the Barābar Hills, lying partly in the head-quarters and partly in the Jahānābād subdivision; the Hasrā, Pahrā, and Chirki Hills, the Brahmjūnī Hill, which rises some 400 feet above Gayā Town, the precipitous peak Kauwādōl, the Lohābar Hill (1799 ft.) in the head-quarters subdivision, . . . and Sringirikh in the Nawādā subdivision.'[1]

These hills have been mentioned in some detail, as many of them are intimately connected with the religious history of the country.

3. Sacred places.—The interest of Gayā District depends entirely on the numerous sacred places that lie within its boundaries, and upon its association with the religious history of India, or rather, of the greater part of Asia. Every Hindu is expected to visit the town of Gayā at least once in his life, and there to make offerings to the spirits of his deceased ancestors. It was at Bodh Gayā that Gautama became 'The Buddha,' or 'The Enlightened One'; and this little village is now the most holy spot on the earth to something like a hundred and forty millions of people.[2]

4. Gayā Town.—The town of Gayā, a municipality with a population of 49,921 (1911), is divided into two parts, Old Gayā and Sāhibganj. The latter was laid out in the end of the 18th cent. by a Mr. Law, then Collector, and possesses no archæological interest. The old town is built upon a rocky hill, separated from a neighbouring hill, called Brahmjūnī (Skr. *Brahmayoni*), by a narrow defile, through which runs the road to Bodh Gayā. Brahmjūnī is a pile of blackened rock and boulders rising to a height of about 450 feet. The old town hill is not so high, and has to its north the Murlī and Rām Silā (372 ft.) hills, the new town lying in the plain between. On its east runs the river Phālgū. A great part of Gayā, therefore, lies in a valley, and, owing to the reflexion of the sun's heat from the black rocks by which it is encompassed, it is extremely hot and dusty.[3]

The old town of Gayā is often called Brahmā Gayā, as being sacred to Brahmā,[4] or else in order to distinguish the Hindu shrine from the Buddhist Bodh Gayā. Its sanctity and that of the country immediately surrounding it—the *Gayā-kṣetra*—depend upon a remarkable legend in the *Gayā-māhātmya* section of the Vāyu Purāna.[1] The main circumstances of the story are as follows:

There was an *asura*, or demon, named Gaya, who was a devout worshipper of Viṣṇu. He practised austerities till the gods became alarmed at the power he was acquiring by his accumulated merit. At Viṣṇu's suggestion they approached him and offered him any boon he might desire. He asked to be made perfectly pure—purer even than the purest gods. The gods granted the boon and returned to heaven. The result of his purity was that every mortal who touched or even beheld him at once ascended to Brahmā's heaven. The rest of the universe, including hell, became empty, and Indra, Yama (the Regent of hell), and other minor deities all found their occupations gone. Headed by Brahmā, they again approached Viṣṇu. Acting under his advice, they asked Gaya to allow a sacrifice to be performed upon his body. He consented, and lay down, his head being where the present Brahmjūnī Hill is situated,[2] and his feet extended to the north. They began the sacrifice, but were surprised to find the demon still moving. Yama then brought a sacred rock from his home and placed it upon Gaya's head. This rock is the present hill. He still moved. Then all the gods sat upon the stone, but, even so, they failed to keep him quiet. Again they appealed to Viṣṇu, who, after unsuccessfully trying the expedient of sending an emanation from himself, came in his own person. He first rendered the demon motionless by striking him with his mace, and then, with all the gods, sat upon the stone. Gaya expostulated, saying that he would have remained quiet if Viṣṇu had only asked him, without using the mace. The gods, delighted, again told him to ask a boon. Gaya replied: 'As long as the earth and the mountains, as long as the moon and the stars shall last, so long may you, Brahmā, Viṣṇu, and Śiva rest upon this stone. May you, Devas, rest upon it too, and call this place after me the "Gayā-kṣetra," extending over five *krośas*, or ten miles, of which one *krośa* will be covered by my head. May therein abide, for the good of mankind, all the sacred pools on the earth, where men, by bathing and offering oblations of water and funeral cakes, may attain high merit for themselves, and translate their ancestors, blessed with a happy salvation, to the heaven of Brahmā. As long as Viṣṇu shall be adored by the learned, so may this place be renowned as the "Gayā-kṣetra," and may resort to it wash away even the sin of killing a Brāhmaṇa.' Viṣṇu and the gods granted this boon, promising that the offering of funeral cakes (*piṇḍas*), and the performance of the funeral rites (*śrāddha*) in the Gayā-kṣetra, should translate a hundred generations of ancestors and also the performer to the desired haven. Moreover, by their worshipping Viṣṇu's feet he would obtain supreme salvation in the after life.

This legend is evidently of comparatively modern origin. In the *Rigveda*, the name of Gaya appears only as that of one of the seers (x. lxiii. 17, lxiv. 16). In the *Mahābhārata*, he is not an *asura*, but a pious king (iii. xcv. and vii. lxii. ff.), who, amongst other acts, performed a sacrifice at Gayā (ix. 2205). Gayā is also mentioned as a holy spot remarkable for its sacred fig-tree (*akṣaya-vaṭa*), a pilgrimage to which secures a large family of sons (iii. 8075, 8305, xiii. 4253); but there is nothing about any benefit secured to ancestors (for further references, see Sörensen, *Index to the Names in the Mahābhārata*, London, 1904 ff., p. 303). In the *Rāmāyaṇa* (ii. cvii.), however, Gaya is said to have chanted a hymn at Gayā, to the effect that a man should have many sons, so that one at least may go to Gayā and rescue him from hell.

So far Gayā has been represented as a town sacred to Hinduism. We next find it mentioned in a Buddhist work, the *Lalita-vistara*, dating perhaps from the commencement of our era. It was still a Hindu town, and is described as the first place visited by Gautama on his journey from Rājagriha to Uruvilvā. He had been invited there as a learned Hindu ascetic by certain householders, who received him with a cordial welcome. After his enlightenment it was one of the first places that received his doctrines, and became the head-quarters of the faith. If this account be true, Gayā became a Buddhist town in the 5th cent. B.C. Fa Hian[3] (5th cent. A.D.) found it desolate and a

[1] *Gayā Gazetteer* (1906), p. 3.

[2] So holy is it that there are Tibetan Buddhists who believe that it is no longer on earth, but is now in heaven.

[3] The Chinese pilgrim Hiuen Tsiang (7th cent. A.D.) noticed these rocky hills of black stone, which translators have turned into 'a sombre valley,' and 'steep dangerous crags' (Beal), and 'dark gorges and inaccessible cliffs' (Watters). The valley is really far from sombre. It is all day under the blazing sun—as one who has lived in it for five years can testify—and any active person can climb the low hills without difficulty. The one gorge is black in colour, not sombre.

[4] See *Ā'in-i Akbarī*, tr. Blochmann and Jarrett, Calcutta, 1873–94, ii. 152.

[1] Given in full by Rājendralāla Mitra in *Buddha Gayā*, 9 ff.

[2] According to Rājendralāla Mitra, p. 19, the true *Gayā-śīrṣa*, or Gaya's Head, is not the Brahmjūnī, but the adjoining hill, on which the old town and the Viṣṇupada temple have been built.

[3] Beal, *Buddhist Records*, i. p. lxi.

desert; but, when Hiuen Tsiang[1] visited it in the 7th cent., it was a city strongly situated, but with few inhabitants. There were only about 1000 Brāhmaṇa families, descendants of the original saint. These Brāhmaṇas were evidently the ancestors of the modern *gayāwāls* to be described subsequently. It appears, therefore, that Gayā was originally a Hindu shrine with a sacred fig-tree that granted offspring; then it became Buddhist; and finally, between the 5th and 7th centuries A.D., it again became Hindu, with the modern legend of the salvation-giving *asura*.

Rājendralāla Mitra[2] argues with great show of probability that this last legend is really an allegory of the triumph of Brahmanism over Buddhism. The ancient king of the *Mahābhārata* is converted into (curious contradiction!) a pious demon. As such he devotes himself to austerities and protracted meditation, and at a later stage cultivates the highest purity. His mere touch suffices to cleanse mankind from the most heinous sin and to give them salvation. His crime is that he made the acquirement of salvation too simple and too summary. As such, to Brāhmaṇas he was a heretic of the character that is assigned to the chiefs among the Buddhists. They were pious and self-mortifying, and devoted to penance and meditation, but they did away with the sacrifices and ceremonies of the Brāhmaṇas. The head-quarters of Buddhism were at Gayā, and the blow from Viṣṇu's mace indicates force used when persuasion failed to attain the end.[3] 'The rock of religion was placed on the head of the infidel, and the force of the gods kept it fixed and immovable.' Just as happened elsewhere—at Purī, Bhuvaneśvarī, and other Buddhist centres—the blessing of the gods sanctified the seat of heresy into a principal sanctuary of the Brahmanical faith. Buddhist emblems, Buddhist shrines, and even Buddhist idols, were made subservient to Hindu worship. In the great temple of Old Gayā, the object of worship is a stone on which is carved a representation of the feet of the Buddha. This is now the 'Viṣṇupada,' the footprint of Viṣṇu, by whom its worship is specially commended in the *Gayā-māhātmya*. In fact, the sacred Bodhi-tree, the most holy object in the world to the pious Buddhist, and situated, not in Hindu Old Gayā, but at the Buddhist Bodh Gayā, has also been made an object of Brāhmanical cult, and a special prayer to be offered to it is contained in the same work.[4]

Whether the above theory is correct or not, it does not affect the ordinary pious Hindu, who sincerely believes in the literal truth of the legend. Since the 10th cent. A.D.,[5] Gayā has been celebrated all over India as a great place of pilgrimage. The various shrines are in charge of a caste of priests known as *gayāwāls*. These claim to be descended from Brāhmaṇas specially created by Brahmā on the occasion of the sacrifice on Gaya's body, when the then existing Brāhmaṇas refused to accept the offerings. With five important exceptions, these priests preside over all the ceremonies performed by the pilgrims. There are altogether 45 *vedis*, or shrines, at each of which the pilgrim, under the guidance of a *gayāwāl*, has to make an offering. If he is poor, or hurried, the list may be cut down, but it is absolutely necessary that *piṇḍas* should be offered to the spirits of the dead at three places—the river Phālgū, the Viṣṇupada temple, and the undying fig-tree (*akṣayavaṭa*), which, we have seen, is the real old object of worship, dating from the time of the *Mahābhārata*.[1] Having finished his round, the pilgrim offers *piṇḍas* to the spirits of his ancestors and a final gift to the *gayāwāl*, before whom he prostrates himself. The *gayāwāl* touches him on the back, and blesses him with the word *suphal*, or 'fruitful,' assuring him thereby that his worship has been accepted.

Five shrines visited by pilgrims deserve particular notice. These are Rām Silā, a hill close to Gayā Town on the north, Pret Silā (540 ft.), about 5 miles to the N.W., and three others of less importance. Although a visit to these forms part of the regular tour of pilgrimage, the priests in charge are not *gayāwāls*, but an entirely distinct order, called *dhāmins*. These shrines are devoted to Yama and to evil spirits. An offering at Pret Silā, the Hill of Ghosts, is enjoined, so that Yama may not beat and bruise the ghosts of the dead. Similarly, at Rām Silā, his hell-hounds must be worshipped that they may not bark and bay at the unhappy spirits.[2] So, also, for the other three shrines. Here apparently we have Brāhmanism covering with its mantle not Buddhism, but the aboriginal demon-worship.

LITERATURE ON THE GAYĀ PILGRIMAGE.—Buchanan-Hamilton, *The History, Antiquities, Topography, and Statistics of Eastern India . . . collated from the original Documents at the E.I. House by Montgomery Martin*, London, 1838, vol. i. p. 51 ff. (this is B.-H.'s MSS [1807–1816], edited by Martin, commonly cited as 'Martin's *Eastern India*'); Rājendralāla Mitra, *Buddha Gayā, the Hermitage of Śākya Muni*, Calcutta, 1878, p. 9 ff.; L. S. S. O'Malley, *Gazetteer of Gayā*, Calcutta, 1906, pp. 59 ff., 214 ff., 217 ff.

5. Mahābodhi.—Gayā's chief title to fame lies in the famous temple of the Mahābodhi (the Great Enlightenment), situated in the village of Bodh Gayā (Gayā of the Enlightenment, often miscalled Buddha Gayā), about six miles to the south of Gayā Town on the west bank of the river Nilājan. Here is the *Bodhi-druma*, under which Gautama sat and received enlightenment. For nearly 2400 years this tree has been as sacred to Buddhists as the cross is to Christians. Pilgrims from all parts of eastern Asia have flocked, and still flock, to it; and its surroundings have been adorned with temples and monasteries by kings, not only of India, but of distant countries such as Ceylon and Burma.

For an account of Gautama's experiences of this spot, reference may be made to the art. BUDDHA (vol. ii. p. 882). Here we shall confine ourselves to such facts as are necessary for the description of the locality. When Gautama visited Gayā as a Hindu ascetic, he passed some time on the Gayā-śīrṣa hill, the modern Brahmjūnī; but, finding there no peace, he went on, with his five disciples, to the village of Uruvilvā, the modern Urēl, close to Bodh Gayā. Here he passed six years in the most extreme asceticism, and then, becoming convinced that this was not the way to win the truth, he resumed the life of a mendicant, living upon alms. His disciples deserted him, and he wandered forth seeking for the place where he should obtain perfect knowledge. On the way he met a grass-cutter and asked him for some grass. This he spread under a neighbouring pīpal tree (a kind of fig, *Ficus religiosa*)[3] and sat upon it, taking his famous vow that, though his body were to shrivel up, though his skin, flesh, and bones were to rot to nothing, never would he rise from the seat till

[1] Beal, *Buddhist Records*, ii. 113; Watters, ii. 111.

[2] *Buddha Gayā*, 16 ff.

[3] We know that, shortly before the time of Hiuen Tsiang, Buddhism had suffered much from the persecution of the Hindu Śaśāṅka.

[4] The site of the Viṣṇupada temple is almost certainly the same as that of the *stūpa* built by Aśoka on the place where the Buddha uttered the *Pa-i-yun* and other sūtras (*Buddha Gayā*, 19).

[5] *Gayā Gazetteer*, 61.

[1] This fig-tree must not be confused with the Bodhi-tree, which is a pīpal tree, an altogether different kind of fig. The *akṣayavaṭa* is a banyan tree.

[2] *Gayā Gazetteer*, 71 ff.

[3] According to Bloch, 141, the worship of this sacred tree can be traced back to very ancient times, long before the foundation of Buddhism, and the Buddhists selected it as the actual site of the Great Enlightenment merely on account of its previous sanctity. At the same time, Bloch does not question the Buddhist tradition as to the main facts of the Buddha's enlightenment occurring at Uruvilvā.

he had obtained the true knowledge. Then commenced the assaults of the Tempter, Māra, and the long night vigil. During the first watch he completed the meditation which enlightens the understanding; during the second he accomplished the meditation of ecstasy; during the third, the meditation which has no object of thought—a simple, but absolute, concentration of the mind upon itself; and, lastly, during the fourth, the meditation which is devoid of all pleasure and pain, and is absolute knowledge.[1]

The place where Gautama spread the grass, and on which he sat, was evidently the mud platform which to the present day is built round the largest pīpal tree in each village of North India, where the elders meet, and where learned men discourse on religious topics. In later times it was called the *Bodhi-maṇḍa*,[2] or 'Seat of the Enlightenment,' and in still later tradition it became the *Vajrāsana*,[3] or 'Adamantine Throne,' believed to be the stable, indestructible centre of the universe. The tree itself was the *Bodhi-druma*, or 'Tree of the Enlightenment.' Gautama, now 'The Buddha,' or 'The Enlightened,' on accomplishing his vow, remained meditating for seven days under the tree. His subsequent actions are described in *ERE* ii. 882, and need not be repeated here. Suffice it to say that the remains of a cloister still exist which was built by Aśoka over the place where Gautama is said to have walked up and down for seven days in his first raptures of emancipation, and where flowers sprang up beneath his feet.[4]

6. The Bodhi-druma.—A pīpal tree universally known as the *Bodhi-druma*, with a stone platform beneath it, identified as the *Vajrāsana*, exists on the west side of the great temple at the present day, and the question of the authenticity of the former naturally arises. The pīpal is a quick-growing and comparatively short-lived tree, and it is impossible that the present one should be the identical tree under which the Buddha sat. There is, however, credible evidence that it is a descendant of the original *Bodhi-druma*, propagated by seed from generation to generation. According to Hiuen Tsiang,[5] that tree, or one of its successors, was cut down and burnt in the 3rd cent. B.C. by Aśoka in his unregenerate days, but was miraculously restored from its ashes. Overcome by the portent, the king worshipped it so zealously that he forgot to return home. The same night, in her jealousy, his queen had it cut down again, but again it came to life. Śaśāṅka, the enemy of Buddhism, again destroyed it about the 6th cent. A.D., but a few months afterwards Pūrṇavarmā, the last descendant of Aśoka, by pious efforts restored it to life, and in one night it became ten feet high. He then built a wall round it, which Hiuen Tsiang saw. In 1811, Buchanan-Hamilton[6] described how the tree in his time was in full vigour, but did not appear to be more than a hundred years old. Cunningham[7] in 1862 found it in the last stage of decay, and in 1876 what remained of it was blown down in a storm, and a seedling from it was planted in its place. This is now the tree which is the object of Buddhist worship. We have already seen that the *Bodhi-druma* is also worshipped by Hindus as part of the Gayā pilgrimage. When the new seedling was set up in the old site, another was planted a short distance off by J. D. Beglar, then in charge of the restoration of the temple, and allotted specially to Hindus. There are thus now two *Bodhi-drumas*—one Buddhist, and the other Hindu.

The legends of the miraculous resuscitation of the tree are no doubt to be explained by the simple expedient adopted on the last occasion, or by the method of dropping a seed into a hollow of the dead or dying tree. In the course of centuries, owing to inundations from the Nīlājan river, the whole level of the ground has been greatly raised, and in 1880, Cunningham found, thirty feet below the present level of the *Vajrāsana*, two pieces of an old pīpal which may well have been fragments of the tree destroyed by Śaśāṅka 1300 years before.

7. The temple.—In the 3rd cent. B.C. the Emperor Aśoka built a temple and a monastery close to the Bodhi tree at a cost of 100,000 pieces of gold. A representation of the temple as it stood in the 2nd cent. B.C. exists in a bas-relief of the Bharut *stūpa* in Central India. It was an open pavilion, supported on pillars. In the middle lay the *Vajrāsana*, immediately behind which was the tree. Nothing now remains of Aśoka's temple but the *Vajrāsana*, a stone step of the entrance, portions of the foundations, the ruins of the cloistered walk, and a portion of the surrounding stone railings. The walk has been already referred to. The portion that has survived is nearly the whole row of bases of the pillars on the northern side of the walk, with a large fragment of what was probably one of the pillars. The bases of the southern row of pillars also exist, but are hidden within the foundations of the later temple.

Much better preserved is the famous so-called Aśoka railing.[1] It originally consisted of sixty-four stone pillars connected by massive stone rails. It was altogether about 250 feet in length and surrounded the whole building. The pillars and rails are covered with sculptures, and several can be dated by the fact of their bearing inscriptions in the Aśoka 'Brahmī' character. When, in later times, the present temple was built, the circuit had to be enlarged to about 520 feet, requiring double the number of pillars; and the original railing was evidently rearranged and added to. The remains of 62 of the pillars of this greater enclosure are approximately *in situ*. About half a dozen have been removed to South Kensington and to the Indian Museum in Calcutta, and 23 more, which until recently have been in the various courts of the present Śaiva monastery near by, have been restored to their proper place round the temple.[2] The railing forms one of the oldest sculptured monuments in India. The pictures carved in the stone are of the most diversified character—spirited and often graceful—and, considering their age, are in a wonderful state of preservation.

Aśoka's temple fell into ruins from lapse of time, and we learn from a Burmese inscription found in the neighbourhood that a new one was built at a date not stated, but which Cunningham[3] fixes as during the reign of the Indo-Scythian kings in the 2nd cent. A.D. This he considers to be the existing temple. It was visited by the Chinese pilgrim Fa Hian in the 5th, and by Hiuen Tsiang in the 7th century. The latter gives a detailed description of the building as he saw it, and this closely

[1] *Buddha Gayā*, 39; cf. *Lalita-vistara*, xxii.
[2] *Lalita-vistara*, xix.
[3] Hiuen Tsiang (Beal, ii. 116; Watters, ii. 114).
[4] See G. A. Grierson, in *Proc. As. Soc. of Bengal*, 1896, p. 52 ff. The bases of most of the cloister-pillars still exist *in situ*, and not only do some of them bear masons' marks in the Aśoka alphabet, but one supplies a missing character, that for ṅ, not found elsewhere.
[5] Beal, ii. 117; Watters, ii. 115. Bloch, p. 140, considers that Aśoka's action in destroying the tree was due to his objection to tree-worship, which he considered to be included among those 'despicable and useless rites' that are 'unproductive of any results,' and should be avoided. He also (p. 141) maintains that Śaśāṅka's destruction of the tree occurred in the course of a war with Pūrṇavarmā, and that it was dictated by political considerations and not necessarily by hatred to Buddhism as a religion.
[6] Martin's *Eastern India*, i. 76.
[7] *Mahābodhi*, 30.

[1] According to Bloch, p. 147, the oldest pillars of this railing date from the middle of the 2nd cent. B.C., or a hundred years after the time of Aśoka. It has hitherto been believed that the Bhārhut sculpture represents the original temple of Aśoka but Bloch (p. 144 ff.) does not agree.
[2] *Gayā Gazetteer*, 55; Bloch, 142.
[3] *Mahābodhi*, 21.

agrees, even to the measurements, with what we have before us now.[1] He also tells us of hundreds of *stūpas* and *chaityas* with which the precincts were crowded. These, together with numerous monasteries and minor temples erected in later times, are now represented by mounds covered with trees to the north of the main building. This in the 11th cent. had fallen into ruins and was twice repaired by missions from Burma. At the end of the 13th cent. came Musalmān domination, and the place became a scene of desolation, although still visited by pilgrims. Cunningham believes that the holy tree and temple were, as above described, appropriated for Hindu worship in the first years of the 14th century.[2] At the end of the 15th cent. a Hindu ascetic founded a *maṭha*, or Śaiva monastery, close to the temple. It was largely built from materials taken from the ruins, and several valuable sculptures have since been disinterred from its wall. In or about the year 1727 the then *mahanth*, or abbot, received the village in which the temple stood, in grant from the Emperor of Delhi, Muḥammad Shāh; and since then the Buddhist shrine has been in the possession of Śaiva ascetics, although Buddhist pilgrims are freely allowed to come and worship, their gifts being made to the *mahanth*. In 1811, Buchanan-Hamilton[3] described it as 'in the last stages of decay compatible with anything like a preservation of its original form.' In 1876 the king of Burma deputed officers to repair it, and, the attention of the Government of Bengal being drawn to the matter, in 1877 a celebrated Sanskrit scholar, Rājendralāla Mitra, was asked to visit the spot and to report as to what was being done. His report is embodied in the work entitled *Buddha Gayā*, published in 1878. It was evident that the Burmese repairs were being done without any regard for archæological fitness. The Government accordingly took the work of restoration into its own hands, and completed it in 1894. This was carried out by J. D. Beglar, under the superintendence of Cunningham. The work done has been subjected to much adverse criticism; but, in the opinion of competent judges, the temple has been repaired as effectively and successfully as funds permitted, and the site immediately surrounding it has been excavated in a manner which will bear comparison with the best modern work elsewhere.[4]

As it now stands, the temple consists of a main tower, rising to a height of 180 feet, in the form of a slender pyramid springing from a square platform, on the four corners of which are similar towers of smaller size. The outside walls have niches for the reception of statues, and access to the temple is obtained through an eastern gate, supported by pillars, which opens into an anteroom in front of the sanctum. In the latter is the principal image, a large mediæval statue of the Buddha. On an upper floor another chamber contains a statue of Māyā Devī, his mother. Owing to the general rise in the level of the country, the temple now stands in the centre of a great sunken courtyard, and one of the most interesting sights is the immense number of votive *stūpas* of all sizes, from actual small temples to little stone models hardly a foot high, with which the surface of the latter is crowded. These are only a small proportion of those dug up. Room could not be obtained for more. Several others are stored in a bungalow near by; and, before their removal was forbidden, hundreds were carried away by visitors as mementoes of the birthplace of Buddhism.

[1] So Cunningham, *Mahābodhi*, 18. Watters, while admitting the possibility of the two buildings being the same, contends that Hiuen Tsiang's description does not agree (ii. 117 ff.).

[4] *Gayā Gazetteer*, 52. The account of the temple immediately following is taken from p. 51 of the same work.

Literature on Mahābodhi. — Buchanan-Hamilton, *ap.* Martin's *Eastern India*, as above; *Archæol. Survey of India*, esp. vols. i. iii. xi. and xvi. (Preface) (Cunningham), and viii. (Beglar), Calcutta, 1871, 1873, 1880, 1883, and 1878 respectively; Rājendralāla Mitra, *Buddha Gayā*, as above; A. Cunningham, *Mahābodhi, or The Great Buddhist Temple under the Bodhi Tree at Buddha Gayā*, London, 1892; L. S. S. O'Malley, *Gazetteer of Gayā*, as above; T. Bloch, 'Notes on Bodh Gayā,' in *Rep. Arch. Surv. Ind. 1908–9*, Calcutta, 1912, pp. 130–158. The travels of Fa Hian and Hiuen Tsiang should also be consulted. The editions referred to are S. Beal, *Si-yu-ki, Buddhist Records of the Western World*, London, 1884, for both; and T. Watters, *On Yuan Chwang's Travels in India (629–645 A.D.)*, do. 1904–05, for Hiuen Tsiang (Yuan Chwang).

8. **Other sacred places.**—The District is so covered with sacred spots, nearly all of great antiquarian interest, that only a selection of the more important can be mentioned here. Amongst the Hindu sacred places may be mentioned the temples of Deo, Umgā, and Konch. In Deo, which is about 40 miles S.W. of Gayā Town, there is a fine temple built of cut stone without cement, and sacred to the sun, dating from the 15th century. Six miles distant, at Umgā,[1] which was formerly the head-quarters of the present Rājā of Deo's family, there is another very similar temple now in ruins. It was built A.D. 1439, and was dedicated to the Vaiṣnava deities Jagannātha, Balabhadra, and Subhadrā. The temple at Konch, about 20 miles N.W. of Gayā, is of brick, and is lighted by a tall opening in front formed with overlapping courses of brick, after the fashion of the Mahābodhi temple. In general appearance, however, it is more in the style of the Deo and Umgā buildings, and probably dates from the same period. According to orthodox Hinduism, the name of the ninth of the ten great incarnations of Viṣnu is the Buddha. The merciful and gracious Viṣnu took this form to secure the damnation of heretics by leading them still further astray. Curiously enough, in this temple there is a carving representing the ten incarnations, in which the Buddha incarnation is omitted, the total of ten being made up by dividing the fifth, or dwarf, incarnation into two scenes.

About thirty miles east of Gayā, at Sītāmaṛhī, there is a notable isolated boulder, in which has been hollowed out a small chamber 16 ft. long by 11 ft. wide. The interior is highly polished, and contains several sculptures. It is said to have been the residence of Sītā, the wife of Rāma Chandra, during her exile; and here her son Lava was born. The rock-cave was constructed for her by Viśvakarman, the architect of the gods, at the request of the poet Vālmīki, the author of the *Rāmāyaṇa*. He lived at the neighbouring village of Bārat. The wide high level ground near the boulder is said to have been the field of the battle fought by Lava and his brother Kuśa against Rāma's army. This is not the only site connected with the Rāma saga. Some twenty miles to the S.E. of Sītāmaṛhī lies the romantic Singar valley. Here, on the mountain of Sringirikh, was the home of the saint Ṛiṣya-śriṅga. The legend regarding him is long and fantastically poetical. In this place it is sufficient to say that he ultimately married Sāntā, the daughter of King Daśaratha, and performed the sacrifice for his father-in-law that brought about the birth of Rāma.

For Buddhistical remains we may first mention the Barābar Hills, about 16 miles north of Gayā. Here there are seven artificial caves or chambers hewn out of the solid rock. Inscriptions show that four of them were excavated by Aśoka, and three about 231 B.C. by his grandson Daśaratha, for the use of ascetics called Ājīvikas. It has not been definitely settled who these people were.

[1] See Kittoe, in *JASBe* xvi. [1847] 656 and 1221; *Rep. Arch. Surv. Ind.* xi. [1880] 140.

They may have been Hindu Vaiṣṇavas, or Jains, or Buddhists.[1] Most of the caves have been left in the rough, with the marks of the chisel still visible, but in one or two the surface inside is highly polished, and there are handsome carved entrances. Near the Barābar Hills are Dharāwaṭ, the site of the Buddhist monastery of Guṇamatī, and the lofty Kauwāḍol Hill, at the foot of which lay the monastery of Śīlabhadra. Both were visited by Hiuen Tsiang in the 7th century.[2] Rājagriha, the old capital of Magadha, where the Buddha lived and preached for many years, is just beyond the border, in the Patna District, but in Gayā there is the Jeṭhian Valley leading into it. This is full of remains, and many legends of the Buddha are connected with it. The name is a corruption of *Yaṣṭivana*, or the forest of the staff, so called from a bamboo staff which was used to measure the Teacher's body, and then took root and developed into a forest. Hiuen Tsiang has left a detailed account of the locality and of the associated legends.[3]

The Kukkuṭapāda Giri, or Cock's-foot Hill, is another site mentioned by Hiuen Tsiang.[4] Here Mahā-Kaśyapa, one of the earliest and greatest of the Buddha's disciples, lies buried, the mountain having cleft asunder to receive him. Here the Saint sleeps, awaiting his resurrection, when the coming Buddha, Maitreya, shall arouse him and cause him to enter into *nirvāṇa*. Three different places have been suggested as the site, and Stein's identification[5] of the Hasrā Hill, about 12 miles east of Gayā, is the one which is now generally accepted. There are many other Buddhist sites of great archæological and historical interest in the District, regarding which reference must be made to the authorities quoted at the end of this article.

9. Popular religion and folklore.—The popular religion of Gayā does not differ in its general character from that of the rest of Bengal (see *ERE* ii. 482 ff.). Uneducated Hindus and Musalmāns alike have a whole pantheon of village godlings, ghosts, and malignant spirits, whom they worship, or, when occasion arises, exorcize. As for Hindus, the elastic nature of the orthodox form of belief allows all these to be included in the religious system. There are practically no traces of Buddhism, although the present writer, in the year 1891, found a few ignorant villagers in the north of the District who worshipped a certain 'Baudh Deo' (Skr. *Bauddha Deva*), whom the educated clerks in charge of the census then being carried out identified with the Buddha incarnation of Viṣṇu.[6]

We have seen (p. 183[b]) how Hinduism has absorbed a part of the folk-religion of demon-worship into the official cult at Rām Silā and Pret Silā. On the other hand, the Buddhist images and broken sculptures which can be dug up in most villages in Magah have been utilized by the common folk as idols, representing in each case any particular god or godling with whom the superstition of the finder wished it to be identified. As a good example, in the early nineties the writer discovered a fine image of the Buddha buried in the ruins of Rājagṛiha. After cleansing it from the encrusted earth, he sent it off to his camp in charge of a village watchman of the Dusādh caste. When he himself returned to his camp in the evening he found the sculpture covered with a mess of oil and vermilion. On inquiry, he learnt that on the way to camp the watchman had made up his mind that it was an image of his tribal godling, had set it up *en route*, anointed and worshipped it, and made oblations to it.

Evil spirits, called *bhūt* and *ḍāṅk*, are worshipped with intent to propitiate. If properly treated, they are useful as field-guardians, striking with disease any one who pilfers crops under their protection. In the jungle-covered Rāmgaṛh, such spirits have a market value, and an *ojhā* (Skr. *upādhyāya*), or wizard-exorcist, will charge a good price for such a one safely shut up in a bamboo bottle and delivered to a low-caste cultivator. Most of these maleficent spirits are ghosts of some one who has come to an untimely end. Sometimes they enter into and possess a man or woman, and the services of an *ojhā* are required to expel them. Cf. DEMONS AND SPIRITS (Indian), vol. iv. p. 607[a].

Several of the castes worship deified heroes, each having its own. Thus, the Bhogtās worship Bān Singh; the Dusādhs, Goraiyā and Sālhes; and the Goālās, Lorik. The last two are the subjects of folk-epics of great interest. Sālhes was the great Master-Watchman, who conquered Chuhaṛ Māl, the corresponding Master-Thief. Dusādhs themselves are usually either thieves or watchmen. The epic of Lorik is of interminable length, and his exploits were not confined to Gayā. He was an Indian Paris who carried off a dusky Helen, and ultimately became a just and powerful ruler. He conquered Sālhes, here a thief, and ended his days at Benares, where, with the members of his family, he was turned into stone. He is also localized and sung of by Goālās in other neighbouring districts, such as Shāhābād, Mīrzāpur, and Balīā.[1]

Musalmān villagers also have their own godlings. The most famous are the five *Pīrs*, worshipped all over northern India. These are, properly, the five Holy Persons of Islām,—Muḥammad, 'Alī, Fāṭima, Ḥasan, and Ḥusain,—but practically they mean any five saints whom a man remembers or worships.[2] All that is required is that a *Pīr* must be a holy man, and that he has departed this life. Another Musalmān saint of wide celebrity, Chānd Saudāgar, is said to be buried at Dariyāpur Pārbatī, in the north-east of the District. The shrine at which he is worshipped is on the site of an ancient Buddhist *stūpa*, probably that erected by Aśoka to commemorate one of the Buddha's miracles.[3]

Other mythical personages are also worshipped by Musalmāns. Amongst them we may mention Shaikh Saddū, a sort of Aladdin, who found a wondrous lamp that controlled genii, and who lost his life through its misuse. Kamālo Bībī, a female saint, who is said to have lived in the time of a Buddhist Rājā Kanaka, and regarding whom many wondrous miracles are reported, is specially worshipped by women who desire offspring; but Hindus and Musalmāns of both sexes resort to her shrine for exorcism or the cure of any disease.[4]

More distinctly Hindu is the worship of Sulṭān Shāhid. Both Musalmāns and low-caste Hindus pay adoration to him. His shrine is commonly close to a temple of the Hindu goddess Devī, and cocks are offered in his honour before the worship of Hindus directed to her. Some regard him as the bodyguard, and others as the paramour, of Devī.[5]

[1] See G. Bühler, in *IA* xx. [1891] 361 ff. Bühler, following Kern, considered them to be Vaiṣṇavas; see, further, art. ĀJĪVIKAS. K. B. Pāthak (*IA* xli. [1912] 88 ff.) shows that Jains considered them to be Buddhists. D. R. Bhandarkar, with whom the present writer agrees, maintains (*JRASBo* xxi. 403 ff.) that they were a distinct sect, neither Buddhist nor Jain.

General Literature regarding Gayā District.—Buchanan-Hamilton, *ap.* Martin's *Eastern India*, as above, vol. i., London, 1838; *Archæological Survey of India*, vols. i. iii. viii. xv. and xvi., Calcutta, 1871, 1873, 1878, 1882, and 1883 (vol. viii., by Beglar, is specially full of information, and contains an immense amount of folklore); G. A. Grierson, *Notes on the District of Gayā*, Calcutta, 1893 (the author does not now maintain the correctness of the economic chapters of this work, which are out of date); L. S. S. O'Malley, *Gazetteer of Gayā*, as above.

G. A. Grierson.

GAYATRĪ.—See Hymns (Vedic).

GEHENNA.—See Eschatology.

GENIZAH.—The name of the room in which damaged manuscripts of the Bible or other writings withdrawn from use are preserved, as well as a collective term for the writings so preserved. The substantive *gᵉnīzāh* signifies properly the act of preserving, as *nomen actionis* to the verb *gānaz*, and occurs in the ancient Jewish literature which has been handed down to us only in the collocation *bēth-gᵉnīzāh*, with which (in the meaning 'treasure-house') an old Tannaitic note explains the word *yēḥāsēn* in Is 23[18] (see *Pesaḥim*, 118*b*). *Bēth-gᵉnīzāh* is the same as Aram. *bēth-ginzīn* (Ezr 5[17] 6[1]), from which the New Hebrew word *bēth-gᵉnāzīn* is derived (occurring in many passages of the Bab. Talmud: *Shabb.* 10*b*, 105*b*; *Pesaḥ.* 119*a*; *Kethub.* 111*b*; *Sanhed.* 104*a*, 109*a*). The verb *gānaz* means 'to *conceal* something,' 'to *preserve* carefully,' as one preserves things of value or treasures. In the Hālākhā (the tradition of religious law) the verb is applied to describe the laying aside and concealing of such sacred objects as for some reason or other can no longer be used but may not be destroyed. In order to prevent such objects from being profaned, they must be carefully concealed and preserved. In the instructions on the subject, the expression used is *gōnᵉzīn*, or in the passive *yiggānēz* or *ṭa'ūn* (plural *ṭᵉ'ūnīn*) *gᵉnīzāh* ('marked for preservation'). Besides the instructions of the Hālākhā there are also reports, partly of a historical and partly of a legendary character, which—with the use of the verb *gānaz*—relate of certain articles that they were 'concealed.' The Hasmonæans, when they purified the temple, concealed the stones of the desecrated altar in one of the temple chambers (M. *Middoth* i. 6); it is the same fact which is mentioned in 1 Mac 4[46]. (According to Tosefta, *Megilla* iv. 15, the stones of the temple building which had become worn were concealed.) According to a tradition of a priestly family, there was a room in the temple where the sacred ark was concealed (M. *Shᵉqālīm* vi. 1, 2). It was said that king Josiah, in order to prevent the ark from being carried away to Babylon, concealed it, and 2 Ch 35[3] was adduced in support of this view (Tos. *Soṭa* xiii. 1; *Yoma*, 52*b*, and elsewhere). In connexion with this view it was also asserted that the tent of meeting, *i.e.* the sanctuary erected by Moses, was concealed at the building of Solomon's temple (Tos. *Soṭa*, *ib.*). According to the view expressed by the Palestinian Jews in the writing at the beginning of 2 Mac (2[5]), it was not King Josiah, but the prophet Jeremiah (cf. Jer 3[16]), who concealed the ark, along with the tent and the altar of incense, and in fact hid them in a cave on the mountain (Nebo) which Moses had ascended before his death. In the same source we read too (1[33]) that at the destruction of the first temple the priests, before they went into captivity, had concealed the fire of the altar. Here the Greek word used (*ἀπέκρυψαν*) is the same as we find in *Apocrypha*, and corresponds to the Hebrew *gānaz*. The information supplied by a well-known Tannaitic reporter, Abba Saul, seems quite credible, namely, that a sacrificial knife, which had become notched and unfit for killing the sacrificial animals, was concealed in accordance with a resolution of the priests (*Zebāḥīm*, 88*a*). In an old commentary on Lv 16[23] we are told that the linen garments worn by the high priest on the Day of Atonement must be concealed and not used again on the next Day of Atonement (*Sifra*, *l.c.* 82*c*, ed. Weiss; *Pesaḥim*, 26*a*, etc.). The command to conceal is especially emphasized with reference to the written text of the Bible and the writing of the Divine name. Those copies of the Bible which present an abnormal form of letters, or in which the sections are not divided in the traditional way, or in which portions of the text which ought to be written in *stichoi* are written continuously and inversely, are to be concealed as well as those in the preparation of which the prescribed ink was not used or in which the Divine names were written in gold (*Sifre* on Dt 6[9]; Bar. *Shabb.* 103*b*). It is also related (*Sopherim* i. 10) that the scribes ordered a manuscript belonging to a certain Alexander (*v.l.* 'the Alexandrians'), which had been shown to them and which had the Divine names written in gold, to be concealed. The command to conceal refers also to copies of the Bible which a heathen had written (*Giṭṭin*, 45*b*), to remnants of those copies which had been eaten by cockroaches (M. *Shabb.* ix. 6), and to covers and holders which had been used to preserve Bibles (*Megilla*, 26*b*). Many other objects of this kind which had served a sacred purpose (*tashmishē qᵉdushsha*), as, *e.g.*, the bands of the phylacteries, were concealed (*ib.*). If a heathen offered a beam of wood for the purpose of building a synagogue, and the dedication with the name of God was written on the beam, then the part containing the name of God must be cut out and concealed (Tos. *Megilla* iii. 15; *'Arakhin*, 6*a*). The same instruction applies to stones on which the name of God is written (Mas. *Sopherim*, v. 13), to handles of house utensils, or the feet of bedsteads on which the Divine name had been inscribed (*Shabb.* 61*b*; *'Arakhin*, 6*a*). Other instructions belonging to the casuistry of the Tannaim on this subject, as it meets us in the Hālākhā, are the following. If a wife suspected of unfaithfulness refuses to drink the 'bitter water that causeth the curse' prescribed for her in Nu 5[17ff.], then the roll on which the words of cursing are written (5[23]) must be concealed and not used on another occasion (M. *Soṭa* iii. 3). If the whole property of a city which has gone over to idolatry (Dt 13[12ff.]) is given up to destruction, then the tenth of all that is found in it as well as the copies of the Bible must be concealed (*Sanhed.* 112*b*). From the casuistry of the 'Amoraim we have the decision that a roll of the Pentateuch which had on every page (column) three errors must be hidden (*Menaḥoth*, 29*b*). With regard to sacred books written in any other language than Hebrew, the Tannaitic tradition tells us (M. *Shabb.* xvi. 1) that they must be concealed. That is a command which is to be treated with the same consideration as the prohibition of the use of written translations of the Bible, which, in fact, remained only theory, like the prohibition of fixing the oral tradition in writing. But, as an ancient piece of evidence for that command, the instance of Gamaliel I. is adduced (Tos. *Shabb.* xiv. 12; Bar. *Shabb.* 115*a*), who ordered a Job Targum, which was laid before him as he stood on the temple mountain, to be walled into a layer of stone (*nidbāk*) which was just at the moment being laid. His grandson, Gamaliel II., after he had heard of the action of his grandfather, as he on one occasion read the Job Targum in Tiberias, caused it also to be placed in concealment (*ib.*). This double anecdote shows us, first of all, how this 'concealing' of books was at times carried out, but also that the books so removed from use were preserved in other copies, and that the fact of their concealment was often

forgotten. Regarding the intentional 'concealment' of individual books of the Bible, we possess definite information about the prophecy of Ezekiel (*Shabb.* 13*b*) and the writings of Solomon (Proverbs [*Shabb.* 30*b*]; Qoheleth [*ib.*, *Leviticus Rabba*, c. 25 *ad init. Qoh. R.* to 1^2 and 11^9]; both along with Canticles [*Aboth of R. Nathan*, c. i.]). In the last-mentioned source (ed. Schechter, p. 2) the tradition held by Abba Saul, the Tannaitic teacher already referred to, is as follows: 'In the beginning people said that Proverbs, Canticles, and Ecclesiastes were "concealed" (*gᵉnûzîm*), because they were only fictions and did not belong to the Holy Scriptures, and for this reason they ought to be concealed. It was the men of the Great Synagogue who first came and, by means of their explanation of those passages of these books which gave offence, brought it about that they were again received among the sacred writings.' This tradition is the only one in which the expression *gᵉnûzîm* (=Apocrypha) occurs as the term for such writings as are no longer in use. King Hezekiah is praised for having concealed a 'book of means of healing' (M. *Pesaḥim* vi. 56*a*; *Berakh.* 10*b*; cf. Jerus. *Sanhed.* 18^3). Regarding the 'Book of the Genealogies,' which, according to *Pesaḥim* (62*b*), was 'concealed,' see Schechter in *ExpT* xvi. (1905) 186. In relation to the Apocrypha of the OT, especially the Book of Sirach, which alone is mentioned in the Jewish traditional literature, there is no mention in the Tannaitic sources that it had been 'concealed.' But the Amora Joseph (head of the school of Pambeditha, who died 333) speaks expressly of the fact that the scribes (the old authorities) have 'concealed' (*gānᵉzú*) the Book of the Son of Sira (*Sanhed.* 100*b*; see *ExpT* xvi. 236).

No particulars regarding the act—how the 'concealment' of sacred writings no longer in use and of fragments of the text was to be carried out—are contained in the traditions either of the Tannaim or of the 'Amoraim. Only a 4th cent. utterance of a Babylonian authority (Raba) is preserved, according to which a Pentateuch roll, which through age had become unfit for use, was concealed by placing it beside a scholar in his grave. Another of the Babylonian 'Amoraim (Aḥa b. Jacob) remarks in reference to this, in connexion with Jer 32^{14}, that it was done by previously placing the roll in an earthen vessel (*Megilla*, 26*b*). On the authority of these two statements, the following precept is accepted in the Codex of Maimonides (*Mish. Torah, Hilkh. Sefer Torah* x. 3): 'A Pentateuch roll which has become old or unfit for use is to be laid in an earthen vessel and buried beside a scholar. In this consists its concealment' (*gᵉnîzātāh*). This has been verbally carried over into the Codex of Joseph Karo (*Yoreh Deʿah*, ch. 282, § 10).

The practice of the Jewish congregations had so developed that not only Bible manuscripts (and in later times printed Bibles) which had become unfit for use, but all Hebrew writings or fragments of these, as soon as they were useless, were brought to some room or other in the synagogue-building which was difficult to reach, and in this way preserved from profanation. Since the special aim here in view was to protect the Divine names contained in these hidden writings, the whole of the latter came to be called *Shēmôth* ('Names,' *i.e.* Divine names). From time to time the contents of the Genizah, in accordance with the instruction mentioned above, were deposited in the cemetery. That takes place still with great pomp—*e.g.* in Jerusalem. In the *Revue des Écoles de l'Alliance Israélite*, 1901 (p. 103), there is an article on the burying of the Genizah which took place in Rustchuk (Bulgaria) in April of the same year:

'A large tent is erected in the cemetery; several rows of chairs are placed before the tent, in the neighbourhood of an erection after the form of a holy ark. Into this, after a sermon by the Rabbi, there are brought about two hundred small sacks, containing the writings which are to be buried. Then the right to take part in the burial is put up for auction among those assembled. Thereafter each carries his sack, and lays it into a grave which has been previously prepared. Then the grave is covered in, and receives later a monument with the inscription: "Genizah of the year 1901, Rustchuk."'

Regarding similar burials of the contents of the Genizah in the Jewish congregations of the East or of North Africa, see *JE* v. 613.

The instruction to bury the Genizah was, however, not always or in all places carried out. And so the Genizah has been preserved which in our day, like a real treasure-house, has disclosed its riches in precious remnants of the ancient Jewish literature—the Genizah of the ancient Ezra synagogue in Cairo. It was discovered in 1864 by the learned Jewish traveller, Jacob Saphir (see his book of travels, *Eben Sappir*, Lyck, 1866, p. 21*b*), who, however, had no idea of the importance of his discovery, and took with him only a few worthless leaves. Elkan N. Adler, too, who in 1888 visited the synagogue, did not succeed in getting the Genizah opened. A. H. Sayce was the first who succeeded in securing a considerable amount from the Cairo Genizah, after a part of the contents of the same had in the meantime, on the occasion of the synagogue undergoing repairs, been taken out and buried. This circumstance brought it about that, even before the whole Genizah was taken out by Schechter, many parts of it were offered for sale in Egypt. Among the parts purchased by the learned sisters Mrs. Lewis and Mrs. Gibson was that fragment which was recognized on 13th May 1896 by Schechter's acuteness as belonging to the Hebrew original of Sirach, and thus in so unexpected a way prepared for the rediscovery of this original. It was Schechter, too, who in 1897 went to Egypt, and, being authorized by the Jewish congregation there, removed the whole Genizah from Cairo, and brought these fragmentary manuscripts, whose value cannot be overestimated, to Cambridge. Under the name of the 'Taylor-Schechter Collection' this unique collection is now the glory of the Cambridge University Library. Many parts of the Cairo Genizah, some earlier, and some later, came into other public libraries, particularly the Bodleian in Oxford, as well as into the hands of individual scholars and collectors in Europe and America.

The whole riches of the Genizah fragments will not be fully discovered till the Taylor-Schechter Collection has been completely catalogued. It is expected to cast a new light upon large departments of Jewish literature, and to increase in an unusual degree the material for the history of the literature and the culture of Judaism. The portions of these fragments which have already been published show us how they are fitted to enrich and deepen our knowledge. The discovery of the Hebrew Sirach, which was due to them, has already been mentioned. The fragments are particularly rich in literature of the Gaonitic period, both in Hebrew and in Arabic, some very important pieces being extant. A great deal coming from Saadya himself, or relating to him and his time, has been published by Schechter, under the general title 'Saadyana,' in the *JQR* (also published separately, Cambridge, 1903). This periodical has, since the year 1896, given us very remarkable and interesting selections from the Genizah fragments, sometimes with facsimiles, and including specimens of the handwriting of Moses Maimonides. With regard to the Arabic portion of the Cairo Genizah in Cambridge, H. Hirschfeld commenced in January 1903 (*JQR* xv. 167 ff.) to publish immensely valuable communications. From his introductory

remarks on this part of the Cairo Genizah the following details, indicative of its contents, are supplied:

'Roughly estimated, they [the Arabic fragments] count about 12,000, mostly written on paper, but many (about one-fourth) on vellum. . . . At first sight it seemed advisable to divide the whole mass into two large sections, viz. those written in Hebrew characters, and those written in Arabic script. . . . The following is an alphabetical list of subjects ascertained up to the present: Astronomy and Astrology, Bible (text, translation, and commentaries), Bills and Accounts, Calendar, Children's exercises, Cufic pieces, Documents, Dreams (interpretation of), Fiction, Geography, Grammar, History, Homilies, Legends, Letters, Lexicography, Liturgy, Māsōrāh, Mathematics, Medicine, Midrash, Mohammedan Tradition, Natural History, Philosophy, Poetry, Polemics, Polite Literature (*Adab*), Proverbs, Qabbālāh, Qaraites, Qorān, Responsa, Ṣūfism, Talmud and Rabbinics.'

To complete this list, we call attention to another remark in Hirschfeld's introduction, that among the Arabic fragments of the Cairo Genizah there are many containing Muhammadan texts in the Hebrew script as well as Hebrew texts in Arabic script. This shows us to how great an extent the Jews of Egypt—from whose midst the greater part of these fragments has come—had adopted the Arabic culture of their environment.

Apart from the MSS fragments, which for the most part were brought to Cambridge, there are also in the Cairo Genizah fragments of very ancient Hebrew printing, from which important information was gathered as to the history of Hebrew typography as well as contributions to Hebrew bibliography. Elkan N. Adler reports, as a result of personal observation, on the Genizahs of some other ancient synagogues (Feodosia in the Crimea, Bukhara, Teheran, Aleppo), in art. 'Genizah,' in the *JE* (v. 613).

GHAIR MAHDĪ.—'Ghair Mahdī' (lit. 'not [expecting a] Mahdī') is the name given to those sectarian groups in Indian Islām whose adherents believe that the Mahdī (*q.v.*)—the promised Messiah of the Muslims—has already come, and that, accordingly, the hopes which centre in the future advent of such a Divine messenger are now groundless and futile. Thus, in the District of Kirmān, Baluchistān, there still survives the tradition of an Indian Mahdī, Muhammad of Jaunpūr, who, it is said, appeared about the end of the 15th cent., was persecuted and expelled from India by the orthodox, and, after many wanderings, died in the valley of Helmend in 1505. In contrast to the orthodox—the Namāzī, *i.e.* those who observe the traditional *ṣalāt*-ritual—believers in this Mahdī call themselves 'Dhikrī' *i.e.* those who give preference to a kind of *dhikr* for the *ṣalāt*. Another sect of similar character is called 'Dā'ire wāle'; they live in the province of Mysore, and their faith is bound up with a Mahdī who appeared over four hundred years ago. In the 'night of destiny' (*lailat al-qadr*), hallowed in Muslim tradition,—the 27th of Ramaḍān,—they erect a stone-circle (*dā'ira*, 'circular wall'), within which they perform their peculiar ritual; and it is from this ritual of the *dā'ira* that their distinctive name is derived.

These Ghair-Mahdī sects display an intensely fanatical spirit towards orthodox Muslims, and, in fact, regard them as unbelievers. Their creed ends with the words: 'The Imām Mahdī has come and has gone away; whoso believeth not this is a *kāfir*'; and they find support for this article in the *ḥadīth*-saying, *man kadhdhaba bi-l-mahdī faqad kafara* ('he who denies the Mahdī is thereby an unbeliever'). Sell is undoubtedly right in holding that the Mahdist pretensions of the 10th cent. A.H. were an outcome of millenarian expectations, and purported to be a fulfilment thereof. The rise of the sects which thus stigmatized all other Muslims as heretics is the subject of a *fatwā*, given by Ibn Ḥajar al-Haitamī († A.H. 973=A.D. 1505) against them, in which he called upon the Muslim authorities to take drastic measures against their adherents.

GIANTS.—At the present day there is no human race of 'giants,' taking that word to denote men greatly above the average human stature. There are, indeed, families or groups of exceptional height. In his *Anthropological History of Europe* (Paisley, 1912, p. 168 f.) John Beddoe observes, selecting Scotland as the home of the tallest Europeans:

'The men of the Merse are among the finest in Britain. Probably the average stature is about 5 feet 9 inches (1752 millimeters): the fishermen are not so tall as the peasantry, but 25 of the latter, of pure local descent, who were measured and weighed by Dr. Charles Stewart of Chirnside, yielded the remarkable average of 5 feet 10½ inches in stature (1784 millimeters), and 199 pounds in weight. Here the weight exceeds, though the stature falls short of, the huge proportions of the men of Balmaclellan in Upper Galloway, who as yet, I believe, hold the record as to stature among all tested communities in Europe.'

As Beddoe places the average height of the Balmaclellan men at 5 ft. 10·46 in., or nearly 1790 mm., that may be taken as the highest stature of any race in Europe—leaving out of consideration the exceptional cases of individuals whose height is greatly above that of their kinsmen. Probably, also, the figures just quoted represent the maximum average height of any human family. The Tehuelches of Patagonia, although long regarded as of gigantic stature, are now ascertained to possess an average male height of 5 ft. 10 in., or 1778 mm. Some individuals among them are as tall as 6 ft. 4 in., or 1930 mm., but the same thing can be said of other races. The statements made by Bourne cannot be quite ignored, but the subsequent information supplied by more accurate observers points to exaggeration on his part. He thus describes the Patagonian natives:

'In person they are large; on first sight, they appear absolutely gigantic. They are taller than any other race I have seen, though it is impossible to give any accurate description. The only standard of measurement I had was my own height, which is about five feet ten inches. I could stand very easily under the arms of many of them, and all the men were at least a head taller than myself. Their average height, I should think, is nearly six and a half feet, and there were specimens that were little less than seven feet high.'[1]

[1] *The Giants of Patagonia: Captain Bourne's Account of his Captivity amongst the extraordinary Savages of Patagonia*, London, 1853, p. 29.

It is possible that at the time of Bourne's captivity (1849) a sub-division of the Tehuelches contained a larger proportion of tall men than can now be seen in any Patagonian tribe. His statements are very explicit, and he undoubtedly indicates a race exceeding, by several inches, the Balmaclellan men reported to us by Beddoe, even if some allowance is made for exaggeration on the part of Bourne. In any case, however, the alleged stature of those Patagonians is not so much above that of normal Europeans as to entitle them to be seriously spoken of as 'giants.' Nor is there any other human race, existing at the present day, which has a greater claim to that title.

There are, however, many individual instances of abnormal height in modern times. The case of the Russian giant Machnov, who was exhibited in London in 1905, is perhaps the most striking. Although a well-made man, and free from the physical defects which often accompany 'giantism,' Machnov's stature reaches the amazing height of 9 ft. 3 in., or 2819 mm. A famous instance in the 19th cent. is that of Chang, the Chinese giant, who was 7 ft. 9 in., or 2363 mm., in height. Like Machnov, Chang was in all other respects normal, in mind and body. The same cannot be said of the 18th cent. Irish giant Magrath, whose great height (7 ft. 5 in., or 2261 mm.) was due to disease. Magrath lived only to the age of twenty-four, and he had the feeble intellect and figure associated with 'giantism' regarded as a disease.

In his book on *Giants and Dwarfs* (London, 1868), Edward J. Wood gives numerous cases of individuals of giant stature in the past. Thus, he refers to John Middleton, who was born at Hale, Lancashire, about 1572–1578, and who was commonly called 'the Child of Hale.' Middleton's height was exactly the same as that of the 20th cent. Russian Machnov, 9 ft. 3 inches. His portrait is preserved in the library of Brazenose College, Oxford. Then there is a painting by F. Zucchero in Hampton Court Palace, representing a native of the Low Countries who was a household servant of Elizabeth of England, and whose height was 7 ft. 6 inches. Contemporary with him was a Piedmontese seen by Martin del Rio at Rouen, in 1572, who was 9 feet high. In 1581, Stow records in his *Chronicle* a Dutchman whose height was 7 ft. 7 inches.

'Johannes Goropius Becanus, physician to the sister of the Emperor Charles v., in his *Origines Antwerpianae* (1569), and *de Gigantomachia*, attests that he saw a youth nearly 9 feet, and a man almost, and a woman quite, 10 feet in height. The man lived within a few miles of the author's own residence in Flanders' (Wood, p. 94).

In considering the possibility of a woman quite 10 feet in height, one must keep in view the following statement:

'Strype in his *Memorials* tells us that giants were introduced into May games, and that on May 26th, 1555, there was a game in St. Martin's-in-the-Fields (London) with, among other amusements, giants, which were in fact men on stilts' (Wood, p. 94).

This suggests an easy explanation of the great stature of the woman referred to by Becanus, as well as of many other nominal 'giants.' Nevertheless, it will not explain every instance. There is no reason to suppose, for example, that John Middleton, whose portrait is preserved in Oxford, was anything else than a real giant; and, although his height was immense (9 ft. 3 in.), it is exactly paralleled by that of the existing Russian giant Machnov.

With the exception of Magrath, the giants here cited appear to have been quite healthy people. Their great stature was not, therefore, the result of disease. To what cause was it due? The usual explanation is that such abnormal stature is merely caused in the same way as any other exceptional development in the animal or vegetable world; that is, by a favourable environment accompanying a happy combination of elemental forces. On the other hand, it is sometimes maintained that giants and dwarfs, of healthy body and mind, illustrate the atavistic tendency and actually represent a remote ancestor belonging to a very tall or a very small race. The probability of a race of giants having once existed is strongly advocated by Th. Zell, who, indeed, is so firmly convinced upon this point that he considers it beyond dispute. He argues that, assuming the races of average height to represent normal mankind, the fact that dwarf races have existed makes the hypothesis of giant races a necessary complement. He points to the discovery of dwarf skeletons alongside those of a larger race in the Neolithic station at Schweizersbild in Switzerland; and with these might be compared the skeletons found in the caves at Mentone, some of which represent a stature of from 6 to 7 feet, while others, of a very different racial type, show an average height of 4 ft. 6 inches. Zell further argues that, just as the folk-tales concerning dwarfs are now found to have a substantial basis (although with a superstructure of fantasy), so the traditions of cannibal giants are traceable to an actual race of men of primitive type who practised anthropophagy.[1]

There is, at any rate, no doubt that a belief in the former existence of a race of giants is very wide-spread, indeed world-wide. It is quite possible that the origin of this belief dates from the time when two races of markedly different stature, such as those of the Mentone caves, were closely associated together. The memory of the tall race, whose stature might be increasingly exaggerated, would live on among the smaller race, and thus form the basis of many wild and impossible tales. In some cases, however, the tales are not radically incredible. A critical examination of various Hebrew, Greek, and Latin stories of giants seems to disclose nothing more wonderful than exceptionally tall or strong men.

'The Highland giants were not so big but that their conquerors wore their clothes,' observes J. F. Campbell, with reference to the *famhairean* of Gaelic legend; 'they were not so strong that men could not beat them, even by wrestling' (*Popular Tales of the West Highlands*, London, 1860, vol. i. p. xcix). Here there is no indication that the 'giants' in question were even taller than their opponents. Another Gaelic name for 'giants,' *samhanaich*, is similarly pointless, so far as regards stature. The word *samhanaich* is derived from *samh*, a fetid odour, and the people so designated obtained this name on account of their malodorous habits. J. G. Campbell records a West Highland story of a certain Tuairisgeul Mór, whom he describes as 'a giant of the kind called *samhanaich*—that is, one who lived in a cave by the sea-shore, the strongest and coarsest of any.' He adds: 'It is a common expression to say of any strong offensive smell, *mharbhadh e na samhanaich*, "it would kill the giants who dwell in caves by the sea."'[2]

Now, McAlpine, in his *Gaelic Dictionary*, translates *samhanaich* by 'savages,' and quotes a proverbial saying in which the word is introduced with this meaning—'you would frighten the very savages.' We have here a word, therefore, which in the opinion of one scholar indicates a race of malodorous savages, without any reference to stature, while another scholar understands that these savages were giants. Even the latter term, however, does not necessarily imply great stature. The large block of stone in the island of Hoy, Orkney, which bears the popular name of 'the Dwarfie Stone,' is so called because it was believed, according to one version, to be the home of a dwarf. But a writer of the year 1700[3] states that

[1] See **Zell**, *Polyphem ein Gorilla*, Berlin, 1901, pp. 6 and 10.

[2] *The Scottish Celtic Review*, Glasgow, 1885 pp. 62 and 140 f.

[3] John Brand, *Description of Orkney, etc.*, reprinted at Edinburgh, 1883, p. 63.

'the common tradition among the people is that a giant with his wife lived in this isle of Hoy, who had this stone for their castle.' As the hollowed-out chamber, or bedroom, in which this giant was supposed to lie, is only 5 ft. 8 in. long, it is obvious that the word 'giant' did not convey the idea of a person of tall stature, in the minds of the common people. A similar problem is presented by the Gaelic word *famhair*, or *fomhair*, which J. F. Campbell and other translators of Scottish Highland tales render by the English word 'giant.' But O'Reilly, in his *Irish Dictionary*, defines it as 'a pirate, a sea robber, a giant.' The Irish forms of the word are *fomhor*, or *fomor*, with plural *fomori*. Sir John Rhys speaks of

'the *fomori*, so well known in Irish legend, which, however, does not always represent them as giants, but rather as monsters.' He further states: 'I remember hearing, however, years ago, a mention made of the *fomhoraigh* [an alternative spelling], which, without conveying any definite allusion to their stature, associated them with subterranean places. An undergraduate from the neighbourhood of Killorglin, in Kerry, happened to relate in my hearing how, when he was exploring some underground *raths* near his home, he was warned by his father's workmen to beware of the *fomhoraigh*.'[1]

When it is understood that the dimensions of the underground structures referred to are often so low and narrow that large men have difficulty in entering them, it will be seen that here, again, we have the idea of 'giants' whose stature did not exceed that of medium-sized men. In modern Gaelic the word *famhair* (literally, 'mole-man,' or 'mole-fellow') is used to denote a mole-catcher, *famh* signifying 'mole'; and it is not unlikely that, in the old legends, it was a contemptuous nickname, given to a race of 'mole-men,' the builders and occupants of the underground dwellings, of which numerous specimens are still extant in Ireland and Scotland. Be this as it may, the foregoing references show that in Scottish and Irish tradition 'giants' are frequently noted, not for their great stature, but as being pirates, sea-robbers, cave-dwellers, savages, and offensively-smelling people. Cf. art. CELTS, iii. 281.

That giants were regarded in some vague way as abnormal is further indicated by Teutonic references. The Old Norse *iötunn* or *jotun*, Swedish *jätte*, Anglo-Saxon *eoten*, Scottish *etin* or *ettin*, represents a being whose attributes are only partly human. In the translations of the Scandinavian Eddas, where the *jotuns* occupy a prominent place, their name is usually rendered by 'giant' (Lat. *gigas*). Like the Irish *fomori*, they are associated with subterranean buildings. '*Etenes* bi old dayn had wrought it,' was said of the underground house wherein Tristan and Isolde lay (*Tristrem*, 3, 17). Grimm states that the *jotun*, 'when at rest, is good-humoured and unhandy, but, when provoked, gets wild, spiteful, and violent' (ii. 530). The *jotun-móþer*, or rage of the *jotuns*, is strongly suggestive of the 'Berserk-fury.' Grimm further points out (iv. 1441) that one passage (*Saem.* 55*a*) describes the *jotun* as a pithecoid being, '*áttrunnr apa*, simiarum cognatus.' The Red Etin of Northern Scotland is similarly remembered as a savage cannibal, scarcely human. Under other names, the 'giants' of Teutonic and Scandinavian tradition are intellectually inferior to men, Gothic *tumbo*, 'giant,' being translated by Latin *stupidus*. From many sides, therefore, there are indications that 'giants' differed from men chiefly on account of their more brutal nature, the question of stature being frequently left out of consideration.

How complex the evidence relating to giants is may best be realized by examining the data brought together by Jacob Grimm. 'There is no clear line to be drawn between giants and the wild hairy woodsprites,' he observes in one place (ii. 553); while on another page (ii. 536) he speaks of 'a giantess or merwoman,' as though these two names were synonymous. Many of his statements support the view that the giants of Europe were a primitive race that preceded the modern European:

'The old giant race have to give way to agricultural man, agriculture is an eye-sore to them' (ii. 540). 'Eaters of flesh give place to sowers of corn, hunters to husbandmen. Giants consider themselves the old masters of the land, live up in the castle, and look down upon the peasant' (iv. 1445).

In pointing out their similarity to the 'wild hairy woodsprites,' he further remarks (ii. 553):

'In the woods of the Bingenheim Mark are seen the stone seats of the wild folk who once lived there, and the print of their hands on the stones. In the vale of Gastein, says Muchar (p. 137), wild men have lived within the memory of man, but the breed has died out since. . . . Their strength was gigantic. . . . Their dwelling was an inaccessible cavern on the left bank of the Ache, at the entrance to the Klamm. . . . To the inhabitants of the valley they were rather friendly than otherwise, and often put a quantity of butter and milk before their house-doors. This last feature,' he adds, 'is more of a piece with the habits of dwarfs and elves than of giants.'

The mention of the stone seats of those wild folk accords well with the ascription to giants of numerous stone structures of primitive character which are found throughout Europe. The names *enta burg*, *risôn burg*, and *Hünen wälle*, all denote giants' castles, and the Gaelic term *caiseal na fian*, found in Scotland, has the same meaning. It is of much significance that such names are specially, perhaps exclusively, associated with buildings of the character known as 'cyclopean,' in which the chief features are: the rudeness and size of the stones, the absence of mortar, and the use of the 'false' arch instead of the true or 'Roman' arch. The former is made by approaching the upper courses of the opposing walls together until the space between them is narrow enough to admit of large flag-stones being superimposed. Architecture of this kind is found in Palestine, Greece, Malta,[1] Sardinia, the Balearic Isles, and Scotland, its most striking manifestation being displayed in the three localities last named, in the form of the massive circular towers known respectively as *nurags* or *nuraghé*, *talayots*, and *brochs*. No fewer than 3000 of these towers are known to have existed in Sardinia, and 500 in Scotland. Besides these towers there are unnumbered megalithic structures above and below ground, of the same general order, not only in the localities just indicated, but throughout the Continent of Europe and in the British Isles. These are known by various names. The remarkable cairns, akin to dolmens, which are found in the province of Drenthe, in the Netherlands, are called *Hünenbetten*, or *Hunebedden*, while the similar structures in North Germany are known as 'Giants' Graves.'[2] There is great difference of opinion as to the age of these structures, some placing them within the Christian era, and others assigning to them a much greater antiquity. The cyclopean buildings in the Levantine region are believed to date from 3000 B.C. On the other hand, the brochs of Scotland are understood to have been built only ten or fifteen centuries ago. Both inferences may be correct, assuming that the more modern structures were built by the modified descendants of a more primitive race. Perhaps the most important point, in connexion with the present theme, is that in Greece, Sardinia, Germany, and the British Isles—presumably elsewhere—the builders of those rude stone structures are often, in popular tradition, regarded as giants. That that word is

[1] Reference may be made to R. N. Bradley's *Malta and the Mediterranean Race*, London, 1912.

[2] For an account of the *Hünenbetten* or *Hunebedden*, and of Hunen-folk associated with them, Grimm (iv. 1438) refers to Janssen's *Drentsche oudheden*, pp. 167–184. Other useful references are Fergusson's *Rude Stone Monuments*, London, 1872, and Munro's 'Megalithic Monuments of Holland,' in *Proc. Soc. Antiq. Scot.*, vol. xviii. [1883–84].

not invariably held to denote people of great stature is shown by the fact that some traditions speak of them as dwarfs.

Nevertheless, there is no doubt that the prevailing opinion with regard to giants is that they were beings of immense stature. It is possible that the term 'giant's grave' might have given rise to this conception. If a long mound of 15 or 20 feet once became known as a giant's grave, then the inevitable deduction would be that a race of men 15 or 20 feet high once existed. Out of this, beings of much greater stature and power might be evolved, in the popular imagination. From whatever cause, the existence of beings of great stature, called 'giants,' was once an article of faith in folklore. Innumerable instances of this might be adduced.

'We are often told,' says Grimm (ii. 543), 'of two giant comrades or neighbours, living on adjacent heights, or on two sides of a river, and holding converse. In Ostergötland, near Tumbo in Ydre-härad, there was a jätte named *Tumme*; when he wished to speak to his chum *Oden* at Hersmala, two or three miles off, he went up a neighbouring hill Högatoft, from which you can see all over Ydre. . . . Two hünes living, one on the Eberstein, the other on Homburg, had but one axe between them to split their wood with. When the Eberstein hüne was going to work, he shouted across to Homburg four miles off, and his friend immediately threw the axe over. . . . The hünes of the Brunsberg and Wiltberg, between Godelheim and Amelunxen, played at bowls together across the Weser.'

The same kind of story is found in other countries. In R. Hunt's *Popular Romances of the West of England* (London, 1865, 1881), he shows that the Cornish people have parallel traditions.

'The giant on the Mount and the giant on Trecrobben Hill were very friendly. They had only one cobbing-hammer between them, which they would throw from one to the other, as either required it.'

This is a Celtic tradition, of the Cymric family. Gaelic tradition in Ireland, Man, and Scotland tells a similar story. Whether those immense and impossible beings are wholly the creatures of popular fancy, or have been gradually evolved from a real basis, is a problem that remains to be solved.

Although certain localities have received special consideration in these remarks, it is not to be supposed that the question can be limited to those regions, or to Europe; for it belongs practically to all countries and all peoples. Hebrew references, for example, are in accord with those of Europe.

Giants in Hebrew story are variously known as Gibborim, Nephilim, Rephaim, Anakim, Emim, and Zamzummim. The first of these terms, *Gibbōrîm*, although translated 'giants' in the Septuagint, is held to mean nothing more than 'strong men,' 'heroes,' or 'warriors.' *Nephîlîm* is a word of wholly uncertain signification. It is applied to an antediluvian race in the well-known passage (Gn 6^4), 'there were giants in the earth in those days'; the word is retained as 'Nephilim' in RV. Most of the English translations have 'giants,' but John Rogers (1537) merely uses 'tyrants.' With regard to the *Rephāîm*, or *Raphāîm*, they are referred to as the descendants of '(the) Rapha,' a Philistine of Gath (2 S 21^{22}). It is not improbable that this Rapha is merely the eponym of the race. During the Philistine wars in the reign of King David, the Rephaim figure prominently, and indeed they are included under the term 'Philistine.' It is recorded that in a battle fought between the Israelites and the Philistines at Gezer, Sibbecai the Hushathite slew Sippai, one of the Rephaim, 'and they were subdued.' Again, in a subsequent campaign, Elhanan the son of Jair slew Lahmi, the brother of Goliath the Gittite, 'the staff of whose spear was like a weaver's beam.' In a third war there figured another of the Rephaim, 'a man of great stature,' distinguished by the peculiarity of having six fingers on each hand and six toes on each foot, who was slain by Jonathan, the son of Shimea, David's brother. These three, Sippai, Lahmi the brother of Goliath, and the unnamed warrior just described, are all said to have been 'born unto the Rapha in Gath.' 'And they fell by the hand of David, and by the hand of his servants' (1 Ch 20^{4-8}). David's famous encounter with Goliath had, of course, preceded these events.

On more than one occasion 'the Valley of the Rephaim,' on the Philistian border, to the west of Jerusalem, was the scene of conflict (2 S $5^{18.22}$). This seems to be 'the valley of the giants' which is referred to in Joshua (15^8 18^{16} AV). 'The land of the Perizzites and of the Rephaim' (Jos 17^{15}), an interesting conjunction of names, seen again in Genesis (15^{20}), indicates the more northern territories of Galilee and Bashan. The reference, however, apparently signifies nothing more than that the Perizzites were neighbours to the Rephaim. But undoubted kinship is shown in the mention of the *Emîm* who preceded the Israelites in Ar of Moab, on the east side of the Dead Sea; for it is stated that 'the Emim dwelt therein aforetime, a people great, and many, and tall, as the Anakim: these also are accounted Rephaim, as the Anakim; but the Moabites call them Emim' (Dt $2^{10f.}$). This statement is repeated, with some amplification, in the same chapter (vv.$^{20.21}$), where it is said of Ar of Moab: 'That also is accounted a land of Rephaim: Rephaim dwelt therein aforetime: but the Ammonites call them Zamzummim; a people great, and many, and tall, as the Anakim; but the Lord destroyed them before them; and they succeeded them, and dwelt in their stead.' In these references (Dt 2) the AV always renders Rephaim by 'giants.' Thus we have the names of Emim, Anakim, and Zamzummim (perhaps the same as *Zuzim*) variously given to tribes of the race of Rephaim, or giants, formerly inhabiting Southern Palestine, the Anakim occupying territory on the western side of the Dead Sea, and the Emim or Zamzummin inhabiting Ar of Moab, on its eastern borders.

The last refuge of the Rephaim was N.E. Palestine, in the land of Bashan. At the time of the Israelite conquest under the leadership of Moses, Bashan was called 'the land of giants' (Dt 3^{13}), and the latest representative of Rephaim sovereignty was Og, king of Bashan; 'for only Og king of Bashan remained of the remnant of the Rephaim.' The great stature attributed to him is demonstrated in these words: 'Behold, his bedstead was a bedstead of iron (is it not in Rabbah of the children of Ammon?), nine cubits was the length thereof, and four cubits the breadth of it, after the cubit of a man' (Dt 3^{11}). It is worth noting that these dimensions are consistent with the height ascribed to Goliath of Gath, which was about 11 feet, or 6 cubits 1 span (1 S 17^4), and that consequently the Rephaim, whether in Bashan or in Philistia, were believed to be of that immense stature. In passing, it may also be remarked that the iron bedstead[1] of the king of the Rephaim, and the iron chariots with which their probable kindred are credited (Jos 17^{16}), point to a civilization superior to that of the Israelites. The same deduction may be made from the statement that the Anakim were, as a nation, 'greater and mightier' than the Israelites, having 'cities great and fenced up to heaven' (Dt $9^{1f.}$). The armour of Goliath—helmet, coat of mail, greaves, and javelin—was all of copper, with the exception of the spear-head, which was apparently of iron. Herein there was no special difference between the champion of the Rephaim and his Jewish opponent, who was similarly equipped. Nevertheless, the Israelites regarded their giant foes as

[1] Unless the meaning be, as many modern commentators think, a sarcophagus of black basalt.

superior to themselves in several of the qualities that imply civilization. This makes it all the more difficult to understand how the Rephaim were eventually conquered and exterminated by the smaller race. Had the former been mere savages, their great bulk and strength would have been of no avail if they had to fight against a people possessed of superior weapons. But, if they were more civilized than the Israelites, as well as much stronger in body, then the Israelitish conquest cannot be easily explained. It may be that the great height attributed to the Rephaim is merely an exaggeration of the Jewish chronicler, anxious to enhance the valiant deeds of his people by magnifying the difficulties which they had to encounter. That the Rephaim were of greater stature than the Israelites may be accepted, but the statements as to their height need not be taken any more literally than the assertion that their cities were 'fenced up to heaven.' Certainly no skeletal remains have been found, in Palestine or elsewhere, which testify to the past existence of a race of men standing 10 or 12 feet high.

It is unnecessary to refer in detail to other stories of giants, in Scandinavian and classic legend. Of these a number are obviously the outcome of imagination, such as the explanation of an earthquake as the movements of 'a giant pulsing under ground,' or the creation of a race of 'frost-giants' to account for the mighty influence of Winter. Cf., further, the following article.

LITERATURE.—This has been indicated in the article.

DAVID MACRITCHIE.

GIANTS (Greek and Roman).—The English word 'giant' is derived from the Greek *γίγας*, plur. *γίγαντες*; and *γίγαντες* was the name of a certain mythological group of beings. There is no mention of Gigantes in the *Iliad*. In the *Odyssey*, the word occurs three times.

(1) In *Od.* vii. 59 the king and queen of the Phaiakes are descended from a daughter of Eurymedon, 'who once was king of the haughty Gigantes; but he brought his infatuated people to destruction, and was himself destroyed.' This genealogy was presumably invented *ad hoc* by the poet; it serves to indicate that his Phaiakes belong to the same order of being as the Gigantes. The name *Eurymedon* ('wide-ruling'), here assigned to the Gigas-king, also looks like an invention of the narrator. The passing mention of the 'wickedness' and 'destruction' of the Gigantes implies that a story which had something at least in common with the later *Gigantomachia* was already known to the poet and his audience.

(2) In *Od.* vii. 201–206 the king of the Phaiakes says: 'The gods are wont to present themselves to us in visible shape, . . . without disguise; for we are near (akin) to them, as are the Kyklopes and the wild tribes of the Gigantes.'

(3) In *Od.* x. 120 the Laistrygones, a tribe of man-eating savages of monstrous size, are described as 'not like men, but like Gigantes.'

To the poet of the *Odyssey* the Gigantes were a tribe dwelling upon earth in the distant past; they were mortals, but surpassed men in size and strength, and stood in close relation to the gods; they were wild and savage in their ways, and, having committed some great wickedness, they were extirpated.

In the Hesiodic *Theogonia* (185) we are told the *origin* of the Gigantes. When Uranos (Sky) was mutilated by his son Kronos, Gaia (Earth), impregnated by the blood-drops which fell upon her from the wound, gave birth to (1) the Erinyes, (2) 'the great Gigantes, flashing in armour, holding long spears in their hands,' and (3) the 'Melian Nymphs' (*i.e.* nymphs of the ash-tree). The three species here grouped together have little in common; but they are alike in this, that all three *rise out of the earth*. The Erinyes (originally the angry ghosts of murdered men) issue from the earth where it has been defiled by the spilling of blood (see art. EUMENIDES, ERINYES); the ash-tree grows out of the earth;[1] and the Gigantes also sprang directly from the earth. The connexion of their origin with the mutilation of Uranos is, no doubt, a piece of deliberate systematization. But the notion that the Gigantes were sons of Earth stands on a different footing; it is based on primitive folk-lore, and forms part of the connotation of the term Gigantes throughout all later literature.[1]

[1] The fact that spear-shafts were commonly made of ash-wood, and that the ash-tree was, consequently, associated with bloodshed, may help to account for the juxtaposition.

The notion is allied to a tradition as to the origin of men which was widely current among the Greeks, namely, that the first human generation grew out of the soil, like vegetables (cf. Paus. VIII. xxix. 4). This tradition was largely overlaid by the prevailing tendency to trace back each human family to some divine ancestor; but the belief persisted that at least some of the Greek races were *autochthonous*, *i.e.* that their first ancestors had sprung from the soil; and the origin of the Gigantes was explained in the same way as that of other primitive races. A parallel instance may be seen in the legend of the Theban *Spartoi*, the men who sprang out of the earth (fully equipped for battle, like the Hesiodic Gigantes) from the dragon's teeth sown by Kadmos; and a variant of the same legend occurs in the story of Jason. The epithet 'earth-born' was suitable to the Gigantes for another reason also when they came to be identified with personifications of sub terranean Nature-forces; but there is no evidence that they were thus regarded in Hesiod's time.

In the prelude of the *Theogonia* (50) the Muses are described as singing first the birth of the gods and the rule of Zeus, and, next, 'the birth of men and of the mighty Gigantes.' The poet here distinguishes the Gigantes from men, and, no doubt, took them to be a species which had once dwelt on the earth, but had long been extinct; so that his notion of them is comparable with that of the 'Race of Bronze' described in *Works and Days*, 143 ff.—a race of fierce warriors 'sprung from ash-trees,' who occupied the earth before the age of the Homeric heroes, and perished by mutual slaughter.

So far, we have found no mention of the *Gigantomachia* ('battle of the Gigantes'), with the exception of the doubtful allusion in *Od.* vii. 59 f. But in all later times, the interest in the Gigantes centred in this battle. The story that the Gigantes made war against the gods, and were destroyed in battle by their divine opponents, was, no doubt, told in some of the later Epic poems which have perished; but the earliest positive evidence of its existence appears in certain vase-paintings of about 600 B.C. Xenophanes (*c.* 535–500 B.C.) speaks of 'battles of the Titans *and of the Gigantes*, and tales of the Centaurs,' as familiar themes; frequent references to the *Gigantomachia* occur in the poets from Pindar onwards; and its popularity is shown by the numerous vases on which it is depicted. But the first continuous and detailed narrative of it which has come down to us is to be found in the compendium of mythology which passes under the name of Apollodorus, and, in its present form, dates perhaps from the 1st or 2nd cent. A.D. That narrative (Apollod. I. vi.) runs as follows:

'Earth, in her indignation at the overthrow of the Titans, gave birth to the Gigantes; their father was Uranos. They were of huge bulk, of irresistible strength, and of frightful aspect; their hair and beards were long and thick, and they had scaly serpent-coils in place of legs. They were produced, according to some accounts, in Phlegrai, according to others, in Pallene. They hurled rocks and blazing tree-trunks against heaven. Eminent above the rest were Porphyrion and Alkyoneus. The latter was immortal as long as he fought in the land of his birth. (He had driven off the cows of the Sun from Erytheia.) Now the gods had been told by an oracle that the Gigantes could not be slain by gods, but would meet their death if a mortal joined in the fight against them. Earth, informed of this, was seeking a magic herb, by which the Gigantes might be secured against death at the hands of a mortal also; but Zeus, having commanded Dawn, Moon, and Sun to withhold their light, gathered the herb before Earth could find it, and, by the agency of Athene, summoned (the mortal) Herakles to take part in the fight. Herakles first shot

[1] The Greeks accordingly assumed the name *Gigantes* to be derived from *γῆ* ('earth') and *γένος* ('birth'). But this etymology is inadmissible. A derivation from the root of *γένος* is possible, but has not been proved (cf. Boisacq, *Dict. étymol. de la langue grecque*, Heidelberg, 1907 ff., p. 147); and it is quite as likely that the name is of non-Hellenic origin.

down Alkyoneus with an arrow; and, as he revived through contact with the soil, Herakles, at the suggestion of Athene, dragged him away out of Pallene, whereupon he died. Porphyrion assailed Herakles and Hera; but Zeus caused him to be seized with love of Hera, and, when he sought to do her violence, she cried for help; whereupon Zeus struck him with a thunderbolt, and Herakles killed him with his arrows. Ephialtes was hit in the left eye by an arrow shot by Apollo, and in the right eye by an arrow of Herakles. Dionysos killed Eurytos with his *thyrsos*; Hekate slew Klytios [with her torches[1]]; and Hephaistos struck down [Mimas?[1]] with lumps of red-hot metal. Athene flung the island of Sicily upon Enkelados as he fled; she also flayed Pallas, and used his skin as a shield to protect herself in the fight. Polybotes, pursued through the sea by Poseidon, had reached the island of Kos, when Poseidon broke off a piece of the island and flung it upon him; the little island called Nisyros is the fragment which Poseidon flung. Hermes, wearing in the battle the cap of Hades (which makes its wearer invisible), slew Hippolytos; Artemis slew [Aigaion?[1]]; the Moirai, [fighting[1]] with clubs of bronze, killed Agrios and Thoon. Zeus struck and destroyed with thunderbolts the rest of the Gigantes; and Herakles shot them all with his arrows as they were dying.'

Here we have the fully developed story of the *Gigantomachia*—or, rather, the dry bones of it, stripped of the poetical flesh and blood. How did this story arise? The narrative is built up of discrete elements; most of the several incidents were current separately before they were included in the *Gigantomachia*. Thus, the combat of Herakles with Alkyoneus was known to Pindar (*Isthm.* v. 32, *Nem.* iv. 27) as an incident belonging to the story of Herakles, but unconnected with the battle of the Gigantes. Pindar's Alkyoneus has not yet become a Gigas; but in a lyric fragment of later date (Bergk[4], iii. 713), Alkyoneus is called 'eldest of the Gigantes.' Porphyrion was incorporated earlier, for Pindar (*Pyth.* viii. 12–17) speaks of him as 'king of the Gigantes'; but, since the name also occurs (Paus. I. xiv. 6) as that of a pre-historic king of a district of Attica, it may be inferred that his legend also had originally a separate existence.[2] Porphyrion's assault on Hera is a replica of several other stories (cf. Ixion and Hera, Tityos and Leto, Orion and Artemis, etc.); it may be connected with a statement which occurs elsewhere, that Porphyrion 'was subdued by Aphrodite' (schol. Aristoph. *Av.* 554, 1252). A combat of Athene with Enkelados is also included in early representations of the battle: and in some accounts (e.g. *Batrachom.* 283; Eur. *Kykl.* 7) Enkelados is singled out as chief among the Gigantes. The incident of Athene flaying her opponent Pallas and using his skin as a shield is another independent myth, a variant of which appears in the story of the *aigis*, as told in Eur. *Ion*, 987 ff. Poseidon's combat with Polybotes is a local tradition of Kos; the evidence of art-remains seems to show that its insertion into the *Gigantomachia* had already taken place early in the 6th century.

On general principles it may be presumed that every Greek myth was at first known within a limited district only. The guardians of some sanctuary, or the people of some one tribe or city, told a tale about their own special deity or hero. Some poet embodied the tale in verse, interwove it with other tales told elsewhere, and gave it wider currency; the process was repeated again and again, with fresh combinations, till the local tradition became part of the common stock of all Greek-speaking peoples; and the system of mythology summarized in Apollodorus is the final outcome of this long development. Accordingly, we may suppose that the germ of the *Gigantomachia* was a tradition, current in some particular community, concerning a tribe named *Gigantes*, which had in some way offended against the gods, and had been destroyed in consequence. Parallels are not wanting; in Arcadia, for instance, a similar story was told of the Lykaonidai (Apollod. III. viii. 1), and in Bœotia, of the Phlegyai (Paus. IX. xxxvi. 2). How the tale first arose, we can only guess. It may be that a race of invaders preserved in this form a vague tradition of their conquest and extirpation of the indigenous inhabitants (the conquerors would naturally assume their enemies to be also enemies of their gods). Or, again, it may have arisen out of a Nature-myth—a tale of conflict between the powers of light and darkness, or between the beneficent forces of Nature and the destructive violence of the thunderstorm, the earthquake, or the raging sea. We may safely assume that the Gigantes had at first no individual names, and were spoken of only collectively.

But numerous tales were also current concerning individuals in human or other shape who had fought against this or that god. Each of these tales had arisen independently, from Nature-myth or otherwise; but any such god-defier was liable to be brought sooner or later into the class of Gigantes, and thereby made to contribute a fresh element to the growing myth of the *Gigantomachia*. For instance, the *Odyssey* (xi. 305 ff.) tells of the Aloidai, two monstrous brothers, named Otos and Ephialtes, who, while still beardless boys, made war on the immortals: 'they strove to pile Mount Ossa on Olympos, and Mount Pelion on Ossa, that they might gain access to heaven'; but Apollo slew them. The Aloidai of the *Odyssey* are quite distinct from the Gigantes; but, as they had engaged in a similar enterprise, they were subsequently confused with them; and so we find the name Ephialtes assigned to one of the combatants in the *Gigantomachia* at an early date.[1]

Again, the Hesiodic *Theogonia* (147 ff., 617 ff.) tells of three monsters, sons of Uranos and Gaia, named Briareos, Kottos, and Gyes, each of whom had a hundred hands and fifty heads. Their father, Uranos, horrified at their threatening aspect, imprisoned them beneath the earth; but, when Zeus was engaged in war with the Titans, he was told by Gaia that the help of the Hundred-handed Brothers would win him victory. Accordingly, he released Briareos and his brothers from their subterranean prison, and made a compact with them; and so, in the crisis of the fight, the monsters struck in on the side of Zeus and his adherents, and won the day for them. They hurled three hundred rocks at once with their stout hands, and darkened the air with missiles, and sent the Titans down to Tartaros, and bound them in grievous bonds: 'and there (keeping guard over the imprisoned Titans) dwell Gyes, Kottos, and Briareos, trusty warders in the service of Zeus.'

These monsters seem to be personifications of the forces of storm and earthquake (cf. EARTH, EARTH-GODS, § 4). Their abode is in the depths of the earth, in which they were imprisoned from their birth; they emerge for a moment to fight for Zeus, and then return to their home in the abyss. They side with the supreme god; yet a suggestion that they were by nature enemies of heaven appears in the statement that Uranos (who is ultimately a doublet of Zeus) imprisoned them in

[1] On the textual emendations here adopted, see M. Mayer, *Giganten*, p. 200 ff.

[2] The word *porphyrion* meant a kind of water-hen. Why should a Giant be so called? It has been plausibly conjectured that the name is a popular corruption of *Pyrphorion* ('fire-bearer'), and that the Gigas-king was originally a πυρφόρος θεός, a sort of Hephaistos or Prometheus. The alteration into a bird-name would the more readily suggest itself, because several other mythical persons bore the names of birds; cf. Kyknos ('swan') and his father-in-law Keyx ('tern'), whose wife was Alcyone (ἀλκυών, 'kingfisher'). Porphyrion and Alkyoneus, 'Giant Coot' and 'Giant Kingfisher,' pair well together.

[1] It occurs (in the form *Hipialtes*) as the name of one of the Gigantes on the vase of Cære. The word ἐφιάλτης means 'assaulter,' and was used by the Greeks in the sense of 'nightmare.'

the depths. Storm and earthquake, in fact, admit of two different interpretations. They are clearly manifestations of conflict between superhuman combatants; but are these terrible forces brought into action by rebels against the ruling god, or by the ruling god himself against his enemies? In the Hesiodic story of the Hundred-handed Brothers, it is the latter notion that happens to have prevailed.

In the *Iliad* also (i. 403) Briareos appears as an ally of Zeus.

Hera, Poseidon, and Athene once sought to put Zeus in bonds; but Thetis summoned to his aid 'him of the hundred hands, whom gods call Briareos, but men name him Aigaion: he is mightier than his father [viz. Poseidon?]. And he took his seat beside Zeus, exulting in his glory; and the gods feared him, and did not put Zeus in bonds.' The alternative name Aigaion probably characterizes him as a sea-god and earth-shaker, of the type of Poseidon.

The Hundred-handed Brothers are, in early myth, clearly distinguishable from the Gigantes; for they are neither mortals nor opponents of Zeus. But, being powerful monsters of like nature, they too came to be regarded as Gigantes, and thus Briareos had a part in the *Gigantomachia* assigned to him. (The earliest certain instance is in Kallimachos, *Hymn. Del.* 143.)

Again, the Hesiodic *Titanomachia* (see art. TITANS) had something in common with the later *Gigantomachia*, since in both alike there was war between Zeus and a hostile power. Hence the distinction between the immortal Titans and the mortal Gigantes was often ignored in later literature; the words *τιτάν* and *γίγας* came to be used as equivalents (*e.g.* Eur. *Hec.* 472, *Iph. Taur.* 224); and the Hesiodic Titan Koios was enrolled among the Gigantes (Verg. *Æn.* iv. 179; Propert. IV. ix. 48).

The connexion of the Gigantes with the earth from which they had sprung was kept in view throughout the development of the myth; hence some pictures of the battle include a figure of Gaia, rising waist-high out of the ground, and vainly entreating the gods to show mercy to her sons.

The inclusion of various stories of single combats helped to determine the parts assigned to the several gods. Zeus holds the central position; among the rest, Athene is usually prominent; Poseidon also takes a leading place; and the picture is filled out with other deities. A conspicuous part in the conflict was given to Dionysos, especially in later times, when the warlike side of this deity's character came to be emphasized. But the aid given to the gods by the half-human Herakles was, from an early date, a point of special interest in the story; and we see him mounted beside Zeus in his chariot, or fighting on foot next to the supreme god. The legend of Herakles was at first a peculiar possession of the Dorian race, and remained in the background in the early Ionian Epic. In one passage of the *Iliad* (v. 385–404) he is even spoken of in terms of reprobation, as an audacious fighter *against* gods, and is coupled with the Aloidai. If this view of him had prevailed, Herakles himself might have come to be included in the list of the Gigantes. But the Dorian hero gained recognition among Greeks of all races; and, as it was the special business of Herakles to slay monsters and evil-doers, it was natural to give him a place in the battle in which a whole tribe of such beings was destroyed. Thus the task of fighting the Gigantes was added to his other labours, and he became, next to Zeus himself, the most prominent of the combatants (see Pindar, *Nem.* i. 67; Eurip. *Herc. Fur.* 177).

Yet another ingredient was supplied by the combat of Zeus with Typhoeus. A passing allusion in the *Iliad* (ii. 782) shows knowledge of this myth; and the combat is described in Hesiod (*Theog.* 820 ff.).

After the overthrow of the Titans, Gaia, in union with Tartaros, gave birth to Typhoeus, a mighty deity, strong of hand and foot. From his shoulders rose a hundred serpent-heads with licking tongues and fire-flashing eyes; and from those heads there issued manifold voices, now such speech as the gods use, and now sounds as of bellowing bull and roaring lion and yelping hound, or piercing hisses. And he might have been king of gods and men; but Zeus marked the danger, and sprang forth, and hurled his lightnings, and smote the monster's heads. Typhoeus fell; and the flame of the thunder-smitten enemy of Zeus shot forth among the mountain-dells of Ætna,[1] and the earth ran like molten metal. Thus did Zeus hurl him down to Tartaros. And from Typhoeus spring the evil wind-storms which wreck ships at sea, and ruin the works of men on land.

Here the narrator is clearly conscious of the meaning of the Nature-myth. Typhoeus is the fire-fiend whose work is seen in volcanic eruptions, and in the blasting winds which were thought to be of similar origin; and the description of the conflict is probably based on accounts of some eruption of Mount Etna, transmitted by the Greek colonists of Sicily.

The resemblance of the Typhoeus-fight to the various combats included in the *Gigantomachia* (some of which at least had arisen out of similar Nature-myths) was sufficiently close to cause Typhoeus also to be associated with the Gigantes; and through assimilation to him and other such monsters the shape and aspect of the Gigantes underwent a change. In the earlier form of the myth (Hes. *Theog.*) they are armed warriors; and, as depicted on early vases, they are indistinguishable in appearance from civilized combatants. Later, they appear in the form of savage men, clothed in beast-skins, and using rocks and tree-trunks in place of weapons. But from the time of Alexander the Great they commonly take the shape described in Apollodorus; head, arms, and trunk are human, but in place of legs they have a pair of serpent-coils. (The serpent form was the more appropriate, because the snake was among the Greeks a symbol of the earth and of the powers beneath the earth.) They are sometimes also depicted with wings, after the analogy of the wind-gods—which is again a sign of their assimilation to Typhoeus, the father of wind-storms.

Moreover, it was probably through their association with Typhoeus that the Gigantes came to be specially connected with *volcanic* forces; and this notion led to fresh localizations. The scene of the battle was commonly placed in 'Phlegra.' But Phlegra ('Land of burning') was a mythical land unknown to geography. Each of the various myths which entered into the composite picture had its own original site, one in Arcadia, another in Attica, a third in Eubœa, and so on; but a certain consensus arose in favour of Pallene, the westernmost of the three Chalkidic promontories on the north coast of the Ægean. We may suppose that the growing myth was carried to that region by the colonists from Chalkis in Eubœa who settled there. Confusions between similar names may have helped to fix the site of the battle in the Chalkidic Pallene. (A personage named *Pallas*, who came to be included among the Gigantes, was known to local tradition in the Arcadian *Pallantion*, in the Achaian *Pellene* near Sikyon, and in the Attic district of *Pallene*.) Moreover, the place was well situated for an assault on Olympos, which stood in full view across the Gulf of Salonika. Thus it came about that, at least as early as Herodotus (vii. 123), Phlegra, the scene of the *Gigantomachia*, was identified with Pallene.

There are no conspicuous signs of volcanic action in Pallene. But, through the westward coloniza-

[1] The reading *Ætna* here admits of doubt; but there is no doubt that the thing described is a volcano in eruption.

tion, the Greeks became familiar with two volcanic regions, the neighbourhoods of Etna and Vesuvius; and the settlers accounted for the outbreaks of subterranean fire by the fancy that some enemy of the gods lay buried alive beneath the soil. Thus, in the Hesiodic *Theogonia*, Typhoeus appears to be already located at Etna.[1] But the imprisoned monster might equally well bear other names, and was often identified with one or other of the Gigantes; hence comes, for instance, the statement in Apollodorus that Athene threw the island of Sicily on her opponent Enkelados. The volcanic district of the Campanian coast was, for like reasons, regarded as the scene of the *Gigantomachia*, and the name of Phlegra was accordingly applied to it (Polyb. III. xci. 7).

Again, after Alexander's conquests, the Greek emigrants carried their myths with them to fresh regions, and located many of them in their new settlements in the East. Thus Syrian Antioch, for instance, developed a local *Gigantomachia* of its own.

One incident in the Græco-Syrian legend will serve to illustrate the process of myth-making. The name of the city of Damascus sounded to Greek ears as if it were derived from the Gr. *dam-* ('conquer') and *askos* ('wine-skin'): hence was invented a Gigas named Askos, who was slain by Zeus or Dionysos, and was flayed by the victorious god to make a wine-skin (Phot. *Bibl.* 348. 13, ed. Bekker, Berlin, 1824–25; *Etym. Magn.*, *s.v.* Δάμασκος).

The popularity of the *Gigantomachia* was increased by the readiness with which the story lent itself to moral and political applications; for it might serve as a type of any victory won by the forces of order and legitimate authority in conflict with lawless violence. A good example of such applications may be seen in the first *Pythian Ode* of Pindar. Addressing Hiero, the monarch of Syracuse, the poet deals with the story of Typhoeus; and in his hands the myth becomes a parable, in which Zeus stands for harmony, and Typhoeus for discord. Hiero is the human Zeus, whose life-task is to beat the monster down, and to keep him safely bound; that is, to maintain peace and prosperity against unruly factions within his realm; to crush the foreign foes who threatened Western Hellenism—the barbarous Carthaginians and Etruscans—and, further (so the poet hints), to see to it that within his own soul, too, the forces of order and harmony prevail; else, he whom men now praise as a king might come to find them curse him as a tyrant.

Pindar elsewhere (*Pyth.* viii. 16) couples Typhoeus with the king of the Gigantes. Under whichever name the enemies of the gods are spoken of, the significance of the story is the same; and it was with some such meaning that the myth of the Gigantes was repeatedly employed in plastic art. Thus the Megarians (*c.* 550 B.C.) sculptured the *Gigantomachia* on the treasure-house which they dedicated at Olympia as a thank-offering for a victory over their neighbours of Corinth. At Athens, before the Persian invasion, the same subject was already represented in the sculptures of the earlier temple of Athene on the Akropolis; after the Persian war, it was carved on the *metopes* of the Parthenon, and on the shield of Phidias' colossal statue of Athene; and it was depicted in the embroideries of the robe which the Athenians presented to the goddess of their city at each Panathenaic festival. The *Gigantomachia* was an appropriate subject for an offering to the warlike goddess, who was prominent in the story of the fight; but, at the same time, the Gigantes might be taken to represent the Persian enemy, and the battle-scene served to symbolize the victories won against barbarism and impious presumption in the fights of Marathon and Salamis. A *Gigantomachia* was also conspicuous among the sculptures of the temple of Apollo at Delphi (Eurip. *Ion*, 206 ff.).

The irruption of Gallic hordes into northern Greece and Asia Minor in the 3rd cent. B.C. suggested a fresh application of the story. Kallimachos (*Hymn. Del.* 174) speaks of the Gauls as 'late-born *Titans* (*i.e.* Gigantes) from the furthest West.' Attalus I. of Pergamon (Paus. I. xxv. 2), after his great victory over the Gauls, set up at Athens four groups of sculpture, representing respectively the battle he had won, the battle of Marathon, the *Gigantomachia*, and the fight of the Athenians against the Amazons; thus coupling his own victory with that of Marathon, and placing beside each of them a mythic prototype. So also the Battle of the Gigantes was the subject chosen for the decoration of the monument erected on the citadel of Pergamon by a successor of Attalus I. (*c.* 180 B.C.) to commemorate the defeat of the barbarous invaders by the forces of Hellenic civilization. This monument took the shape of a great altar; and along the sides of the rectangular block of building which formed the altar-platform there ran a continuous band of sculpture, over 400 feet in length, in which all the chief deities of the Greek Pantheon were represented, each engaged in combat with some special adversary. Of the Gigantes, who are falling stricken before the victorious gods, or offering hopeless resistance, some are in wholly human shape, and might be taken for idealized portraits of Gallic combatants; some are men with serpent-legs; some have wings springing from their shoulders; and here and there appears some more bestial monster.

References to the *Gigantomachia* are frequent in Latin poetry. Horace (*Od.* III. iv. 42 ff., II. xii. 6 ff.) found in it a type of the work accomplished by Augustus in suppressing the anarchy of the Civil Wars, and establishing the peace and order of the Roman Empire. Ovid began a poem on the subject in his youth (*Amor.* II. i. 11). In the last age of Pagan literature, Nonnos, in his *Dionysiaka*, makes numerous references to the myth, and (bk. 48) introduces an episode of his own invention, in which Dionysos single-handed fights the whole tribe of Gigantes, but refrains from destroying them, in order that something may be left for Zeus to do; Claudian (*c.* A.D. 400) wrote a Latin poem on the *Gigantomachia*, the first 129 lines of which are extant; and a portion of a Greek poem on the same subject has also come down to us under the name of Claudian.

The Cyclopes (*Kyklopes*), as described in the *Odyssey*, are giants in the sense in which the word 'giant' is used in our nursery tales; but they were not called Gigantes by the Greeks. The story of the encounter of Odysseus with the man-eating ogre Polyphemos is told in *Od.* ix. Polyphemos, a son of Poseidon and a sea-nymph (*Od.* i. 71), is one of a tribe of wild men called Kyklopes, who dwell on the coast of some unspecified land in the western seas. The Kyklopes are housed in caves; they do not cultivate the soil, but live on the natural products of the earth, and the milk of their flocks of sheep and goats. They are 'a lawless folk'; 'they have no gatherings for council'; each lives apart, 'giving law to his children and wives,' and 'they reck not one of another.' So far, the poet might be describing a tribe of savages (cf. *Od.* vi. 5, where we are told that the Phaiakes migrated to Scheria, because in their earlier abode they suffered from the raids of the Kyklopes, 'overbearing men, who used to harry them'). But Polyphemos is distinguished from ordinary men

[1] The *Iliad* (ii. 782) places 'the bed of Typhoeus' in 'the land of the Arimi,' a mythical country, which in later times (Verg. *Æn.* ix. 716) was sometimes identified with the island of Ischia off the Campanian coast. Pindar (*Pyth.* i. 17, viii. 16, fr. 92, 93) names Kilikia as the birthplace of Typhoeus or Typhon, 'the land of the Arimi' (*i.e.* Kilikia?) as the place of his defeat, and Campania and Etna as the places where he is imprisoned.

by his huge bulk and strength (he can lift a rock which could not be moved by two-and-twenty waggons), and it is implied that in place of two eyes he has a single eye in his forehead.

The Homeric conception of the Kyklopes persisted through all later Greek and Roman literature; *e.g.*, Euripides adheres to it closely in his satyric drama *Kyklops*. In post-Homeric times the abode of these Kyklopes was localized on the coast of Sicily at the foot of Etna (Eur. *Kykl.* 20; Thuc. vi. 2). A later addition to the tale of Polyphemos was the story of his love of the sea-nymph Galateia, which was told in a poem of Philoxenos (*c.* 398 B.C.), and may have been invented by that poet.

But the name Kyklopes was also used in a different sense, which first occurs in the Hesiodic *Theogonia*. The Kyklopes there spoken of are three sons of Uranos and Gaia, born after the twelve Titans, and before the three Hundred-handed Brothers. The three Kyklopes are named Brontes ('Thunder'), Steropes ('Lightning'), and Arges ('Flash,' or 'Flashing Thunderbolt'); and 'they gave Zeus the thunder, and made for him the thunderbolt. They were like to the gods, except in this, that each of them had a single eye in the middle of his forehead. They had mighty strength, and were skilled in handicraft' (*Theog.* 139–146). Those parts of the narrative which have to do with the Kyklopes are somewhat obscure; but the meaning appears to be that they were imprisoned beneath the earth by their father, Uranos (*ib.* 154 ff.), and that Zeus, when about to fight against the Titans, released them from their bonds, and they, in gratitude, 'gave him thunder, thunderbolt, and lightning' (501–506). Armed in this fashion, Zeus warred against the Titans (687–712); and it is in the strength of the same weapons that he still rules over gods and men (506).

The Hesiodic narrative of the *Titanomachia* seems to have been constructed by interweaving two distinct versions of the story. In one of the two, Zeus owes his victory over the Titans to the help of the Hundred-handed Brothers; in the other, he owes it to the lightning-weapons with which he is provided by the Kyklopes.

The Hesiodic Kyklopes have nothing in common with the Kyklopes of the *Odyssey*, except that they are one-eyed. They are not men, but immortals; they are beings of the same order as the Hundred-handed Brothers; and their function is to supply Zeus with thunder and lightning. It is probable that they were originally demons of the thunderstorm, and were at first imagined as themselves thundering and flinging the lightning, but were afterwards subordinated to Zeus the Thunderer. The Kyklopes to whom sacrifices were offered on an altar in or near the sanctuary of Poseidon at the Isthmus of Corinth (Paus. II. ii. 2) were presumably storm-demons of this kind.

The Hesiodic conception of the Kyklopes survived in later literature side by side with the different conception of them which is presented in the *Odyssey*. As forgers of thunderbolts, they were associated with Hephaistos, the metal-worker of the gods (Orph. *Theog.* fr. 92, Abel), and were described by Alexandrian and Roman poets as workmen employed in his service (Kallim. *Hymn to Artemis*, 46 ff.); and the smithy in which they worked was located in some volcano (Lipara [Kallim. *l.c.*]; an island near Lipara [Verg. *Æn.* viii. 416 ff.]; Etna [Verg. *Georg.* iv. 173]). The immortal lightning-makers of the Hesiodic *Theogonia* seem to be confused with the mortal savages of the *Odyssey* in the story that the Kyklopes were killed by Apollo, who was angered with them because they had supplied Zeus with the thunderbolt with which he slew Apollo's son Asklepios (Hes. *Eoiai*, fr. 47, Göttling; Pherekydes, schol. Eur. *Alc.* 1; Apollod. III. x. 4).

The Kyklopes were also spoken of as the builders of certain ancient fortress-walls, especially those of Tiryns, Mykenai, and Argos (Pindar, fr. 169, Bergk; Eur. *Herc. Fur.* 15, 944, *Iph. Aul.* 1500; Strabo, viii. 372; Paus. II. xvi. 4). As the walls of Tiryns were constructed of huge blocks of stone, it was natural to assume that their builders were beings possessed of more than human strength; and the notion that these builders were the Kyklopes may have been suggested either by the Homeric narrative, in which the Kyklops Polyphemos heaves vast masses of rock, or by the Hesiodic conception of the Kyklopes as skilled artificers.

The origin of the name Kyklopes is unknown. The Greek word *kyklōps* might mean 'round-eyed' (it was used by Parmenides as an epithet of the moon), but this meaning is not specially appropriate either to the one-eyed Polyphemos of the *Odyssey* or to the one-eyed lightning-makers of Hesiod. As to the notion of a being with one eye in his forehead, compare the description given by Pausanias (II. xxiv. 5) of an old statue of Zeus in the citadel of Argos, which had a third eye in the forehead. This may have been a statue of a lightning-god; and it is possible that the god whom it represented may have been originally called 'Kyklops,' though in later times it was supposed to be a statue of Zeus. The 'one-eyed Arimaspoi' of Aristeas (Æsch. *Prom. Vinct.* 830; Herod. iv. 27) are comparable rather with the Kyklopes of the *Odyssey*.

It may be conjectured that the name Kyklopes was first used to signify demons of the thunderstorm, and that the poet of the *Odyssey* (or some earlier story-teller whom he followed), working into his narrative an old tale of an ogre outwitted and blinded by a bold and cunning hero, made the ogre a member of an imaginary tribe of savages, and transferred to this tribe the name of the storm-demons.

Among the many representations of the *Gigantomachia* in art, the following are specially noteworthy: Ionic Amphora from Cære, Louvre (Overbeck, *Kunstmyth. Atlas*, Leipzig, 1872–89, Taf. iv. 8); Megarian Treasury at Olympia (G. Treu, in Curtius-Adler, *Olympia*, Textband iii., Berlin, 1897, pp. 5–15, and Tafelband iii., Taf. ii., iii.); Vase of Erginos, painted by Aristophanes, Berlin, 2531 (Gerhard, *Gr. und etr. Trinksch.* ii., iii.; Overbeck, v. 3); Amphora from Melos, Louvre (Ravaisson, *Monuments grecs*, Paris, 1875, iv.; *JHS* iii. 316); Altar-frieze of Pergamon, Berlin (Puchstein, *Beschreibung der Skulpturen aus Pergamon*, Berlin, 1895, *Die Skulpturen des Pergamon-Museums in Photographien*, do., 1903; Pontremoli-Collignon, *Pergame*, Paris, 1900, ch. 5).

W. SCOTT.

GIFTS (Primitive and Savage).—**1. General conception among uncivilized peoples as to the nature of the transaction of giving.**—(1) It has commonly been assumed that the 'presents' of savages and barbarians are the outcome of the same feelings and intentions as those of the modern man. Our act in giving is (in theory, at all events) an act of spontaneous bounty without thought of a return. It springs from good-will, or generosity, or gratitude, or sympathy. But with the primitive man it is otherwise; and of him we may say generally what has been said of the western Eskimos, that of a free and disinterested gift he is absolutely ignorant.[1]

(2) Of course, there are exceptions, real or apparent, to be found.

[1] J. Simpson, 'Observations on the W. Esquimaux and the Country they inhabit,' in *Further Papers relating to the recent Arctic Expeditions, presented to both Houses of Parliament, January 1855*, London, 1855, p. 926.

Thus Parry[1] tells us that on one occasion he received a present from a grateful Eskimo, who looked for nothing in return, although to give a counter-gift was the habitual practice of his people; and Howitt[2] says of the Dieri that they made presents to a white man whose advocacy had saved the life of one of their tribesmen. Finsch[3] states expressly of natives on the banks of the Caprivi River that they expected no return for their presents of food; and von Siebold[4] gives a similar account of the Ainus of Yezo. The Aleut, if he makes a present, even to a wealthy man, is said to expect no recompense;[5] and, among the Banaka and Bapuku, the donor can demand a counter-gift only when he is poorer than the recipient.[6] Among the Bogos and Abyssinians, a gift called *majbetot* by the former and *kalatha* by the latter is given to a relative impoverished or ruined by war, on condition that the donor may recover it if he falls on evil days, or if the recipient recovers his position.[7] Again, it is not unusual for a tribe on the occasion of a visit to a friendly tribe to make presents; and of this we have an instance in the gift-dance of the Wintūn.[8] But it is to be kept in view that the gift-dancers receive similar gifts when the visit is returned.

(3) Further, it is to be observed that amongst many peoples—the Yahgan of Cape Horn,[9] for example, and some of the natives of North Queensland[10]—the distributor, in sharing food, keeps little or nothing for himself;[11] and it is a commonplace that the rudest savage is often profuse in his hospitality, which frequently includes a parting gift to his guest, it may be in the form of provisions for his journey (see 3 (9) below, and art. STRANGERS). But it does not follow that such conduct is due to a spirit of unselfish liberality. For, where the supply of food is uncertain, and procurable only by the joint exertions of the community, it is not unnatural that he who has a superfluity will give, on the understanding that he will receive a return when he requires it.[12] And, where there is no provision for public entertainment, to travel, especially if the country is insecure, would be highly dangerous, if not impossible, were it not for a hospitality based upon the experience that 'he who is the host to-day may be the guest to-morrow.'[13]

(4) In the vast majority of instances, however, the gift is given on the understanding or, at all events, in the expectation that the recipient will make a return, either by giving something, or by doing or abstaining from doing something.[14]

2. Return in the form of a material thing.—(1) The New Zealander sometimes gave away every article which he possessed;[15] but he always expected an equivalent, and frequently, like the natives of Tahiti, dropped a hint of what he wanted in return.[16] The Yahgan are ready to share what they have with others. They desire to possess in order to give.[1] At the same time, they know that they will be well repaid by counter-gifts.[2] In these circumstances, it is not wonderful that misunderstandings frequently arise with strangers who imagine that they have purchased some article for a trifle, while the natives think that they have given a present for which they have not received an adequate return.[3] The case of the Andamanese is similar. Among them visits are usually the occasion of an interchange of gifts,

'the hosts taking the initiative; and a *fracas* not infrequently ensues, for donor and recipient are not always of a mind as regards the relative value of their presents.'[4]

In Amboyna, the recipient of a gift says, 'Friend, you have given me this; with what shall I recompense you?'[5] and a note is taken of the gifts received at a funeral ceremony, so that, when the donors die, like gifts may be given in return.[6]

'They [the natives of Rotuma] have the *faksoro*. If a man, say, wants a pig for a feast, he goes to another who has plenty, and asks him for one. He cannot well refuse, but in his turn is entitled to ask for something at some future time.'[7]

Again, the Drummond Islanders

'seemed to have no idea of receiving anything as a gratuity, but instantly made a return of something for whatever was given them';

and the inhabitants of other islands of the Kingsmill group

'never buy or sell, but, if any person desires an article which another has, he asks for it, and, if not too valuable or esteemed, is seldom refused. It is the general understanding that such favours are to be returned, and that the request should only be made by persons who can afford to do so.'[8] '"Give" and "give back" make the longest friends, if there is luck withal . . . gift always looks for return.'[9]

The 'potlatch,' or gift-festival, prevails among all the coast tribes of British Columbia. By a well-understood rule, which has the force of a law of honour, every recipient of a gift is bound to return twice its value at some future day; and in this repayment his relatives are expected to assist him; they are, indeed, deemed to be his sureties.[10] So, too, among the Eskimos of Point Barrow, on the occasion of high festivals to which neighbours are invited, gifts are exchanged, especially among the wealthy, in expectation of a return.[11]

Similar accounts are given of the natives of New Caledonia,[12] the Marshall[13] and Caroline Islanders,[14] the Samoans,[15] the eastern islanders of Torres Straits,[16] the Tlingits and Haidas,[17] the Salish and Déné,[18] some of the Indian tribes of North

Carolina,[1] the Wanika,[2] the Waniamwesi,[3] the Masai,[4] and the Samoyeds.[5]

(2) Very frequently a small present is given in the hope of receiving a large one in return—a practice which illustrates the point of the saying 'beneficia non obtrunduntur.'[6] In Nigeria the present which the king sends to the stranger is 'in every case to be regarded, not as an expression of good-will, but as the formal demand for a larger present';[7] and Livingstone[8] speaks of the practice near Senna, on the lower Zambesi, of making 'a very small gift, which is to win back to the donor at least twice its value.' If a native is asked to sell some article, he declines on the ground that it is *seguati*—it is not for sale, it is a compliment. The Chiboque 'are in the habit of making a present and demanding whatever they choose in return';[9] the Wahkiacums offer presents, expecting three or four times their value in return.[10]

(3) While the donor always expects a return, he does not always stipulate for the precise shape which it shall take. Thus, at Wytoohee—an island of the Paumoto group—the inhabitants accepted with gratitude and delight anything given in return for the articles taken from them;[11] and, although the Bakairi exchanged the specialties of one district for those of another, they knew nothing of the practice of bartering specific article for specific article.[12] Sometimes the savage throws out a hint of what he wants;[13] and sometimes nothing else will serve him but the article which has caught his fancy. In many cases, he is said to give some product of his industry or skill—the result it may be of the labour of months or years—for a mere trifle;[14] while instances are not wanting of his shrewdness in making a bargain.

As to the savage's ignorance of or indifference to value, see J. Viehe, *Die Ovaherero*, *ap.* S. R. Steinmetz, p. 312; G. F. de Oviedo, *Hist. nat. et gén. des Indes*, tr. J. Peleur, Paris, 1556, pt. i. bk. v. cap. iii. p. 76*a*; D. Crantz, i. 161; R. Schomburgk, *Reisen in Brit.-Guiana in 1840–44*, Leipzig, 1847, i. 175; A. Donaldson Smith, *Through Unknown African Countries*, London, 1897, p. 277 f.; O. Dapper, *Descr. de l'Afrique*, Amsterdam, 1686, p. 389; G. W. Stow, *Native Races of S. Africa*, London, 1905, p. 250. See also R. C. Temple, 'Beginnings of Currency,' *JAI* xxix. [1899] 101 f.; F. Schultze, *Psychol. der Naturvölker*, Leipzig, 1900, p. 215 ff.; J. Kohler, *ZVRW* xxii. [1909] 298; A. Sartorius von Waltershausen, 'Die Entstehung d. Tauschhandels in Polynesien,' *Zeitschr. f. Social- und Wirthschaftsgesch.* iv. [Weimar, 1896] 59 ff.

(4) Thus this primitive practice of exchanging articles partakes in some cases of giving rather than of bartering, and, in others, of bartering rather than of giving. On the whole, it seems best to regard the transaction as one of mutual gift, for the amount given is by no means exclusively determined by purely commercial considerations.[1] See below, 5 (1).

3. Return consisting of an act or of an abstention from acting.—(1) We come now to the second class of instances—those, namely, in which the recipient makes a return, not by giving something, but by doing or abstaining from doing something. It is stated to be 'the universal custom of the East for none to present himself before a superior, more especially the king, without a present.'[2] Free-will offerings were brought to the chieftains of old Germany;[3] and a similar practice prevailed in Mexico, and among the Chibchas, and has been observed in Tahiti and Fiji,[4] in New Caledonia,[5] among the Monbuttu,[6] and in Sumatra.[7] On the Lucalla, each district from which representatives attend the fair must give a present to the chief within whose territory it is held.[8] Very frequently the protection of a king or headman, and his permission to enter the country, to trade within it, or to leave it, must be purchased with gifts (see art. STRANGERS); and it has been observed that the stranger may have less to suffer from beggars in a despotic than in a republican country, it being presumed that on his first arrival he had satisfied the greatest beggar of all—namely, the king.[9]

It may be noted by the way, that of the presents, of which the original purpose was to secure the protection of a superior, many lose in course of time their voluntary character. In Fiji, forced presents were made to *vasus* by their hosts;[10] and in New Zealand,[11] and among certain Kaffir tribes,[12] chiefs on visiting expect to receive large presents from their entertainers, the revenue they derive being really a tax.[13] Spencer points out that, where the political head assumes universal ownership, he recompenses his subordinates by giving them gifts.[14] Thus, liberality is expected from the chief; so that, among the Abipones, for example, he must give what he has, even when asked for the garment on his back.[15] 'We still have in vails and Christmas-boxes to servants, etc., the remnants of a system under which fixed remuneration was eked out by gratuities—a system itself sequent upon the earlier system under which gratuities formed the only remuneration.'[16] The system to which Spencer alludes is in full force in the East. An Oriental expects not only to be paid for his services at the stipulated rate, but to receive a gift on leaving his employer; and this expectation prevails among persons in all ranks of society.[17]

(2) No one consults a prophet,[18] or a priest or priestess,[19] without giving presents; and, in New Guinea, the Toaripi tribesmen obtain the prayers of the sorcerer by means of gifts.[20] If bananas are not growing well, the Murray Islander takes some

of them as a gift to the *zogo le*, who makes a charm to ensure a plentiful crop ;[1] and presents are given to the medicine-man for his services in treating the sick,[2] and, if the latter dies, in ascertaining whose witchcraft slew him.[3] If he fails to cure, he must return the gifts.[4]

(3) Often the purpose of the gift is to procure the abandonment of rights. Among the Jekris, Sobos, and Ijos, the son-in-law gives his father-in-law a *dash* (*i.e.* a present) on the birth of the first child ;[5] while, among the Ba-Yaka, on a child's birth, the chief of the mother's village gives a gift of fowls to the father ; and, as soon as it can walk, it is sent to the chief's village, to which it legally belongs, and from which the father cannot even purchase it.[6] Again, there are cases in which the bridegroom is resisted, as he meets the bride, by his own kinsmen, until he gives them something, and cases in which the bride refuses to enter the bridegroom's house until she has received a present from his friends.[7] Sometimes a present is given by the bridegroom to his mother-in-law, to signify that the bride is thenceforth separated from the home of her girlhood ;[8] and with this gift may be compared that given, among the Chamorro, by members of the bride's and bridegroom's families to the latter's mother.[9] Somewhat similar is the case of the bride in Uganda. During the first month of marriage she veils her face ; and the bridegroom is permitted to lift the veil only on giving her a goat to be eaten by her and her friends.[10] A present of money procures a similar privilege in modern Egypt.[11]

(4) Sometimes a gift serves as compensation for loss. Thus, among the Banaka and Bapuku, it is obligatory on a husband whose wife has died to give something to her family ; while the kinsfolk of a dead man must make a present to the relatives of his mother.[12] The Déné recognize the former obligation.[13]

(5) In Ashango-land, if a stranger accepts a present from the natives, he is bound to make some stay in their district.[14]

(6) Crime is expiated,[15] and peace is purchased,[16] by making presents. Again, a tabu may be removed by a gift of food ;[17] and by presents the imposition of a tabu may be bought off.[18]

(7) It is a world-wide practice for the suitor to open his suit by making a gift, it may be to the girl's father,[1] or to her family,[2] or to her and her relations,[3] or to her alone.[4] Sometimes this gift is handed to the girl's mother,[5] or, where she does not belong to her suitor's tribe, to her father and to the headman and other principal men of her tribe.[6] If the suit is unwelcome, the gifts are in many cases returned.[7] Among the Lapps[8] and the Siena,[9] presents are given at every stage of the courtship to the girl and her relatives ; while among the Bororo[10] and the Orang-Ot of Borneo[11] it is the lady who begins the courtship by giving presents to the man of her choice. In Japan, the sending of presents by the intending husband forms one of the most important parts of the nuptial ceremony ;[12] while, in many instances, present-giving seems to be recognized as the only solemnity.[13]

It may be noted that Westermarck (p. 395) and Kohler ('Das Recht d. Birmanen,' *ZVRW* vi. [1886] 167, 'Das Gewohnheitsrecht der Provinz Bombay,' *ib.* x. [1892] 80) are of opinion that the giving of bride-gifts is a relic of a previous custom of marriage by purchase ; while Crawley (*The Mystic Rose*, London, 1902, p. 387 ; cf. Steinmetz, pp. 307, 319 ; Lane, p. 147) regards the latter as a development from the former—a view which seems to be supported by the evidence.

(8) At Tlingit feasts in remembrance of the dead,[14] and at gift festivals held by the tribes south of the Yukon River,[15] men gain rank and reputation by giving away their whole possessions. Similar facts are reported of the Ahts[16] and the Western Eskimos.[17] It seems that the desire to establish his position as a great man forms the motive of the Lekunen bridegroom's generosity,[18] and, to some extent, of the host's munificence in giving presents to his guests in Scandinavian antiquity.[19] Among the Carriers, strips of skin are distributed on the death of the head of the clan by his successor

'as an act of atonement for the death of the deceased noble, gifts of such sort being looked upon as wiping out the shame and grief of the mourners' (C. Hill-Tout, *Brit. N. Amer.*, p. 149).

(9) The custom of giving presents to the departing guest is wide-spread (see I (3) above). It was

practised in the world of Homer,[1] and in the northern countries;[2] and it is in observance in the Andaman Islands,[3] among the Banaka and Bapuku,[4] in New Guinea, and among the Aleuts,[5] in New Zealand,[6] and among the Ostiaks.[7] It may be noted that a gift is sometimes given by the guest to the host.[8]

(10) It is to be observed that in some of the instances mentioned above the object of the giver is not so much to procure the performance of, or the abstention from, an act, as to create in the recipient a disposition favourable to himself. For example, a man may give away his property in order to impress others with his importance, or to gain a reputation for generosity (see 3 (8) above). The suitor's present to the girl's parents may be due to his desire to ingratiate himself with them (see (7) and (8) above); and the host's parting gift may express nothing more than a wish to kindle friendly feelings in the breast of his guest (see (9) above). We shall return to the consideration of this topic (see 4 (6) below).

(11) In connexion with the last two instances mentioned in the preceding paragraph, it is to be noted that the purpose of the donor—the suitor who gives to the girl's parents, and the host who gives to his departing guest—is not always and everywhere one and the same. The suitor gives sometimes to gain the goodwill of the parents, and sometimes to buy off their rights in their daughter; and the host gives sometimes to strengthen the ties of friendship, and sometimes, it may be, to secure a similar gift when it is his turn to be entertained (see 1 (3) above). These instances might easily be multiplied. Moreover, it is not to be forgotten that, in making a present, the donor may have in view more purposes than one. He may, for example, be seeking, by one and the same act, to obtain the donee's favour, to acquire a material benefit for himself, and to take part in the performance of a religious or magical ceremony.[9]

4. The ground upon which the donor rests his expectation that a return will be made.—(*a*) *Where the return is in the form of a material thing.*—It is obvious from the evidence which has been adduced that, among uncivilized peoples, gifts are given in the expectation that a return will be made; and the question at once presents itself: What ground has the donor for entertaining this expectation? In other words, What is it which induces or constrains the recipient to make a return? We shall take, first of all, the case of a material return.

(1) Now, it is strictly in accordance with primitive notions to regard 'the nature of anything as inhering in all its parts,'[10] even when the parts are separated from it,[11] and to treat as part of a man's substance not only his blood, saliva, umbilical cord, sweat and other *excreta*, hair-clippings, nail-parings, and the like, but earth from his foot-prints, the remains of his food, his name, his portrait, his garments, ornaments, weapons, and implements.[1] This conception has two important consequences. If the man is in all his parts, whether these are or are not detached from him, it follows that they may be the medium either of his action upon others or of the action of others upon him. A part may be so impressed with his personality—with his intention for good or ill—as to benefit or injure any one with whom it may be brought into contact. On the other hand, whoever gets possession of it will be able through it to work his will, at any distance, upon the man himself.[2] Accordingly, if A give an article belonging to him to B, he gives a part of himself—a gift which may be dangerous to himself, for, by giving it, he puts himself in B's power; or it may be dangerous to B, for A may impress upon it his will to injure him.[3] Thus, in Morocco, if a person give food or drink,

'it is considered dangerous, not only for the recipient to receive it without saying, "In the name of God," but also for the giver to give it without uttering the same formula, by way of precaution. . . . It seems likely that the custom of not receiving payment from a guest is largely due to that same dread of strangers which underlies many other rules of hospitality' (E. Westermarck, *MI* i. 590, 593).

(2) To give is frequently regarded as perilous to the donor. Thus, among the Australian tribes other than those of the centre, hair is never given by the owner, lest he should put it into the power of the recipient to injure him.[4] Again, it is thought to be dangerous to give salt or leaven out of the house, for, if it pass

'into the hands of any person who has the power of wishing, *i.e.* of bringing down harm on another by uttering an ill wish, the possession of it places the giver entirely within the power of the wish.'[5]

(3) In some cases a gift will ward off harm at the hands of witch or fairy. Thus, in Cornwall, in the Isle of Man, in Somersetshire, and in some parts of Scotland, it was customary for the woman who carried a child to be christened to give bread and cheese to the first person whom she met;[6] and a refusal of the gifts was regarded as an expression of evil wishes towards the child.[7] With this practice we may perhaps compare that of the Stlatlumh (or Lillooet), among whom visitors to the parents on the birth of a child receive presents from its father.[8] In the Highlands of Scotland, if a stranger has looked over a cow, the dangers of the evil eye are averted by offering him some of its milk to drink;[9] and in Australia a tabu is removed by a present of food. Thus, among the Unmatjera and Kaitish tribes, a widow is under a ban of silence after her husband's death, usually for many months, until she is released from it by the dead man's younger brother.

'When this takes place she makes an offering to him of a very considerable quantity of food, with a fragment of which he touches her mouth, thus indicating to her that she is once more free to talk and to take part in the ordinary duties of a woman.'[10]

(4) To accept a gift may be no less dangerous. It is said of the Tlingits and Haidas that every gift is received with mistrust;[1] and the Annamese decline presents 'for fear of bringing ill-luck into the place.'[2] An offer of snuff unasked would be regarded by a Kaffir with suspicion; and, were he taken ill, it would be thought that he had been poisoned by the donor of the pinch.[3] A somewhat similar risk is incurred by those who eat fairies' food; and the same idea is at the root of the drinking customs of Greece, Rome, and Germany.[4] In Servia, it is usual, when sending an apple to a relative, to bite a little piece out of it, so as to show the mark of the teeth;[5] and, in Melanesia,

'a native offering even a single banana to a visitor will bite the end of it before he gives it, and a European giving medicine to a sick native gives confidence by taking a little first himself.'[6]

Crawley[7] cites an instance which makes clear the meaning of these practices:

'Amongst the Krumen, at a palm wine-drinking the goodwife of the house has to take the first and last draught herself, to show the guests that she has not been dealing in poison or witchcraft. This is called "taking off the fetish."'[8]

(5) In other cases, a gift by a person whose evil wishes are feared seems to have the effect of rendering him innocuous. Thus, a Kayan stranger, who comes into a house where there is a young child, brings a gift with him, lest his appearance should frighten away its soul.[9]

The difficulty in deciding whether to take or refuse a gift is identical with the difficulty

'in knowing how to act when a witch offers to shake hands with us. No doubt there is some risk in accepting the courtesy, since the action entails on us all the ill she may wish us. Still it insures us equally all the good she may wish us, and therefore it seems a pity to refuse one's hand.'[10]

(6) How, then, are these dangers to be averted? We are told that, in New Zealand, when a chief has medicine administered to him by a European, he always demands payment;[11] and Hartland[12] informs us that, in Ireland,

'when a child is vaccinated, the medical man is not allowed to take lymph from its arm without giving some present, however trifling, in return.' In a case from Tipperary, the nurse reported that the child's arm was kept inflamed because the doctor had neglected, when taking the lymph, to put silver in its hand; and Hartland attributes this superstition to the belief in witchcraft.

'Payment,' he adds (*loc. cit.*), 'is always held to neutralise a witch's power over a person through something received from him, probably because what she gives in exchange would confer a like power over her, and hence becomes a hostage for her good faith.'

Accordingly, in order to avert these dangers in giving and receiving, each party to the transaction must both give and take. This principle is illustrated by the account which H. von Wissmann[13] gives of his meeting with a dwarf people, whom he found among the Batetela. They gave him presents of which they implored his acceptance, and, on his taking them, they went away satisfied.

'They evidently acted in this way under the impression that my presents, if they did not return them, would give me some power over them. Such mistrust is quite a mark of the genuine savage.'

When the Spaniards at Cabo de Gracias a Dios would not take the articles set out by the natives, the latter laid down all that they had received near the sea, where the former found it the next day;[14] and, in Tahiti, the islanders would not accept Wallis's presents until his men had taken all the articles which they offered in return.[1] The islanders of Mannicola declined to accept presents when they had nothing to give;[2] and the natives at Astrolabe Bay deposited on the beach every morning fresh gifts for their European visitors, with whom they were on terms of enmity, and left untouched the articles placed there as a counter-gift.[3]

With these instances may be compared those supplied by popular superstition: the case, for example, of the Durham schoolmaster, who dared not give a knife to one of his pupils without receiving a penny, in order that it 'might be purchased, not given';[4] and the widely prevalent belief that it is unlucky to give a knife or a pair of scissors, unless some return be made to the donor.[5] We are told that, in South Germany, the dwarfs were always careful to make a return for anything which they had received;[6] and that, in Altenburg and Silesia, if anything is given out of a house, the luck is given away unless some trifle, such as a needle, be given in return.[7]

(7) We have seen that the principle of exchange is that of giving in order to receive—that the gift is made in the expectation, if not on the understanding, that a return will be made. Further, the evidence adduced seems to warrant the view that this expectation rests, to some extent, at all events, upon the notion that it is dangerous to accept the thing given without giving something in exchange for it, and that, if each of the parties both gives and takes, the danger is averted. What then is the nature of this new relation? It is that of union, brought about by an interchange of substance—a union, therefore, of the most intimate character.[8]

The closeness of the connexion is illustrated by the fact that, among the Eskimos of Bering Strait, persons exchanging presents at the 'Asking Festival' are considered to hold a certain temporary relationship. Formerly they gave and received presents at the festival every succeeding year.[9] A somewhat similar instance is that of the Tarahumare, with whom a purchase establishes a kind of brotherhood between the parties to it. Thenceforward they call each other 'naragua,' and a confidence is established between them much the same as that which subsists between 'compadres' among the Mexicans.[10]

(8) The duration of this substantial union appears to differ in different cases. Where, for instance, men have been made 'brothers' by an exchange of blood or by the use of some other rite, the relation so constituted is often a lifelong, and sometimes a hereditary, relation (see BROTHERHOOD [Artificial]). Among the central Australians, a connexion which appears to be temporary is created between those who are about to take part in an avenging expedition, by an exchange of blood, which has the effect of rendering treachery impossible.[11] So, too, where the union is brought about by an exchange of food or drink, or by eating together—which is regarded as virtually the same thing—it is often merely temporary. Thus Doughty[12] tells us of the Bedawîn that by 'bread and salt' peace is established with the stranger for a time—for, that is to say, two nights and the intervening day—'whilst their food is in him'; and Burton[13] adds that some tribes required the bond to be renewed every twenty-four hours, as

otherwise, to use their own phrase, 'the salt is not in their stomachs.'

(9) It would seem, then, that in every case of a breach of this union the wrong-doer lays himself open to the vengeance of the man whom he has wronged. But this is not the only or the greatest danger to which he exposes himself. For, where the relation is so intimate and so complete that each of the parties is, in a very literal sense, the *alter ego* of the other, its rupture may be productive of the direst consequences to him who is in fault; and these consequences are due not to the action of the injured party, but to that automatic retribution—in the form, it may be, of disease, or disaster, or death—which follows upon the breach of a tabu.[1]

(10) If an exchange of presents can produce a union such as this, it is easy to understand why it is that the solemn occasions of savage or barbaric life are almost invariably celebrated by such an exchange. It signalizes the birth of a child,[2] and it accompanies marriage,[3] circumcision,[4] initiation,[5] and the constitution of such relations as those of brotherhood by choice (see BROTHERHOOD [Artificial]), and those between protector and protégé,[6] and club and privileged stranger.[7] In China, it has a place in betrothal,[8] and in mourning ceremonies;[9] and it is practised at inter-tribal assemblies,[10] in the formation of alliances,[11] on the conclusion of peace,[12] and in evidence of intimate friendships.[13] Visits are frequently the occasion of an interchange of gifts, as, for example, those made to a woman on her confinement;[14] while, in the Luang-Sermata group, the female visitors, who bring presents to the young mother, are, at a later date, entertained by the father to a feast.[15] Among the Mohawks, visits are always accompanied by an exchange of presents;[16] and similar accounts are given of the Andaman Islanders,[17] of the Eskimos of Greenland,[18] of the Yahgan,[19] and of the natives of Samoa.[20]

On days of feasting and rejoicing the Jews sent portions to one another;[21] and a similar practice was followed in the Homeric world.[22]

In Ceram, a man is assisted in building his house by relatives and friends. He feasts them in return, and the former give him presents.[23] The Lapps give and receive gifts on coming into the presence of a superior;[1] and, in Bhutan,

'an inferior on approaching a superior presents the white silk scarf, and, when dismissed, has one thrown over his neck, with the ends hanging down in front. Equals exchange scarfs on meeting, bending towards each other with an inclination of the body.'[2]

(11) This view of the operation of an exchange of gifts makes it readily intelligible why the refusal of a gift is generally regarded as in the highest degree insulting,[3] or injurious.[4] In old Germany, such a refusal had its special forms. Thus, in order to show that it did not proceed from selfish motives, it was accompanied by the invocation of a blessing upon the object returned—'got lâze in iuwer bouge beiden saelic sîn.'[5]

(*b*) *Where the return consists of an act, or of an abstention from acting.*—We have seen that, where the return takes the form of a material thing, each of the parties to the transaction—donee as well as donor—gives part of himself to the other. Each puts himself in the other's power. There is an exchange of substance which creates a union. But, in the case which we are considering, neither act nor abstention from acting passes to the donor as part of the donee's substance. Suppose, for example, that an inferior makes a present to a superior in order to obtain his protection, and that the latter accepts it on the footing that he will see to the security of the donor's person and property. The acts which he performs in fulfilment of his engagement are not parts of himself which he gives to the donor in exchange for his gift. They are not elements out of which a union is created. They are, rather, results flowing from a union already in existence, of which the elements are the donor's gift on the one hand, and the donee's acceptance of it on the other. This operation of acceptance appears still more clearly in those cases in which the return consists rather in a state of feeling towards the donor than in an overt act or abstention in his favour. In this connexion we may recall those cases, which we have noted above (see 4 (*a*) (3)), where a gift to the person, or by the person, whose ill-will is feared averts the danger; and, further, we may refer to the world-wide usage in accordance with which a girl sends a gift to her lover, in order to transmit to him her feelings and to quicken his affections. The gift may be, as in the case of the women of Timor, a flower from her hair or a scarf-pin from her bosom,[6] or an article, such as a head-band, which, having been 'sung,' acts upon the wearer as a charm.[7] It seems that, in all these instances, the acceptance of the gift by the recipient as his makes it part of himself, just as it is already part of the donor. Donor and recipient are thus united in and through it, to precisely the same effect as they are united by an interchange of presents; and precisely the same relation of reciprocal goodwill is brought into being (see above, 4 (*a*) (3) (5) (6) and Crawley, pp. 90, 237, 239). If these views be sound, it is plain why presents are given on days of friendly intercourse or family reunion, as in China, where valuable gifts are made to parents and heads of clans on their birthday festivals;[8] and why gifts are distributed as part of ceremonies in which the community is interested, as on the

admission of a child into a gens among the Kwakiutl;[1] at the initiation of novices into the secret societies of the Bismarck Archipelago and Solomon Islands;[2] among the Brahmans of the Deccan and Madras Presidency at ceremonies of adoption;[3] on the bestowal of a family name among the Lekunen;[4] and on the burial of a leading chief at Duke of York's Island.[5] At a Yahgan burial presents are liberally distributed.[6]

5. The completion of the transaction.—(1) The primitive transaction to which we in ordinary parlance assign the name of 'gift' is thus really a bilateral transaction; and the position of the donor is really that of a person who makes an offer which he can recall, until it has been accepted. In many instances acceptance is signified by some trifling payment or present—a survival, it seems, of the return-gift of which we have so often spoken—once familiar under the name 'launegild,' 'guidardone,' 'guerredon,' 'galardon,'[7] and recognizable in the earnest,[8] or the luck-penny,[9] which is sometimes given in evidence of the completion of the bargain. Edmond de Bryon[10] quotes from Harou, *Le Folklore de Godarville* (Antwerp, 1893), the statement that, in cases of sale,

'en échange d'un objet qu'on vous offre, vous devez faire un cadeau, fût-il de la plus minime importance. Ainsi il est d'usage de donner une pièce d'un centime ou une épingle lorsqu'on va chercher du petit lait à la ferme.'

Instances are to be found in which other methods are employed to complete the transaction, and to place the object transferred beyond the donor's or seller's reach. Of these a common one is that by which the recipient makes the object his own, or, rather, part of himself, by some act of appropriation. Thus, Cook says of the natives of Tahiti that 'they have a singular custom of putting everything you give to their heads, by way of thanks, as we conjectured. . . . When we gave things to little children, the mother lifted up the child's hand to its head. They also used this custom in their exchanges with us; whatever we gave them for their goods was always applied to the head, just as if it had been given them for nothing. Sometimes they would look at our goods, and, if not approved, return them back; but, whenever they applied them to the head, the bargain was infallibly struck.'[11] A similar practice seems to have prevailed in Fiji.[12] So, too, the Eskimos of Savage Island 'lick with their tongue everything that comes into their possession,'[13] 'as a finish to the bargain and as an act of appropriation.'[14]

The significance of these acts appears clearly from the converse practice of the Eskimos of Bering Strait, who retain and, in some cases, swallow part of the article which they are trading, in order to keep possession of its essential essence, and so, through its agency, to obtain another article of the same kind;[15] and from other instances.[16] Again, it is not unusual for farmers, market-women, hawkers, and the like, to spit for luck on all money received by them,[1] probably for the reason given in Lemon's *Dictionary* (1783), viz. prevent its 'vanishing away like a fairy gift';[2] and a like practice prevails among the Berbers of the Atlas.[3] Interesting in this connexion is the advice given to those who receive money from a witch:

'Put it at once into your mouth, for fear the donor should spirit it away and supply its place with a round stone or slate, which otherwise she might do at pleasure.'[4]

It was from neglect of some such precaution that a fiddler who had been paid in gold for his music by a party of mysterious dancers found that the pieces were really beech-leaves.[5] Among the Masai, purchases and gifts are completed by spitting on the objects transferred.[6] By German custom, if a horse was given, the donor dismounted, and the recipient mounted; if a garment was given, the donor took it off, and the recipient put it on; if a necklace was given, it was clasped by the donor round the recipient's neck; while, in other cases, the thing given was in some way or other attached to the person of the donee.[7] From this 'binding on' (*anbinden*), Grimm derives the expression *Angebinde* ('present').[8]

(2) In some cases a transaction of gift takes the form of a sale,[9] it may be to bring within the domain of law a transaction which lies beyond it,[10] or to avoid the risk of the cancellation of the gift,[11] or, perhaps, to escape the danger of giving, as in the case of the Durham schoolmaster noted above (see 4 (*a*) (6)).

6. Transition from the practice of exchanging gifts to that of barter.—(1) It has been pointed out above (see 2 (4)) that the primitive practice of making exchanges takes the form, in some cases, of giving rather than of bartering, and, in others, of bartering rather than of giving. Further, the evidence which we have already adduced shows that these exchanges take place sometimes between the members of the same clan or tribe, sometimes between the members of friendly tribes, and sometimes between strangers. Now, undoubtedly the most formidable obstacle to the extension of the practice of giving or bartering beyond the limits of the clan or tribe is the hate born of fear with which the stranger is regarded. To primitive man the little circle within which he lives forms the only possible world of social life. Beyond its limits lies an unknown country peopled by beings whom he fears and hates, and whose very existence he regards as a menace to his own. These beings have no part or place within this sphere, where alone right is recognized and enforced; and, accordingly, it is not robbery to strip them of their goods, nor is it murder to kill them. Rather it is a public duty to hunt them down and slaughter them like beasts of prey.

It is plainly impossible to lay down with any degree of precision the boundary-line where goodwill ceases and enmity begins.[12] Of the Yahgan of Cape Horn it is said that, outside of the family-group, the relation of man to man is doubtful, if not hostile:

'The bond of a common language is no security for kindly offices. A stranger and an enemy are almost synonymous terms.'[1]

On the other hand, it has been observed by Spencer and Gillen that, among the tribes with which they are acquainted,

'there is no such thing as one tribe being in a constant state of enmity with another.'[2] 'The members of one tribe will tell you that a distant tribe, with which they rarely or never come into contact, is very fierce and bloodthirsty and given to making raids. The same tribe will be living upon most friendly terms with its immediate neighbours, and some of the latter will be doing precisely the same thing with the tribe of which your informants are afraid and suspicious. At the same time it is quite true that, if a member of an unknown tribe made his appearance, except, of course, he came accredited as a sacred messenger, he would most probably be promptly speared. Anything strange is uncanny to the native, who has a peculiar dread of evil magic from a distance.'

In many instances the conception that the stranger is a being to be feared and hated is held most strongly by that portion of the population which is most remote from and, therefore, least familiar with him. Thus, those of the Yahgan who have never met with the Ona regard them as mortal enemies; while those of them who are their neighbours intermarry with them and fall, to some extent, at all events, under their influence.[3] So, too, it is said of some of the N. Queensland natives, that they will hunt down and slay and eat the stranger who trespasses on their territory; while those of their divisions which lie nearest the border live on such amicable terms with their neighbours that the tribal boundaries are not easily determined.[4] Thus, the range of social feelings is widely different in different cases. In some, they reach beyond the clan or even the tribe; in others, they hardly cross the threshold of the family-group (see STRANGERS).

The dread with which the stranger is regarded is largely due to the universal belief in his magical powers. The Bakaïri,[5] for example, and some of the Australian tribes[6] regard evil and sickness and death as coming to them from those who dwell beyond their borders. In short, the stranger is looked upon as belonging to strange gods, and as bringing with him strange supernatural influences.[7] He is possessed, and one of the duties of the medicine-chief and a main purpose of the ceremonies of hospitality are to disenchant him—or, in other words, to remove the tabu.[8]

(2) In the case of certain peoples, exchanges take place only between members of a tribe who are known to one another. Thus, while the Yahgan,[9] like many another people,[10] celebrate the occasion of a visit to their friends by an exchange of gifts, they appear to have had no such dealings with their neighbours the Ona and Alacaluf; nor had they any notion of barter with the stranger until they had learned to practise it from passing voyagers.[11] Among the Andaman Islanders, it frequently happens that a head chief organizes a large gathering in order to receive the members of some distant community who have offered to give an entertainment of dance and song.

'Sundry implements or articles, which are more common in their community than in that of their hosts, are taken by the visitors on these occasions for purposes of presentation, or, to speak more correctly, of barter.'[1] Still, their mode of negotiating is that of giving.[2]

Nor is the interchange of presents limited to friends and acquaintances; for strangers, if introduced by mutual friends, are always welcomed.[3] A very similar exchange of specialties upon the occasion of friendly visits is stated to take place among the Samoans,[4] but it is not clear from the account whether this exchange is or is not subject to the same limitations as the practice of lending, which occurs only between members of the same tribe or clan.[5] The Bakaïri are not themselves potters, and they do not possess the stone suitable for axes. Accordingly, they procure these articles from neighbouring tribes.[6] Each tribe has its specialty, and these specialties pass from tribe to tribe; still, the form of exchange is that of gift followed by counter-gift. On his arrival the stranger presents to his host some article peculiar to his tribe or locality; and the latter, either on receiving him, or, more generally, on parting, gives him something in return.[7] But, until our informant's visit to them, the Bakaïri knew nothing of exchanging specific object for specific object. The guest expected to receive something, but it remained with the host to determine what he should receive.[8] Again, it is said of the Indians of Guiana that each tribe has some special manufacture; and that its members constantly visit other tribes, hostile though they be, for the purpose of exchanging the products of their labour for articles which they themselves do not produce. These trading Indians are allowed to pass through an enemy's country without let or hindrance,[9] traders being treated, for the time being, as fellow-tribesmen.[10] New Zealand affords another instance of the circulation of property by exchange of specialties. The inhabitants on the upper Wanganui send preserved parrots and other birds which are considered a delicacy 'as presents to other parts of the country where they are scarce; and, in due time, a return present of dried fish, or something else not to be obtained easily in the inland country, is received.'[11] Of the Bushmen we are told that 'they had no contact with people beyond their own little communities, except in war, for they were without a conception of commerce';[12] while R. Moffat[13] informs us that they supplied Hottentots, Corannas, and Namaquas with quivers, bows, and poisoned arrows. S. Passarge,[14] relying on the information of a Bushman attendant, speaks of the commercial relations of the latter's countrymen with Bantu tribes, and adds that large prices were obtained for certain commodities; but as to the *modus* of these transactions he leaves us in ignorance.

The most remarkable example of this primitive traffic is afforded by the aborigines of Australia. In their case it seems to reach its highest point of organization among those tribes of Queensland of which W. E. Roth supplies an admirable account. He tells us that

'certain trade-routes laid down from time immemorial along their own or messmates' country are followed by the members of a tribe or tribes, along which each knows that he is free to

travel unmolested; these routes, of greater or less extent, are rigidly adhered to. The opening of the local market, so to speak, may take place at the instance of one of the elders or "bosses" at one of the larger camps . . . where instructions are issued as to when to leave, to whom to go, what to take, and what to return with.'[1]

Roth gives a list of trade routes and of the articles bartered at the various 'swapping stations,' and observes that this intercourse is productive of an exchange not only of material things but of ideas.[2] In the case of the tribes of S.E. Australia, commerce is less systematic in form. Trade-centres exist among them, but barter takes place only on certain solemn occasions, such as the settling of a blood-feud, the celebration of an initiation ceremony, or the occurrence of a great tribal gathering;[3] and it is worthy of note that the very tribes which frequent those resorts make annual expeditions to obtain pitcheri and red ochre, during which they must be prepared to fight every inch of the way. But, besides this trading at recognized places, articles pass from one tribe to another by way of barter. Thus, the Yantruwunta obtained wooden shields 'from their neighbours higher up Cooper's Creek, who got them from tribes farther to the north-east';[4] and, in the case of the central Australians, fighting clubs made by the Kaitish and Warramunga are 'traded down to the Macdonnell Ranges and right away to the south of the Arunta and Luritcha.'[5] In this way ornaments,[6] shields,[7] spears,[8] pieces of greenstone (diorite),[9] stone for axes and hatchets,[10] articles of food,[11] red ochre, sandstone, slabs for grinding grass and other seeds,[12] and skins[13] pass from tribe to tribe by way of barter—those tribes being, in many instances, widely separated from one another.[14]

There are two Australian usages with regard to trade which deserve special mention. Of these the first, called *yutchin*, prevails among the Dieri. 'When a black-fellow is going a distance from home, either to another of the Dieri hordes, or its lesser divisions, or to a neighbouring tribe, some one at his camp becomes his *yutchin*. . . . It is then his duty to bring back with him articles for his *yutchin*, who while he is away also collects presents for him. Under no circumstances is such a pledge broken.'[15] The second usage is practised by the Narrinyeri. When a tribesman has a child born to him, he preserves its umbilical cord, and gives it to a man of another tribe, who has children. In this way these children become *ngia-ngiampe* to the child first mentioned. He and they may not touch, or approach, or address one another; and, when they have arrived at adult age, they become the agents through whom their respective tribes carry on barter. Their estrangement is said to answer two purposes. 'It gives security to the tribes that there will be no collusion between their agents for their private advantage, and also compels the two always to conduct the business through third parties.'[16] It is a matter of indifference whether the children do or do not belong to the same clan.[17]

(3) These instances from Australia establish the fact that the tribes of which Roth speaks possess a far more highly organized system of commerce than is to be found among the natives of the centre. They show us, further, that the S.E. aborigines engage in barter with strangers as well as friends at certain established trading-centres on certain recognized occasions; and they supply ample evidence of the passage of commodities from tribe to tribe, sometimes directly and sometimes through the medium of friendly tribes or of a special class of persons. At the same time, it is obvious that, except perhaps in the case of the tribes first mentioned, such trafficking is exceptional. Yet the mere fact that it exists indicates that the parties to it have made a considerable advance along the path of commercial progress. The privileges accorded to the trader among the natives of Guiana point in the same direction.

The practice of exchanging guest-gifts has a wider range among the Bakaïri than among the Andaman Islanders. Among the former, it may take place between strangers; among the latter, it takes place only between friends, or between a host and an accredited stranger. Accordingly, it is plain that in each of the three last instances we meet with a personal exception to the general rule of treating the stranger as an enemy—an exception, that is to say, in favour of the stranger-trader and the stranger-guest.

(4) Now, a large body of evidence attests the prevalence, both in the past and in the present, in almost every quarter of the globe, of a mode of trading which throws, it is thought, no little light upon the origin of this exception. This so-called 'silent trade' is, in its simplest form, a transaction by way of exchange between persons who are unseen by one another; and examples of it are supplied by European and Asiatic Russia, by many parts of Africa, by Sumatra, Borneo, and the Moluccas, and by North, Central, and South America.[1] Here we propose to consider only those instances which occur amongst peoples regarding whose life and surroundings we have adequate if not full information.

It has been said that this form does not represent the first beginnings of intercourse with the stranger—that it is, rather, a device adopted by traders of a higher civilization in order to overcome the suspicions and fears of those belonging to a lower civilization and to induce them to trade. It is undoubted that to many primitive peoples the practice of making exchanges with persons outside of their own clan or tribe was unknown until it was introduced among them or forced upon them by strangers of a culture superior to their own. Thus, while there is no evidence of exchange between the extinct Tasmanians or Botocudos or Seris with the tribes in their neighbourhood, it is reported of the two former that they engaged in it with the Europeans with whom they were brought into touch,[2] and of the last named that they learned to practise it from the whites of Sonora, with whose missions and military expeditions they came frequently into contact.[3] It would be unjustifiable, however, in view of the evidence, to attribute the origin of this curious form to the ingenuity of civilized traders; for, while it is true that not infrequently such traders employ this method in dealing with rude peoples, it is no less true that in many cases it is practised by such peoples in opening a trade with those outside their borders.[4]

(5) The Veddas of Ceylon, the Sakais (Senoi) of Malacca, the Toálas of Celebes, and the Kubus of Sumatra are regarded by the latest authorities as related races, on the ground of the similarity not only of their somatological characteristics, but of their habits and modes of life;[5] and, consequently,

it is of especial interest to us to find that all these peoples practise this method of exchange in its simplest form. Fa Hian is apparently speaking of the Veddas, when he says of Ceylon that

'it was originally uninhabited by men. Only demons, genii, and dragons dwelt there. Nevertheless merchants of other countries trafficked with them. When the season for traffic came, the genii and demons appeared not, but set forward their precious commodities marked with the exact price. If these suited the merchants they paid the price and took the goods.'[1]

Many instances might be collected in which the merchant is said to have been uncertain whether he was trading with men or demons.[2] According to al-Bīrūnī,[3] the coast-people of Laṅkā (Ceylon) traded cloves in accordance with this method. It is possible, however, that his account applies not to Ceylon, but to those islands in the Indian Ocean where, according to Qazwīnī,[4] a clove-trade was conducted in this manner. The method is still practised by the Veddas of Nilgala.[5] Accordingly, the statement of Bailey[6] to the contrary appears to be erroneous.[7]

Robert Knox's account[8]—which is corroborated by many other reports to the same effect—informs us that, when the Veddas want arrows, they

'will carry their load of Flesh in the night, and hang it up in a Smith's, also a leaf cut in the form they will have their arrows made, and hang by it. Which if the Smith do make according to their pattern they will require, they bring him more Flesh; but if he makes them not they will do him a mischief one time or another by shooting in the night. If the Smith makes the arrows he leaves them in the same place as the Veddas hung the Flesh.'

It may be noted that in the case of the Smoos and Twakas, who employ a similar method of trading, each article has affixed to it a sample of what is wanted in return;[9] and a similar indication is given by the natives of the Rio del Norte in bartering with the whites.[10]

The wild Sakais of Perak, in trafficking with the Malays, either employ a 'tame' Sakai as an intermediary, or deposit their wares, which consist of jungle produce, on the banks of rivers, at certain times and places known to the trader. They then withdraw, and return after an interval to fetch the articles offered in exchange.[11] Hugh Clifford[12] speaks of the 'tame' Sakai only as exchanging with the Malays, who deposit the articles of barter at certain spots in the forest, whence the Sakais remove them, replacing them with their wares. The Toálas of Celebes formerly practised this mode of trading, laying down what they had collected at some place of resort, whence any one could take it on leaving something in exchange.[13] Winter tells us that the Orang Kubu of Sumatra deposit such articles as rattan, beeswax, resin, and ivory at a spot on a river-bank where they may catch the eye of the Malay trader, and then retire. They return from time to time; and, if they find that something which suits their taste has been laid down beside their offer, they take it away with them, leaving their barter for the trader to carry on board his proa.[14]

[14] Quoted by Hagen, p. 118.

Hagen quotes de Sturla, Olivier, and H. O. Forbes to much the same effect. According to Olivier and Forbes, however, it is the Malay who opens the trade. Forbes[1] says that the Malay trader 'beats a gong in a particular manner so as to give notice of his arrival.' In Winter's time a person in need of assistance could summon the Kubus by striking a hollow tree so as to produce a certain series of sounds recognized as a call for aid. Whenever the Orang Ot of Borneo wish to gather the members of the tribe together, they beat upon a tree-trunk, and the Malays who trade with them use the same means to collect their clients;[2] and a very similar use is, or was, made of a gong or copper vessel in Buru.[3] Bakuwi[4] says that those who traded by this method with the people of Tibri—a country of the Sudan, distant about three months' journey from Segelmessa—announced their approach by sound of drum.[5]

The Ukits, the Punans, the Buketans, and the Ot Damung of Borneo are said to employ a similar method;[6] but a recent account of the Punans from Malay sources shows that, when bartering, they no longer keep out of sight of the trader.[7] According to Chinese writers, it was at one time in use up country from Banjermasin.[8]

(6) A racial connexion, similar to that which is said to subsist between the Veddas and certain other peoples, is held by Schmidt[9] to be established between the pygmies of Central Africa, the Bushmen, the Andamanese, the Semangs, and the Negritos of the Philippines. We have already referred to the modes of exchange practised by the Bushmen and the Andamanese (see **2** (1) and **6** (2) above). The Semangs are neighbours of the Sakais, and, although of a wholly different stock, exhibit a manner of life and a method of trading practically identical with theirs.[10]

The accounts of the pygmy peoples of Central Africa disclose an interesting variety of trading customs. The Akkas are grouped in small communities, and wander over the countries of certain of the Monbuttu tribes. They are hunters, and do not cultivate the soil; but they have a remarkable fondness for vegetable food, and not infrequently raid the fruit-trees of their neighbours.[11] 'After a successful hunt, when they possess abundance of food, they invade the banana groves, and for every bunch of fruit gathered they substitute a piece of meat.'[12] A very similar description is given of the Obongo of the Ogowe Basin,[13] who are also said to employ the method of the 'silent trade.'[14] The Batua are simple hunters, and know nothing of agriculture. They wander over the country of the Bakuba, Baluba, Bakaté, and other tribes, but are met with only on certain days at market-places situated within the virgin forest, and, in general, equidistant from the neighbouring villages. These spots are regarded as neutral ground, and are frequented by the pygmies in order

to exchange fresh or dried flesh for maize. As to the manner of the exchange, we have, unfortunately, no precise information.[1]

The accounts of the trading methods of the Negritos of the Philippines are somewhat wanting in precision. We are told of the Aetas that they deal only with the Malay tribes which are their neighbours, in order to procure, for their honey and beeswax, such articles as arrow-heads, knife-blades, cloth, etc., which they cannot provide for themselves. It is said that they always, as far as possible, employ the same persons to conduct this traffic.[2] Further, it is stated by a recent American authority[3] that

'in many places in the Archipelago to-day, especially in Mindanao, periodic commerce is carried on regularly on neutral territory. Market-places are selected where products are put down by one party, which then retires temporarily, and are taken up by the other party, which comes and leaves its own productions in exchange.'

Blumentritt's informants spoke of the Mamanuas of Mindanao as exchanging, but said nothing of the method of the exchange.[4] The 'silent trade' is employed by the wild Apoyaos of Luzon in bartering their tobacco with the Christian natives.[5]

(7) Winter's description of the Kubus' mode of exchange is remarkably similar to Bell's account of that employed by the Smoos and Twakas of the Mosquito country.

'So much confidence have they in the honesty of transactions that I have frequently seen at the mouths of rivers a peeled and painted stick planted in a conspicuous position, and on landing have found hanging to the trees bunches of plantains, baskets of maize, rolls of *toonoo* cloth, skins, etc., and attached to each article a sample of what was wanted in return, such as a fish-hook to one, a few beads to another, a pinch of salt to the next, and so on. These were placed there in the expectation that the coast Indians passing by on the main river would make the required barter. After a while, if they were found to remain untouched, the river Indians bring the articles to the coast villages.'[6] The last sentence seems to show that the practice was declining.

(8) This method of trade is found among the Gorngai and Tungu, the original inhabitants of Kola and Kobroor, islands of the Arru Archipelago, and was formerly in use in Buru and Ceram.[7] From Japanese writers dating from the first half of the 18th cent. we learn that the practice was employed by the Ainus of Yezo in trafficking with the inhabitants of Ki-itat-soub, one of the Kurile Islands;[8] and by the Ainus of Saghalien in trading with the people of the Amur country.[9] According to Paulus Jovius,[10] the Lapps made exchanges,

'yet so that they flye the syght and coompagnie of all merchantes. For comparyng and laying theyr wares togeather and leavyng theyr furres in a mydde place, they bargayne with simple fayth with absent and unknowen men.'

(9) Similar accounts are given of peoples regarding whom we have little information. Thus, we hear of the practice at Mozambique,[11] and, if we credit a native story, at Amboyna.[12] It was employed by the Paloungs in exchanging their tea with the Burmans;[1] and the legends of the invisible smith in Berkshire, and in 'the Æolian Isles of Lipari,'[2] find an echo in Denmark,[3] in Westphalia,[4] and other parts of Germany,[5] and on the West Coast of Africa.[6]

(10) We are told of the natives of Cumberland's Island, by the writer of Martin Frobisher's second voyage to the north, that

'their manner of traffique is thus: they doe use to lay downe of their merchandise upon the ground so much as they meane to part withal, and so looking that the other partie with whom they make trade should doe the like, they doe themselves depart, and then if they doe like of their Mart they come againe and take in exchange the others merchandise, otherwise if they like not, they take their owne and depart.'[7]

It is not quite clear whether those who carried on this trade were mutually unseen, or whether this instance is an example of another form of the practice, in which the parties are seen by one another, but keep at a safe distance.[8] Of the latter form many examples might be cited.[9] In some of these a considerable interval separates those engaged in the traffic, while, in others, a mere line drawn on the sand is the only division between them.

(11) A very instructive instance of another form of the practice is supplied by Lander.[10] His object was to obtain yams, and some of the natives with him proceeded well-armed to a town near the river, and returned followed by many armed people carrying bundles of yams. They were accompanied by an old woman, who seemed to be a person of authority. On arriving at the river, she directed the yams to be placed in distinct and separate bundles before Lander's natives, and ordered the owner to retire to a short distance. The purchaser then inspected the bundles, and, having selected one to his own satisfaction, placed beside it what he considered to be its value in cloth, flints, etc. The old woman looked on while this was being done, and, if she thought that what was given was sufficient, she took up the cloth and gave it to the owner of the bundles, the purchaser taking away the yams. If, on the contrary, she thought that the purchaser's offer was insufficient, she allowed it to remain a short time, so as to give him an opportunity of adding something to it. If he did not add anything, she directed the owner of the yams to move them out of the way, and left the purchaser to remove his cloth. 'All this was carried on without a word passing between the parties.'

With Lander's account may be compared what is said of the Aleuts:

They never transact business with each other personally, but always through a third person. Whoever wishes to sell anything, sends it into another house by this agent, who, without mentioning the owner's name, says, 'Here is the tayák' (saleable object). The buyer asks what is wanted in return, and sends as much as he thinks fit of what is required. The agent takes this to the seller, and, if he is satisfied, the bargain is concluded. If he is not satisfied, he asks for something in addition, or proposes a new exchange.[11]

This method of bargaining is remarkably similar

to that employed by the Eskimos of Bering Strait at the 'Asking festival,' of which Nelson[1] gives an account.

(12) M. H. Kingsley[2] supplies us with an example of yet another form of this practice, in which a divinity safeguards the rights of the traders. She tells us that, when walking along a bush path, far from human habitation,

'you' will 'notice a little cleared space by the side of the path; it is neatly laid with plantain leaves, and on it are various little articles for sale,—leaf tobacco, a few yams, and so on,—and beside each article are so many stones, beans, or cowries, which indicate the price of each article; and you will see either sitting in the middle of things, or swinging by a piece of tie-tie from a branch above, Egba, or a relation of his,—the market god,—who will visit with death any theft from that shop, or any cheating in price given, or any taking away of sums left by previous customers.'[3]

It has been contended by a recent writer, F. Somlo,[4] that this mode of exchange is not, in any of its forms, a primitive mode, because it is not practised by primitive peoples. In his list of such peoples he includes the aborigines of Australia, the extinct Tasmanians, the Botocudos, the Fuegians, the Andaman Islanders, the Negritos of the Philippines, the Bushmen, the Seris, and the Veddas. He does not notice some eight or nine peoples whom the best authorities regard as primitive, and who practise the method in question. He admits that the Veddas employ this mode of trading, and offers the explanation, without, however, adducing any evidence in support of it, that they borrowed the practice from their neighbours.[5] In dealing with the Negritos of the Philippines, he says not a word of the practice of this method at Mindanao and elsewhere; and, while he names the Kubus, he excludes them from his list, without stating his reasons for so doing. Further, he refuses a place in it to the Ainus of Yezo and the Akkas of Equatorial Africa, on the ground that they are agriculturists or are influenced by agricultural tribes; and he would probably have treated in similar fashion, had he dealt with them, the Toálas, the Semangs, and the Sakais. It is quite true that the Ainu women cultivate small garden plots; but, as a people, the Ainus know nothing of agriculture.[6] The Akkas, although they are hunters *κατ' ἐξοχήν*, have an especial fondness for vegetable food, and frequently raid the fruit-trees of the tribes over whose lands they wander.[7] The Toálas of Celebes are now cultivators of the soil; but the remains found in the caverns which they inhabited until recently show that formerly they were hunters pure and simple.[8] But few of the Semangs till the soil,[9] while the tillage of the Sakais is of the rudest.[10] We have already noted that the Paloungs and the Apoyaos grow respectively tea and tobacco (see 6 (6) and (9)). As to primitive methods of agriculture, see K. Bücher, *Die Entstehung d. Volkswirthschaft*[4], Tübingen, 1904, p. 54 ff. It has been pointed out again and again that the fact that a people has made an advance in one direction does not necessarily exclude it from the class of primitive peoples.[11] Thus, for example, the aborigines of Australia are universally and rightly regarded as being within that class, although among many tribes commercial relations have been reduced to an organized system (see 6 (2) and (3)).

It seems plain, then, that the method of exchange under consideration is or has been known to and practised by many primitive peoples; and, accordingly, we are freed from the necessity of discussing the question whether a usage is to be regarded as primitive only on proof that primitive peoples practise it.[12]

(13) It is obvious that considerable light is thrown upon these curious forms of trading by the evidence which we have adduced as to primitive conceptions regarding the nature, incidents, and effects of exchange (see 4 (*a*)). The problem which confronted the savage was this, How was he to obtain from those who were the objects of his suspicion and fear, if not of his open enmity, certain articles which they possessed and he coveted? He was familiar with exchange as practised within his own group, and he believed that the parties to it were brought into a relation of such a sort as to secure their good faith. Here, then, was a method to his hand. He would exchange with the stranger, and by keeping out of sight—by neither seeing nor being seen by him—would limit his contact with him to that effected by the exchange itself. The stranger would not dare to take his goods without making a return; and the good faith of both parties would be guaranteed by the nature of the relation which united them for the time. Thus, the method, in its simplest form, is an application of the principles which operate in exchange, as adapted to the special circumstances of the case. Among the Aleuts, the contact of the parties is limited to that implied in the act of exchanging; but, in other instances, the case is different. Sometimes the parties come into view of one another; sometimes they even approach one another; sometimes they transact wholly through intermediaries; and sometimes they take the additional precaution of keeping silence so long as the traffic lasts. Lastly, there are instances in which honest dealing and peaceable conduct are assured by fear, not of the mysterious retribution which follows upon a breach of tabu, but of the punishment inflicted on the cheat and the truce-breaker by the god of the market. It will be seen from the facts which have been adduced that the mutual avoidance of the parties, accompanying, as it does, the mysterious union which exchange creates, serves more than one purpose. It begins, so to speak, by being a safeguard, and it becomes a rite, without, however, in many cases at least, losing its primary character. It seems not improbable, notwithstanding Somló's observations[1] to the contrary, that the method of trading by means of tabued persons in use among the Narrinyeri (see 6 (2)) is to be regarded as a survival of practices formerly prevalent among the natives of Australia before they had reached the stage of commercial development which they now occupy; and a like explanation may hold good in the instance supplied by Melville[2] of trading through the medium of a 'tabooed Kannaka,' and in the case of the Aleuts and the Eskimos of Bering Strait already referred to (see 6 (11)).

In only one account of this method of trade, and that a very vague one, is it expressly stated that the place of its occurrence is regarded as neutral ground.[3] This matter will be dealt with in art. MARKET.

LITERATURE.—This is indicated in the footnotes.

P. J. HAMILTON-GRIERSON.

GIFTS (Greek and Roman).—1. There was an old Greek proverb that gifts persuade the gods and the majesty of kings (Plat. *Rep.* 390 E). Besides testifying to the universal efficacy of gifts, it serves to mark a natural division of the subject-matter. Gifts made to the gods will form no part of the present article; for information concerning them the reader is referred to SACRIFICE. But, even if these are excluded, the giving of presents on particular occasions was often dictated by superstitious fears, as in the case of birthday-gifts, which have survived from an immemorial antiquity to the present day, because that which was formerly accounted to possess a magic virtue has endured as a symbol of affection or a graceful act of courtesy (cf. BIRTH-DAYS). It is true that valuable gifts could never be out of season, when an enemy was to be won over or a friend had been estranged. Nevertheless, in heroic times the customs regulating the giving of presents had a

serious importance, which the growth of civilization subsequently effaced (Monro on Hom. *Od.* xviii. 282). This may be illustrated by the survival of ceremonious gifts in the East, as well as by the dealings of travellers or political agents with the chieftains of savage tribes (see preceding art.). The gift was not merely treasured as a compliment, but coveted for its intrinsic value.

In *Od.* xiv. 323 ff. the Thesprotian king is represented as showing to another the parting gifts which Odysseus had collected on his travels—bronze, gold, and iron enough to support one owner after another to the tenth generation. In *Od.* xv. 82 ff., Menelaus offers to accompany Telemachus on a journey through the Peloponnese, and assures him that from every homestead he may visit he will take away something valuable—a brazen tripod or a bowl, a pair of mules, or a golden cup. In *Od.* xviii. 282 the disguised Odysseus rejoices at the cunning shown by Penelope in procuring gifts from the suitors without any intention of choosing one of them as her husband. The most instructive case in Homer is that of the embassy to Achilles in *Il.* ix. The refusal of Achilles to accept the handsome recompense offered by Agamemnon is clearly contrary to public opinion, as expressed by Phœnix (496 ff.) and by Ajax (628 ff.). Even the gods are open to persuasion, if the sacrifices and vows made to them are adequate to the occasion; for Achilles to reject the gifts of Agamemnon is to repudiate the god-like honours which the Achæans are anxious to bestow upon him. Even when a relative has been slain, if the blood-price is offered, no one persists in his resentment; but Achilles is stubborn and relentless after an inconsiderable affront.

2. In primitive times hospitality to the stranger is a binding obligation, enforced by the belief that his person is under the special protection of the gods, and that neglect to provide for his wants will be visited with divine displeasure. All strangers and beggars are favoured by Zeus; a gift, though small, is welcome, says Nausicaa to Odysseus (*Od.* vi. 207). It thus became a duty (*θέμις*) for the host to provide food and lodging suitably to his means for any stranger who arrived at his homestead; and such gifts were known as the guest-portion (*ξείνια, ξένια*)—an offering which no prudent man would refuse (see *Il.* xi. 778, xviii. 387).

It is possible that the motive which originally inspired these acts of hospitality was not so much piety as fear. Plenty of evidence has been collected by anthropologists to show that strangers (*q.v.*) were regarded by uncivilized men as a source of danger, and that special precautions must be taken to guard against their influence. Hence the reception of the stranger with particular marks of honour may have been in its inception intended to exorcize the evil spirits surrounding him, or to counteract his magical powers. Instances of this kind from the practices of savage tribes are quoted by J. G. Frazer, *GB*[2] i. 303; but the earliest civilization known to us in Greek literature has reached a much higher stage of development, and what was originally a mere act of superstition has become a religious and social duty.

The progress of civilization in later times tended to reduce to a formality the observance of hospitable relations; but that in critical circumstances the person of the stranger continued to be sacrosanct is shown by the story of Themistocles, when an outlaw, throwing himself upon the mercy of his enemy, the king of the Molossians (Thuc. i. 136). Normally, however, hospitality became less an obligation than a sign of good-will—a point of view which is illustrated by the sovereignty conferred by the Dolonci upon Miltiades, who had offered board and lodging to their envoys when passing through Athens (Herod. vi. 35).

3. Gifts were especially appropriate to the recurrence of particular occasions. The earliest allusion to a birthday feast is in the *Pseudolus* of Plautus, the original of which belonged to the year 309 or 308 B.C. But there can be no doubt that the celebration of birthdays prevailed at a much earlier date. For its special purpose was to invoke the aid of the Good Demon (*ἀγαθὸς δαίμων*) at a time when—on the border-line of two periods—evil spirits were especially prone to extend their influence. It may be inferred from Æsch. *Eum.* 7 that, at any rate as early as the time of Æschylus, presents were made to children on their birthdays (*γενέθλιον δόσιν*). At a later date there is plenty of evidence for the custom: as examples of such gifts we find the mention of golden rings and charms (Plaut. *Epid.* 639), a silver pencil-case (*Anth. Pal.* vi. 227), and a garland of flowers (*ib.* 345). In the same connexion it may be added that at the Amphidromia, a purificatory festival which took place five days after the birth of a child, presents were made by friends and relatives (*πολύποδες* and *σηπίαι*, according to Harpocr. p. 15, 8), as at a modern christening. In Ter. *Phorm.* 13, the slave expects to have to give a present when the child is born, then again on his birthday, and a third when he is weaned.

4. Gifts made on the occasion of marriage require special treatment. In the Homeric age we find clear traces of the time when marriage was an affair of bargain and sale. Aristotle (*Pol.* ii. 8. 1268*b*, 41) testifies to the fact that the Greeks of old bought their wives from each other. The bride-price paid to the father by the suitor is called *ἔεδνα* (*ἕδνα*) in Homer (*ἀπερείσια ἕδνα* [*Il.* xvi. 178]). The value of the bride is sometimes reckoned in oxen. In *Il.* xi. 243 the premature death of the husband prevents him from getting a return (*χάριν*) for the 100 oxen which he had paid down on marriage, with the promise of 1000 sheep and goats afterwards from the increase of his flocks. Hence the epithet 'oxen-earning' (*ἀλφεσίβοιαι*) applied to girls who were able to fetch a high price (*Il.* xviii. 593). In exceptional instances, or as a special compliment, the father might remit the price, as when Agamemnon offered to Achilles one of his own daughters in marriage (*Il.* ix. 146, *ἀνάεδνον*). In *Od.* i. 277, where the *ἕδνα* seem to come from the wife's family, we may detect a changing custom: the explanation is perhaps that they were sometimes expended for the bride's outfit, and to that extent were returned to the bridegroom. However this may be, it is unquestionable that, at least in the case of ladies of high rank, it was customary for their family to provide a suitable portion (*δῶρα*). In this sense Andromache and Penelope are *πολύδωροι* (*Il.* vi. 394, *Od.* xxiv. 294; cf. *Il.* xxii. 51).

When we examine the records of the Attic period, we find that an entirely different system has come into existence, though we have no evidence concerning the change by which the revolution in custom was effected. But the change is evidenced by the shifting sense attached to the word *ἕδνα* by the poets who still continued to use it. Thus in Æsch. *Prom.* 579 it is applied to presents made by the bridegroom to the bride to induce her consent to the marriage; in Pind. *Pyth.* iii. 94, to gifts made by those who were present at a wedding—like our wedding-presents; and in Pind. *Ol.* ix. 10 and Eur. *Andr.* 153, to the portion of the bride. The practice of providing a daughter with a dowry eventually became the rule in Greece. The terms *φερνή* and *προίξ*, generally interchangeable, were in use to denote a dowry; but some authorities hold that *φερνή* was originally limited to the outfit or *trousseau* of the bride, and that it must be so understood in Plut. *Sol.* 20, to be presently quoted. Aristotle (*Pol.* ii. 9. 1270*a*, 24) affords the curious information that two-fifths of the land at Sparta had passed into female ownership in consequence of the number of heiresses (*ἐπίκληροι*) and the size of the dowries. There is evidence, however, that in early times a law of Lycurgus had severely restricted the right of giving dowries (Ælian, *Var. Hist.* vi. 6; Athen. 555 C). In Crete the amount of a dowry was limited to half a son's share (Strabo, 452). There

was no such limitation at Athens, except the law of Solon forbidding any woman other than an *ἐπίκληρος* to receive any *φερνή* in excess of a few clothes and articles of furniture. If *φερνή* is to be understood in the full sense, it is clear that the law soon became obsolete: for it was so general a custom at Athens to provide a dowry for daughters and sisters that a respectable Athenian was obliged to make sacrifices for that purpose (see Plaut. *Trin.* 689; Dem. xl. 25). The reason was to be found in the facilities for divorce permitted by Athenian law. In such a case the wife's dowry became repayable to her guardian (*κύριος*), and the husband was often required at the time of the marriage to provide security (*ἀποτίμημα*) by a mortgage of real property (Dem. xxvii. 17, etc.). The position of a dowerless wife was not only precarious but degrading (Men. *Monost.* 369). The law required that an heiress (*ἐπίκληρος*) without estate must either be taken in marriage by her nearest male kinsman or portioned by him suitably to his means, if bestowed upon another (Dem. xliii. 54).

5. In these cases family pride and natural affection, apart from legal obligation, combined to supply the necessary motives stimulating to action. Otherwise there is little to show that liberality in giving was highly esteemed among the Greeks. The philosophers may be taken to stand upon a higher plane of morality than was attained by the average man, and Aristotle's account (*Eth. Nic.* iv. 1) of liberality (*ἐλευθεριότης*) is typical of the most elevated Greek sentiment. The action of liberality is thus described:

'The liberal man, being virtuous, then will give from a noble motive and in a right spirit; for he will give the right amount, and will give it to the right persons and at the right time, and will satisfy all the other conditions of right giving.'

But the Christian precept, 'It is more blessed to give than to receive' (Ac 20[35]), ushered in an entirely new conception of liberality as founded upon love. Sir A. Grant, in an excellent note on *Eth. Nic.* iv. 1. 16, remarked:

'Aristotle's statement would be, "It is better to give than to receive, because it is more noble." . . . In Aristotle's whole account we do not find a word about benevolence or love to others as prompting acts of liberality. We find no other motive but the "splendour" (*καλόν*) of the acts themselves.'

The strictly prudential attitude of the average man (*do ut des*) is clearly indicated by the common usage of *χάρις*, a favour or free-gift. The word constantly implies a reciprocal relation. He who has received a boon lies under an obligation to return it. Hence the phrase *χάριν καταθέσθαι* is 'to bestow an obligation,' much as a deposit is made of a valuable property which on a convenient occasion may be reclaimed (cf. Thuc. i. 33). The philosopher may protest that a boon ceases to be such, if it is conferred with the ulterior object of prospective gain (Arist. *Rhet.* ii. 7. 1385*a*, 18), but is compelled to acknowledge that, so soon as the action is done, a return is contemplated; and the giver is as prone to overrate the value of his beneficence as is the recipient to disparage it (*Eth. Nic.* viii. 13. 1163*a*, 9).

6. Voluntary contributions to meet the needs of the State were known as *ἐπιδόσεις*. It seems, however, that, like the 'benevolences' of English history, the name was largely euphemistic. In a small community indirect pressure could readily be applied as a spur to the unwilling. From an inscription of the 3rd cent. B.C. (*CIG* ii. 334) we learn that a *minimum* and a *maximum* were sometimes prescribed—in that case 50 and 200 drachmæ respectively: the appeal was followed by a list of subscribers with the amounts given. Isæus (v. 37) tells of a man who, when challenged to subscribe, offered 300 drachmæ on a critical occasion, but failed to make good his word, and was posted with other defaulters. The mean man, according to the description of Theophrastus (*Char.* xxii. 3), is apt to rise in his place as if to make an offer, but then quietly slips out of the assembly.

7. We pass to the juristic aspect of gifts (*δόσεις*), although our knowledge of the provisions applied to them by Greek law is extremely limited.—(*a*) As regards gifts *inter vivos*, in view of the testamentary disability which prevented a man from disinheriting his children, it is necessary to infer, in spite of the absence of evidence, that the law could not be evaded by gifts made in the lifetime of the donor. Similarly, impediments were placed upon the alienation of their property by public officials who had not passed their audit, and by freedmen dying without issue. In the latter case the bar operated in favour of their former owners (Ziebarth, in Pauly-Wissowa, v. 1599). Bastards were not allowed to receive gifts from their putative parents in excess of the amount fixed by law, which was 1000 drachmæ (Harpocr. p. 133. 1).—(*b*) Gifts made in contemplation of death occupy a middle place between gifts *inter vivos* and testamentary dispositions. A valid gift of this kind could be made by the deposit of a sum of money or valuables with another, to be retained by him in the event of the owner's death, but to be returned if he should survive a journey or other adventure about to be undertaken (see Dem. lii. 23, 24).—(*c*) An early instance of what we call a charitable trust is to be found in the dedication by Nicias of a piece of land at Delos, which he had bought for 10,000 drachmæ, on condition that the revenue should be used by the Delians in defraying the costs of a solemn feast (Plut. *Nic.* 3). In the Græco-Roman age the endowment of foundations for religious or secular uses became increasingly common. Thus, the erection and maintenance of public buildings, such as theatres, baths, and gymnasiums, were often due to the munificence of rich private citizens. In such cases a corporation was formed to undertake the ownership of the property and management of the trust so as to secure its perpetuation. A right was sometimes reserved for the founder or his representatives to intervene, in case the management failed to carry out the terms of the trust; or the State might exercise a supervising control through its own officers.—(*d*) Gifts by testamentary disposition require only a brief mention here (see WILLS [Greek and Roman]). A general right of disposition by will did not exist throughout Greece, and is not recognized by the law of Gortyn; but there is evidence of its wide diffusion, at any rate in the Hellenistic era. Our information is naturally most complete in regard to Athens. The right of disposition outside the family, but subject to certain restrictions, was first conferred by a law of Solon. All citizens of full age and of proper capacity were competent to make a will, but no one could disinherit a son (Dem. xx. 102), or, if he had no son, leave his property away from his daughter, although he might direct that a particular person should succeed on condition of marrying her (Isæus, iii. 68). When a man had no issue, he was at liberty to adopt a son either in his lifetime or by will (*ib.* vii. 1). Subject to these limitations, legacies might be given to friends or relatives.

8. It was customary at Rome for presents to be made by friends and relatives to each other at certain of the annual festivals. The first of March was the beginning of the year according to the Roman religious calendar, and was also the *dies natalis* of the temple of Juno Lucina on the Esquiline. On that day, to which Horace refers in a well-known ode (iii. 8) as celebrated by married folk, husbands were accustomed to make presents to their wives (Mart. v. 84. 10). Juvenal (ix. 50) mentions green parasols and amber balls as gifts

which a woman is likely then to receive. After the year 153 B.C., when the beginning of the civil year was transferred to the 1st of January, it became customary to give New Year presents on that day. The feeling—no less universal than primitive, which underlay the custom—of the importance of an auspicious start is acknowledged in Ov. *Fast.* i. 178.

The gifts might be of trivial value—a gilded date (Mart. viii. 33. 11), like our Easter eggs; a dried fig; or honey in a white jar (Ov. *Fast.* i. 186). Especially, it was usual to tender small brass coins, as a symbolical gift of wealth. These gifts were called *strenæ*; and the name, if not the custom, is preserved in the French *étrennes*. Suetonius (*Cal.* 42) describes Caligula, who had announced that he would accept *strenæ* on New Year's Day, as standing in his porch, while a crowd of persons of every class pressed round him with their hands full of coppers. On the other hand, Tiberius often absented himself from Rome at the beginning of January in order to avoid the nuisance (Dio Cass. lvii. 8).

Of all these occasions the best known to us is the festival of the Saturnalia, which lasted for several days from the 17th December, and was kept as a popular holiday, characterized by every kind of merry-making and licence. The giving of presents then was as common as it still is at Christmas, and there is no doubt that the sports of the Saturnalia have been perpetuated for after-ages in the observances of the Christian festival. Martial's xivth book is entirely occupied with epigrams on specimens of rich or poor gifts suitable to the Saturnalia. The same poet (vii. 53) gives an appalling list of useless presents supposed to be sent to him at the Saturnalia, in order to remark in conclusion how much more simple it would have been to present him with the money which they cost. The *cerei* and *sigillaria* deserve special mention. The former were wax tapers (*funiculi cerei*), which may originally have had a symbolical reference to the revival of the sun's power after the winter solstice. They afterwards passed into the Christmas ritual of the Latin Church. The latter were little images made of earthenware, and sometimes of dough; Martial (xiv. 182) mentions the earthenware figure of a humpback (*gibber*). These also survived into Christian times; and even in England it is recorded that bakers made little images of paste at this season (Brand, *Pop. Ant.*[3], 1870, p. 180).

The significance of the giving of presents on the Kalends of January and March is to be found in the same superstitious feeling which has already been mentioned as operative in relation to birthday-gifts. Magic influence must be excited in order to assist the passage from the old to the new year. The gifts at the Saturnalia were perhaps prompted by similar reasons, although the origin and development of that festival have not been ascertained with certainty.

J. G. Frazer suggested, from the analogy of the Carnival of modern Italy, that the Saturnalia was originally observed in February or March, and was transferred to December after the change of the Calendar (*GB*[2] iii. 144).

On the occasion of a birthday, which was celebrated by a feast in honour of the *Genius natalis*, friends brought with them presents of all kinds (Mart. x. 87). Nor was the custom restricted to the birthday of the head of the household. Palæstra, in the *Rudens* of Plautus (1171), mentions a golden *bulla* (*i.e.* a case containing an amulet which children wore round their necks) which her father had given her on her birthday.

9. A marriage was the occasion for a variety of gifts. At the betrothal (*sponsalia*), which sometimes preceded the marriage by a considerable interval, a feast to which friends and relatives were invited was given in the evening, and presents were made to the prospective bride (Blümner, *Röm. Privatalt.*, Munich, 1911, p. 346). Juvenal (vi. 204) is our sole authority for the custom of presenting the bride with a sum of money, gold coins of Trajan on a salver, on the day after the marriage. The Roman law of dower is elaborated in the writings of the jurists, and will be more fully treated elsewhere (see MARRIAGE); here it is sufficient to say that the provision of a *dos* by the wife was a customary duty, and that her father, or those who stood in his place, could be required to furnish it. The *dos* was under the control of the husband during the coverture, and he was entitled to receive the mesne profits. The capital he was liable ultimately to make good, and landed property could not be alienated by him. At the termination of the marriage by death or otherwise, the rights of other parties accrued, which were usually regulated by the terms of the dotal agreement.

Cicero received as part of the dower of his wife Terentia certain flats (*insulæ*) on the Aventine and Argiletum. After her divorce he retained these, in order that the rents might be applied towards the maintenance and education of their son (Cic. *Att.* xii. 32).

10. A special class of gifts were those made by men of rank to their clients or dependents. These were called *congiaria*, properly a definite measure of wine or oil, and were especially made by magistrates and candidates for office to their supporters or to the whole people. Thus in the year 212 B.C. (Liv. xxv. 2) a public distribution of oil was made by Scipio as curule ædile. Money was distributed in this way by provincial governors to their staffs and troops (Mommsen, *Abriss d. röm. Staatsrechts*, Leipzig, 1893, i. 300[2]). Julius Cæsar is the first of whom we hear as making a gift of money to the whole people (Suet. *Cæs.* 38). In Imperial times this was a customary act of munificence by the Emperor, either in his own name or through one of his family (Tac. *Ann.* ii. 42). The claim on the Emperor's generosity soon came to be regarded as a right, and any failure to make a suitable response was resented accordingly. For the lavish extravagance of Caligula, who squandered in this way the accumulated savings of his predecessor, see Dio Cass. lix. 2. The occasions for such distributions were various, including great public festivals, such as the accession of a new Emperor, and the celebration of private anniversaries belonging to the circle of the Imperial family. As distinguished from gifts to the people at large, extraordinary presents of money to the soldiers, which were sometimes also described as *congiaria* (Cic. *Att.* xvi. 8. 2), came to be known technically as *donativa*. This reprehensible practice, which must be distinguished from the division of spoils on the occasion of a triumph, appeared for the first time in the last century of the Republic. The earliest instance is associated with the name of Sulla, and his example was followed by Julius Cæsar, Octavian, and Brutus and Cassius. In Imperial times the donative to the legions, and especially to the prætorians, became a regular institution. A new Emperor invariably sought to ingratiate himself with the troops by a liberal gift, and the refusal of Galba to confirm the donative promised in his name was the immediate cause of his downfall.

11. In connexion with the gifts of rich men to their clients, the practice of the *sportula* deserves notice. In acknowledgment of the homage rendered by the clients who attended the house of their patron, and escorted him when he went abroad, it was customary to invite them to share the evening meal. Subsequently, under the Empire, those who attended to render their morning salutation also received a dole of food, which they carried away in a basket (hence the name *sportula*). This dole was soon commuted, as convenience dictated, for a money gift of 25 *asses*, or about 1s. 3d. (Juv. i. 120). An edict of Domitian enforced for a short

time the revival of the *cena recta*, or regular meal (Suet. *Dom.* 7; Mart. iii. 7).

12. The conditions necessary to a valid gift were minutely investigated by the Roman lawyers. A gift was a mode of acquisition by delivery arising out of a particular motive. It must be such as to increase the property of the donee and to diminish that of the donor, and must not, therefore, be confounded with a grant of freedom or of citizenship. But, when the lawyers endeavoured to distinguish the strict legal meaning of *donatio* from its looser acceptation in popular phraseology, they were often inconsistent. Thus it is denied that the surrender of an inheritance is a gift; but an alienation made to defeat creditors is elsewhere admitted to be a form of *donatio* which is not subject to the usual provisions applicable thereto.

The suspicion with which gifts were regarded and the restrictions imposed to hinder their extension are noticeable features of Roman jurisprudence. They were, no doubt, primarily attributable to the Roman spirit of *parsimonia*, which is amusingly illustrated by the account given in Polybius (xxxii. 13) of the surprise excited by the younger Scipio's liberality towards the sisters of his adopted father—a liberality which consisted in paying down at once a sum of 25 talents to each, when he was entitled to spread the payments by instalments over three years. This niggardliness was the product of the hard conditions endured by the early agricultural population, and was unaffected by the prevalence of present-giving on particular festivals which has been mentioned above. These latter presents were generally trivial in value, and were considered as differing in kind (*munera*, *dona*) from voluntary benefactions. The growth of wealth and the increase of political ambition, which were the outcome of the Punic Wars, led to the passing of the *Lex Cincia de donis ac muneribus* in 204 B.C. on the proposal of the tribune M. Cincius Alimentus. This law prohibited advocates from receiving honoraria (Tac. *Ann.* xi. 5), and prescribed certain restrictions on the validity of *donationes*, if above a certain amount, and unless made in favour of a certain class of persons (*exceptæ personæ*). Outside those limits a gift must be perfected by the observance of certain formalities, as, *e.g.*, that *res mancipi* must be conveyed to the donee by *mancipatio*. It should be observed that the statute did not impose penalties or annul gifts, but prevented proceedings being taken to enforce them. In later times a form of registration (*insinuatio*) was required for any gift exceeding 200 *solidi*, but Justinian (*Inst.* ii. 7. 2) raised the limit to 500. A mere agreement to give (*pactum donationis*) was not binding until the time of Constantine, who required it to be reduced to writing. Justinian, however, made it valid whether in writing or not, requiring the donor to complete the gift by *traditio*. In Imperial times, the object of stimulating munificence had become more important than that of repressing extravagance. It was provided, however, that gifts *inter vivos* should in certain circumstances be revocable, either (1) by the donor, if he could show that the donee had been guilty of specific ingratitude; (2) by the near relatives of the donor on a *querela inofficiosæ donationis*; or (3) in favour of after-born children, when a childless donor had enriched his freedman.

13. A special branch of *donationes inter vivos* is that of *donationes ante nuptias*. Gifts passing between husband and wife, unless of a trivial kind like birthday-presents, were invalid. If the wife passed *in manum viri*, her property belonged to her husband; otherwise, she retained her previous rights so far as they had not been surrendered in relation to the *dos*. The latter was the contribution to the expenses of the marriage on behalf of the wife; and, as we have seen, it belonged to the husband, subject to an obligation to restore its value if the marriage came to an end. The custom which enjoined the making of a gift by the husband before marriage grew up in order to provide for wives who had no property of their own, and so could not contribute a *dos*. Hence the *donatio ante nuptias in dotem redacta*—a sum of money put into settlement by the intending husband, in order to provide for his wife, if she became the survivor. It was considered the property of the wife, but could not be alienated even with her consent. Justinian provided that these gifts might not only be increased, but might be first made, after marriage; and, accordingly, that they should be styled *donationes propter* (not *ante*) *nuptias*. Dowries were placed on exactly the same footing.

14. *Donationes mortis causa* are contrasted with *donationes inter vivos* as being gifts made upon condition that, if anything happens to the donor, the donee's title shall accrue; but, if the donee dies before the donor, the latter shall receive back the gift. The gift was always revocable at the pleasure of the donor. It differed from a legacy as being a disposition made in the lifetime of the donor, and not merely a charge on his inheritance, so that it would take effect altogether apart from the act of the *heres* on entering into possession. In other respects these gifts were placed exactly on the footing of legacies. Thus, (1) no one could make such a gift, unless he was of full testamentary capacity; (2) the property in question remained subject to the claims of the donor's creditors; (3) the heir could claim his Falcidian fourth from it: *i.e.*, the provisions of the *Lex Falcidia*, forbidding a testator to give more than three-fourths of his estate in legacies to the detriment of the heir, were made applicable to the property subject to the gift. The English Law has adopted the doctrine of *donatio mortis causa* from the Roman, but has still further restricted it by insisting on the necessity of delivery, and making the immediate expectation of death an indispensable condition to the validity of the gift. The provisions of the Roman law concerning gifts made under a will are described in artt. INHERITANCE and WILLS (Greek and Roman).

LITERATURE.—On the legal aspect of gifts, see L. Beauchet, *Hist. du droit privé de la république athénienne*, Paris, 1897, iii. 122 ff.; O. Karlowa, *Röm. Rechtsgesch.* ii. [Leipzig, 1892] 584 ff.; H. Burckhard, *Die Stellung der Schenkung in Rechtssystem*, Würzburg, 1891; and for *congiarium* and *donativum*: J. Marquardt, *Röm. Staatsverw.*[2] ii. [Leipzig, 1881–1884] 132 ff. See also the articles 'Congiarium,' 'Donatio,' 'Donativum,' 'Dos,' and 'Dosis,' in Pauly-Wissowa, and the corresponding articles in Smith's *Dict. of Gr. and Rom. Ant.*[3], London, 1890. For birthday customs, see Wilhelm Schmidt, *Geburtstag im Altertum*, Giessen, 1908.

GIFTS (Hindu).—Gifts, especially religious gifts to Brāhmans, form an important subject with the early legislators of India. The receipt of gifts, according to the Sanskrit lawbooks, is one of the principal sources of income of a Brāhman. What has been once promised to a Brāhman may be claimed by him like an outstanding debt. Their greatest means of support consisted in the grants of land, including sometimes houses, tanks, gardens, etc., given in perpetuity to gods or the priests. There is no lack of special Sanskrit treatises on the subject of *dāna*, *i.e.* gifts to the Brāhmans. The gift of a man's weight in gold or silver, called *tulāpuruṣa*, was considered specially meritorious. Thus Chandeśvara, a minister of Mithilā (Tirhut), presented in A.D. 1314 an assembly of Brāhmans with his own weight in gold. Royal grants of land on copper-plates have been found in great numbers all over India, and have furnished many interesting historical dates. The

land was generally granted rent-free, and with other privileges. Many *agrahāras*, or villages occupied by Brāhmans, held either rent-free under special grants, or at a reduced rate of assessment, are still in existence. There is a rule that *devottar*, landed property, *i.e.* lands dedicated to an idol, to a temple, to the maintenance of Brāhmans, or to other religious purposes, cannot be subjected to payment of Government revenue, if they were so dedicated before A.D. 1765. Funeral ceremonies were a special occasion for making gifts to Brāhmans, likewise a marriage, a thread-girding, and other family festivals and religious celebrations.

GILDS.—There exist among many barbarous peoples certain systems of confraternity and association which are analogous to the gilds of mediæval Europe. The concurrence is inevitable in social evolution, but actual continuity cannot be established, as, for instance, it can be established in the case of the State or of marriage. An attempt has been made to trace the Teutonic gild to the blood brotherhood of the ancient Scandinavian peoples, in which occurred the ceremony of mingling the blood of the parties in a footprint.[1] This would connect the system continuously with the various methods of forming the brotherhoods which are a feature of the lowest wild societies (see BROTHERHOOD [Artificial]). But the thread is too slender.[2] Similar social impulses acting in different conditions and in different ages will produce similar forms of union. An earlier hypothesis has been discredited, viz. that the gild originated in the drinking feasts of the ancient Teutons.[3] Herbert Spencer traced the origin of the gild system to customs of paternal inheritance;[4] Maine, to customs of adoption.[5] But it is merely analogous to these, as it is to the family itself. Alone among peoples other than the Western, the Chinese and Hindus possess a similar system. The comparison of the three groups suggests that the gild belongs to particular types of humanity at a particular stage of social evolution. It is generalizing somewhat too broadly to say that 'the conception of the gild belongs to no particular age and to no particular country.'[6] The gilds of mediæval Europe were a growth from the crossing of Teutonic and Græco-Roman ideas and institutions. In this connexion it is to be noted that intercourse between the peoples of Europe and their knowledge of one another was, in spite of relative slowness and difficulty of communication, not less, but probably more, than it is to-day. Half a century later than the Code of Justinian, which takes cognizance of the classical *collegia opificum*, a craft gild of soapmakers was established at Naples, and in 7th cent. England the 'Laws of Ine' illustrate the conception of the frith gild. It has been suggested that the *corps des métiers* of early France were directly continuous with the Roman *collegia*.[7] On the other hand, the influence of the Christian Church is to be taken into account;[1] for an essential characteristic of the gild is the religious conception of brotherhood.

'When,' says Gross, 'the old kin-bond or *mægth* was beginning to weaken or dissolve and the State did not yet afford adequate protection to its citizens, individuals naturally united for mutual help.'[2]

The reference is to England in the 5th and 6th centuries, and we may compare the fact that the first mention of Continental gilds is in the Carolingian Capitularies of A.D. 779, and that Charlemagne regarded these 'conspirations' as dangerous to the State. It might be said that the early Christians were the first gildsmen.

Three classes of gilds are distinguished: (1) *social and benevolent*, often described incorrectly as 'religious' (religious gilds proper, such as were formed from the clergy, are a sub-species of the social); (2) *gilds merchant*; (3) *craft and trade gilds*. Roughly, this order represents the order of development. The second and third classes are not prominent until the 12th century. Even these, as perhaps may be said of every mediæval institution, had a strong religious element, and possessed the functions of social and benevolent gilds.

In the O.E. and O.N. terms several formations have apparently coalesced.[3] The O.E. *gild* or *gyld* has the meaning both of 'payment' and of 'gild,' and also of 'offering' and of 'idol.' O.N. *giald* is 'payment'; Goth. *gild* is 'tribute.' The decision of the earliest meaning of the root is difficult; it involves the question whether gildsmen were originally those who contributed to a common fund or those who worshipped and feasted together.[4] The question is perhaps irrelevant; in all likelihood the distinction was never made either in theory or in practice. The one function involves the other in all 'societies' formed in early Europe from classical times onward.

It is convenient to bear in mind the analogy already suggested of the Christian Church, while tracing the history of the gilds. They were its microcosms. In gilds of the social class, life generally, in its social aspect, was the main object. In other gilds other objects preponderated, such as the furthering of commerce, or of a craft; in short, livelihood was the main object.

A gild, in general, is 'a confraternity, brotherhood, or association formed for the mutual aid and protection of its members, or for the prosecution of some common purpose.'[5] It is for Europe essentially a mediæval institution; other applications of the term are secondary or metaphorical; in several cases, as in Scottish burghs, the modern use is directly continuous with the mediæval. Such a confraternity in its social aspect performed functions similar to those of modern burial clubs, benefit, insurance, and friendly societies, the most important of the last-named being direct descendants of the mediæval type. The earliest included the payment of the *wergild*; all included the saying of Masses, and the holding both of religious services and of an annual feast. The majority had a saint as patron. In the commercial and craft gilds, the religious and social functions of the benevolent gild were retained, though the worldly ideal was predominant. This in the *gild merchant* was the best use of the monopoly of the town's commerce; in the craft gild it was the furtherance of the art or trade in question, the maintenance of good work, the fixing of a reasonable price, and the organization of employment on the system of apprenticeship. The gild was essentially a local institution; its members were neighbours.

The gild had a master and various officials. Each member took an oath, and paid an entrance

1 M. Pappenheim, *Altdän. Schutzgilden*, p. 18 ff.
2 K. Hegel points out that this brotherhood did not exist among the Franks and Anglo-Saxons, where gilds first appear (*Städte u. Gilden d. german. Völker im Mittelalter*, i. 250–255).

fee and annual subscription. Regular business meetings and an annual gild day were held.[1] The livery of the gild was worn at festivals and at all meetings of a ceremonial nature.[2] Small parish gilds met in a room or in members' houses. Large and wealthy gilds possessed a gild hall. Legacies and donations were received; loans were made to members, and gifts of charity to poor gildsmen out of the gild funds. The gild possessed a chapel or chantry, where its Masses were said, and where members met on the day of the patron saint. Schools and churches were financed or founded by important gilds. This last function has become the chief business of some of the great Livery Companies. Men and women alike were eligible for membership. Technically there was no distinction of classes. Henry IV. and Henry VI. belonged to the Coventry Gild of the Trinity. By the 14th cent. their numbers were enormous. Every town had many social, religious, and trade gilds.

(1) The *frith gild*, or *peace gild*, so called, refers to an occasional feature of town life in Northern Europe from the 6th century. The 7th cent. 'Laws of Ine,' and the 10th cent. 'Dooms of London,' are constitutions of frith gilds in substance, though not in form. The intention is to supplement defective law and constitution no less than to further national defence by local co-operation.[3] A 'gild' is said to have been formed in Canute's time at Roeskild for the purpose of defence against the Vikings. The frith gild as such never crystallized into a formal institution.

'Brentano's commonly accepted story of a great network of frith gilds covering England, battling with lordly oppressors, founding town constitutions, etc., is merely a phantasm of the imagination.'[4]

There was no general development even of the *corps des métiers* in France or of the *arti* in Italy before the 12th and 13th centuries; while gilds for trade and commerce are unknown in England until after the Norman Conquest. The question has been extensively debated as to the character and number of the Anglo-Saxon gilds. It cannot be maintained that gilds were characteristic of the Anglo-Saxon period. The idea of them was implicit, and occasionally expressed, as in the gild of thanes at Cambridge, which gave its members assistance in the blood feud and provided the *wergild*.[5] The oldest gild ordinances of Europe are those of Cambridge, Abbotsbury, and Exeter, belonging to the first half of the 11th century. It is often assumed that the Normans brought over to England the idea of craft gilds which had been so largely exploited in the Frank empire for three centuries. The Anglo-Saxon gilds themselves were of the social type, apart from a few traces of co-operation in monastic orders.[6] But the fact that religious gilds proper flourished under the Anglo-Norman kings was due to the Normans themselves.

Among the most famous social-religious English gilds was that of Corpus Christi.[7] Organizations of a gild type have been traced to a period prior to the 7th cent. among English monasteries. The modern Catholic confraternities are lineal descendants of religious gilds. Gilds of Kalendars, so called because the gild met on the first of each month, were formed among the clergy. Gilds of the higher clergy were major, those of the lower were minor.[8] But the social gilds were strongly religious; their ideal is an interesting continuation of early Christian principles. The object of association was

'not only devotions and orisons, but also every exercise of Christian charity, and therefore above all things mutual assistance of the gild brothers in every exigency, especially in old age, in sickness, in cases of impoverishment, if not brought on by their own folly, and of wrongful imprisonment, in losses by fire, water, or shipwreck, and by loans, provision of work, and, lastly, the burial of the dead. It included, further, the assistance of the poor and sick, and the visitation and comfort of prisoners not belonging to the gild.'[1]

Even the craft gilds had a religious tinge,[2] or, rather, the framework of the organization was religious. The Tailors' and Shoemakers' Gilds had chapels in St. Chad's Church, Shrewsbury.[3] Wealthy gilds spent considerable sums on the embellishment and upkeep of their chantries and chapels. The annual pageant was in a sense a thank-offering for the year's blessings. Mass, or Morn-speech (*Mornspeche*), preceded the ordinary business meetings, as well as the feasts, as it preceded the day's work daily for all Christians. A mystery play often was a feature of the annual pageant.[4] It was probably as being a network of Catholic influence throughout the people that the gilds were abolished in Protestant countries on the ground that they were 'superstitious foundations.' In the 14th cent. Wyclif had condemned the abuses of the gilds. With their disendowment their important work of poor relief was taken from them.[5] The craft gilds were technically only disendowed of their religion[6] in the great suppression of the social and religious gilds in 1547. Their social services, however, were limited to their industrial side. The property of disendowed religious and social gilds was taken over by the Crown; gild halls became poorhouses. In Denmark and North Germany they were similarly affected by the Protestant movement. Modern social and religious 'gilds' are thus technically a revival, rather than a survival, of the mediæval.

(2) The *Gild Merchant*, or Gild of Merchants, was the dominant form of the organization of English commerce from the 12th to the 15th century. It is also closely connected with the growth of municipal government. In Anglo-Saxon times it had not been instituted. The Laws of the City of London, supplementing deficiencies in the law, exhibit 'a complete authority for the supervision of trade corresponding to the later Merchant Gild in nearly every particular.'[7] But London, like certain other great cities, such as Florence, never developed a Gild Merchant. The 12th cent. was marked by the growth of towns, due to the impulse given to trade by the Norman Conquest. At first the chief difference between town and country was that the former possessed a Gild Merchant.[8] Trade being the *raison d'être* of towns, and the chief burgesses being the chief merchants, they naturally combined to frame commercial regulations. Traces of such action are found as early as A.D. 1000; a Chapman Gild is mentioned in 1109.[9] On the Continent the method was already established. It is presumed that the Normans introduced it into England.[10]

The Gild Merchant was an incorporated society of the merchants of a town or city, having exclusive rights of trading therein. They regulated the trade monopoly of the town, confirmed to them by royal charter of *gilda mercatoria*. This included the right of wholesale pre-emption of all trade coming to the town, and that of retailing, restricted to individual members. Free trade was allowed periodically at fairs. The great merchants

1 The annual 'Show' of London's Lord Mayor is derived from such.

2 Hence the name of the great London Livery Companies, the survivors of trade gilds.

3 Dover possessed a gild hall in A.S. times (Hibbert, 12).

were usually large landowners. The Gild Merchant was exempt from the town tolls, their chief obligation being that of 'scot and lot,' participation in the town assessments. On occasion they supplied the town with money. The majority of householders became members, but not all gildsmen were burgesses; the status of burgess depended on residence and burgage tenement. Many outsiders were in the Gild Merchant. The system worked well, and it is easy to see the possibility, often realized, that the Gild should develop into the Town Corporation.[1] But the Gild Merchant and Borough were not identical; the former may be regarded technically as being a department of the borough constitution, though it was never the basis or nucleus of it.[2]

During the 14th cent. mention of the Gild Merchant decreases. Trade and handicraft were becoming more complex, and it may be said that each creation of a craft gild or trade gild weakened the Gild Merchant. In its best days the latter included many artisans; by the 14th cent. the craft gilds began to supersede it. Each separate trade or craft was able to secure a monopoly from the Crown when it suited the Exchequer to grant it. Thus the new bodies, in one sense, specialized the functions of the once all-embracing Gild, and, in another, usurped them. But there was no actual struggle between the new gilds and the older body. Nor did the Gild Merchant give birth to the craft gilds; no real organic connexion can be established. The gild system was the system of the day; the process of devolution was as if small factories for special industries should be set up by private enterprise in towns which hitherto had possessed one general factory and universal emporium. Economically the process marks an advance in the scientific organization of the division of labour.

The Gild Merchant survived longest in the small boroughs. In some cases its religious framework alone remained; in others its only trace is an annual feast-day or show. In many cases the term survived as a designation of the totality of the craft and trade gilds. In some, it served to denote the Corporation, in which it was frequently merged. Or again in special cases, where it had become virtually the civic government, it remained as such, or as a 'select body' thereof. Its terms and title recurred in a Royal Grant to the Colony of Virginia in 1705.[3] Cases where it simply disappeared are easy of explanation. But cases where a 'company of merchants' is found after its disappearance present the problem of continuity.[4] However, the rise of the Merchant Staplers and the Merchant Adventurers really marks a new epoch in the history of English Commerce.[5]

One or two special cases are to be noted. In Coventry the Bakers' Gild had been established for more than a century before any Gild Merchant was created.[6] It was authorized by the *Communa* in 1208, and still exists to-day.[7] At Wisbech a religious gild was the precursor of the civic Corporation which obtained its charter from Edward VI.[8] Such cases, as well as the following, simply show the universality of the gild *principle*. If we look at the principle, we may describe the mediæval civic corporations as being themselves, so far, gilds. But this is not to say that this religious or that trade or merchant gild became the municipal authority.

Scotland, as in other matters, so in the development of municipal constitutions, was more strongly influenced than England by the Continent, and thus reproduced some special features of the history of Continental gilds. England was never subjected to the struggle between the Gild Merchant and the craft gilds which was so regular a feature of Continental municipal life in the 13th and 14th centuries. There was some friction in London, which was soon removed. In Scotland the large admixture of a Flemish element in the population led to a division of the inhabitants into *guildry* and *burgesses*, just as was the case in Bruges and Ghent, for example. The *guildry*, as elsewhere, were the mercantile aristocracy. Craft gilds did not become important till the 15th century. Each gild, as it was created, was regulated by a deacon appointed by the town. The craft gilds struggled during the 15th and 16th centuries for the right of electing their own deacons and for a share in the government of the burgh. They succeeded at the end of the 16th century. The privileges survived till 1846.[1] The term *guildry* is still applied to the municipal corporations of the Royal Burghs. By the 15th cent. the Guildry practically formed the Corporation. In Edinburgh, Glasgow, Perth, and Aberdeen, the 'Dean of Guild' is still elected by the Guildry; elsewhere he is chosen by the Town Council from its members. This Dean of Guild is technically the head of the Gild Merchant.[2]

(3) By far the most clearly defined, and historically the most influential, were the *craft gilds* and *trade gilds*. The former term frequently implies the connotation of the latter. Members of the same craft, industry, or trade, working in the same town, combined in association to protect and promote their common interests, but on principles very different from those followed by any modern industrial organization. Their lineal descendants in London are the Livery Companies, whose title retains the fact of the uniform worn by these gilds, and also one of two synonyms for the gild—'company' and 'mistery.' The latter is a reduction of the Lat. *ministerium*, and is frequent in the dual term 'craft and mystery.' *Gild* was the North German term, *Zunft* the South German, *métier* the French, and *arte* the Italian. They have been traced—not without success, as noted above—to the Roman *collegia opificum*. It is unlikely that they had any evolutionary connexion with the manorial groups of workmen. In the Frankish empire they may have been first formed as brotherhoods of artisan serfs. In England they are first mentioned in the reign of Henry I., and were probably due to Norman and Flemish influence combined. The Weavers of London, Oxford, Winchester, Lincoln, and Huntingdon, the Cordwainers of Oxford, and the Fullers of Winchester were among the first to be formed.[3] In the 14th cent. they were extremely numerous, their number and importance growing with the growth of the respective trades. In Normandy, Flanders, and Germany they were prominent in the 12th century. They were

'first introduced into this country as royally authorized organizations among *alien artisans* settled in English towns. They appear to have been in occasional conflict with the town authorities, but by the beginning of the 14th century the causes of disagreement seem to have been set at rest, and the Mayor of London had succeeded in establishing authority over the Weavers' gild in 1300. From this time onwards gilds were organized among the *inhabitants* who worked at one craft, with the consent and approval of the municipal government, and were utilized for certain purposes of police and regulation by the town officials.'[4]

The Weavers' gilds were perhaps the earliest; the Lorimers' gild is heard of in 1261 as insisting on the Saturday and other half-holidays for its

brethren, providing against the enticing away of apprentices, and fixing terms of payment.[1] At their complete development, already attained in Paris by the 13th cent., the gilds comprised the three ranks of Masters having apprentices, Journeymen or Yeomen, and Apprentices.[2] An eldest son was free of the craft by patrimony. The central figure was the Master Craftsman, who owned his implements and sold his wares. The executive consisted of these and two Wardens, who had the duty of supervising the competency of apprentices and the right of search. There was a board of Assistants: two stewards, a clerk, and later a treasurer; with a beadle who summoned meetings and kept the door.[3]

The religious aspect of the gild has already been noticed. The town authority, the *Communa*, was careful to maintain control over the gilds (the history of this relation proceeded differently in Scotland and on the Continent). 'Compositions,' annual agreements, were made between them and the town. The latter, as a rule, did not encourage the gilds of building trades.[4]

The craft gild has no historical connexion whatever with the modern Trade Union. Nor was it at all similar in principles and aims. On the other hand, it is equally unconnected with the modern Employers' Association or Capitalist Syndicate. The gild represented capitalist, manual worker, and consumer alike.[5] It has been described as an 'aristocracy of labour,'[6] so far as the labour element was concerned. Considering all its elements, we can reach no modern analogy except the distant ones of Co-operative Societies and the trading Municipality, the latter resembling rather the older Gild Merchant. Large numbers of half-taught helpers and unskilled workers were connected with, but had no share in, or membership of, the gilds.[7] At Newcastle and elsewhere the aggregate of craft gilds was spoken of as the Gild Merchant.[8] In many towns 'the old Gild Merchant lived on, not so much as a distinct body, but in the life of the separate crafts into which it had been specialized.'[9] In short, they 'can hardly be regarded as democratic bodies'; they were 'the élite of each trade,' closely attached to the interest of a particular town.

The economic principles which they expressed are significant of the age of their best work, most of which is the glory of their respective countries.

'The purpose of these gilds was the regulation of work in such fashion that the public might be well served and that the trade might therefore flourish.'

But, whereas nowadays the same purpose is carried out on the following principle that

'each manufacturer works to produce at as low a price as possible, and thus to force a sale for his goods by their cheapness [another avenue of profit being the exorbitant price of articles of the best material and workmanship, so-called luxuries], in old times,' continues our soundest student of economic evolution, 'the effort was to secure satisfactory conditions for production—skilled workers and honest materials—and to ensure a price which should be "reasonable" to receive and therefore reasonable to pay for such wares thus made.'[10]

It was on these principles that all gild ordinances were framed. Hence the Warden's right of search, and the proviso in articles that members of the craft should be resident.[11] A gild was a police system, an association of *ateliers*, and a Christian brotherhood. Its members included consumers; its status and functions were closely connected with municipal government.

England was not, as Brentano supposed, the birth-place of gilds,[1] but gilds passed through their phases of development on more typical lines in England than on the Continent, with which for this purpose Scotland is to be classed. First heard of in Italy, they became important in pre-Carolingian France. Not till the 11th cent. did they become important in Norway and the Netherlands, at which period their revival in France, after their suppression by Charlemagne, is to be placed. Denmark and Sweden developed them in the 12th and 14th centuries respectively.[2] The Gild Merchant on the Continent is the *Koplude Gilde*, *Kopmanns-Gilde* of Germany, the *Comansgulde*, *Comannen Gilde* of the Netherlands and Northern France (*Hanse* is a synonym in both areas), the *Mercanzia*, *Università de' Mercanti* of Italy.[3] Often identified with 'patrician governments,' these Gilds Merchant kept up a conflict with the craft gilds during the 13th and 14th centuries, a conflict extending from Italy to Scotland. The craft gilds in the end succeeded in obtaining a share of authority. Such a struggle, but against the nobles alone, was carried on in Florence by the *arti majori*.[4]

The Reformation, by disendowing the religious and social gilds and crippling the organization of the craft gilds, prepared the way for Poor Law reform and the changes in industrial evolution which were then shaping. An intermediate process remains to be noticed. In England during the 14th cent. the class of gildsmen known as *journeymen* or *yeomen* set up confraternities of their own. The movement was analogous to a struggle between workmen and employers. It was followed by a similar movement in Germany in the following century. The result was the formation of subsidiary craft gilds. 'Journeymen's companies' and 'Merchants' Companies' (the latter not to be confounded with the old Gilds Merchant) became important in 15th cent. England. Amalgamation followed in the 16th and 17th centuries, often resulting in a more or less definite identification of the gilds with borough organizations. The privileges of the craft gilds were not formally abolished till 1835, in Scotland 1846, some still surviving. But the new economic forces broke the old principles in the 16th and 17th centuries.[5] The gilds of France were abolished in 1789; gilds of European origin survived in Constantinople till 1877. Their break-up, generally speaking, was more rapid and clearly marked in Northern Europe, where the new commercial and industrial factors had most influence.

GILDS (Greek and Roman).—**1. Origin, etc.**—The word 'gild,' which is here employed in default of a better, is in some respects unsuitable to the alliances which have to be considered, because it carries with it ideas which are foreign to the ancient world, as will presently appear. The Greek and Roman gilds had a long history, and their character varied greatly under the stress of the manifold influences, local and general, which were continually remoulding the social structure. Broadly speaking, the association of private origin is a feature rather of the later Greek and later Roman civilization than of the earlier. Few of these unions or brotherhoods or corporations (if a somewhat loose use of this designation be permissible) existed on the Greek side of the Mediterranean earlier than the 4th cent. B.C., and on the Roman side few were older than the Imperial age. It is natural to connect the vast outgrowth of private associations in both cases with the ruin of freedom. When the liberties of the Greek city-State on the one hand, and of the Roman burgesses on the other, were impaired, men naturally sought to compensate themselves by extending and strengthening social bonds of various kinds. But it is important to observe that in the Greek and græcized lands after Alexander, and in the whole Roman world after the inauguration of the Empire, peace became more stable, international trade increased with improved communication, and forms of cult spread from their centres of origin over ever-widening areas. Religion, trade, social enjoyment—these were the main sources from which the ancient gilds sprang, and these naturally became more productive as political and municipal liberty declined. In the romanized provinces a gild is usually named *collegium* or *corpus*. On the side of the Roman dominions where Greek influence was paramount, the titles were varied, and nothing like a common designation was in use. The evidence for the history of the Greek as well as the Roman corporations, in the period before they were wholly subjected to public control, is to be found almost entirely in a vast multitude of inscriptions, chiefly brought to light by very recent research. The details thus revealed are of intense human interest, as opening up secrets of social evolution of which literature betrays almost nothing. From the 4th cent. A.D. onwards the gilds were enslaved to the State, and participated in the universal misery. The severe regulations then enacted form a great element in the history of the age, and the Theodosian code supplies not a little information.

The ancient gilds were intimately bound up with the ancient municipality. In one of its most momentous aspects the old Greek and Roman world consisted of a vast complex of municipalities, each retaining some semblance of State sovereignty. The gild was a group within a town, and rarely had any links connecting it with similar groups outside. A notable exception is that of the 'Dionysiac artists' (τεχνῖται), a union of men who served the theatre and exhibitions cognate with it—actors, dancers, musicians, and the like. Exceptionally large gilds of these persons were early formed, and they gradually coalesced, until, in the Imperial age, they acquired an organization which covered the whole Empire. Their traces are found in almost all lands subject to Rome. The position of the gilds within the cities of the romanized West was more definite than that which they occupied in the communities of the hellenized East, and in all public ceremonials they had a precedence allotted to them. After the municipal senates came the peculiar religious bodies called *Augustales*, then the gilds, then the unorganized common people (*plebs*).

2. Classification.—The gilds may be considered with reference to their three main purposes. Some had religion as their chief bond, others trade or labour, others mere social amenity. But it is impossible to draw sharp lines of severance.

(1) *Gilds for religious purposes.*—On Greek soil the earliest voluntary unions came into existence for purposes of worship. There was often a certain divergence between the cults sanctioned by the rituals of the city-States and those beloved by the masses. Among cultured people, too, the advance of civilization brought with it a dissatisfaction with official religion, which is clearly reflected in the dramatic and philosophic literature of Hellas. Men, therefore, banded themselves together to satisfy their yearning after gods not publicly recognized. The attraction which a divinity introduced by foreign residents might have for the Athenians even in the great classical age, is illustrated by the mention of the festivity of the Thracian goddess Bendis in the introduction to Plato's *Republic*. But it must be noted that hardly any gilds, either Greek or Roman, were entirely dissociated from religion. As religion was primarily a municipal concern, and citizenship was intrinsically bound up with it, no organized body of persons within a town could live without a cult. But the degrees of importance which the religious element possessed in the organizations were very various. In some it was the principal, in a few the sole, interest. In most it was only one of the avenues to enjoyment which a brotherhood opened up to its members. Most of these institutions existed principally for the enhancement of the dignity of life and for the increase of its satisfactions. Religious ceremonies were mainly joyous, and the common sacrifice or offering was a natural occasion for the common feast. The whole story of the corporations which were predominantly religious is rich in attractions; but only a few of its points can find a place in this article. Such gilds are far more characteristic of Roman or romanized cities than of those which were or became Hellenic. An early propaganda, obscurely recorded, gave birth to many brotherhoods in regions where Greeks dwelt, which spread far and wide the ideas known as Orphic. Another remarkable movement began in the 2nd cent. B.C., in favour of cryptic and ecstatic forms of worship. It gave rise to many unions of men who described themselves as *mystæ*. It embodied a revulsion from unbelief similar to that which created the great drift of the Western world towards forms of pagan faith in the 2nd and succeeding Christian centuries.

At Rome the more antique brotherhoods which served the gods (*sodalitates* or *sodalicia*), apart from the great State colleges, were organized and supervised by the State. Such were the associations for the worship of the Great Mother, introduced from Asia in 205 B.C. In Italy, private religious groups were first called into life by Greek influence. Many societies for the veneration of Bacchus sprang up as a consequence of the passionate superstition which the disasters of the Hannibalic War engendered. The secrecy of these brotherhoods led the Roman government to regard them as criminal, and to believe the wildest allegations concerning them. In 186 B.C. and the following years the so-called 'conspiracy' was suppressed by judicial murder on an enormous scale. For a very long time the societies for the service of Oriental divinities—Isis, Osiris, Serapis, Anubis, Mithra, and others—struggled hard for existence in the West. It was not until the age of Sulla that any *collegium* of this type could live unmolested. The Jews were specially favoured in this respect both in and outside of Italy, al-

though the ordinary Roman deemed their creed an odious superstition. The persecution of Christian societies is partly to be explained by the fact that they appeared to be of a secret, and therefore a dangerous, character.

With religious gilds may conveniently be classed those which were maintained to provide for the decent burial of deceased members, whose spirits were treated with a veneration not unlike that accorded to divine beings. These were generally formed by the very poor, and sometimes even by freedmen or slaves, especially by the great groups of both classes which were in the Imperial service. The inscriptions (to be found in the work of Waltzing mentioned below) provide a vast amount of interesting and minute information about these *collegia funeraticia*, as scholars are accustomed to call them, though in the actual titles no ill-omened word is used. Many describe their members as worshippers of a particular divinity. In some cases these colleges are called officially 'health-giving' (*salutaria*). The regulations testify to the extraordinary depth of the desire among these obscure people, not only to secure a distinguished burial, but to make certain of remembrance after death. These associations were almost universal in the Western half of the Roman Empire, while on the Eastern side, in spite of the Greek scrupulousness about funerary rites, few were founded and most of those owed their existence to Roman influence. Strange as it seems to moderns, the burial clubs, like almost all others, subserved to some extent the purpose of common enjoyment. The place of interment provided by the contributions of the members often had attached to it rooms for reunions, in which feasts were celebrated, and meetings held to keep alive the memory of the dead. There was a bright and even joyous element in the ceremonials which is alien to the life of Christian times. It may be noted that many associations, not primarily burial clubs, paid some attention to the obsequies of members.

(2) *Trade gilds.*—When we turn to gilds formed by men of the same trade or occupation (and these constitute the largest section), we can observe a great distinction between the Eastern and the Western divisions of the Roman realms. In the West, unions of this class are to be found in abundance in almost every city. On the walls of buildings in Pompeii about 1500 scrawls have been discovered calling for the election of particular persons to local offices. Many of these appeals were issued in the names of gilds of artisans or traders. We find gold-workers, wood-merchants, mule-drivers, fruiterers, cooks, bread-bakers, confectioners, poulterers, fishermen, dyers, fullers, porters, tailors, barbers, and perfumers. In Roman Africa, by way of exception, the trade organizations hardly existed. Their social functions were carried out by associations based upon the political divisions of the citizens (into *curiæ*). In the East, where the Greek spirit ruled, societies constituted by workmen or traders were sporadic before the days of Roman ascendancy; and, though they grew in number afterwards, they were never widely spread. In only a few cities was there a general organization by trades and occupations, in the Western fashion. In the city of Philadelphia, for instance, the corporations of workers were the constituent elements of the local body politic, as was the case with many mediæval communities (see Waltzing, iii. 51). At Thyatira, again, the manual labourers and traders seem to have been as completely organized as they were at Pompeii and in the generality of Western municipalities (see Waltzing, iii. 55). At Rome there was a legend which ascribed to King Numa the creation of the trade gilds. This was a mere deduction from the fact that all gilds had a connexion with religion, of which Numa was supposed to have been at Rome the general founder. Romans and Italians possessed in a remarkable degree the faculty for self-government, and it was to this faculty that the gilds owed their origin. The associations of Roman citizens in foreign communities, to which the name of *conventus civium Romanorum* was given, testify to the Roman power of self-organization. It is a curious fact that the earliest inscription (*CIL* xi. 3078) relating to a trade gild is one which emanated from a college of cooks, natives of Falerii near Rome, who were domiciled about 200 B.C. in Sardinia. They employed their own peculiar dialect, the 'Faliscan.' It may conveniently be noted here that foreigners everywhere organized themselves after the fashion of the Roman *conventus*, for the protection of their common interests. Delos, for example, and Ostia possessed numerous gilds of foreign residents (see inscriptions in the works of Waltzing and Poland, mentioned below). In the later centuries of the Roman Empire associations of Syrian traders existed in many parts of the Western provinces (see Mommsen, *Provinces of the Roman Empire*, London, 1909, ii. 138). The spread of Oriental cults was, of course, much furthered by these foreign societies.

(3) A number of gilds existed mainly, and some solely, *for the promotion of social recreation or enjoyment*—a purpose from which, as has been said, no gild was wholly free. The organizations with which we now have to deal flourished almost exclusively in the sphere where the Hellenic spirit was potent. Athletic, gymnastic, and artistic brotherhoods were rare and exotic in the West, whereas on the Eastern side of the Empire they were a natural growth, and a city could hardly make the proud claim to be Hellenic if it did not possess them. Apart from these, many social unions, both in the East and in the West, must be regarded as ephemeral. Such are the numerous companies of 'life-comrades' (*συμβιωται* in Greek, *convictores* in Latin), and also associations with eccentric titles, such as the 'sleepers' (*dormientes*) and the 'late-drinkers' (*seribibi*). The 'little thieves' (*furunculi*) and the 'assassins' (*sicarii*) remind us of the young men at Athens who called themselves by the name of a savage Thracian tribe, the Triballi, and of the 'Mohocks' in London during the reign of Queen Anne. With the athletic gilds may be classed the organizations of boys for military training—boys who at that stage were called *ἔφηβοι*. These were not so much gilds as educational institutions originating with the State. From Athens they passed to every land where Greek culture was adopted. In many places, as their age advanced, the *ἔφηβοι* entered clubs of younger men (*νέοι*), and later on became members of elder men's gilds, which bore the designation *γερουσία* (to be distinguished from the municipal councils or senates which had the same name). The numerous 'colleges of younger men' found in the West (*collegia iuvenum*) may have originated in an imitation of Greek custom.

3. **Constitution and activity.**—We shall now give a brief sketch of the constitution of the gilds and of the manner in which their purposes were achieved, during their flourishing period. In their organization, the voluntary associations imitated that of the municipalities. The codes of rules which inscriptions have preserved resemble greatly the codes by which the cities were governed. Greek lines were followed in the Eastern half of the Roman Empire, Roman lines in the Western half. The gild always had officers elected by the members, just as in the towns local magistrates were chosen. The members paid regular contribu

tions, usually month by month, into a common chest, and the general body sanctioned the disposal of the funds. Fines for neglect or malfeasance on the part of officers and members alike were laid down with much elaboration, as was the case in the municipal statutes. The office-bearers were, as a rule, the richer members. These were expected to contribute handsomely towards objects of common interest. Money might be given; or buildings, or statues, or other benefits for the enrichment or adornment of the society might be bestowed. In course of time such contributions were more and more regularized until, as in the towns, there was a tariff of payments to be made on accession to offices, whether of a sacred or of a secular character. Of course, there was no universal tariff; each city and each gild enacted its own. In this way there was a great continuous outflow of wealth from private coffers for the advantage of the gild, and especially of its less wealthy members. This is a great feature of the Roman Imperial age. Ambition led many holders of office to exceed the stipulated gifts, and generosity was repaid by many kinds of honours—in particular, eulogistic inscriptions, special titles, and statues. The towns were full of effigies of benefactors, and the mania for erecting them was a common subject of ridicule. Cassiodorus, in the 6th cent. A.D., spoke of the statues in Rome as surpassing in number the population. The resources of the gilds were further increased by a device commonly practised also by the municipalities. Rich persons were adopted as 'patrons,' and were honoured in proportion to their benefactions. The wealth of the gilds naturally increased when Marcus Aurelius made them legally capable of taking benefits under wills. We have many records of extensive endowments and rich properties acquired in this manner.

The expenditure out of the common chest was largely devoted to the gratification, in various ways, of the members by banquets, exhibitions of games, and other spectacles, and social enjoyments. In the case of the funerary gilds the main expense was incurred in granting sums to the representatives of the deceased, wherewith to carry out the obsequies. Benefactions to the associations, like those made to the municipalities, had the effect of enabling the poor to profit in a certain degree by the generosity of those better endowed. But the ancient gilds, unlike their mediæval counterparts, paid no heed to what we should regard as charity. In all the multitude of inscriptions which they have left behind them there is hardly one which records any benefaction in aid of the sick and needy (cf., further, 'Greek' and 'Roman' sections of art. CHARITY, ALMSGIVING). In this aspect the Christian societies from the first contrasted strikingly with those which were pagan, and they won thereby the admiration of their bitter enemy, the Emperor Julian. Indeed, the poorer the gild, the less likely was it to be the recipient of important gifts. The burial clubs, composed of the poorest of the poor, had hardly any resources beyond the contributions of the members. It is very notable that, when distributions of money (*sportulæ*) were made on festal occasions, the members of a gild who were higher in social station received a larger sum than those of humbler rank, just as in Christian societies the priest's share was larger than the layman's.

As the gilds were not charitable institutions, so they were not societies for mutual benefits, like the modern provident or mutual insurance associations. Exceptions are rare. Some Greek unions which bore the name of *ἔρανοι* advanced money for certain purposes, to be repaid by the recipients (see Poland's work, mentioned below). These societies were characteristic of Attica and the Greek islands. Here and there similar practices may be traced in connexion with gilds bearing other titles, but not often. In the Roman army of the late 2nd and 3rd centuries the minor officers were allowed to form societies for mutual aid. Records of such unions have been found especially in Africa (Waltzing, i. 308). Expenses contingent on advancement or change of station were met out of the common funds. The institution provided, in effect, an insurance against possible sudden requirements.

Modern writers have often been tempted to compare closely the ancient gilds of artisans with the workmen's trade unions of our day, and with the gilds of the Middle Ages. There is hardly a single true point of comparison. By combining, the ancient workers might procure from local or central authorities advantages and immunities which scattered individuals could not have secured. But, apart from this consideration, it is not too much to say that the trade bond, which was vital in the mediæval gild, as it is in the modern trade union, was merely incidental in the ancient association. No league of artisans in ancient times made any attempt to force a rise in wages, to prescribe the conditions of work, or to regulate apprenticeship. Still less were the workmen's *collegia* companies for the carrying out of contracts, as has sometimes been imagined. The all too common modern phenomenon of the 'strike' was almost entirely absent from the society of the ancient world. Of course, the existence of slavery partly accounts for the fact. But among the free workmen, who were far more numerous in the cities than modern scholars often suppose, the strike was so rare an event that the known examples of it may almost be counted on the fingers of one hand. We have an instance (inscription of Magnesia in *BCH*, 1883, p. 504) of a Roman governor compelling the bakers of a city to return to work; but in the Imperial age the bakers were more and more under local or Imperial direction, in order that the supply of food might not be endangered. A decree of the island of Paros (*CIG* 2374*e*) tells how the people erected a statue to an official of the community who compelled the artisans to keep to their work and also forced their employers to pay wages without the necessity of legal procedure. What was the exact nature of the quarrel does not appear.

It may be observed that the inscriptions show not a few examples of freedmen, and even slaves, being admitted to membership of unions mainly composed of free workmen, and even to offices (Waltzing, i. 347). The fact appears less strange when we remember that, in the times of the Empire, capitalists often entrusted large operations to men who were technically slaves, but actually subordinate partners. Another noticeable circumstance is that women appear among the members of the funerary gilds; even in the earlier Imperial centuries they were not disdained as 'patronesses' (*patronæ*) of other gilds, and were sometimes given the title 'mother' of the gild (see Waltzing, iv. 369, 373).

4. Relation to the Government.—The process by which the gilds were, in the end, subjected to the most stringent control by Government fills a chapter in the history of the ancient world which is of the utmost moment. The earliest interferences with the freedom of private association were due to religious causes, as in the case of the so-called 'Bacchic conspiracy,' mentioned above, or to the misuse of liberty for political purposes. Numerous secret societies sprang up from time to time which were really dangerous to the common weal. Such were the 'comrade-bands' (*ἑταιρεῖαι*) at Athens during the Peloponnesian War, and the groups of ruffians organized by Clodius and others in the dying days of the Roman Republic. In 64 B.C. the Senate of Rome dissolved a number of these pernicious associations. Six years later Clodius passed a law which established complete freedom. This state of things the Empire naturally could not tolerate, and to the Senate was given jurisdiction over all gilds and private societies within the Roman dominions. Many of them record in their extant memorials that they possess the Senate's licence (Waltzing, i. 125). But in this field, as in all others, the Emperors could intervene, and did intervene with ever increasing frequency. Some of the letters which

passed between Pliny and Trajan (see *Epp.* 33, 34, 92, 93) have reference to this subject. But a vast number of associations subsisted without public sanction. So long as they were innocuous, the Government disregarded them; when they became a nuisance, it suppressed them. A club which was secret was *ipso facto* suspect.

A great change was brought about when public services were demanded of the different corporations. At first these services were elicited by rewards and immunities, particularly in the case of the gilds connected with the provisioning of the capital. Special exemptions from taxation were given by Claudius to those engaged in the bringing of corn from over the sea. Gradually this duty became compulsory, and what at first affected Rome alone afterwards befell the municipalities of the Empire in general. The terrible scheme of Imperial taxation, which, in the 4th and succeeding centuries, crushed out municipal freedom, was also fatal to the freedom of the gilds. It became extremely difficult for a man whose father was a member of a gild to escape from it; and a system of caste, of a kind, was created. The oppression which lay on the local senates and on the gilds alike, in carrying out their duty of producing revenue or supplying service to the Government or municipality, led the victims to attempt every method of escape. When a man fled, there was a substantial reward for his capture, and if this failed his property was forfeited. Thus the dwellers in towns were to a great extent in a state of serfdom, like that of the tillers of the soil, due to the same causes. The immunities granted at first to the Christian clergy induced many members of gilds to seek ordination, and the Emperors were compelled to cut short the privileges of clerics who merely wished to escape obligations. Thus in A.D. 365, Valentinian I. forbade clerical ordination in the case of the corporations of bakers. Other ordinances followed, and in 458 the law of 365 was extended to the members of all colleges. Means of production fell more and more into the hands of the central authority. A sign of misery is that in not a few cases the workers sided with the barbarian invaders against the Roman power (see an example belonging to 376 B.C. in Ammianus Marcellinus, xxxi. 616). Yet, with all disadvantages, the gilds died out slowly. In Italy a number of them were vigorous in the days of Theodoric, who saw their value and tried to protect them. At Constantinople many gild-organizations survived down to the 10th century. It has long been a disputed question whether mediæval municipalities and gilds can be affiliated to their ancient counterparts. The problem is not likely to be brought to an acceptable solution. Cf. preceding article.

The relation of the early Christian societies to the gilds is an interesting but still obscure subject. There were undoubtedly many Christian gilds which presented the appearance of funerary organizations, and so escaped Government control. Behind this screen these gilds were, of course, used for purely Christian purposes. Titles resembling those of the pagan corporations were avoided, and such names as 'brothers' or 'brotherhood' (*fratres*, ἀδελφοί, *fraternitas*, ἀδελφότης) were adopted. The Emperor Valerian, by his edict of 257, attacked the Christians through these associations, by withdrawing from them the protection of the law and rendering them illicit, and by sequestrating the burial-places. The fact that Christians were very familiar with the pagan private unions, and adopted their forms in part for themselves, must have had influence on the early structure of the Christian institutions. But the extent of the influence is hard to define. The conclusions of Hatch, in his Bampton Lectures on 'The Organization of the Early Christian Churches' (1880), are now generally supposed to be exaggerated.

LITERATURE.—The Greek gilds are exhaustively examined by F. Poland in his *Gesch. des griech. Vereinwesens*, Leipzig, 1909; the Roman, by J. P. Waltzing, in his *Etude historique sur les corporations professionnelles chez les Romains*, Louvain, 1895–1902. The survival of gilds at Constantinople is studied by A. Stöckle, in *Spätröm. und byzant. Zünfte*, Leipzig, 1909, which is an appendix to the journal *Klio*. A good survey of the subject is given in art. 'Collegium' by Kornemann, in the new edition of Pauly's *RE*. The position of the gilds within the municipalities is shown in W. Liebenam, *Städteverwaltung im röm. Kaiserreiche*, Leipzig, 1900. See also W. M. Ramsay, in *HDB* v. 132.

J. S. REID.

GILGIT DARDS.—See DARDS.

GILYAKS.—1. Ethnology, etc.—A tribe of unknown racial affinities living among many other native tribes, especially the Tunguses, in the northern part of Saghalien, on the shore of the mainland opposite, and on the lower course of the Amur (between 49° and 54° 4′ N. lat.). The Gilyaks are below middle height; the average height of twelve men measured by Zeeland was 162·2 cm. (5 ft. 4 in.); that of eight women measured was 150·4 cm. (4 ft. 11 in.). They are squarely built, with a short neck and well-developed chest, rather short and crooked legs, small hands and feet, a fairly big and broad head, swarthy complexion, dark eyes, and straight black hair, which the men plait in one tail, the women in two. The Gilyaks are of two types: the Mongolian or Tungus, and a type less far removed from the European, with a long-shaped face, moderate cheekbones, more open eyes, and more hair upon the face. There is every ground for believing that the original pure racial type has vanished owing to age-long crossing with various alien elements. What marks out the Gilyak among the Mongolo-Manchurian tribes by which he is surrounded is his language, which has nothing in common either with that of the Ainus or with that of the Tunguses. So far we can only say that certain grammatical peculiarities allow of our comparing Gilyak with the languages of the aborigines of N. America (see below, § 8). Ethnographers have accepted the view first set forth by Schrenck, according to which the original location of the Gilyaks was the Island of Saghalien, from which they migrated to the mainland. But the latest investigator of the Amur region, Sternberg, supposes that certain peculiarities of Gilyak life, survivals both in speech and in custom, and, finally, tradition, give us reason to suppose that the Gilyaks are immigrants from the distant north, from the Arctic regions. The most characteristic survival of this kind is the fact that on certain solemn occasions a Gilyak is compelled to use not the door but the smoke-hole of his pit-house, which among Arctic tribes serves as the regular entrance into the hut. The actual terms used to express the ideas of entrance (lit. 'diving down') and exit (lit. 'popping up out of') confirm this view of such survival. The modern name *Gilyak* is probably not of Chinese origin (as Schrenck, who derived it from the words *Kile*, *Kileng*, supposed), but rather spread to the Gilyaks from the Tungus tribes which bear the name *Gilyami*, *Gilyakha*. The Gilyaks' own name for themselves is *Nivukh*, *Nitsyvyts*, i.e. 'inhabitant of my place.'

The Gilyaks numbered in all, according to Sternberg's repeated enumerations made in the nineties, 4365 souls (2392 males, 1973 females); of these, Saghalien contained 1954 (1089 males, 865 females), and the mainland 2411 (1303 males, 1108 females). Since the appearance of the Russians the numbers of the Gilyaks have noticeably fallen off. Epidemics of smallpox, typhus, and measles in the sixties and seventies carried off 30 or 40 per cent. of

the population. Something must also be ascribed to periodic famines, along with the scurvy which inevitably accompanies them. According to tribal traditions, the nation of the Gilyaks would long ago have disappeared but for the constant immigration into its territory of solitary exiles and refugees from neighbouring peoples. These energetic immigrants, thanks to natural selection and to crossing, produced vigorous and healthy progeny, which delayed the process of extinction.

2. Mode of life, etc.—The Gilyaks live in settlements, whose numbers depend on the fishing conditions of the locality. There are small settlements with only five or six inhabitants, and large ones with two hundred. They follow a half-settled mode of life, changing their place of abode several times in the year, in accordance with the movements of the fish, their own occupations, and the seasons of the year. Their summer quarters are generally near the sea at the mouths of rivers; in the winter they move away from the sea to the edge of the *taiga* (Siberian jungle). Their winter huts are of two types. On the mainland and on the shore of Saghalien which looks towards it they have adopted a hut of the Manchurian type. It is a big shed-like house of timber, squared or unsquared, with a two-pitched roof supported by pillars inside, no ceiling, but windows filled in with fish-skin; along the walls under the sleeping-benches are run horizontally big heating pipes daubed with clay, and connected with two low stoves which are placed on each side of the entrance to the house. The pipes are generally made of whole trunks of hollow trees. Another type of winter quarters is the pit-house, half sunk in the earth, and having above its level only a pyramidal superstructure of timber with soil heaped upon it. In the middle of the pit-house is an earthen hearth surrounded by a low wooden fence. Above the hearth is the smoke-hole. The way into the hut is through a low movable door giving upon a vestibule. Round three sides of the hearth are the sleeping-benches, of which the one opposite the entrance is reckoned the most honourable. The summer habitation is either a wooden wigwam standing directly upon the ground or else a shed on high posts, which serves in winter as a store for preserved fish. The interior of the habitation is most unattractive: smoke, cold, darkness, dirt, and plenty of parasites.

The Gilyaks' chief occupation is fishing. Two species of the genus Salmo (*S. proteus* and *lagocephalus*) yearly visit their territory in countless numbers, and form the basis of their subsistence. Of the other kinds of big fish the most important are two species of sturgeon (*Acipenser sturio* and *orientalis*). They use the fish not only cooked but in a raw or frozen state. They catch them with hand-nets, hooks, cast-nets, and seines made of nettle-fibre; they also spear big fish. The second principal occupation of the Gilyaks is the chase of big sea-beasts. Their vegetable food consists of berries. Hunting is a secondary occupation. They kill bears chiefly in the time when the fish are passing, and the bears come down to the banks of the stream in whole crowds. Hunting sables, carried on by means of nooses, pitfalls, and traps, yields most of the money with which they purchase necessaries.

The weapons of the Gilyaks are the bow and arrows with iron heads. It is particularly to be noticed that they use dogs for food, which is quite contrary to the custom of the other hunting tribes. Their means of locomotion are boats and, in the winter, sledges (*narta*) drawn by dogs. Their boats are of two kinds: (1) sea-boats after the Manchurian model; (2) river-boats of native production, dug-outs made from a whole poplar, with round bottoms, long and narrow. The sledge is, like the boat, a dug-out, and very narrow, so that the driver sits astride upon it and his legs slide on snow-shoes on each side. The dogs, from five up to thirteen, get over as much as 12 *versts* (8½ miles) in an hour.

The Gilyak's winter costume is a tunic of dog-skin with the fur outside; from the waist to the knees there is worn above it a short skirt of seal-skin; besides this are fur thigh-pieces and boots of sealskin cut in the Chinese manner. On the forehead is worn a frontlet of squirrel tails, on the head a hat or bonnet of fur inside and out with ear-pieces—with the men these are separate; the women's form part of the bonnet. Their hands are covered with gauntlets of hare's fur. Their underclothing consists of a shirt of bought material and short drawers of the same down to the knees. The summer costume is nowadays almost exclusively of bought stuff, mostly red, blue, or black. Clothing of fish-skin and costly women's clothes of carp-skin, with numerous patterns embroidered in colours, are going out of use. Summer foot-gear is still made of fish- or seal-skin. The summer hat of the men is conical in form, and made of birch-bark with patterns on it; the women's is bought, and is of Chinese fashion. All the parts of their costume except the under-linen and the furs are edged and embroidered with the most delicate patterns. The Gilyaks are very skilful in carving wood; ordinary things, even cups of birch-bark, are adorned with very fine patterns. The modern Gilyak arabesque has developed gradually from the meshes of netting and the representation of various animals.

3. Family and domestic life.—The structure of the family among the Gilyaks has peculiar features. At first sight, marriage would appear to be absolutely individualistic. As a matter of fact, monogamy is the commonest form; polygamy is rare, and owes its occurrence to circumstances. According to the accounts given by the Gilyaks themselves, polygamy hardly exists at all either on Saghalien or on the estuary of the Amur or on the coast of the Sea of Okhotsk; it is fairly frequent along the course of the Amur; but, even where it is found, there are seldom more than two wives. A Gilyak buys his wives from outside his kin, and pays a bride-price for them, according to their value, in various precious goods. A Gilyak's wives and his children are reckoned his wives and children in the eye of the public; but at the same time there is a whole group of men—his younger brothers, cousins in every degree of kinship, and also the husbands of his sisters and his wife's sisters—who have the right to sexual intercourse with his wife. A group of brothers possesses the same right over all the sisters of the wives of each of them. Accordingly, any man who is joined in individual wedlock to any woman has rights over a whole group of women. Likewise, each woman who is married to a single Gilyak is at the same time participant in a group marriage with the whole group, consisting of the husbands of her own sisters and the brothers of her husband. This regulation of sexual intercourse, discovered by Sternberg in 1891, is in exact accordance with the words expressing relationship. Each man applies the word *an'khei* ('wife') not only to his individual wife, but to all his own wife's sisters and also to all the wives of his elder brothers; and the woman gives the name *puniva* ('husband') not only to her own individual husband, but also to the whole group of persons mentioned above. In the same way the terms 'father,' 'mother,' 'brother,' 'son,' and the like, are applied to whole groups of persons; the wives of brothers call each other 'sister,' and a daughter's husband calls his wife's father's sister 'mother.' The men of each kin

marry, for the most part (and formerly this was obligatory), the daughters of their mother's brothers, and women wed the sons of their father's sisters. The rules as to sexual intercourse among the Gilyaks can by no means be called immoral, inasmuch as towards persons in forbidden classes the strictest correctness is observed in all relations; with such not only jests, but even ordinary conversation, are forbidden. The position of women is one of subjection. Their marriage is often forced; betrothal is often arranged between children not yet weaned. The special sentiment of love is well known to the Gilyak. The death of a beloved wife, or the impossibility of marrying one's beloved, is often a motive for suicide. This sentiment is often the cause of women being carried off. Kinship among the Gilyaks is exogamous, founded on the agnatic principle; its signs are having: (1) the same hearth or lord of the hearth; (2) the same kin-gods and sacrifices; (3) the same kins into which the women are given in marriage, and from which the men take their wives; (4) the same common obligation of kin-vengeance; (5) the same cemeteries in common; (6) mutual rights of inheritance; (7) the bear-festival in common.

In spite of the agnatic principle, the Gilyaks do not recognize any patriarchal power of the elder. The elders of the kin or the richer members of it receive respect and exercise authority, but not power. Juridical relations are to a great extent regulated by the kin organization. By the agnatic principle only sons inherit, or, in their absence, brothers—preferably that one who takes over the wife of the deceased; but in any case the property does not pass out of the kin. Only by testamentary disposition can part of the property pass to daughters or to an outsider. A curious case of taking the law into one's own hands is the reclaiming, by force of arms, of a woman who has been carried off. But more frequently recourse is had to the decision of the kinsmen. An insult leads to a duel with sticks. Not long ago, if a kinsman was slain by an outsider, the kin of the slain man would all unite in sanguinary warfare with the murderer's kin, but the women and property were not touched. Sometimes such struggles ended in a peace, upon condition of the payment of a blood-price. Murder within the kin is not punished.

In general, juridical morality among the Gilyaks stands very high. Thefts are almost unknown; murders are never committed for the sake of gain. But the evil example of the Russian traders is beginning to have its destructive effect. The moral feeling which animates the Gilyaks is visible among them in the general propriety and in the modesty of the women. They live all together; but shameless nakedness is not allowed, nor the disgusting scenes which are met with among the Ainus. Of course, even among the Gilyaks, cases of unchastity outside wedlock occur; but the parents of a girl who commits such a fault treat her with severity; the mother, according to the Gilyaks, subjects her to corporal punishment; and the father, in case of an illegitimate child being born, tries to set the evil right by killing the child and hiding its body. The marriages, though based upon sale, generally run a peaceful course. As long as the wife is young, the husband guards her jealously, and she most carefully avoids giving him cause for anger. Moreover, both sides are kept in check by the fact that a husband who sends back his wife to her parents for any reason has no right to ask for the return of what he had formerly paid for her. If a wife leaves her husband of her own initiative, he can demand that the payment made for her be given back to him.

In allotting the labour of keeping up the domestic economy, incomparably the greater share falls to the wife. The husband is responsible only for winning the most necessary means of subsistence. Hunting, fishing, trading, and the journeys connected with them, are the whole sphere of his activity. The time when the Salmonidæ pass up the Amur in masses perhaps requires of him redoubled energy; but in this case, too, the woman gives him no inconsiderable help. When the fish has been brought to the bank, she has to clean it, gut it, split it, and arrange it on the drying stages to be parched in the sun. It is also the women, partly with the help of the children, that lay up, for the winter, stores of food derived from the local flora, and collect berries, roots, herbs, mosses, etc. The Gilyak children are kept in an extremely dirty state. The mothers wash them only in very rare cases. Nevertheless they are usually, at any rate in winter, well and carefully dressed. Their clothing exactly reproduces in miniature the adults' garb, down to the smallest details and all the ornamentation. From the belt which secures the coat and apron of the little Gilyaks hang all the same objects as the adults carry—tinder, flint and steel, pipe-cleaner, etc. In their amusements and games the children love to imitate the work and pastimes of their elders.

In cases of polygamy all the wives live together in one and the same room, and each has for herself and her children an appointed place on the sleeping-benches. All the wives have equal rights, and each gives her share of labour to the domestic economy. But the division of labour is not always equal. The wife who enjoys the special favour of the husband is generally given only the lighter work; the heavier is allotted to the rest. According to local testimony, a Gilyak often contracts a second or third marriage solely in order to render easier the life of one or other of his former wives, by putting at her disposal a fresh worker. Men of the richer class, who from sheer ostentation, in order to make a show of their wealth, allow themselves the luxury of several wives, not infrequently adopt another means of lightening the labour of the latter. They allot the heaviest labour about the house to slaves, usually female, but occasionally male, bought for this purpose. The Gilyaks have a special word for them, *krygkhrys'* or, according to their sex, *krygkhrys'-umgu* for women, and *krygkhrys'-utgu* for men. It is to be noticed that they have no slaves of their own tribe; and the number of slaves, especially male ones, is rather limited. The reason for this is the high price which they have to pay in getting them either directly from the Ainus, or Gol'ds, or, more frequently, from other Gilyaks at second hand. The price of a female slave is much higher than that of a wife. Slaves male and female are without any civil rights, and are entirely dependent on their lord; they are treated humanely only as far as the lord's own interests dictate, and he has perfect freedom to sell them whenever he likes. The business of slaves is to obey and to serve, but their chief suffering, especially in the case of the females, comes from their having no rights at all, and from the contempt with which they are treated by their masters, who do not allow themselves any human relations with them. Gilyaks are not allowed to marry female slaves, or have sexual intercourse with them; the latter rule, however, is not always kept by young unmarried men. But no Gilyak would ever allow himself to acknowledge progeny resulting from such intercourse. A child that comes into the world under such circumstances is reckoned to belong to its mother's tribe, and is the property of her owner. It is allowed to grow up along with its mother, and when it is adult it is kept or sold just like any other slave.

In view of what has been said about marriage, it is obvious that the right of inheriting extends only to persons of the male sex, and woman herself passes in inheritance like a chattel. The only direct heirs of a deceased Gilyak are his sons, however many they may be, on absolutely equal terms, no regard being had to seniority. The wife and daughters, whether married or single, have no rights in the inheritance. The only modification is when a man leaves behind him a wife with young children. The relict, along with all the property of the deceased, passes to his next eldest brother as his wife, whether he is single or married even to several wives. The levirate, however, is not quite obligatory. Any other person may, if he wish, marry the widow, with the consent of the brother-in-law and on payment of a certain sum. The children, according to custom, are not forbidden to follow their mother. Finally, if a deceased Gilyak leave neither sons nor brothers, the right to the inheritance passes to his nearest male relative. In the words of the Gilyaks themselves, the deceased is succeeded by his so-called *kall*. A clear distinction is made between relatives on the father's and on the mother's side. The former are called *ñgafk*, and are reckoned blood relations; the latter *amal'*, 'friends.' It is only the former who are subject to the obligations connected with the so-called blood-revenge, which plays such an important part in Gilyak life. Like all primitive peoples, the Gilyaks hold strongly to the feeling that every shedding of blood requires a corresponding retribution exacted by the victim or his kin. Not less deeply seated in their minds is the belief that any one who omits to fulfil this duty inevitably pays for the omission by misfortune or even death. This belief, which is universal among them, has in the execution of blood-revenge a powerful, decisive, and permanent influence upon the conduct of both sides—the offensive and defensive alike. The execution of blood-revenge is partly facilitated, partly hindered, by the fact that not only the immediate principals take an active part in it, but also their kinsmen, who are actually subject to certain obligations. The latter do not extend to all relatives, but only to the *ñgafks*, i.e. those on the paternal side. The laws of blood-revenge unconditionally require *ñgafks* to avenge a kinsman who has been slain outright or has died from wounds received and cannot avenge himself. If his hurt is not fatal, he is himself the avenger, and his *ñgafks* only help him. The same obligations are imposed upon the *ñgafks* of the original aggressor. The feeling of solidarity in the matter of blood-revenge, which binds together all the *ñgafks* of one and the same kin, especially a large one, serves as some guarantee against attacks being readily made upon any of them.

4. Government.—When Schrenck was on the Amur the Gilyaks were subject to no one, and paid no tribute either to China or to Russia. It is true that in the beginning of last century they were still to some extent subject to the Chinese power both on the Amur and on Saghalien. In the twenties of the 19th cent. this state of things was altered. The authorities of Manchuria chose headmen in many places from among the natives, and upon them lay the duty of collecting tribute, each in his own district, and delivering it at Deren. Later, the Chinese rule sensibly weakened in those parts, and concentrated itself exclusively in that region of the lower Amur which extends up the river to the Sungari. The Gilyaks and Olchas remained only nominally subject to China and paid no more tribute; when Schrenck lived among them, they were very conscious of independence and liberty, and there was no talk of any headmen among them, so that Schrenck even failed in ascertaining the Gilyak name for them. In the fifties the Russians established themselves firmly at certain points of the Amur region, *e.g.* at Petrovsk, Nikolævsk, and Mariinsk. By the time of Schrenck nothing was left of the institutions forced upon the Gilyaks by the Manchuro-Chinese administration, while the Russians had not yet had time to introduce any new arrangements. Accordingly the people was left to itself, and within certain limits nothing interfered with its action. This was the most favourable time for studying its native manners and customs, and it is these we shall keep in view in our survey.

With the exception of the regulations concerning the family and the paternal kin, the Gilyaks have no legal rules or accepted organization to determine the course of self-government. They do not elect from among themselves any persons with authoritative power to preserve proper order in the community, settle any differences which may arise, or the like. Indeed, there seems no need for anything of the kind. They have no wars with their neighbours or internal strife; they make no predatory raids on neighbouring lands, and exact no tribute; hence they need no leaders or headmen or such governing persons. On the other hand, there is a sharp difference among them in the matter of material prosperity. A Gilyak is reckoned rich who can make frequent journeys to trade with the Manchus and Sizams (the Gilyak name for the Japanese), and among them get a store not only of all the necessaries of life but of various articles of luxury. Further, journeys and intercourse with foreigners give the prosperous Gilyak such a breadth of view and experience, and make him so much more clear-sighted and logical, that, quite apart from his material importance, he acquires a great influence with his compatriots. Thanks to his wealth, he becomes, as it were, the soul of his village. It is his house that is chosen for the cheerful assemblies and feasts which accompany the bear-festival. The help a rich Gilyak gives to a poor one is not a matter of sending something or other to his house, but of supplying him with all the necessary means of subsistence gratis (in Gilyak *pai*). The chief ground of this is the communistic spirit which pervades all primitive peoples.

5. Calendar, etc.—The Gilyaks have no exact idea of time, and so they define it only very approximately. Besides the usual expressions like 'day' (*muv*), 'night' (*urk*), 'morning' (*tyt*), and 'evening' (*padf*), the time of day is defined according as the sun is rising or setting (*keng-myrch* or *padnch*, 'being born'; *keng-yugch* or *much*, 'dying'), mounting the sky (*keng-tytyrakh-bokirch*), slanting down (*keng-kotrech*), or standing at its highest point at noon (*keng-muvutych*). It is especially difficult for them to define some day long past but in some way memorable, as it is exactly like the whole series of similar days spent at one place amid the ordinary duties. In spite of this, they follow very attentively the phases of the moon. They have separate terms for full moon and new moon (*long-charnch*, 'the moon is full'; and *long-much*, 'the moon is dead'), its waxing and waning, and also for the various stages of these phases of waxing and waning. The year is divided into twelve months, but the names of the months differ in various parts of the country. Some are current among the Gilyaks living on the lower Amur and its estuary, on the western coast of Saghalien and on the south coast of the Sea of Okhotsk, while others are used in the interior and on the east coast of Saghalien. The following are the names of the months among those on the west coast of Saghalien and on the mainland:

January,	*Cham-long*;	July,	*Machn-chrar-long*;
February,	*Karr-long*;	August,	*Lygi-vota-long*;
March,	*Chrad-long*;	September,	*Ngarvi-long*;
April,	*Arkail-long*;	October,	*Oni-lami-long*;
May,	*Valten-tengi-long*;	November,	*Tlo-long*;
June,	*Tenga-vota-long*;	December,	*An'-long.*

The Gilyaks divide the twelve months very unequally into seasons, of which, strictly speaking, they recognize only two—winter (*tulf* or *tulv-an'*) and summer (*tolf* or *tolf-an'*), corresponding to the times that they live in winter-houses and summer-houses. In general their year falls into the following divisions: winter, consisting of five months, November to March; spring, one month, April; summer, five months, May to September; autumn, one month, October.

Seeing the daily rising and setting of the sun, they naturally think that the earth (*mif*) stands immovable and the sun (*keng*) moves round it; further, the circle of the horizon makes them imagine the earth as a disk. But as to where the sun hides when he has set and night has come on, they do not inquire.

'When I asked them about this,' says Schrenck, 'they laughingly answered my questions with others, such as whether I had perhaps seen somewhere or other the sun after he had set. The more intelligent of them, such as Yuchin and Ruigun, involuntarily began to revolve the problem of the regular succession of day and night, and there came into their heads the idea of the uninterrupted motion of the sun about the earth, of the succession of day and night on the other or lower side of the earth, and, as its direct consequence, that of the possibility that there, as here, animals and people may exist. I found it much easier than I expected to get the Gilyaks to believe that the earth is not a disk but a sphere.'

The stars also, in their opinion, revolve round the earth, just as the sun does. Indeed, in regard to the stars, the Gilyaks have got so far in their conception of the universe that they reckon them similar world-bodies to the earth, supposing that it is only their enormous distance that makes them appear so small. This can be seen from the fact that the words *ungkhyr*, 'star,' and *ungkhyr-mif*, 'star-earth,' are with them identical. For some of the constellations they have their special names: *e.g.*, three stars in the tail of the Great Bear are called *charv(u)krich*; four others *nyagr-nyo*, 'the mouse's store.' A constellation with many stars, perhaps the Pleiades, is called on the Amur *lumr*, 'sable'; on Saghalien *tagkhr-nyo*, 'the store of the little beast (*Tamias striatus*),' and also *tamml-ungkhyr*, 'many stars.' Orion's sword is called *chekhvak*; the Milky Way, *taigkhopan-tif*, 'the unknown way'; and so on. One of the commonest questions of the Gilyaks concerns the existence of people on the stars. When Schrenck said that the stars are so far off that people on them, if they do exist, could not be seen even through a telescope, the Gilyaks always replied that the shamans do succeed in seeing them. According to the latter, it is positively known that upon the stars there grow tall trees and whole forests with plenty of all kinds of animals—sables, minks, foxes, bears, dogs—and, finally, people whom the Gilyaks call sometimes *ungkhyr-nibakh*, 'star-people,' sometimes *ungkhyr-mif-nibakh*, 'earth-star-people.' These people are of gigantic stature, with thick brows, long noses, and so on. The inhabitants of the earth occasionally meet the star-people, and the shamans know what to do in these cases.

6. Festivals, etc.—The bear-festivals take the first place. These are festivals for the rich, who secure the bears for this pastime. When the beast has been caught the hunters fetter him securely, and carry him home in triumph on a pair of sledges tied together. Old and young run out to meet him with joyful cries. In Gilyak villages there is nearly always to be found a place prepared for a bear; if there is none ready-made, it is erected without delay. This place consists of a square log-hut, open above, with a small door fastened from the outside, and a small window-opening which is never closed. After dragging the bear into it by force and untying him, they cover the hut over with planks, and pile heavy stones upon these so that there is not the slightest possibility of the prisoner's escaping. From that moment the bear becomes the object of the care of the village, which is bound to look after him and supply him with food, so acquiring the right to participate in the bear-festival. Thus the bear-festival is entirely communistic. It unites all the members of the village, and thereby offers a kind of centre about which the whole village-life revolves. The day of the festival is commonly fixed by the original owner of the bear, *i.e.* the man who bought him or caught him at the time of the trapping. He also figures as the leader of the feast, keeping strictly to the customs consecrated by time. Besides the chief delicacy, bear-meat, the leader of the feast enriches the festive board with other culinary productions in the Gilyak taste. In his anxiety for greater splendour, he invites to the feast not only his kinsmen, but all his friends and acquaintances. After the close of the festival the bear's skin is allotted to the organizer of the feast. The feeding of the imprisoned bear proceeds according to well-established rule. The food is introduced through the window-opening; it consists of fish, raw or dried (*yukaly*), and *mosi*, a kind of thick gruel. At rare intervals the bear is brought out of his prison chiefly in order that the hut may be cleaned. Before he is put back into it, he is led round the village several times. The period for which the animal is kept depends upon his age. Grown-up bears are kept in captivity only a few months, but cubs for several years until they have grown and put on fat. Bear-festivals are celebrated in the winter months, as at that time of year the Gilyaks live on the mainland in roomy houses after the Chinese fashion. The greater part of the bear-festivals occur in the month *An'-long* (December). During the opening days of the festival the bear is led solemnly round the village; there is a farewell feeding of him; he is set up as a target; and, after he has been killed, he is cut up and skinned, and his head and skin are borne to the hut. The following days are given to feasting, games, contests, dances, singing, sledge-races, and other pastimes. Throughout the festival an original kind of music is incessantly produced by rhythmical blows of a stick on a hanging beam, to the accompaniment of humorous songs. The last act of the drama is the sacrifice of dogs, and the carting off of the bear's head and bones to the common resting-place for the remains of bears.

7. Religion.—The religion of the Gilyaks is pure Animism. Regarding all Nature as animate, they give to it a completely anthropomorphic expression. The island of Saghalien is regarded as a live creature, with its head at Cape Mary and its feet touching La Perouse Strait. Every more or less important headland or hill is a live creature, to which are attached many romantic and tragic legends of a purely human character. As he sees in inanimate objects of Nature a living anthropomorphic existence, the Gilyak takes a yet more anthropomorphic view of animals, regarding them as beings to whom are granted the highest reason and strength, and for whom the animal envelope is only a mask hiding a human being. Every element, every force of Nature, has its own lord, in all his attributes and social conditions similar to a Gilyak. These gods likewise, in their turn, occasionally take the form of some animal or another. The chief gods or 'lords' are the following: *Pal'-yz'*, the lord of the mountains, jungle, and all that lives in them; *Toll'-yz'*, the lord of the sea, an

old man with a long beard, who throws handfuls of fishes' roe about in all directions; *Tly-yz'*, the lord of the heaven; *Mif-yz'*, the lord of the earth; and others. All these lords are kindly beings, and to them from time to time sacrifices are offered in the shape of various sweet roots, rice, tobacco, etc. In more important cases the sacrifice is a dog. Often such sacrifices are performed in the jungle to the lord of the jungle, or on the sea or the river to the lords of these.

The Gilyaks believe in the existence of the soul, and in life after death. The soul is the man's double. After the death of its possessor it passes into the under world, through a special opening in the earth, and there continues exactly the same mode of existence as above ground. Poor people have one soul each, the rich and the shamans have two or three. In the underground world a man dies once more, and passes into yet another world, and so three times. The Gilyaks burn a dead man after dressing him in his best clothes (several suits). After the cremation they break his cauldrons and sledges and kill his dogs. Not far from the place of burning they set up a little house. In it they put a doll which represents the dead man, dressed up in precious stuffs. Above the doll they set a wooden representation of a cuckoo, and round about cups, plates, pipes, tobacco, sugar, and various things to eat. During the time immediately following death, before the dead man is settled in his new place, his kinsmen visit his little house at intervals, make libations, and present provisions.

Disease and death are regarded by the Gilyaks as the results of the wiles of an evil spirit, who either seizes the soul or gradually eats it away after having entered into the man's organism. The shamans are invited to drive this evil spirit forth. In social relations the shamans are not at all to be distinguished from common Gilyaks, but the gift of shaman-craft is ordinarily handed down from father to son.

The worship of idols among the Gilyaks must be regarded as borrowed from the Tungus tribes, Manguts, Gol'ds, and Orochi, and also from the Ainus. The Saghalien Gilyaks have scarcely any idols. Special reverence is paid to a representation of a bear which is kept in a toy-house, into which they also put a store of victuals—tobacco, sugar, etc.—and other things belonging to the sacred animal.

8. Language, oral literature, etc.—The Gilyak language stands lexically quite isolated among the languages of the old world; grammatically it is possible to compare it with certain American languages. It is full of special coronal and dorsal sounds, aspirates, nasal gutturals, and hissing sounds; its phonetics are among the most difficult to master of any language. The Gilyaks have no kind of writing. Their oral literature consists of: (1) heroic poems; (2) cosmogonic and mythological legends; (3) stories and tales of ordinary life; (4) historical traditions; (5) lyrical and humorous songs and catches. Their poems, though in prose form, are sung. The singing of Gilyaks takes the form of various guttural modulations and howlings, rarely passing into melodious chest-notes. The character of their singing has been influenced by the shaman's chants. The singers are supposed to be helped by a special spirit, who has his seat in the tip of the tongue. Poems are, for the most part, inspired improvisations. In the songs and poems are the rudiments of dramatic scenes. The Gilyaks delight in sitting up whole nights through, listening to improvisers, with perfect faith in the reality of what is being related. They delight in playing on home-made instruments, one-stringed guitars, pipes, and such like; and lately they have even learned to play the accordion. They are eager for knowledge, and possess remarkable mental ability. Even in the poorly equipped missionary schools they make quick progress in learning. They gladly adopt from the Russians everything which is useful and applicable to their way and conditions of life. In many places they have learned to salt fish, plant potatoes, breed horses, and earn a living as drivers. Their capacity for adapting themselves to new conditions of life gives them every chance of preserving their nationality.

GIPSIES.—See GYPSIES.

GIRDLE.—A girdle in its modern sense is a belt or cord used to encircle the waist. In ancient times, however, the girdle had a much wider signification, and was employed not only as an article of clothing, but also as a sacrificial ornament, and as an amulet. The reason for its adoption by primitive races as an article of clothing is not far to seek, the waist being a natural means of support for the clothing of the lower parts of the body (see art. DRESS). When we attempt to explain the origin of its use in sacrifice, the question becomes more difficult and leads back to mythical times. Its use as an amulet for the cure of disease, and as an aid in childbirth, is so universal that it must be, like the former, of great antiquity; and, although the evidence at hand is somewhat fragmentary, it is probable that the amulet girdle was originally derived from the sacrificial cord of mythical times.

1. Girdles as articles of clothing and adornment.—On account of the fact that the girdle is so generally distributed amongst peoples as a support for the lower garments, it is impossible to give more than a bare outline of the subject. Among the Egyptians in very early times a girdle was employed above the loin-cloth, and to it was fastened either a tail of some animal or an imitation made of leather.[1] Girdles are also indicated in the sculptures as far back as the IInd and IIIrd dynasties.[2] The ancient races of India appear to have employed the girdle in dress, and richly embroidered girdles still persist in Indian costumes; in ancient Norse mythology, *e.g.* Frigga's golden girdle,[3] and amongst the Chaldæans and Babylonians (Ezk 23^{15}) reference is also made to them.

Coming to Biblical girdles, it is necessary to point out that in the EV the word *'ēzōr* is frequently translated 'girdle,' whereas it is more properly rendered 'loin-cloth.' Such were the 'girdles' of Elijah and John (2 K 1^{8}, Mt 3^{4}, Mk 1^{6}).[4] The true girdle of the Bible consisted of a long strip of cloth wound round the waist above the tunic, with or without the ends hanging down in front; but, in other cases, it varied from a simple rope (Is 3^{24} RV) to the elaborate waist-belts of the priests and the 'golden girdles' of Rev 1^{13} 15^{6}. The 'curious girdle of the ephod' (*ḥēshebh 'ăphuddāthō*) was 'of gold, of blue and scarlet, and fine twined linen' (Ex 28^{8}); it was wound several times round the waist and tied in front, the ends

falling to the ankles.[1] The girdle also served as a sword-belt (2 S 20[8]); as a purse (Mt 10[9] RVm); and as a support for the inkhorn (Ezk 9[2f. 11]). The application of the girdle in most cases in the Scriptures is used to indicate the completeness of the dress and readiness for action—*e.g.* 'gird thyself and serve me' (Lk 17[8]).

Amongst the Romans, the girdle consisted of linen,[2] and was used to confine the *tunica*. It was worn by both sexes, and also formed part of the dress of the soldier and gymnast. The Grecian athletes also wore girdles in the games,[3] and Hercules is depicted at Olympia as 'wresting from the Amazon her girdle.'[4] Among both Greeks and Romans the girdle was the usual receptacle for money. The *cinctus Gabinus* (so named from the town Gabii) was the term applied to the method used by the early Romans in warfare of wearing the toga, the end of which, instead of being thrown over the left shoulder, was drawn tightly round the body as a girdle, thus leaving the arms free.[5] In Tibullus we read that at funeral ceremonies the garments were to be ungirdled.[6] Gallo-Roman graves seldom contain girdles; on the other hand, beautifully ornamented girdles were found in those of the Franks and Burgundians. The Arch-Druids were clothed in a stole of virgin white, fastened by a girdle on which appeared the crystal of augury encased in gold,[7] and the ancient Kings of Ireland on state occasions wore golden girdles inlaid with precious stones.[8] Not till after the Norman Conquest, however, did the Anglo-Saxons adopt the girdle generally as a dress essential for both sexes. In the later 13th cent. the knight's surcoat was girdled at the waist with a narrow cord, and the great belt looped across the hips to support the sword. In the 14th cent. the girdles were worn somewhat below the waist, and were of exceedingly rich design. To the girdles of the 15th and 16th cent. were attached all the paraphernalia of the wearer, *e.g.* purses, daggers, keys, inkhorns, books, etc.; and laws were introduced to stop these extravagances: thus, priests were censured for wearing silver girdles with baselards hanging from them.[9] In Skye 200 years ago we find that girdles were used to support the plaid, and the custom was, doubtless, general in the West at that time.

'The belt was of leather and several pieces of silver intermixed with the leather like a chain. The lower end of the belt has a piece of plate about eight inches long and three in breadth curiously engraven; the end of which was adorned with fine stones or pieces of red coral.'[10]

Amongst curious customs in regard to girdles we find that bankrupts used to remove them in open court, that in France courtesans were forbidden to wear them, while the expression 'belted earl' is derived from the ceremonial of the investiture in olden times.[11]

Girdles are still used by many Continental peoples, who preserve their national customs, *e.g.* in Macedonia, Sicily, Brittany, and Norway. In German New Guinea, a girl is invested with the girdle only on reaching maturity,[12] and similar customs prevail in many lands. As an illustration of the various girdles in use as articles of dress the following may be cited: in Norway, fine old filagree silver girdles are preserved as heirlooms; the Lapps wear belts adorned with bear's teeth; the Uled-Nail women use a simple cord; the Swazis, Basutos, and Zulus, a beautifully embroidered band; Sarebas Dya women, hoops of rattan.[1] The girdle-wearing custom is also prevalent in the New World.

2. Girdles used in sacrifice and in religious ceremonies.—The earliest form of the sacrificial girdle was probably a cord worn round the waist by the priests. Later, it was worn on the right shoulder, and, finally, on the left shoulder. Such girdles, we shall see, can be traced in India, Umbria, and Mexico.[2] The structure of these sacrificial girdles and the part they play in the religious initiation ceremonies of various nations form a most interesting and comprehensive study in astrology and mythology, which would repay thorough investigation.

In the Zoroastrian ritual the sacred *kustī*, or girdle, with which every Zoroastrian child, whether boy or girl, is invested when about fifteen years of age,

'consists of a string, about the size of a stay-lace, which is first passed twice round the waist very loosely, over the sacred shirt, and tied in front with a loose double knot (right-handed and left-handed), and the long ends are then passed a third time round the waist and tied again behind with a similar double knot. This string contains six strands, each consisting of twelve very fine, white, woollen threads twisted together, or seventy-two threads in all. Near each end the six strands are braided together, instead of being twisted, and for the last inch they are braided into three separate string-ends of two strands each; these string-ends, therefore, contain twenty-four threads each, and form a kind of fringed end to the string. This fringe is a sort of remembrancer, as its six strands are supposed to symbolize the six Gâhanbârs or season-festivals, the twelve threads in each strand symbolize the twelve months, the twenty-four threads in each string-end symbolize the twenty-four kardaks or sections of the Visparad, and the seventy-two threads in the whole string symbolize the seventy-two hâs or chapters of the Yasna.'[3]

The importance of the girdle in India is shown by the fact that its assumption, before which no religious rite may be performed, is the second birth.[4] The rules regarding the northern Indians are noted below;[5] among the southern Dravidian Brāhmans the girdle is made of three strands of cotton, in each of which are nine threads;[6] and, similarly, a three-knotted girdle is worn by the Dervishes of S.W. Asia.[7] The Vedic Brāhmans wear the girdle over the right shoulder, but during funeral ceremonies, when the customs connected with the living are frequently reversed for the dead (*ERE*, vol. iii. p. 658, vol. iv. p. 439[b], vol. v. p. 60), the girdle is removed to the left shoulder.[8] At the annual May procession of the boundaries at Iguvium (Gubbio), a sacred girdle (*cringatro*) was worn on the right shoulder.[9]

For different castes the girdle is of different materials.

'The girdle of a Brahman is to be made of a triple cord of *muñja* [*Saccharum munja*], smooth and pliable; but of a Kṣatriya it (should be) a bowstring of *mūrvā* [*Sanseviera Zeylanica*]; of a Vaiśya, a triple thread of hemp. If *muñja* cannot be had, (their girdles) are to be made of *kuśa* [*Poa cynosuroides*], *aśmāntaka* [*Bauhinia tormentosa*] (or) *valvaja* [*Eleusine indica*], threefold, with one knot, (or) three, or even five.'[10]

The girdle of the Brāhman is composed of 3

strands of cotton formed of 9 threads, and the material must be gathered and spun by pure Brāhmans. After marriage the cord must have 6 strands, and may have 9; the months of March–June are the most favourable for the investiture, and begging is permitted to defray the heavy expenses of the ceremony.[1] The initiation with the girdle took place at 8 years old in the case of Brāhmans, at 11 years with Kṣatriyas, and at 12 years with Vaiśyas.[2] The following is the formula used at the ceremony:

'Here has come to us, protecting us from evil words, purifying our kin as a purifier, clothing herself, by the power of inhalation and exhalation, with strength, this friendly goddess, this blessed girdle.'

With these words thrice repeated, the girdle is tied from left to right thrice round; there should be one knot or three or five, and it is finally adjusted with the words: 'The sacrificial cord art thou. With the cord of the sacrifice I invest thee.'[3] Further, the student has to repeat the verse 'Protecting us from evil word' and 'The protectress of right'; the initiator then makes a threefold knot in the girdle at the north side of the navel, and draws that to the south side of it.[4] At funeral ceremonies the relatives of the dead wear their sacrificial cords.[5] The Brāhman who has been invested with the triple cord is called a *Brahmachāri*; the cord is called *yajñopavīta* in Sanskrit, *jandemu* in Telugu, *punul* in Tamil, and *jenivara* in Canarese.[6] Other Hindus share with the Brāhmans the honour of wearing the cord, *e.g.* the Jains, the Kṣatriyas, the Vaiśyas, and even the Panchalas.[7]

The oldest extant charm for a girdle is contained in *Atharvaveda*, vi. 133, and runs as follows:[8]

'The god that bound on this girdle, that fastened [it] together, and that joined [it] for us, the god by whose instruction we move—may he seek the further shore, and may he release us.

Offered to art thou, offered unto; thou art the weapon of the seers; partaking first of the vow, be thou a hero-slayer, O girdle.

Since I am death's student, soliciting from existence a man for Yama, him do I, by incantation, by fervour, by toil, tie with this girdle.

Daughter of faith, born out of fervour, sister of the being-making seers was she; do thou, O girdle, assign to us thought, wisdom; also assign to us fervour and Indra's power.

Thou whom the ancient being-making seers bound about, do thou embrace me, in order to length of life, O girdle.'

Girdles were in use for religious purposes in the Greek and Roman liturgy, and Anastasius mentions in the 9th cent. *muræ nulæ*, or jewelled girdles in the shape of lampreys or eels.[9] Zodiacal amulets in the form of girdles were known to the early Christians,[10] and the girdle of the ephod must be again referred to (see above); its end when the priest was engaged in sacrifice was thrown over his left shoulder.[11] As early as the 5th cent. Pope Celestine (423–432) deprecated the frequent use of the girdle by the priests as an article of adornment and distinction in their dress.[12] Some mention must be made of the *orarium*, a kind of scarf worn on the left shoulder and passing diagonally downwards to the right side; it was permitted to be worn by the Romans as a favour by Aurelian. The fourth Council of Toledo directed that the *orarium* should be worn by deacons over the left shoulder.[13] The application of the *pallium*, which was used as early as A.D. 514—in its earliest form a narrow strip of cloth, passed over the left shoulder, then round the neck and over the left shoulder again, leaving the two ends free, one in front and one behind[1]—seems to the present writer to be connected with the *orarium*.

The girdle in its final form as an ecclesiastical vestment is a narrow band, usually and properly made of silk, but sometimes of cotton; white as a rule, it may be coloured. The esoteric meanings attached to it are: 'custodia mentis; discretio omnium virtutum; virtus continentiae; perfecta Christi caritas.' Properly it is about four yards long, and is used to secure the alb, the upper portion of which depends over and often hides the girdle.[2] The 'stole' is the successor of the *orarium*, and consists of a strip of embroidery 2–3 in. wide, and latterly terminating in a cross.[3] Deacons wear it over the left shoulder and secure it under the right arm, while priests cross it over the breast.[4] The 'pall' is also probably derived, through the *pallium* and stole, from the girdle, while the *subcingulum*, now worn only by the Pope, was originally a girdle with a lozenge-shaped lappet depending on either side of it.[5]

In the Orthodox Greek Church the ζώνη, in the Armenian Church the *kodi*, and in the Malabar the *zunro*, are all girdles; and other vestments used in their ceremonies show traces of girdle origin.[6] The girdle is also an important article in the dress of many religious orders. It is often of black leather, although a simple cord or rope is also common.[7]

The above sketch of the part played by the girdle in sacrifice is by no means exhaustive. Little attention has been paid so far to the signification of the girdle in vestments; and attempts to trace the various metamorphoses which have taken place in its descent from mythical times are often vitiated by the omission by authors of accurate descriptions of the girdles and their mode of application.

Sympathetic magic appears in connexion with the girdle in the Germanic belief that a man can change himself into a werwolf (*q.v.*) by donning a belt of wolf's skin.[8] According to Maḥmūd Shabistarī, who wrote his *Gulšan-i-Rāz* ('Rose-Garden of Mystery') in A.H. 717 (A.D. 1317), the girdle signifies to the Ṣūfī 'the binding of the bond of obedience,' so that 'the knotted girdle is the emblem of obedience.'[9] Perhaps influenced in part by some such passage as Is 11[5] ('righteousness shall be the girdle of his loins, and faithfulness the girdle of his reins') or Eph 6[16] ('having girded your loins with truth'; cf. also Ps 18[32, 39] 30[11] 65[6]), an Irish monk in Austrian Klosterneuburg wrote the curious hymn which may also contain some reminiscences of the pagan Celtic period:[10]

'The girdle (*criss*) of Finnen is round about me, to protect me, that I walk not the way which encircleth the people: . . . against disease, against anxiety, against the charms of foolish women. . . . The girdle of John is my girdle, . . . it putteth to shame the wrath of men, it averteth the charms of women. The girdle of the serpent is my girdle, the serpent is about me that men may not wound me, that women may not destroy me; to the stars it hath exalted me; at my hour it is about me.'

3. Girdles used as amulets for the cure of disease and for facilitating childbirth.—(*a*) *For the cure of disease.*—Girdles used as amulets for curing diseases are to be met with in many countries, and are employed in the treatment of multifarious conditions. No doubt they originally had some religious signification, but in the majority of cases this has been completely lost. Four in-

stances may be cited as examples of their use. The natives of the Island of Harris wore a girdle of sealskin about the waist for removing sciatica; and in Aberdeenshire one was employed to cure 'chin-cough'[1] (whooping-cough). In Ardnamurchan to this day, when a child is born, a rope of grass is wound round it to keep away many diseases; an incantation is used, and the grass must be pulled, not cut; some place the rope round the neck and chest in the form of a cross; and it is finally cut into nine pieces and flung into the wine.[2] Among the Niam-Niam and Gour Tribes of Bahr al-Ghazal in Southern Egypt, a tight cord is placed round the chest of a man suffering from pleurisy; to the cord cylindrical wooden charms are attached.[3] These must suffice as typical illustrations of the wide distribution of such beliefs and of the variety of conditions in which they are employed.

(*b*) *In pregnancy and childbirth.*—The application of the girdle during pregnancy and labour forms a curious ethnological problem. It is well known that the popular idea in most nations is that everything must be unloosened in these contingencies: thus, husbands must not sit with their legs crossed, doors must be opened, knots of all kinds undone, and the hair even loosened. Whether the girdle idea arose as an offshoot of the sacrificial girdle or as a simple means of applying *vis a tergo*, one is not prepared to say with certainty, but the preponderance of evidence is in favour of the religious origin, as we shall attempt to indicate.

In the Brāhman marriage rites the bride is invested with a red and black woollen or linen cord with three amulet gems;[4] this is not the sacrificial cord, which women were not allowed to wear.[5] In popular Hindu birth-customs, a charm is bound about the belly of a woman in labour; this charm consists of an equilateral triangle or a collection of magic words arranged in three rows of three.[6] In an Assyro-Babylonian fragment in the British Museum an incantation recited for a pregnant woman mentions 'binding being relieved.'[7] The Bab. Ištar is goddess of the pregnant and of those in labour, and carries as symbol the womanly girdle;[8] Ištar is, let it be noticed, comparable with Aphrodite and Frigga. Among the Greeks, a birth was forwarded or retarded by divine beings, the Eileithyiai, handmaids of Hera; there seem to have been two Eileithyiai, one advantageous and one unpropitious.[9] According to Theocritus,[10] the former is called 'the girdle-loosing' (λυσίζωνος). Later the two Eileithyiai were merged into one, who became the Roman Lucina. The Troezenian maidens had before marriage to dedicate their girdles to Apaturian Athene;[11] and Athenian women pregnant for the first time hung up their girdles in the temple of Artemis.[12] The Roman ladies bound the abdomen with a waistband-like girdle from the eighth month of pregnancy, and these bandages were probably made near the image of some god;[13] the girdle was loosened at the confinement; hence the goddess of birth came to acquire the epithet *Solvizona*, 'the girdle-loosing.' In some cases the husband seems to have tied and unloosened the girdle.[1]

It will have been perceived by this time that two or three variations of custom exist in regard to these girdles. In some cases, the girdle is applied during labour as a charm, in others as a means of pressure, and it is also applied, probably as a support to the abdomen, in the later months of pregnancy, and removed when labour approaches. This introduces us to an interesting philological curiosity connected with the last variety. The Latin word *incincta* means 'girded,' sometimes 'ungirdled,'[2] and, in the vulgar tongue, 'a pregnant woman'; from this is derived the Italian *incinta*, 'pregnant,' Spanish *estar encinta*, 'to be pregnant,' French *enceinte*, 'pregnant,' and probably German *entbinden*, 'to unloosen,' and 'to deliver.' These words furnish excellent confirmatory evidence of the fact that the girdle played a most important part in pregnancy in early times. Amongst the Jews a girdle made of snake's skin or that of a she-ass was worn to prevent mishaps at birth, and the Turkish women hold similar beliefs;[3] compare with the Jewish custom that of Brandenburg women, which consisted in binding the abdomen with a snake's skin to gain an easy delivery.[4]

The same beliefs are prevalent amongst the less civilized races; thus, in China, a belt is used during pregnancy and loosed at labour; the Japanese women wear a long and flowing silken girdle, and the custom is said to have been originated by the Empress Djin-go-Kogu about A.D. 200. The fifth month is selected for its application, and a girdle belonging to a woman who has had easy confinements is favoured and, therefore, borrowed, such a woman being referred to as 'the girdle-mother'; after the birth, part of the girdle is used to make some of the child's clothing.[5] The Kalmuks, nomads of Mongolian race, buckle broad leather belts around the abdomen of the patient as soon as labour begins, and use pressure from above downwards;[6] and the Burmese women wear a tight bandage from the 7th month onwards to prevent the child ascending too far.[7] The central Australian tribes have curious modifications of these customs. A certain stone is believed to contain the spirits of children; by visiting it a woman becomes pregnant; and, by tying his girdle round the stone, a man can cause his wife to be with child. Again, the Arunta husband removes his hair girdle, which is then tied tightly round the woman just under her breasts, probably with the idea of expelling the child.[8] During a Zulu confinement a grass rope is tightly fastened round the middle of the woman to prevent the child slipping up again;[9] and, to judge from an illustration, the girdle is also worn during pregnancy.[10] The Bantus of South Africa employ the girdle as an amulet for easy delivery.[11] A very curious girdle is used by the Shangaan women of Portuguese East Africa; it is of woven fibre, hinged in the middle so as to resemble a pair of callipers; but, as its height is only 6–7 in., one fails to understand how it is ap-

plied.[1] The practice is general among the American Indians, where the idea again seems to be pressure; the 'squaw belt' used by the Sioux Indians is of leather 4 in. wide, and has three buckles.[2] In Macedonian folklore, if one's girdle becomes undone, some woman of the family has just been delivered, and it is also an omen of easy delivery; girdles have also a place in their marriage ceremony.[3]

In historic times, and particularly among Catholic peoples, the belief in the efficacy of girdles in difficult labour has been, and is probably still, rife. In France, the girdle of St. Oyan; in England in 1159 that of St. Joseph, and that of the Abbot Robert of Newminster; and of the Holy Margareta in Swabia, have all been used for this purpose. In Germany a cord the length of the standing image of St. Sixtus was used about the 14th century.[4] Spanish women tied their girdles or shoe-latchets about one of the church-bells, and struck the bell thrice.[5] Further, we find in 1502, under the expenses of Elizabeth of York, a sum of money paid 'to a monke that brought our Lady gyrdelle to the Quene,' and the note that 'it was probably a relick from a monastery for her to put on in labour, as it was a common practice for women in this situation to wear blessed girdles.' Sometimes a long scroll containing the Magnificat was used. Dr. Leighton writes in a letter to Lord Cromwell (1537): 'I send you also Our Ladys Girdle of Bruton red silke, a solemn relike, sent to women in travail.' Other charms of a like nature were bound to the thigh.[6]

In the *Battle of Lora*, by Ossian (James Macpherson), the passage occurs:

'An hundred girdles shall also be thine, to bind high-bosomed maids, the friends of the births of heroes, the cure of the sons of toil.' Macpherson adds a footnote stating that 'Sanctified girdles, till very lately (1761), were kept in many families in the north of Scotland; they were bound about women in labour, and were supposed to alleviate the pains and to accelerate the birth. They were impressed with several mystical figures; and the ceremony of binding them about the woman's waist was accompanied by words and gestures which showed the custom to have come from the Druids.'

In commenting on this note, Laing believes that they were girdles consecrated by Irish saints and not by Druids,[7] and one is inclined to homologate his criticism. These girdles still exist. Thus, in 1911, Henderson states that they are 'sometimes still worn by pious women . . . to "sain" the expected child as well as the mother from all harm, and to attach all good spiritual powers on her side.'[8] That they are kept secret is evident, as the present writer has corresponded with several Highland medical men, none of whom can trace one.

Another modern survival of the custom exists in Brittany, where the Urusline nuns of the Quintin convent send to any of their pupils who have married a girdle of white silk which has been touched by a relic of the Virgin and inscribed in blue letters with the words 'Notre Dame de Délivrance, protégez-nous.' The recipient hastens to put it round her body and compresses herself with it.[9]

Lastly, to bring the subject down to the present day, the writer met with one of those girdles in Dublin; it was an ordinary leather belt, old and greasy, about 1½ in. broad and possessing an iron buckle; it was applied loosely round the patient's chest, and the writer was assured that it would hurry up matters; this it probably did, although the action must have been purely a psychological one. On inquiry of the person who owned it, no information could be got; but subsequently it was ascertained that it was a belt worn by people who are enrolled in a society of St. Augustine, and helps them in times of sickness and childbirth.

LITERATURE.—This is fully given in the footnotes. For further information, reference may be made to the work by Ploss-Bartels, *Das Weib*, Leipzig, 1885, frequently cited, and to an article by the present writer in the *Caledonian Medical Journal*, ix. (1913).

WALTER J. DILLING.

GIRNAR.—A sacred hill and place of pilgrimage of the Jains, with numerous ruined temples, situated in Kāṭhiāwār, Bombay; N. lat. 21° 30′, E. long. 70° 42′. The hill reaches a height of about 3500 feet above sea-level, and includes five peaks, one of which was, till recently, a haunt of the loathsome ascetic Aghorīs (*q.v.*). In the opinion of the Jains, the sanctity of the place is second only to that of Pālitāna, because it is associated with Neminātha, the twenty-fourth of their Tīrthaṅkaras, or deified saints. A rock at the foot of the hill is engraved with a copy of the edicts of Aśoka (*q.v.*; cf. V. A. Smith, *Asoka*[2], Oxford, 1909, p. 129 f.), and two other inscriptions—one of the Śatrap Rudradāman (*c.* A.D. 150), recording the construction of the Sudarśana tank; and a second its destruction and repair in A.D. 458 (V. A. Smith, *Early Hist. of India*[2], Oxford, 1908, pp. 129 f., 290).

The original name of the mountain was Raivata or Ujjayanta; and the Buddhist pilgrim, Hiuen Tsiang, describes it under the Pāli form of the latter title, Yuh-chen-to or Ujjanta (S. Beal, *Buddhist Records of the Western World*, London, 1884, ii. 269). The Jain temples, the largest of which is that dedicated to Neminātha, are fully described by Burgess in his Report. On the verge of the hill, at some distance from these temples, is the huge isolated rock, known as Bhairava-jāp, 'the place where charms are recited in honour of Bhairava,' Śiva in his destructive form. In former days, fanatics used to hurl themselves down the precipice, in the hope of gaining immediate entrance into the paradise of Śiva (cf. Crooke, *PR* ii. 169). Another interesting temple is that dedicated to Ambā Mātā, the Mother-goddess, now one of the many forms of Umā or Pārvatī, the consort of Śiva (see DURGĀ). Here newly-married Brāhman couples resort, have their clothes tied together, and present coco-nuts and other offerings to the goddess, in the hope that she will secure for them a continuance of wedded felicity.

LITERATURE.—The place is fully described by J. Burgess, 'Report on the Antiquities of Kāṭhiāwāḍ and Kachh,' in *ASWI* ii. [1876] 93 ff. Some further information is given in later *Progress Reports of the W. Circle*, esp. that for 1893–99, p. 15; see also *IGI* xii. [1908] 247 f.; *BG* viii. [1884] 441 ff.

W. CROOKE.

GLASITES (SANDEMANIANS).—A Christian sect founded by John Glas (1695–1773), and his son-in-law, Robert Sandeman (1718–1771). Glas was born at Auchtermuchty, in Fife, where his father was parish minister. He graduated at St. Andrews, and studied for the ministry at Edinburgh. Licensed by the presbytery of Dunkeld, he was ordained as minister of Tealing (1719), and soon attracted large congregations by earnest and effective preaching. He was led early in his ministry to study the Scripture doctrine of the Church, through 'being brought to a stand,' while lecturing on the Catechism, by the question, 'How doth Christ execute the office of a king?' The result

of his inquiry appeared as early as 1725 in the forming of a society 'separate from the multitude,' drawn from his own and neighbouring parishes. Glas taught that there is no authority in the NT for a National Church, or for a National Covenant, such as then existed in Scotland. He maintained that the magistrate as such has no function in the Christian Church, and that the use of political and secular weapons as a means of reformation, instead of the word and spirit of Christ, is wholly wrong. This is the argument of his most famous treatise (Edinb. 1727), *The Testimony of the King of Martyrs concerning His Kingdom*. When it became apparent that Glas was teaching the Scriptural authority of Independency he was summoned before his presbytery. In 1728 he was suspended from the discharge of ministerial functions, and in 1730 he was deposed.

As the members of his congregation adhered to him, the first 'Glasite' church was formed, and Glas ministered to communities of this order in Dundee, Edinburgh, and Perth. They observed the primitive custom of the kiss of peace; and the Agape was celebrated as a common meal with broth. From this custom they became known as the 'kail kirk.' Although the General Assembly removed the sentence of deposition which had been passed, Glas remained an Independent minister to the end.

At Perth, Glas was joined by Robert Sandeman, who had become his son-in-law. Sandeman gradually became the recognized leader of the churches of the order. He was responsible for drawing the charge of antinomianism on the Glasite churches. He taught 'that the bare death of Jesus Christ, without a thought or deed on the part of man, is sufficient to present the chief of sinners spotless before God.' He maintained that justifying faith is a simple assent to the Divine testimony concerning Jesus Christ, differing in no way from belief in any ordinary testimony.

Owing to Sandeman's prominence, the Glasite churches became known as 'Sandemanian.' Diligent endeavours were made to make these churches the exact reproduction of the NT type. Elders, pastors, or bishops, who were all equal, were chosen without regard to education or occupation. Second marriage was a disqualification for office. There was a weekly observance of the Lord's Supper, and a love-feast at which every member had to be present. The members at one time washed one another's feet. Things strangled and blood were prohibited as articles of food. Decisions of the church must be unanimous. The accumulation of wealth was regarded as unscriptural, and therefore wrong, and each member considered his property as liable to be called upon at any time to meet the wants of the poor or the necessities of the church.

There were about a dozen Glasite or Sandemanian churches in Scotland, and a few in England and America. Michael Faraday was for many years a member of the Sandemanian Church in London. The most rigid churches of the order have now become extinct, and most of the members have joined the Scottish Congregational or Baptist Churches.

D. MACFADYEN.

GNOSTICISM.—1. Name and character.—Under this name are included all the manifold systems of belief, prevalent in the first two centuries of our era, which combined the Christian teachings with a γνῶσις, or higher knowledge. According to Hippolytus (*Refut.* v. 6), the title of 'Gnostics' was assumed by the Naassenes; and we may infer that it did not originally bear the wider connotation which was given to it later. The pursuit of γνῶσις was so intimately bound up with the religious sentiments of the age that those who shared in it were unconscious of any close affinity, and did not think of calling themselves by a common name. But the eventual triumph of orthodox Christianity brought into clear relief the identity of principle which underlay the various heretical doctrines, and caused them to be grouped together under the general designation of 'Gnosticism.'

We have to deal, therefore, not so much with a definite scheme of thought as with a large and many-sided movement, which was continually changing. The nature of this movement has often been misunderstood through a failure to apprehend the precise significance of the term γνῶσις. It has been taken for granted that the Gnostics were the intellectual party in the Church, and that their object was to resolve the Christian message into a philosophy acceptable to cultivated minds. This estimate of the movement is not wholly erroneous. In working out their beliefs the Gnostic thinkers were led to construct highly speculative systems, which sought to explain the origin of evil, the nature of the Divine being, and the interaction of the spiritual and the material. In the words of Theodotus, as quoted by Clement of Alexandria (*Exc. Theodot.* 78), γνῶσις is 'the knowledge of who we were, what we have become, where we were, into what place we have been thrown; whither we are hastening, whence we are redeemed; what is birth, what is re-birth.' This definition, however, belongs to the later, more speculative phase of Gnosticism; and in any case it suggests the idea of a knowledge not attainable by ordinary intellectual processes, and only to be gained by a mystical enlightenment. To the term γνῶσις, as we meet it in Hellenistic writings, there always adheres this suggestion of a knowledge obtained supernaturally. The magical papyri describe their contents as γνῶσις. The word is constantly employed, by religious and philosophical writers, to denote an immediate vision of truth, as contrasted with a wisdom that comes by seeking. These two kinds of supernatural knowledge have both to be taken into account in estimating the purpose and character of Gnosticism. On the one hand, the Gnostic is in possession of an occult lore. He participates in mysterious rites, and is instructed in magical watchwords and secret names.

'By means of this γνῶσις a man receives power to overcome those very angels that made the world' (Iren. I. xxiii. 5). 'This is the book of the γνώσεις of the invisible God, contained in the hidden mysteries which show the way to the elect generation' (*Book of Jeû*, i. ch. 1).

On the other hand, he undergoes a mystical experience whereby he apprehends the true nature of God and enters into communion with Him.

'He who possesses a heart that is sanctified, and that shines with light, is blest with the vision of God' (fragment of Valentinus, quoted by Clem. Alex.).

The idea of γνῶσις is closely related to that of revelation. It is assumed in all the systems that man is unable of himself to attain to the higher knowledge, which is, therefore, communicated to him by a being from the heavenly world. This fundamental doctrine of Gnosticism has its classical expression in the Hymn of the Naassenes (Hippol. v. 5):

'Then said Jesus: Father, a searching after evil on the earth makes man to wander from thy Spirit. He seeks to escape the bitter chaos, but knows not how to flee. Wherefore send me, O Father! With the seal will I descend, travel through all Æons, disclose all mysteries, show the forms of the gods: the secrets of the holy path which are called "Gnosis" I will impart.'

Each of the sects claimed to be the repository of a secret message, revealed from heaven; and on the knowledge of this message, with its accompanying symbols and ritual, the entrance into the higher life depended. As there had been an original revelation, so, from time to time, there had arisen chosen spirits who had apprehended it with peculiar strength and fullness. Their record of it was contained in sacred books which had been handed down in the community of their disciples. The abundant literature of Gnosticism was for the most part pseudonymous. Sometimes the books were assigned to purely fanciful names, sometimes to prophets or heroes of antiquity, sometimes to disciples of Jesus who were supposed to have transmitted His secret teaching. Apart from this fabricated literature, the writings of the New Testament, and especially the Fourth Gospel, were transformed into Gnostic documents by means of allegorical commentaries. The revelation, however, was not wholly a matter of tradition. Gnostic teachers occasionally laid claim to an original insight into the mind of God, or even to a participation in the Divine nature. The Patristic references to cults that grew up around the persons of individual Gnostics (*e.g.* Simon, Epiphanes) have often been called in question, but without sufficient reason. Probably in all cases the founder of a Gnostic sect was regarded with a veneration which would hardly have been paid to a philosophical teacher. He was not only a teacher but the medium of a revelation, and in some degree, therefore, a manifestation of God.

2. Relation to syncretism.—According to the Church tradition, the originator of the Gnostic movement was Simon of Gitta, the 'sorcerer' whom Peter and John encountered at Samaria (Ac $8^{9ff.}$). There is no reason to doubt that Samaria, with its mixed population, was an early centre of Gnosticism, or that Simon was a historical personage who was prominently connected with some important phase in its development. But the movement as a whole cannot be traced back to the activity of any individual teacher. It manifested itself under so many forms and in localities so widely separate that we can regard it only as the outcome of ideas and tendencies which were involved in the general life of the time. This is acknowledged by the Fathers themselves, who derive the heresies of Simon and his successors from Greek philosophical speculation; and the hypothesis has been accepted, in a modified form, by not a few modern scholars. Harnack defines Gnosticism as 'the acute . . . hellenising of Christianity' (*Hist. of Dogma*, i. 226). The Gentile mission entailed a rationalizing of Christian doctrine by means of the categories of Greek thought; and this process pursued its natural development in the work of the early theologians, and ultimately resulted in the orthodox creeds. But meanwhile there was the stormy episode of Gnosticism, when the Greek interpretation was pushed to an extreme limit by irresponsible thinkers. This view, however, cannot be maintained if we take 'hellenising' in its narrower sense of philosophical re-statement. It is true that in Gnosticism we meet with a variety of terms borrowed from philosophy, and in almost all the systems there is some attempt at a speculative construction. But, if Harnack's definition is to stand, we must read the widest meaning into the idea of 'hellenising.' The Hellenic spirit which so profoundly modified the Christian doctrines had itself been modified, in the most radical fashion, by influences from without.

For the true explanation of the Gnostic movement we must turn to the process of syncretism which accompanied the breaking up of the pagan religions. This amalgamation of different types of national belief was carried out most fully in the first two centuries of our era; but we can trace its beginnings long before. Even in the period of the ancient Oriental monarchies, the frequent transplanting of peoples had led to a fusion of religions, as in the case of the tribes settled in Samaria, who 'feared the Lord, and served their own gods' (2 K 17^{33}). The fusion took effect on a large scale when Persia fell heir to the Babylonian Empire and imposed its dualistic religion on the various Semitic provinces. After the conquest of Alexander the tendency to syncretism became still more pronounced. The Hellenic culture, now diffused over the East, acted as a solvent upon the native forms of belief. Their myths and observances were interpreted in the light of Greek thought, and were at the same time thrown together in new combinations. The process was completed under the Roman Empire, which finally broke down all national boundaries and promoted a free intercourse of the Eastern races with one another and with the peoples of the West. Moreover, in the Roman period the influence of Stoicism became everywhere prevalent. The Stoic philosophy linked itself readily with the most diverse religious systems, and helped at once to disintegrate and to remould them. All over the East the syncretistic movement was in process, but it advanced most rapidly in the cosmopolitan centres, such as Antioch, Alexandria, and the great cities of Asia Minor. In each of these centres there arose a mixed religion, to which the local type of belief—Syrian, Egyptian, or Phrygian—naturally contributed the largest share. So far as the masses of the people were concerned, the syncretism was for the most part fortuitous, but there were circles in which it was carried out deliberately. From the time of Plato, the idea had obtained currency that a deeper wisdom was enshrined in the Oriental mythologies; and the beliefs now surging in from the East were eagerly embraced by eclectic thinkers. One man would often seek initiation into a number of cults, and would endeavour, with the aid of philosophical categories, to combine their teachings into a single system. We have thus to do with a fusion of religions which, to a great extent, was artificial—the result of conscious effort on the part of cultured and intellectual men. It was this that distinguished the syncretism of the 1st cent. from similar movements of which we have record elsewhere. It is this, too, that partly explains the strange mixture of crude mythology and lofty speculation in the typical Gnostic schools.

Judaism, more than any other Eastern faith, was a sharply defined religion, excluding on principle all foreign elements of belief. But Judaism itself had become involved in the general syncretistic movement. The Apocalyptic literature bears witness to the many alien influences which had affected Jewish theology during the period that had succeeded the Exile. At the time of Christ there were sects even in Palestine (*e.g.* the Essenes [*q.v.*]) which gave a place to foreign rites and speculations alongside of orthodox Judaism; and the communities of the Dispersion were much more accessible to influences from without. Of this we have the most signal, but by no means the sole, evidence in the case of Philo, who represents a studied attempt to bring the OT teaching into harmony, not only with Stoic and Platonic ideas, but with the native traditions of Egypt. The conspicuous part which is assigned in Gnostic speculation to OT legend and theology can, no doubt, be explained in great measure by its Christian affinities; but we have to allow for the probability that Judaism had made an impression

on syncretistic thought before Christianity had yet emerged. Indeed, it is possible—although of this we have no certain proof—that the Jewish contribution was of a decisive nature, and was one of the main factors which enabled Gnosticism to effect its alliance with Christianity.

The Gnostic movement, then, was the result of that mingling of diverse beliefs which had long been in process at many different centres; and it had developed itself, in all its essential features, before the Christian era had fairly begun. Of this pre-Christian Gnosticism we still have an impressive monument in the so-called Hermetic literature of Egypt—a literature which was compiled from sources that were certainly in existence in the 1st or 2nd cent. B.C. Not a few of the Gnostic systems described by the Fathers betray a pagan origin, although they have been artificially combined with Christian elements. Reitzenstein has succeeded in detaching a purely pagan document which underlies the Naassene teaching, as preserved by Hippolytus; and a similar analysis could probably be applied to the records of other systems with a like result. But, while we can thus speak of a pre-Christian Gnosticism, it was by no accident that the movement identified itself with Christianity in such a way that the earlier stages of its history became only the preparation for this, its characteristic development. From the Christian teaching it received a mighty impulse. The contact with a living religion gave a new vitality to pagan thought and compelled it to offer its own solution of the ultimate problems.

How was it that the syncretistic movement came to ally itself with nascent Christianity? A definite answer to this question is hardly possible. The tradition that connects the beginnings of Christian Gnosticism with Samaria may be well founded, for in the neighbourhood of Palestine the new religion would be first known and welcomed. But the same causes that led to its recognition in Samaria would operate independently in other centres where it was afterwards established. The Eastern religions were superficially akin to Christianity in their presuppositions and motives. They represented a striving after purity and redemption, and a belief that the true path to blessedness could be discovered only in the light of a Divine revelation. Earnest thinkers, in their effort to win the secret of the higher life, found in Christianity a wealth of spiritual conceptions which promised to aid them in their quest. The life of Jesus Himself was capable of an allegorical interpretation whereby it could be partially fitted into the prevailing mythology. In their eclectic scheme, therefore, they made room for the Christian message, and by its intrinsic power it gradually won for itself a central place. It must be remembered, too, that Christianity, when it first entered the Gentile world, was still in the process of free development. Within the Church itself its teachings were subjected to a constant revision, and the Hellenistic thinkers had little difficulty in modifying them yet further and adapting them to alien speculations. For that part, the assimilation of Christianity to the syncretism of the age was not effected entirely from the outside. In their endeavour to make their Gospel intelligible to the Gentile world, the missionaries had themselves clothed many of its conceptions in terms and imagery derived from the pagan cults. The cardinal idea of a salvation offered by Christ had been expressed, even by St. Paul, in a manner that easily suggested the current beliefs. Moreover, the Church was compelled, by deeper reflexion on its doctrines, to interpret them along the lines of Gnostic thought. The new religion, springing as it did from the soil of Judaism, was apocalyptic in character, and was thus involved with conceptions that became more and more untenable. A reaction against the primitive millenarianism set in almost from the beginning; and the main task which was laid upon Christian thought after the end of the 1st cent. was that of transforming its apocalyptic beliefs into their spiritual equivalents. In the pursuit of this task it could not but avail itself of ideas which were already familiar in the religions of the time. Thus the alliance between Christianity and syncretism was a mutual one. At a later date the Church perceived the danger that threatened it from the encroachment of foreign beliefs, and required to free itself at the cost of a life-and-death struggle. But there was an earlier period when the boundaries between the Church and the contemporary cults were ill-defined, and influences could pass by many channels from the one side to the other. It was in this period that the Gnostic movement properly so called—the adoption of Christianity into the syncretistic system—took its rise.

3. **Origin.**—Gnosticism resulted from the fusion of a number of diverse beliefs, and the tracing of its origin is, therefore, beset with many complex problems. The attempt has been made by scholars in recent times to connect it more definitely with one or other of the religions out of which it sprang, but there are several considerations which make this attempt not a little hazardous. (*a*) 'Gnosticism' is a general term which covers a wide variety of religious thinking. It may be possible to assimilate one particular system very closely to a given religion; but the conclusions thus obtained cannot be made valid for the whole many-sided movement. (*b*) Certain features are common to many different Oriental religions (*e.g.* the Mother, the Redeemer, the Heavenly Man, the Serpent, the Ascent to a higher and the Descent to a lower state of being). The presence of these features in Gnostic systems affords us no clue to the source from which they are derived. They can be traced exclusively to one religion only by obscuring details in which they remind us of another. (*c*) Even when a characteristic element can be assigned, with practical certainty, to a given religion, we cannot be sure that it was borrowed directly from that source. A syncretism had been in process for a much longer time than we have means of following it; and the element in question may already have been incorporated into some later faith, from which it passed into Gnosticism. (*d*) In Gnostic thought the concrete is resolved into the abstract. Personal names are replaced by terms of philosophy, mythological figures are changed into qualities and attributes, and events into cosmical processes. It is next to impossible to make out the original colours and outlines of this blanched picture.

But, while we cannot determine, with anything like precision, the elements which enter into Gnosticism, some valuable light has been thrown on the problem by the investigations of recent years.

The work of Anz (*Ursprung des Gnostizismus*) was the first attempt at a scientific analysis. He discovered the central idea of Gnosticism in the ascent of the soul through successive stages of being, and sought for the origin of this conception. He found it in the astral religion of Babylonia, with its doctrine of a series of heavens, each under the rule of a planetary god, through which the soul must make its ascent by means of magical passwords delivered to the 'guardians of the doors.'

To this theory of Anz, at least in the extreme form in which he presents it, there are several objections. (*a*) The doctrine of the ascent of the soul, though, no doubt, of the first importance, cannot be singled out as the whole message of Gnosticism. From some systems it is entirely absent, and, even where it occupies a prominent place, it is combined with other ideas no less essential. The derivation of this one element of Gnostic thought cannot be made conclusive for the origin of the movement as a whole. (*b*) In the 1st cent. A.D., and, indeed, for several centuries before, the Babylonian religion belonged to a remote past. It is true that many of its superstitions survived in the current astrology, but they had now

merged in the general belief of the time. To assume a Babylonian origin for any system of thought in which we can recognize them is to confuse our whole historical perspective. (c) The planetary gods, as we find them in Gnosticism, have an altogether different place from that which they occupy in the Babylonian religion. They are no longer supreme Divinities, but are inferior and antagonistic powers by which man is held in bondage. His one endeavour is to throw off their bondage, and thus to procure for himself true life. Admitting, then, that there are elements in Gnosticism which must have had a Babylonian origin, it seems necessary to hold that they came in by an intermediate channel.

Bousset (*Hauptprobleme der Gnosis*) has advanced strong reasons in favour of the view that this channel was the Zoroastrian religion. He lays especial stress on the altered position ascribed in Gnosticism to the planetary gods, and finds in it an instance of that 'degradation' which is not uncommon in religious history. The Persians after conquering the Babylonian Empire had allowed a place to the ancient gods, but had deposed them from their sovereign rank to that of subordinate demonic powers. To the Persian influence Bousset would attribute not only the Babylonian elements in Gnosticism, but most of its characteristic features, and, above all, the dualism which marks its theology as a whole.

It may be doubted, however, whether even the Persian influence was exercised directly. Not a few of the Gnostic doctrines are closely allied with those of Mithraism, which had branched out from the main stem of the Persian religion, and had already, in the 1st cent. A.D., become widely prevalent in Asia Minor. Mithraism had adopted the conception of the ascent of the soul through the planetary spheres, and had associated it with a sacramental and ritual system of a highly elaborate kind. As a mystery religion it powerfully attracted the votaries of γνῶσις. But the influences from Babylonia and Persia were combined with others, hardly less potent, which can be traced back to Egypt.

An Egyptian origin of Gnosticism was first maintained by Amélineau, who based his argument on fancied resemblances between the mystical symbols in the Coptic documents and certain hieroglyphic signs. Of late years, Reitzenstein and other investigators have adduced stronger evidence, derived from the inner affinities of Gnostic with Egyptian thought. It is significant that the Hermetic literature, our chief existing record of pre-Christian Gnosticism, was composed in Egypt and is impregnated with Egyptian ideas. On the ground of the parallels supplied by this literature, we can assume, with a fair degree of confidence, that the Gnostic thinkers were indebted to Egypt for their theory of the Pleroma, of the birth of the Æons by a process of emanation, and of the syzygies, or pairs of male and female gods. To Egyptian influence we may also assign the conception of an apotheosis, or absorption into the Divine nature, which in Gnosticism is the final goal of the ascent to heaven.

The main sources of the Gnostic beliefs must be sought in Babylonia, Persia, and Egypt; but other religions added their contribution. Phrygia had long been the home of a peculiar worship, mystical and ecstatic in its character, which had powerfully affected all the Hellenistic cults. It centred in the two figures of Cybele and Attis, the Mother and the Victim-Deliverer; and it was largely through Phrygian influence that these figures, although they have counter-parts in almost all the cults, were brought into prominence. They hold a foremost place in Gnosticism, and are conceived in a manner that constantly suggests the Phrygian myths; indeed, the Naassene document in Hippolytus appears to be borrowed directly from Phrygian sources. In later Gnosticism we begin to discern traces of influences proceeding from India. The Basilidean system, as described by Hippolytus, affords striking analogies to Buddhistic thought in its negative conception of God and its doctrine of the Great Ignorance (Nirvāṇa) which will accompany the final consummation. The theory of the Parasitic Soul, as held by Isidorus, son of Basilides, likewise suggests a well-known Buddhistic conception, and Bardesanes, the 'last of the Gnostics,' was confessedly influenced by his acquaintance with Indian thought. It is easy, however, to attach undue importance to the Indian contribution even in the later systems; in the Gnosticism of the main period it seems to have played little or no part.

The ground-work of Gnosticism was supplied, then, by a number of mythologies which had become fused together in the process of syncretism. Ideas that had come down from the astral worship of Babylonia were blended with Persian and Mithraic beliefs, and these, again, with the cults of Egypt and Phrygia. Other religions (*e.g.* the local cults of Syria) also made themselves felt, although their contributions cannot be identified with any certainty. It is more than likely that this mixture of Oriental beliefs had been partially leavened, even before the Christian era, by elements taken over from Judaism. As a result of the Gnostic alliance with Christianity the OT came to occupy an even greater place in the building of the various systems. Attention was directed, more especially, to the opening chapters of Genesis, which henceforth supplied the framework for the Oriental cosmologies. The whole mass of belief which had thus been compounded out of the débris of many religions was informed with the spirit of Greek speculation. What had been given as myth and legend was construed metaphysically. Theories concerning the nature and destiny of the soul were interwoven with the ancient traditions. But, while Gnosticism availed itself freely of the language and ideas of philosophy, the appearance which it thus assumed was for the most part deceptive. It was not a speculative but a mythological system. In spite of all efforts to read a deeper meaning into its hieratic doctrines, the material could not be made tractable to philosophical interpretation. As a movement which strongly influenced Christianity in its formative period, Gnosticism has an important place in the history of human thought, but in itself it remained sterile. For all its pretension to hold the key to a higher wisdom, it never really transcended the primitive mythology out of which it sprang.

4. Doctrine of redemption.—The affinities of Gnosticism are not with philosophy but with religion, and it has to be explained throughout in view of its practical religious motive. This is forgotten by the Christian polemical writers, who deal almost exclusively with the Gnostic speculations. In all the sects these, no doubt, occupied a large place, but they were at best subsidiary to the religious interest. The central idea of Gnosticism, as of all the mystery religions, was that of redemption. A γνῶσις, or spiritual enlightenment, was offered to the elect, whereby the soul might be delivered from its condition of bondage. Redemption, as understood by Christianity, is fundamentally ethical, although the ethical meaning is obscured, even in the NT, by apocalyptical or speculative forms. But in Gnosticism the ethical aspect of redemption falls almost completely into the background. Here we may discern the chief peculiarity of the movement, which gave direction to all its thinking, and brought it finally into open conflict with the orthodox Church.

Two ideas are involved in the Gnostic doctrine of redemption. They are closely associated, or even identified, in all the systems, but were different in their origin, and need to be considered separately. (*a*) The redemption is a deliverance from the material world, which is regarded as intrinsically evil. Gnosticism based itself on the Persian dualistic conception; but, while in Parsiism light and darkness appear as two natural principles in eternal conflict, the Gnostics transformed the physical dualism into a metaphysical one. Under the influence of Greek speculation the contrast of light and darkness became that of spirit and matter—the lower world of sense and the higher world of pure being. Although these two are viewed as irreconcilable opposites, it is recognized that they have come to be mingled together. All the evil and misery in the world are set down to this forbidden intermixture of the antagonistic principles. This is the grand calamity which has made necessary a work of redemption.

In most of the Gnostic systems the Oriental dualism is frankly accepted, although we constantly meet with efforts to overcome it. The Naassenes conceived of a 'chaos poured forth from the First-born.' The later Valentinian school regarded the fall of Sophia as taking place within the Pleroma. Basilides, according to Hippolytus, resolved the history of all being into a single continuous process. Moreover, in a number of systems a mediating power is assumed between light and darkness (cf. the Sethian conception of πνεῦμα as a fragrance everywhere diffused). To thinkers trained in Greek philosophy the mere opposition

of the two worlds was a standing challenge to discover some ground of unity. But the dualism is rather concealed than overcome, and may be traced more or less clearly underneath all the apparently monistic constructions. Indeed, it constitutes the basis apart from which the Gnostic type of religion has no purpose or meaning. A spiritual essence has come to be imprisoned within a sphere which is radically alien to it; hence the need for a redemption, to be achieved only by some supernatural power.

(*b*) But the idea of deliverance from the material world is blended with the further idea of escape into a world of freedom. To ancient Hellenic thought, necessity was the power above the gods (see FATE [Greek and Roman]); and at the beginning of the Christian era this mode of thinking had been immensely strengthened by Oriental fatalism. The conception of a εἱμαρμένη imposed on all human action had grown into a veritable tyranny—all the more so as it was now connected with astrological beliefs which had come down from the Babylonian religion. The planets were regarded as the ἄρχοντες or κοσμοκράτορες to which the whole creation is subject. By their influences, controlling him from his birth, man is forced under the yoke of mechanical necessity, although conscious all the time of his vocation to freedom. Gnostic thought took its direction from these contemporary beliefs. Its motive was a genuinely religious one—to secure for the human spirit that liberty which is implied in its very nature. The deliverance, however, was sought for along the lines suggested by astral mythology. It was assumed that the soul was held captive by the planetary powers; and in order to win freedom it had to ascend through the spheres over which they ruled, subduing or deceiving the guardian demons by means of charms and pass-words. To this purpose of circumventing the hostile rulers the secret discipline of Gnosticism was mainly directed. The adept was prepared for his future journey by sacraments and lustrations, and by instruction in the hidden names of angels and the words and signs by which they could be overcome. All the resources of magical γνῶσις were called into play to effect the deliverance of the soul from the cosmical powers which had brought it under the bondage of necessity.

These were the two aspects in which the idea of redemption presented itself, and they merge into one another at every point. The escape into freedom is conceived at the same time as a rising out of the material into the spiritual world. As the goal of the redemptive process the Gnostic looked for a return of the soul to its original place in the heavenly light. A doctrine of the resurrection of the body, or even of personal immortality, was precluded by the fundamental conception of matter as evil. The soul, freed from its limitations, is simply to be reunited with the 'Pleroma'—the fullness of the Divine being.

It is characteristic of all Gnostic systems that redemption is anticipated for only a limited number of chosen spirits. This has sometimes been set down to an exaggeration of the Christian doctrine of election; but it belongs rather to the aristocratic tendency of all mystery-religions, heightened, in the case of Gnosticism, by the underlying dualism. As there were two worlds, so there were two classes of men, absolutely separate from one another. For the grosser type of men, God was not responsible; only the spiritual natures had sprung from Him and were destined for the higher realm of light. These spiritual natures alone were capable of the redeeming γνῶσις, and to impart it to others was a profanation. The earlier Gnosticism recognizes only two classes—the πνευματικοί, and the inferior class which is variously described as ψυχικοί, χοϊκοί, or ὑλικοί. Later schools allow for three—πνευματικοί, ψυχικοί, and ὑλικοί, the intermediate class representing the ordinary Christians, who possess πίστις instead of γνῶσις. The Coptic writings divide humanity into a large number of different classes. These, however, are merely attempts to conciliate the Church by obscuring the distinction between the Gnostic and the orthodox believer. The distinction is really an absolute one: those who share in the heavenly light can have nothing in common with those who are denied it.

5. **Praxis and mythus.**—In its essential purpose Gnosticism was a method of redemption, and consisted not so much in the profession of certain opinions as in the practice of given rites, which were supposed to aid the soul in its effort to shake off its fetters. Although the extant documents are concerned chiefly with the Gnostic theology, we have one detailed account of the praxis in the so-called *Books of Jeû*, and further light is thrown upon it by Irenæus' description of the Marcosians and the liturgical portions of the *Acts of Thomas*. As in the Christian Church, the act of initiation took the form of a baptism; but the Gnostic rite was more elaborate, and the ordinary baptism by water was supplemented by 'fire' and 'spirit' baptisms. The worship of the various sects seems to have been accompanied by a highly complicated ritual, intended, as in Mithraism (cf. Dieterich, *Eine Mithrasliturgie*), to typify and anticipate the ascent of the soul to heaven. Each sect had its own peculiar rites—lustrations, anointings, sacramental meals, repetition of magical phrases and formulæ. Symbols with a mystical import were frequently marked on the body, or were engraved on rings and gems, which were worn as amulets. Above all, the secret names of angels and demons were carefully committed to memory, along with the spells and invocations whereby the different powers of the invisible world could be controlled.

How was this praxis, consisting, as it did, of the usual apparatus of contemporary magic, related to the speculative side of Gnosticism? The relation appears to have been twofold. (1) The speculative systems were the interpretation of the praxis. In the *Pistis Sophia* we can almost follow the process by which a mythical history was woven together out of the details of the ritual, which was then regarded as the symbolical enactment of the experiences of a Divine person. The worshipper could thus feel that he was participating, by a series of sympathetic acts, in a deliverance which had already been realized on a higher stage. (2) The mythus was developed as a supplement to the praxis. Speculative minds were unable to rest in the bare assurance that by partaking in a certain ritual they would secure redemption. They could not but ask themselves why a redemption was necessary, what was its scope and nature, and by what means it had become possible? The answer to those questions was given in the Gnostic systems. Originally they were something added to the γνῶσις proper, which was concerned entirely with the occult rites and formulæ. But in course of time they became an integral part of the γνῶσις. It was taken for granted that redemption was in some measure conditioned by a knowledge of those higher speculations on the ultimate problems of being.

6. **General features of the mythus.**—In the details of their construction the systems are widely different, and cannot be fitted into any one general scheme. Yet there are certain elements which in one form or another belong to all of them, in view of the dualistic hypothesis that underlay the whole

Gnostic theory of redemption. It followed from that hypothesis (1) that matter was intrinsically evil—a lower world standing over against that higher one into which the soul sought to escape; (2) that the soul was native to the higher world, and had fallen from it, previously to its conscious existence, as the result of some cosmical disaster; (3) that the soul could be restored only by a Divine intervention, since its progress was hopelessly barred by its imprisonment in matter. The ideas which thus presented themselves to Gnostic speculation were set forth and elaborated in terms of mythus. It was assumed that man's spiritual nature was derived from a Divine being, who had fallen out of the world of light into the world of darkness. The process of deliverance involved, in the first place, the restoration of this fallen being, and the restoration could not be effected except by the voluntary descent of another Divine being, equal or superior in rank. Around these two beings—the fallen Divinity and the Redeemer—the Gnostic mythus in all its variations may be said to turn.

Allowing, then, for an endless diversity of detail in the manifold systems, the characteristic features of Gnosticism may be briefly indicated. At the head of the universe stands a Supreme God, who is not so much a personal Deity as the abstract ground of all existence. Sometimes (as in the *Pistis Sophia*) He is conceived as pure Light. Elsewhere He bears names which serve to emphasize His absolute transcendence—Father of All, Unbegotten, Ineffable, the Unapproachable God, the Abyss, the Unknowable. The Naassene and Barbelo systems describe Him as 'the Man' or 'the Primal Man,' and traces of this conception meet us even in Valentinianism. In view of the many analogies furnished by ancient religion (*e.g.* Parsiism, the Hermetic writings of Egypt), we cannot assign it to Jewish or Christian speculation. It runs back rather to some primitive myth, the meaning of which can now only be conjectured, and which possibly underlies the imagery of Daniel and the Book of Enoch. From the Father or Supreme God there proceed a number of beings in a descending scale of dignity, who are arranged in pairs of male and female ('syzygies'), and in their totality make up the *Pleroma*—the fullness of all blessedness and perfection. Behind this conception of the Pleroma we can discern the purely mythological idea of a Pantheon, or family of gods; but in Gnosticism it assumes a mystical character. The Divine existences, while distinguished from one another, are the manifestations of the one God, who is Himself impersonal and unknowable.

In later Gnosticism — more especially in the teaching of Valentinus and his school—the members of the Pleroma bear the name of Æons (*q.v.*), and are created in successive pairs by a process of emanation. This doctrine of Æons, in which we can trace Mithraic and Egyptian ideas modified by Platonism, has often been singled out as one of the typical features of Gnostic speculation; but it is characteristic only of certain systems, and seems to represent an attempt on the part of later thinkers to overcome the dualism inherent in the movement. In a manner which partly anticipates the Neo-Platonic theory, the Primal Being is conceived as going forth from itself in a series of existences, each at a further distance from the centre, so that the interval between God and the world is partly bridged over.

The process of redemption becomes necessary through the fall from the Pleroma of the member that stands lowest in rank. To this Æon or Power is usually assigned the name of *Sophia*, a name suggested by the OT conception of the Wisdom by which the world came into being. In Simonian Gnosis the fallen Divinity is called Helena (a reminiscence of Σελήνη, the moon-goddess), while in one important group of systems she appears as Barbelo (בארבע אלוה, 'in the four is God'). The conception of Sophia is related in many of its features to that of the Mother (Ishtar, Isis, Atargatis, Cybele) who in the Babylonian myth descends into the abyss, where she is held prisoner. But, whatever may have been its origin, the figure of Sophia underwent a complete transformation at the hands of the Gnostic thinkers, who sought by means of it to solve their crucial problem of how the Divine principle of light could enter into contact with darkness. According to one theory, Sophia fell by leaving her appointed place in her desire to attain to the supreme light. According to another, she was lured into the outer depth by a false reflexion of the light. In Valentinianism, as in the Barbelo system represented by the *Pistis Sophia* and the *Books of Jeû*, the figure of Sophia is doubled. The higher Sophia remains in the Pleroma, or in a sphere just outside of it, while the lower Sophia sinks into the darkness. The purpose of this duplication is apparently to account more easily for the fall, which was unintelligible on the strict dualistic hypothesis; but it also reflects a conception of Sophia of which we have traces in all the systems. A twofold function is attributed to her. She is the fallen Divinity through whom the light becomes immersed in darkness; and she is also the intermediary between the higher world and the spiritual nature which has been exiled from it. Thus she is regarded not only as the object of redemption, but as herself assisting in the redemptive process —watching over the light until the deliverance comes.

The fall of Sophia has for its consequence the work of creation. Hitherto the world of light had stood over against an utterly formless world of darkness; but the commingling of the higher principle with the lower evolves a cosmos out of the chaos. As the agent of creation, Gnosticism assumes a *Demiourgos*, who is usually represented as the son of Sophia. He is himself ignorant of the Pleroma above him, and governs the world created by him in the belief that he is himself the Supreme God; but unconsciously he transmits the elements of light which have come to him through his mother. The figure of the Demiourgos is due to a blending of mythological with philosophical ideas. On the one hand, it points back to the astral religion of Babylonia; the Demiourgos (who also appears as 'Ialdabaoth'—a name of uncertain significance)[1] is at the same time the first of the Archons, *i.e.* the planetary god Saturn. On the other hand, it reflects the conception which has ever and again found utterance in philosophy, that creation is the result of a blind intelligence. The Demiourgos is conceived not as an evil power, but rather as a cosmical force which acts unwittingly. But, since he thus represents a mechanical will, controlling the spiritual life of which he has been the unconscious vehicle, he becomes the tyrant from whose thraldom the soul craves deliverance.

A singular feature of Gnosticism is the identification of this inferior God with the God of the OT. It is possible, as Bousset conjectures, that this identification was prior to Christianity, and was inspired by hostility to Judaism on the part of neighbouring peoples. But it seems more probable that we have here an exaggerated reflexion of the attitude of the early Church. Christian thought from the beginning had been compelled to deny the validity of the Law, although its

[1] Hilgenfeld, *Ketzergesch.* 238, 243, suggests ילדא בהוה, 'offspring of chaos.'

claim to a Divine origin and sanction was still acknowledged. In Gnosticism, the riddle which had perplexed St. Paul and the writer to the Hebrews was solved in the most drastic fashion. The God of the OT was regarded as different from the God revealed by Jesus, and in some sense hostile to Him. He was not, as the Fathers were wont to assert, identified with Satan, but he was clothed with inferior attributes and limited to the one task of blind creation.

The fall of Sophia breaks up the perfect harmony of the Pleroma, and this cannot be restored until the lost light is recovered from the darkness. An Æon of supreme rank—the *Soter* or *Christus*—undertakes the work of deliverance. According to the Naassene hymn, this Divine being acts throughout on his own initiative, but elsewhere (e.g. *Pistis Sophia*, Ophites of Irenæus) he is moved by the urgent prayer of Sophia. He comes down through the spheres of the Archons, taking on himself the forms of the spirits of each world as he descends. Arriving in the world of darkness, he gathers to himself the scattered seeds of Divine light, and finally re-ascends along with the rescued Sophia into the Pleroma. The figure of the Soter is itself anterior to Christianity and has many counterparts in the Hellenistic cults. Its prototype may possibly be found in the Babylonian light-God Marduk, who descends unrecognized to do battle with Tiāmat, the monster of Chaos. Further elements are borrowed from the myths of Attis, Osiris, and Mithra, although all the definite features are blended together and resolved into one abstract conception. The grand characteristic of Christian Gnosticism is the identification of the mythical Redeemer with Christ, with whose history the pagan traditions are interwoven. But the Soter always remains distinct from the historical Jesus, who appears simply as a man of pre-eminent spiritual nature, united for a given time with the heavenly Redeemer. The union takes place either at his birth (Naassenes and *Pistis Sophia*), or when he is twelve years old (Justinian sect), or, according to the usual view, on the occasion of his baptism. Before the crucifixion the Divine being, who is incapable of suffering, separates himself from Jesus (cf. art. DOCETISM). This distinction of the Soter and the historical Jesus is partly necessitated by dualistic theory; but it must be explained, in still greater measure, by the radically un-Christian character of the whole movement. The Gnostic Redeemer had originally no connexion with Jesus. He was simply an abstraction of features common to the mythological Saviours, and this abstract figure was combined artificially with the Jesus of history. It was on this account that Gnosticism was unable, in spite of all efforts, to establish any real identity between the Redeemer and Jesus. Before it could adapt itself to the Gnostic construction the Gospel history had to be revised throughout, with a loss of practically all the elements which gave it significance to Christian thought.

The task of the Soter is twofold—to deliver the fallen Sophia, and to rescue the seeds of light which have become mingled with the darkness, owing to her fall. This double activity is emphasized in some systems by a duplication of the figure of the Soter, while in others the work of redemption is separated into two acts—the first of them in the period before creation, and the second at the advent of Jesus. The redemption accomplished by Jesus is not connected with His death, which is transformed into a mere outburst of hostility on the part of the Demiourgos. The real purpose of Jesus, or rather of the Soter who used Him as his instrument, was to communicate the hidden γνῶσις. By means of this knowledge, imparted by Jesus and preserved in the Gnostic tradition, the higher natures were freed from their earthly bondage and restored to the kingdom of light.

The *ethical system* of Gnosticism, like its speculative construction, was grounded in the dualistic hypothesis. By this hypothesis the idea of morality, in the ordinary sense, was excluded. All material conditions were regarded as necessarily evil, and the aim of the Gnostic was to rise above them into the purely spiritual life. To this struggle for deliverance from the bondage of matter all moral endeavour was subordinated. As a consequence, the Gnostic rule of conduct was liable to take either of two directions. (1) In most of the systems it is strongly ascetic in character. The soul is required to free itself from earthly conditions by holding aloof from all sensual pleasures and reducing the needs of the body to the barest minimum. A strict ascetic discipline is conjoined with the possession of γνῶσις as its necessary support and complement. (2) But the same motives that dictate this ascetic morality lead as easily to the opposite extreme of libertinism. Spiritual natures are called on to assert their independence of the material world by indulging in its pleasures without restraint. The libertine tendency is reinforced by the identification of the God of the OT with the Demiourgos—the inferior and tyrannical God. It is assumed that the moral law as laid down in the Decalogue is founded on his arbitrary will, and aims at the subjection of man's free spirit to the yoke of necessity. To defy the ordinances of the law, and thereby throw off allegiance to the inferior God, is a duty obligatory on the true Gnostic. Carpocrates and his son Isidorus sought to establish the libertine theory of conduct on a regular philosophical basis. It was represented likewise by the Nicolaitans, and in a still more marked degree by the Cainites, who applied their inverted standards of moral values to the characters of Scripture. Cain, Esau, Korah, and Judas were honoured within this sect as the champions of spiritual freedom. How readily the one extreme could pass into the other is illustrated by the opposite attitude of kindred sects, such as the Peratæ and Sethians.

7. **The Gnostic sects.**—The diversity of the Gnostic systems, as portrayed in the writings of the Fathers, may in some measure be explained by controversial motives. One of the strongest arguments against the heretical beliefs was their tendency to conflict with one another, and the Patristic writers take every means to emphasize the confusion. Local and superficial differences are made prominent; alternative forms of the same doctrine are set forth under specific names, as if they were held by separate schools. But, when we have allowed for this artificial sub-division, the variety of the sects is still bewildering. Gnosticism drew from so many sources and was so irresponsible in its methods of speculation that no uniformity of belief was possible.

The difficulty of tracing the affinities and ramifications of the systems is all the greater because of our ignorance of their historical development. For the leading Gnostic teachers we can roughly assign dates between 130 and 190—the age of the Antonines; but a large number of schools cannot be connected with any personalities, and bear no marks by which the period of their origin may be computed. In their fundamental features these anonymous systems are pagan, and we may, therefore, infer that they are of an early date—perhaps anterior to Christianity. But they have become overlaid with Christian elements, and we cannot tell how or when they assumed their final form. The most accurate dating of the systems, however, would carry us only a little way. During all the

history of Gnosticism there seems to have been a continual process of borrowing and adaptation and revision. An arrangement of the sects in historical order would be largely deceptive, for the movement in its most developed stages was constantly reverting to ideas of a primitive stamp.

Attempts to classify the systems were begun even in Patristic times. They were grouped by Clement of Alexandria according to their ethical tendency, as ascetic and libertine; by Theodoret according to their speculative character, as monistic and dualistic. It is evident that no true classification can be arrived at by either of these standards. Among the many modern scholars who have tried to group the systems, the following may be mentioned. (*a*) Neander laid stress on the relation of Gnosticism to Judaism, and distinguished between the friendly and hostile schools. (*b*) Baur applied this test in a more scientific fashion and divided the sects according to their prevailing Jewish, pagan, or Christian character. (*c*) Gieseler sought to determine the countries in which they originated—Egypt, Syria, or Asia Minor. (*d*) Lipsius also adopted the geographical division, but was content to make it more general and to recognize two great Gnostic schools—the Syrian and the Alexandrian.

These groupings are all unsatisfactory, since they fail to take account of that intermingling of diverse types of religion which belongs to the essence of Gnosticism as a syncretistic creed. Perhaps the most convenient classification is that which is now usually adopted, and which distinguishes the anonymous systems from those associated with a definite founder or teacher. The distinction is at best a rough one, and is open to at least two serious objections. (1) The ascription of a system to a given founder is often accidental, and is due to nothing else than the existence of some well-known work in which its doctrine was expounded. (2) The Fathers were anxious, wherever possible, to connect each heretical sect with a prominent name; thus in many cases their references to a founder are purely conjectural. But, with these reservations, the grouping may be accepted, and serves to bring out a real and important distinction. The anonymous systems may fairly be held to represent the more primitive Gnosticism, which grew up more or less spontaneously out of the pagan cults and had only a superficial relation to Christianity. When a system bears the name of a definite teacher, we can regard it as a comparatively late product, based on philosophical reflexion and more closely allied to Christian thought.[1]

(*a*) The anonymous systems are brought together, in the controversial writings, under the general head of *Ophitism*. They comprise, besides the Ophites proper, the Naassenes, Peratæ, Sethians, Cainites, Archontics, Severians, Barbelo-Gnostics, Justinians, Nicolaitans, Docetæ, and other more obscure sects. The figure of the serpent, to which the name refers, seems originally to have had a cosmological significance; but in various Hellenistic cults it had come to symbolize the world-soul, or eternity, or the Divine redeeming power. Its import for religious thought was enhanced by the Biblical stories of the serpent in Eden and the brazen serpent in the wilderness. Among the Ophite sects the serpent was a favourite symbol, typifying sometimes a beneficent, sometimes a hostile, power. But the term 'Ophitism,' although convenient, carries with it no definition of the systems. From some of them the serpent-symbolism is entirely absent, and in none can it be regarded as central and characteristic.

The Ophite or anonymous group of sects is marked by certain broad fundamental features. All the systems included in the group are relatively simple in structure, and have affinities with mythology rather than with Christian or philosophical speculation. The Æonic scheme, as we find it in later Gnosticism, is undeveloped or altogether wanting. The Godhead is conceived under the form of a Triad—the Supreme unknown Father, whose essence is light, and, associated with Him, the Mother and the Son. Other Divine beings have their place in the Pleroma, but the Triad appears so constantly that we cannot but feel that originally it was complete in itself. Beneath the higher world are the seven planetary powers—half gods, half demons—and at their head stands Ialdabaoth, who is identified with the God of the OT. He and the other six are throned above the lower world, which they have created out of the darkness, and in which the fallen particles of heavenly light have become imprisoned. The aim of the γνῶσις is to enable these spiritual natures to free themselves and re-ascend to their native world.

As a typical example of Ophitism, the 'Gnostic' system described by Irenæus (*adv. Hær.* i. 30) may be reproduced in outline. It starts from the conception of a Supreme Being, 'the First Man,' from whom proceeds his son, 'Son of Man' or 'Second Man.' Along with these two there exists a third and female principle, 'the Holy Ghost.' Illuminated by the First and the Second Man, she produces another male principle, 'Christ.' But the overflow of the light communicated to her causes her also to produce the male-female Sophia or Prunicus, who sinks into the depth and assumes a body. The heavens are formed out of her body as she struggles to rise, and, finally, she raises herself to her Mother. Meanwhile, however, she gives birth to a son, Ialdabaoth, who begets sons in his turn, and thus there arises the Hebdomad, or group of seven planetary powers. Ialdabaoth, opposed by his sons, begets from the lowest matter another son, Nous, who is formed like a serpent; and by him he is led to believe himself the Supreme God. But his Mother reveals to him the existence of the true God, and, in order to distract the attention of the other six powers, he unites with them in creating man. The man thus formed is at first inert and shapeless, but Ialdabaoth breathes into him the breath of life, and thereby empties himself of his power, while man is inspired with the knowledge of the Supreme God. The wrath of Ialdabaoth is kindled, and he endeavours to keep man in ignorance and subject him to his own ordinances; but man, on the impulse of Prunicus, transgresses the will of the tyrant, and is driven by him out of Paradise. Henceforward the malign influence of Ialdabaoth moves through human history; but Prunicus has pity on man, and the prophets whom she sends in a constant succession keep alive in him the knowledge of the light. Finally, at her prayer, her Mother requests of the Supreme God that Christ should come to the help of man. Descending through the seven planetary spheres, he unites himself at the Baptism with Jesus, the son of Mary, and through him proclaims the unknown Father. Ialdabaoth and his sons bring about the crucifixion of Jesus, but Christ and Sophia ascend to the higher world. The crucified Jesus is raised in a spiritual body, and for eighteen months reveals the mysteries of Gnosis to his disciples. Then he is exalted to heaven, where Christ sits at the right hand of Ialdabaoth, drawing to Himself all souls which possess the spiritual nature. The consummation is effected when all the lost light is gathered together and restored to the higher world.

This example will illustrate the character of the Ophite systems, and a few brief notices will suffice for the others. The *Justinian* mythus bears a marked resemblance to that which has been outlined, except that it reverses the part assigned to two of the chief figures. The female principle Edem (corresponding to Prunicus or Sophia) is the hostile agency who seeks to thwart the beneficent influence of the creator Elohim. The rôle of Saviour is enacted by the angel Baruch. He enlightens a series of elect spirits (pagan as well as Hebrew) before he brings the final revelation to Jesus.

The *Naassene* sect appears to represent a highly primitive type of Gnosticism, the pagan features of which are thinly veiled by transferring to Jesus the attributes of the Soter. So far as we can gather from the confused account of Hippolytus (*Refut.* v. 2–5), the Naassenes assumed a Primal Being (First Man), in whom the whole universe (including the material world) potentially exists. His nature is threefold—material, psychical, and pneumatic—and the world-process consists in the segregation of these three principles. By the work

[1] De Faye holds, however, that towards the beginning of the 3rd cent. the great schools diminished in importance and gave place to a multitude of minor sects. In proof of this he urges (*a*) the prominence given to the anonymous Gnostics by Hippolytus, (*b*) the affinities of the *Pistis Sophia* and the *Books of Jeû* (late works) with Barbelo-Gnosticism, and (*c*) the anonymous character of the sects opposed by Plotinus. But the evidence appears to point to nothing more than a vigorous survival of the earlier sects alongside of the later.

of creation the Divine Being purifies Himself of the material and psychical natures, in order to attain to His true life as absolute Spirit. In man, as in the First Man, the three natures are united, and require likewise to be separated. The process whereby the spirit in man may be set free from the alien elements adhering to it is revealed by the Saviour Jesus. (In the Naassene hymn preserved by Hippolytus we have an authentic document of the highest value for the study of earlier Gnosticism.)

Closely related to the Naassenes were the *Peratæ*. Their name most probably points to an origin in the Euphrates valley, although it was explained by themselves as signifying that they had passed *across* the gulf of the transient and phenomenal. Like the Naassenes, they taught the doctrine of a tripartite being who had proceeded from the eternal Father. The Saviour was endued with the three natures, in virtue of which he carried out the work of separation alike in the cosmic realm and in the world of men.

The *Sethians* took their stand on the Persian dualism, and may originally have been a Zoroastrian sect. But along with the two opposing principles of Light and Darkness they allowed room for a mediating principle, the Spirit, conceived as a subtle odour diffusing itself through all things. Sparks of the heavenly light become intermingled with the darkness, and strive to free themselves with the aid of the Spirit. Their deliverance is at last effected by the Logos, to whom they are drawn like grains of iron to a magnet, escaping from the fetters of the body and the rule of the inferior God.

The so-called *Docetæ* conceived of the Primal Being as a seed, infinitely small and yet containing in itself infinite potentialities. There proceed from Him three root-æons, which, in their turn, give rise to others; and these, in their totality, constitute the world of light. The light shines down on chaos, and produces the souls of all species of living beings. From the reflexion of the Logos arises the God of creation, who forms bodies in which He imprisons the souls born of the light. The souls migrate from one to another of these bodies, until the Saviour descends and frees them from the circle of re-birth.

The *Barbelo-Gnostics* assumed an unknown Father, with whom is associated a female principle, Barbelo. A succession of Æons, in pairs of male and female, comes into being; but one of the Æons, Sophia or Prunicus, is without a consort, and, in hope of finding one, leaps out of the Pleroma, where she produces the God of creation, who believes himself to be the sole God. Irenæus' account of the sect, which at this point breaks off, is of special interest, since there can be little doubt that the Coptic writings (*Pistis Sophia*, etc.) present a variety of the Barbelo-Gnosis. Indeed, it is probable that Irenæus derived his account from the recently-recovered *Gospel of Mary*.

(*b*) From the various systems of anonymous Gnosticism we now turn to those which are connected with the names of definite teachers. In the view of the Fathers, these are attached to one another by a regular genealogy; and, while this may be doubted, the systems in question seem to reflect the main development of Gnosticism in its alliance with Christianity.

The name of *Simon Magus* is uniformly placed at the beginning of the series. This may be partly due to the fact that Justin Martyr, the earliest heresiologist, was himself a native of Samaria, and would be particularly interested in the Simonian sect. But the figure of Simon, although obscured by legend, seems to be historical, and the narrative in the Book of Acts may embody a reminiscence of his efforts to ally Christianity with the syncretistic movement. Tradition makes him a disciple of Dositheos, and from this we may infer that he was a leader in the Dosithean sect, which seems to have existed in Samaria from about the time of the Maccabees. According to Justin (*Apol.* i. 26, 56, *Trypho*, 120), he was honoured as the highest God, and his companion Helena as the Divine creative Thought (ἔννοια). If this notice can be accepted, he must himself have come to occupy the centre of the system which is known by his name. The treatise entitled the Ἀπόφασις Μεγάλη, which is quoted by Hippolytus and attributed by him to Simon (vi. 6), was more likely an anonymous document of the Simonian sect. In the Simonian doctrine—which converges on the deliverance of the fallen Helena—there is little trace of Christian influence; and this is likewise true of the teaching of *Menander*, who, according to Irenæus and Justin, was Simon's fellow-countryman and disciple. A livelier interest in Christianity begins to manifest itself in *Cerinthus* (*q.v.*), towards the end of the 1st century. He appears to have been the first to promulgate the Gnostic conception of Jesus as a man of pure spiritual nature, temporarily united with the heavenly Saviour. *Satornilos*, the disciple of Menander, taught that the Supreme God created the world of angels, by seven of whom, with the God of the Jews at their head, the world was formed. They made man according to an image reflected from the Supreme God, who afterwards, in pity, bestowed on their creature a spark of Divine life. The Saviour descended for the sake of rescuing man from the oppression of the inferior powers, and was Himself a man only in appearance. Satornilos is important as the link between a more primitive Gnosticism and the elaborate speculations of Basilides and Valentinus; but prior to these speculations, and in the same country of Egypt, there appeared the remarkable system of *Carpocrates*. In this system, which reflects a Christianity strongly influenced by Plato, the antinomian ideas of Gnosticism are most fully developed. Good and evil are resolved into merely arbitrary commandments, imposed on man by the tyranny of the world-rulers. Freedom from these oppressors is given through Jesus. A man like others, but of exceptional purity of soul, He remembered what He had seen in the higher world, and received power from above to escape from the world-rulers. All souls that follow the path marked out by Him are endowed with the same power, and may even rise superior to Jesus. In order that they may pass through every phase of experience in their ascent to God, departed souls must undergo a series of re-incarnations; but the stronger souls are able in their lifetime to traverse all experiences, and so free themselves at once from the bondage of the lower law.

The teaching of the two great masters of Gnosticism forms a large and complex subject by itself, and is discussed in special articles (see BASILIDES and VALENTINUS). In the case of both of them the doctrine of the founder has to be carefully distinguished from that of his school. The nature of the original systems has been much debated; but, so far as we can gather from the scanty quotations, they had many points of affinity with the more primitive Gnosis—Basilides connecting himself with Satornilos, and Valentinus with the Ophite sects. Irenæus' account of Basilides is probably much nearer to the original than that of Hippolytus, but itself represents a later doctrine, in which an attempt is made to mitigate the uncompromising dualism of the earlier teaching. The theory that the Basilidean doctrine as set forth by Hippolytus is based on a 'mystification' has now

been generally abandoned. Not only is the system too profound and original to be the work of a casual forger, but it agrees in not a few important details with the teaching described by Irenæus, and may well reflect a further development of that teaching in its progress towards pure monism. From the account in Hippolytus, too, we are enabled to understand why the Basilidean influence ceased to play a part in the later history of Gnosticism. The cardinal Gnostic positions had been gradually abandoned by the disciples of Basilides, and his Gnosis merged itself at last in the ordinary philosophical speculations of the age.

The Valentinian movement, on the other hand, while it freely admitted the philosophical element, never ceased to be faithful to the distinctive Gnostic ideas, and drew into itself practically the whole stream of later Gnosticism. Hippolytus recognizes two separate Valentinian schools—the Italic or Western, and the Anatolic. To the Eastern school he assigns Theodotus and Bardesanes; to the Western, Ptolemæus, Heracleon, and Marcus. But the points of difference on which he insists appear somewhat arbitrary and superficial; and perhaps we arrive at a truer division when we conclude that Gnosticism, under the Valentinian influence, proceeded in three main directions. (1) The mythological and ritual elements were exaggerated—as in the Marcosian system, with its intricate machinery of symbolism, and mystical letters and numbers. Gnosticism in this phase of its development was ultimately absorbed in the magical and cabalistic lore of the later centuries. (2) The speculative tendency became predominant. Although the mythological scheme was retained and even amplified, it was subjected to a process of allegory. The history of the Æons was construed as a theory of the unfolding of the Divine consciousness. Ideas borrowed from Plato were interwoven with the mythical data, and served, in great measure, to disguise their real character. (3) The Gnostic beliefs were assimilated more closely with those of the orthodox Church. By so adapting itself, Gnosticism vastly enhanced the success of its propaganda, and continued to survive, even when its day was finished, in heretical Christian sects. Of this phase of the movement the outstanding example is Marcion (*q.v.*). That he is legitimately reckoned among the Gnostics must be admitted, not only in view of his undoubted dependence on the Gnostic teacher Cerdon, but because of the distinction which he drew between the Supreme God (ἀγαθὸς θεός) and the Creator, and his consequent rejection of the OT. But the ground-work of his theology was Pauline; and it was mainly in the interest of an exaggerated Paulinism that he accepted the Gnostic positions. It is probable that a similar judgment must be passed on Bardesanes, the last of the great Gnostic teachers (A.D. 154–240). The true character of his system is hard to recover from the contradictory records; but the judgment of Eusebius may be accepted that he was at first a disciple of Valentinus, and then turned to Christianity without completely abandoning his former errors (cf. the discussion by Haase, *Zur bardesanischen Gnosis*). Unlike Marcion, he seems to have held fast to the conception of one all-creating God; but he combined the Christian position with ideas of an astrological nature taken over from Gnosticism. Whether the hymns preserved in the *Acts of Thomas* can be ascribed to Bardesanes is doubtful. It has been clearly proved, by the investigations of Preuschen and Reitzenstein, that they are adapted throughout from pre-Christian sources; and the work of Bardesanes, if he had a part in them at all, can have been little more than editorial.

8. Results of the movement.—From a very early time the danger that threatened Christianity from the side of Gnosticism became apparent, and in the NT itself we meet with a polemic which was almost certainly directed against incipient phases of the movement. The false teachers who are condemned in Colossians seem to belong to a variety of Jewish Gnosticism. The heresies contemplated in the Pastoral Epistles and in the messages to the Churches in Revelation are even more evidently of a Gnostic type. The Fourth Gospel rests upon the thesis that 'the Word was made flesh'; and, in view of the close relation between the Gospel and the 1st Epistle of John, there can be little doubt that the writer is opposing some form of Gnostic docetism. It is the peculiarity of the Fourth Gospel that its underlying polemic against the Gnostic teaching is combined with a certain sympathy. We are enabled to understand how, in spite of misgivings, the Church was led to compromise with the heretical movement, and so to encourage the attempt at an alliance. In the opening decades of the 2nd cent. the alliance had become imminent, and the Church was fully awakened to its danger. The letters of Ignatius are marked by the sharpest antagonism to the new doctrines; and all through the century this conflict with Gnosticism is the dominant interest in the theological life of the Church. The objections most frequently urged against the heresy are (1) its hostile attitude to the OT; (2) its doctrine of a higher God who is other than the Creator; (3) its docetic view of the Person of Christ; (4) its ethical teaching, ascetic or libertine; and (5) its denial of the Resurrection. These, however, were only the particular errors on which the ecclesiastical writers laid hold for the purpose of controversy; and beneath all else was the sense that the very existence of the Church was imperilled. Unless it closed the door on the heretical teaching, Christianity would be dragged into the vortex of contemporary syncretism, and would disappear as a separate religion.

The struggle to overcome Gnosticism was fraught with momentous consequences. (*a*) It led to a strengthening of the Catholic idea. As against the alien sects, which were always breaking up into new sub-divisions, the Church took its stand on its universality; and by the strict enforcement of uniformity in creed and worship it sought to make its catholic character more fully manifest. (*b*) It hastened the development of the episcopal form of government. The letters of Ignatius illustrate in the clearest manner how the rise of the heretical sects enhanced the position and importance of the bishop. He was at once the representative of the true Catholic tradition, and the centre around which the Church could rally, in the face of disruptive influences. (*c*) It made necessary a *regula fidei*—an authoritative standard of belief whereby all innovations could be tested. Out of this rule of faith, with its brief summary of the cardinal doctrines, arose the great creeds of succeeding times. (*d*) It contributed, more than any other cause, to the formation of the canon of the NT. The Gnostic sects were prolific in forged literature, which presented their own teachings under the sanction of consecrated names. To guard against this evil, and at the same time to define its own position more clearly, the Church was compelled to sift and collect the genuine documents of the primitive age. (*e*) It secured for the OT its permanent place as a sacred book. The causes which led the Gnostic thinkers to reject the Jewish Scriptures were operative within the Church itself; and in course of time would have brought about the same result. It was the conflict with Gnosticism which prepared the way for a truer appreciation of the OT. The Scriptures of the old religion were adopted by the new, to the enrichment of its spiritual heritage.

The chief results of Gnosticism were thus consequent on the reaction against it; but it made its influence felt, in a more positive manner, on the development of the Christian religion. It could not have diffused itself so widely over the world of the first two centuries unless it had answered to some real need of the time, and Christianity was able to conquer it only by the partial adoption of many of its aims and interests. In the following directions, more especially, we can discern a Gnostic influence modifying the life and thought of the Church. (*a*) The tendency to asceticism was strengthened. It is true that the Christian monks of the 3rd and subsequent centuries no longer appealed to Gnostic doctrine; but their contempt of the world was nothing, in the last resort, but a survival of the earlier dualism. (*b*) The sacramental idea of religion was more firmly established. Gnosticism had laid hold of the popular imagination by its claim to a secret praxis, which was itself sufficient to ensure all spiritual blessings. In place of the heretical ritual the Church now offered its own. The efficacy of the Christian faith was more and more identified with the value of the sacraments. (*c*) A mystical strain, originally foreign to it, was introduced into Christian thought. Already in the Fourth Gospel we have the example of a Christian writer otherwise opposed to Gnosticism, who was powerfully attracted by the mystical element in its speculations. The influence exerted by the Fourth Gospel was reinforced, in the course of the following century, by further contact with the Gnostic type of religion, until mysticism had worked itself into the very substance of Christianity. Here, perhaps, we can discern the most enduring of all the effects that are traceable to the Gnostic movement. (*d*) An impetus was given to theological research in almost all its branches. The Gnostic teachers were men of philosophical culture, and their free attitude to Christian tradition prompted them to investigations from which the more orthodox writers held back. In the letter of Ptolemæus to Flora (preserved by Epiphanius) we find the earliest attempt at Biblical criticism. The commentaries of Heracleon laid the foundations of exegesis, and afforded many hints to Origen. Marcion was the first to institute a NT canon—unwittingly suggesting to the Church its most potent weapon against Gnosticism. In the domain of theology proper, the Gnostics supplied an impulse which can hardly be over-rated; and among their other contributions may be reckoned the Christian hymn. Their literature abounded in hymns, many of them of great beauty, and these were taken over in not a few cases and adapted to the service of the Church. The recently discovered *Odes of Solomon* are possibly an instance of such adaptation.

That the Church was compelled to set itself in uncompromising antagonism to the Gnostic movement was in many ways a misfortune. Not only was it thus deprived of influences that would have proved helpful, but it suffered a partial arrest of development. The extravagance of Gnosticism was only the other side of that freedom which was the birthright of Christianity, and which breathes through the NT like a living air. To check the inroads of Gnosticism the Church had to prohibit freedom. Dogma was made rigid; the idea of new revelation was forbidden; ecclesiastical government became official and oppressive. The contrast between the 3rd and 4th centuries and the primitive period affords us a measure of the loss which the Church sustained by its triumph over heresy. Nevertheless, the victory, at whatever cost, was necessary. Gnosticism, associated though it was with much profound speculation and with a genuine and enthusiastic religion, belonged to the past. It represented the final effort of paganism to maintain its hold on the world by allying itself with a new and vital faith. The whole history of the movement is a demonstration that such an alliance was impossible. In the Gnostic systems the Christian ideas were hopelessly buried under a débris of mythology; the Christian morality was sacrificed or perverted; the historical facts of the Gospel were eliminated. Christianity stood for an entirely new conception of religion, and could not develop, according to the law of its own nature, unless it broke loose from the insidious forces which would have anchored it to a bygone world. By its victory over Gnosticism the Church won its independence, and turned its face definitely towards the future.

9. **The sources.**—The often repeated statement that we know the Gnostics only from their adversaries can now be regarded as no more than partially true. Several extensive treatises in the Coptic language have been recovered which undoubtedly are genuine products of Gnosticism, although they reflect a late and decadent form of the movement. Three of these writings are still in process of editing, viz. the *Gospel of Mary*, the *Apocryphon Johannis*, and the *Sophia Jesu Christi*. They will appear in due course as the 2nd vol. of 'Koptisch-Gnostische Schriften,' ed. C. Schmidt. The other works comprise (1) the *Pistis Sophia*; (2) the two *Books of Jeû*; (3) a fragmentary work of unknown title and origin (Schmidt's ed. of these writings is of classical value). The *Pistis Sophia* was apparently written in Egypt towards the close of the 3rd cent., and in its existing form is a translation from the Greek. It consists of two parts, originally separate, and the title of 'Pistis Sophia' applies strictly to only the 1st part (books 1–3). Many scholars have assigned it to the Valentinian sect, but its affinities seem to be rather with the Barbelo-Gnosticism described by Irenæus (i. 29). This is true likewise of the *Books of Jeû*, which bear a close relation to the *Pistis Sophia*, and are mainly concerned with the ritual practices of the sect.

Apart from the Coptic writings, a large number of fragments, preserved by the Fathers, are to be ranked as original sources. Of special value are (1) the letter of Ptolemæus to Flora; (2) the *Excerpta Theodoti*, a series of extracts, contained in the *Stromata* of Clement of Alexandria, from the writings of one of the leading disciples of Valentinus; (3) the Naassene hymn; and (4) the hymns in the *Acts of Thomas*. Probably the controversial writings embody a great number of direct citations, but these are so entangled with summarized statements that they cannot be detached with any certainty.

For our main knowledge of the Gnostic teaching we have still to rely on the Christian polemical treatises. In the employment of these we have to make allowance not only for a controversial bias, but for a frequent lack of real understanding and adequate information. The earliest work written with the express purpose of counteracting Gnosticism was the *Syntagma* of Justin, now lost. On this writing the subsequent controversialists seem to have been largely dependent, although they supplemented its data by a further research (not always, perhaps, of a first-hand nature) into the Gnostic teachings. The great work of Irenæus, *adv. Hæreses* (ἔλεγχος καὶ ἀνατροπὴ τῆς ψευδωνύμου γνώσεως), is preserved in a Latin translation, and until recent times was the chief store-house of knowledge on all subjects connected with Gnosticism. In 1842 a work was discovered which was at first ascribed to Origen, but has now been identified with the κατὰ πασῶν αἱρέσεων ἔλεγχος of Hippolytus. This work contributed an immense amount of fresh material, and is especially rich in data concerning the Ophite sects. For many years Hippolytus was

accepted without question as the basis of all study of Gnosticism; the estimate of him then passed to the other extreme, and his information was attributed to secondary or even to forged and garbled sources. Later investigation, however, has tended to re-establish his authority. So far as may be judged, he brought little critical discernment to bear on his material; but much of it is of the highest value, and must have been derived from first-hand documents. Irenæus and Hippolytus are the two chief Patristic witnesses; the others do little more than repeat their evidence, with occasional additions. Epiphanius, Philaster, and the pseudo-Tertullian seem to have drawn for the most part on the lost *Syntagma* of Hippolytus—a shorter work which preceded the larger one, and which was dependent mainly on Irenæus. Clement of Alexandria and Origen deal incidentally with the subject of Gnosticism. Of all the Fathers they were the best fitted to treat it intelligently and sympathetically; and their notes are always of value. But no systematic account has come to us from their hands.

LITERATURE.—Of the older works may be mentioned: A. Neander, *Genet. Entwickelung der vornehmsten gnost. Systeme*, Berlin, 1818; F. C. Baur, *Die christl. Gnosis in ihrer geschichtl. Entwickelung*, Tübingen, 1835; R. A. Lipsius, *Der Gnosticismus*, Leipzig, 1860; H. L. Mansel, *The Gnostic Heresies*, London, 1875; A. Hilgenfeld, *Ketzergesch. des Urchristentums* (following on a long series of previous writings), Leipzig, 1884; C. W. King, *The Gnostics and their Remains*[2], London, 1887; E. Amélineau, *Essai sur le gnosticisme égyp.*, Paris, 1887. The following may be singled out as among the most noteworthy of the later contributions: A. E. Brooke, *The Fragments of Heracleon, newly edited from the MSS*, Cambridge, 1891 (=*TS* i. 4); A. Harnack, *Dogmengesch.*[3], Freiburg, 1894–97 (Eng. tr., London, 1894–99); W. Anz, *Zur Frage nach dem Ursprung des Gnostizismus*, Leipzig, 1897 (=*TU* xv. 4); M. Friedländer, *Der vorchristl. jüd. Gnosticismus*, Göttingen, 1898; G. R. S. GOBARDHAN (Skr. *govardhana*, 'nourisher of kine').—A sacred hill and place of pilgrimage in the Muttra (Mathura) District, United Provinces of Agra and Oudh; lat. 27° 30′ N., long. 77° 28′ E. The hill, which is possibly the Erarasa of Ptolemy (McCrindle, *Ancient India as described by Ptolemy*, London, 1885, p. 129), is, according to Hindu legend, a fragment of the Himalayan range, which was being carried by Hanumān, the monkey-god, ally of Rāma, to aid him in forming a bridge from the extremity of the Indian peninsula to Ceylon, when he was engaged in war with the demon Rāvaṇa, who had abducted his spouse, Sītā. In passing Gobardhan he made a false step, and a portion of the mountain, falling, formed the present sacred hill. When Kṛṣṇa was manifested at this place, the people were accustomed to worship Indra by circumambulating the hill; but they abandoned his cultus for that of the new divinity. Indra was wroth, and, summoning the clouds from the four quarters of the heavens, directed them to pour a deluge of water on the place. The inhabitants were in danger of being swept away, when Kṛṣṇa uprooted the hill from its base, supported it on the tip of his finger, and called his worshippers to take refuge beneath it. There they remained secure for seven days and nights, until, Indra finding his action fruitless, the heavens cleared and the people stepped out from under Gobardhan, which Kṛṣṇa quietly restored to its original site. Indra, being defeated, accepted the new god and worshipped him (Growse, p. 60). The legend probably indicates a conflict between the Vaiṣṇavite cultus and the worship of the Vedic gods. In the modern pictorial representations of the miracle the hill is shown as an isolated, solitary peak, which is as unlike the reality as possible. Hindus at the present day usually call it *Girirājā*, 'royal hill'; but in earlier literature it is known as *Annakūṭā*, 'peak of corn.' There is a firm belief in the neighbourhood that, as the waters of the Jumnā are yearly decreasing in volume, so too the sacred hill is yearly diminishing in height.

The most important temples at Gobardhan are, (1) that dedicated to Kṛṣṇa as Gokulnāth, 'lord of Gokul' (*q.v.*), the image being brought over from that place on the occasion of the festival; (2) the temple of Harideva, Hari being one of the titles of Viṣṇu. This temple was erected during the tolerant reign of Akbar, about A.D. 1560, by a prince of Amber, on a site previously occupied by a succession of humbler fanes.

'It consists,' says Growse (p. 304), 'of a nave 68 ft. in length and 20 ft. broad, leading to a choir 20 ft. square, with a sacrarium of about the same dimensions beyond. The nave has four openings on either side, of which three have arched heads, while the fourth, nearest the door, is covered by a square architrave supported by Hindu brackets. There are clerestory windows above, and the height is about 30 ft. to the cornice, which is decorated at intervals with large projecting heads of elephants and sea monsters. . . . The construction is extremely massive, and even the exterior is still solemn and imposing, though the two towers which originally crowned the choir and sacrarium were long ago levelled with the roof of the nave.'

Close to this temple is the sacred tank known as Mānasī Gangā, the 'Ganges' supposed to have been called into existence by the mere action of the Divine will (*mānasa*). On one side of it are two stately cenotaphs (*chhattrī*) dedicated to the memory of Rājās Randhīr Singh and Baladeva Singh of the Jāt dynasty of Bharatpur, who died in 1823 and 1825 respectively. A mile or so from the town is a third cenotaph in honour of Sūraj Mal, founder of the family, who died in 1764. Close to the hill stands the village of Anyor, where are annually celebrated the *Girirājpūjā*, or adoration of the sacred hill, and the *Annakūṭ*, or commemoration of Kṛṣṇa's sacrifice. Like most sacred places in N. India, Gobardhan seems to have been the scene of Buddhist worship. Outside the village stands a large statue of Buddha, with an inscription of the Indo-Scythian period.

GOD (Primitive and Savage).—Whether or not we may speak of the supreme, or at least superior, beings of savage and low barbaric religions as 'gods' is a matter of the definition of 'gods' and of 'religion.' To such superior beings in the beliefs of Australian tribes, Howitt, in his *Native Tribes of S.E. Australia* (London, 1904), gave the name 'All-Father,' as they are usually spoken of as 'Father ours.' He adds that (as the present writer had already pointed out in *The Making of Religion*, London, 1898, pp. 202–204) the terms 'spirit' and 'Great Spirit' are not applicable to such beings in Australia; and this holds good in almost all savage and lower barbaric religions. It would not be easy to find the Eternal spoken of as a 'spirit' in the Hebrew Scriptures, and there is nothing spiritual in Homer's conception of his Olympians. The term 'spirit' or 'Great Spirit,' in application to savage All-Fathers, or highly superior beings, is an error of European introduction. It is important to remember these facts, for current anthropological theories usually explain the superior or supreme being of savage and other beliefs as merely the idea of ghost, or spirit, carried to the highest power. From the notion of ghosts, writes Im Thurn, 'a belief has arisen, but very gradually, in higher spirits, and eventually in a Highest Spirit.'[1] This is the current theory, held, with a variety of details, by Herbert Spencer, E. B. Tylor,[2] and their popular exponents.

The idea of a supreme being is not of late appearance in culture, and is not a reflexion from human kings. It is found among the democratic tribes of Australia, who, at most, may have a 'head-man' of the community, while the council of the mature men makes his position more or less 'constitutional.' The All-Father is not the glorified ghost of such an one, for he was before Death, in the myths, entered the world; and he still exists, usually in a world of his own, above the sky. Again, he is very seldom, if ever, envisaged as a spirit. He is simply a being, a magnified undying man, who lived long on earth, and then went to his own place, whence he watches men and their conduct, but seldom indeed takes any active part in their affairs. A good example of such a being is Atnatu, recorded by Spencer-Gillen as believed in by the Kaitish tribe, in the precise centre of Australia.

Atnatu was prior to the 'Alcheringa' (*q.v.*), or age of beginnings of things. 'He arose up in the sky in the very far back past. . . . He made himself and gave himself his name. . . . His sons he called Atnatu.' He expelled from his heaven a number of his sons who neglected his 'sacred services'; and they came down to earth, to which Atnatu sent 'everything which the black-fellow has.' He has wives, himself works sacred services, rejoices in the noise of the sacred bull-roarer (*q.v.*), and punishes mortals if they do not sound the bull-roarer at initiation ceremonies. There is a legend that he once caught up a neophyte to heaven and ate him, but found him unpalatable. He is 'a very great man, black,' and his name is said to mean, without *anus*.'[3]

In this self-existing being, dwelling above the heavens, the father and benefactor of men, who are his disobedient children expelled from his abode, we recognize a familiar figure in human religion. Atnatu is said to care only for the ritual, not the moral, aspect of conduct; the latter is matter of concern to several All-Fathers among the S.E. tribes of Australia. As a self-created being (and, of course, he must have been in existence before he could create himself), Atnatu is no glorified ghost of a dead man. The 'ghost theory' or 'animistic theory' of Spencer and Tylor breaks down when it encounters All-Fathers like Atnatu, and others more concerned than he with human conduct and human fortunes both in this and in the future life. It is plain that if *these* All-Fathers are also creators, or makers of things, as they usually are, the very backward savage tribes who believe in them have, with no aid from ghosts, or spirits of any sort, arrived at a belief not easily to be distinguished from a rude form of belief in a God. The faith is touched with puerile and unseemly fables about the All-Father when he is envisaged as, when on earth, a capricious and very skilled hunter and magician. But nobody denies that Zeus and Apollo are 'gods'; yet much worse stories are told of them than of the black-fellow's All-Father. The myth about our Lord, in the old ballad, *The Bitter Willow*, is another example of the play of popular imagination around One held sacred; and the Apocryphal Gospels are also germane to the matter.

As the idea of the All-Father is so obviously the germ of, or a rough draft of, the highest of religious conceptions, as the All-Father is often creative and ethical, and as he is no glorified ghost (though Spencer-Gillen call Atnatu 'a spirit individual'), anthropologists generally ignored him, until examples of the belief from most parts of the savage world were persistently thrust on their notice. When they did see that some notice must be taken, they either (1) sought to discredit the evidence, as that of prejudiced missionaries, or of casual unscientific laymen; or (2) tried to explain away the unwelcome appearance, as if the higher elements, at least in the conception of the All-Father, were borrowed from missionary teaching and the ideas of Christianity or Islām. Though, of course, there are instances of borrowing in religion, the efforts to prove the All-Father to be a 'loan-god' have entirely failed. In the first place, the All-Father is in the *esoteric* faith of the men, in Australia, and it used to be death to reveal him to the women and the uninitiated, who were not left thus uninstructed by missionary teachers! Secondly, Howitt, in his *Native Tribes*, combats the idea that the All-Father faith in tribes known to him was of European importation. He himself knew nothing of its existence among the Kurnai and Yuin, till he was made free of their mysteries.[1] It follows that squatters and other white men who, without having been made free of any tribal

mysteries, deny this article of native belief are negligible witnesses.

The other side is taken by Frazer and Spencer (see Frazer, *Totemism and Exogamy*, London, 1910, i. 145–153). After giving the sum of Howitt's conclusions, Frazer quotes Spencer, the explorer of the Central and North Central tribes:

'As to the "discovery" of a high ethical religion amongst the lowest savages, there is not, I am convinced, any such thing in Australia. The great difficulty is that we have had statements made on the authority of men like Gason.'

Gason was a police officer among the Dieri tribe on Lake Eyre. He knew the natives well and knew their language, which scientific visitors to a tribe hardly ever do. He appears to have confused a set of mythical beings, the *Mura Mura*, with a single great being, *Mura Mura*. Howitt gives *Kutchi* as the Dieri equivalent of the S.E. All-Father.[1] Spencer, after describing Gason as 'perfectly incapable of dealing with matters such as these,' goes on:

'In the days when the evidence of [concerning] Baiame and Daramulun was collected, the importance of securing minute and detailed information was not realised, nor was it imagined that there were men without any so-called religious ideas,' while it was easy for casual inquirers to be deceived, or, rather, to deceive themselves.[2]

Spencer must have forgotten that the chief authority on Daramulun is Howitt.[3] Howitt also gave for other All-Fathers the information which he acquired after being initiated in the secret rites and doctrines of the Kurnai tribe.[4] He was perfectly aware of 'the importance of securing minute and detailed information,' and was, of course, the most eminent of Australian anthropologists. Spencer overlooks these circumstances.

As to Baiame, the All-Father of the Kamilaroi, Euahlayi, and other tribes, the first author who is at all definite is James Manning, who, when very young, was advised by the aged Goethe to look into Australian religion. He began his researches about 1833–1834, when missionaries had not arrived, Melbourne did not exist, and there were no churches near his station, though his chief native informant had gone to church more than once from curiosity. Manning's notes were not written till 1844–1845. His fault is that by his Christian terminology he transforms Baiame (written 'Boyma' by him) and his son, Grogorally, who brings the spirits of the dead before him, into very close conformity with the Father and the Son of Christian doctrine. He might have done as much, speculatively, with Zeus and Apollo. His style does not invalidate the fact that as early as 1833 he found Baiame as a supreme being, with a paradise into which he receives the spirits of the deserving dead. It has been said that W. Ridley, twenty years later, invented the word *Baiame* (from *biai*, 'to make') as a name by which he might bring the Kamilaroi to a knowledge of God. Ridley, in fact, only made an etymological guess at the derivation of Baiame, who, on all the evidence, did make or create things in general.

Manning's account, setting his phraseology aside, is corroborated by Mrs. Langloh Parker (*The Euahlayi Tribe*, London, 1905) in many particulars. Manning's informant, who was much alarmed at his own temerity in revealing things hidden, refused to repeat the hymn to Baiame which, so many years later, Mrs. Langloh Parker procured.[5] This lady, it is right to say, had read, and she drew the attention of the present writer to, Manning's notes of 1844, which were published in 1882; and one of her remarks as to the reason of the rarity of prayer among the Euahlayi may have been suggested to her mind by an observation of Manning's black informant. The sceptical student will do well to compare her book and her *Australian Legendary Tales* (London, 1897) with the published notes of Manning. Howitt recognized in Baiame, under the Athanasian terminology of Manning, the features of several All-Fathers who have each a Son, or deputy, mainly concerned with patronizing the tribal rites and the sacred bull-roarer. Thus a being, benevolent, creative, and guardian of the souls of the happy dead, is, under variants of his name (Boyma, Byame, Byamee), attested in 1833, 1855, and 1885–1895 by three witnesses, all very intimate with the Kamilaroi and Euahlayi tribes, and his first appearance is long prior to that of missionaries. The informants of Manning and of Mrs. Langloh Parker took every precaution against being detected in revealing the tribal secret. Thus the evidence is not quite so bad as Spencer supposes it to be.

Ridley, in 1855, published *Gurre Kamilaroi*, a text-book in Kamilaroi for native catechumens. In this he used Baiame as the translation of 'the Eternal' of the OT, relying on the native accounts of the All-Father. 'Missionary evidence' on this point is commonly rejected by anthropologists, who themselves do not know the tribes and languages of which the missionary is speaking. He is supposed to be so prejudiced by belief in a once-revealed religion that he must distort the facts. That an anthropologist may be a little blind to what he does not wish to see (as when Spencer seems to be ignorant of Howitt's own evidence) is a proposition quite as tenable. Ridley is entirely corroborated by Mrs. Langloh Parker, in her book on the Euahlayi tribe of north-western New South Wales. She settled among the Euahlayi when the nearest missionary was a hundred miles distant. She took her information from the oldest men of the tribe, comparing carefully the versions of various informants. To her, as we said, was communicated the hymn to Baiame, in a language no longer intelligible to her teachers. The result was that, whereas she came to the Euahlayi as a believer in Herbert Spencer's theory, she was obliged to yield to the evidence of facts. At funerals, and, as she was informed, at a certain point in the rites of initiation, the Euahlayi prayed to Baiame. She herself, of course, never was present at these ceremonies.[1]

In another region east of the Grey and Barrier Ranges, A. L. P. Cameron is our chief informant as to aggregates of very primitive tribes, the 'nations' of the Itchumundi, Karamundi, and Barkinji. In *JAI* xiv. [1885] 344 ff. he gives a copious account of the All-Fathers of these tribes—Thatha-puli of the Wathi-Wathi, Tu-long of the Ta-ta-thi. One of them, like Baiame, is the Judge of the dead, who sends some to a region of fire. Cameron suspected here what Frazer calls 'a ray of Gospel truth,'[2] but, cross-examine as he would, could not find that there was any basis for his suspicion. As Cameron is the accepted authority for the totemic institutions of his remote and little known tribes,[3] he cannot easily be dismissed as 'perfectly incapable of dealing with matters such as these.' As to 'the discovery of a high ethical religion' in Australia, a religion whose chief being sanctions unselfishness is not very low. Spencer, when he

[1] *Op. cit.* 89. From all that the present writer can find, Kutchi is here set on too high a pedestal.

[4] *Op. cit.* 492 f., 630; a much more copious account earlier in *JAI* xiv. 301 ff.

[5] See Howitt, 501 f., for Manning, whose 'Notes on the Aborigines of New Holland' are in *Journ. and Proc. of the Royal Society of New South Wales*, xvi. [1882].

[1] Marett, in *Man*, vii. [1907] 2 f., and 114 f., has criticized the evidence on this point of prayer as 'coloured,' and apparently thinks that Mrs. Langloh Parker's version is contaminated by that of Manning. For this reason the two reports ought to be compared. There is probably no other evidence in Australia for prayer to the All-Father, though the Dieri pray for rain to beings called *Mura Mura*.

[2] *Totemism and Exogamy*, i. 386, note 1.

[3] *Ib.* 380–387.

writes that 'it was not imagined that there were men without any so-called religious ideas,' seems unaware that this was perhaps the prevalent opinion of anthropologists when Lord Avebury wrote *The Origin of Civilization* (London, 1870), while E. B. Tylor criticized that popular view in *Primitive Culture* (do. 1871).

It has been necessary to examine this instance of a great anthropologist's mode of treating evidence in this matter—a mode sanctioned by Frazer, who then proceeds to quote E. M. Curr, in *The Australian Race* (1886–7, i. 45), and his belief that the Blacks dress up what they have learned from missionaries 'with a view to please and surprise the Whites.'[1] Frazer neglects to inform his readers that Howitt (*op. cit.* 503–506) replied to and crushed Curr. First, Curr's own book contained evidence of the beliefs which that author rejected. Secondly, Howitt's own friends, the Kurnai, were, to the best of his knowledge, untaught by missionaries. Next, where missionaries have long been settled, as among the Dieri and the Southern Arunta, not the faintest ray of Gospel light was discovered by Spencer-Gillen among the Arunta, or by Howitt or his informants among the Dieri. Howitt found only a dæmon named Brewin among the Kurnai (see *Kamilaroi and Kurnai*, Melbourne, 1881) till he was initiated into their esoteric rites and doctrines. His reply to Curr appears to have wholly escaped the notice of Frazer, who prints Curr's attack but does not notice Howitt's defence. Frazer concludes, as regards the All-Father:

'If the abstract idea of a powerful headman, kind to his own people and terrible to their foes, had blended with a belief in the immortality of the dead, it might easily have culminated in the worship of a tribal or national god.'[2]

But no evidence is quoted, and none is known to us, which suggests that the All-Father is 'terrible to the foes' of any Australian tribe; indeed, intertribal war is almost unknown. Belief in a future life, on the evidence of Howitt, Mrs. Langloh Parker, Cameron, and others, *has* blended with belief in the All-Father. It is unfortunate that an analysis of anthropological objections, by the most distinguished authorities, to the idea of the All-Father must be offered: the value of the objections is easily estimated when we remark on points not alluded to by the critics.

Howitt was by no means the first to bring the All-Father into full light, but the great German ethnologist Waitz (1866) had accepted the faith as unborrowed and genuine. In 1881, in his and Fison's *Kamilaroi and Kurnai*, Howitt, still uninitiated, knew nothing of the belief. In 1884–1885 he wrote copiously and with some enthusiasm about it in the *JAI*. He then spoke of the being as 'the Supreme Spirit, who appears to me to represent the defunct headman.' In 1904 Howitt[3] renounced the idea that the All-Father is a spirit, but still regarded him as an idealization of a tribal 'head-man,' who had created the world or most of it, among other wonderful works, and whose very name was tabued among men on earth except on the most sacred occasions. He 'can go anywhere and do anything.' In the same work Howitt rather watered down his expressions of 1884–1885. He gave an account of such All-Fathers as he had heard of from the natives, from published books, and from correspondents; and he endeavoured to prove that the belief was a concomitant of social advance on the coast and in well-watered countries. But, in fact, he had recorded the belief among tribes with the simplest and most archaic social organization, without kins locally associated (a result of tracing descent in the male line)—tribes with descent in the female line—and among tribes as far from the sea and in conditions as unfavourable as the peoples of the Darling River and its hinterland. Moreover, we have seen, on Spencer's evidence, Atnatu flourishing in a tribe of the arid and infertile centre. Again, no All-Father belief was discovered by Spencer-Gillen in the Arunta nation, in the northern tribes of the most advanced social organization, or on the coasts of the North. Thus it is impossible to make out that the All-Father was a concomitant of advance in social organization, or a belief propagated by seawinds and plentiful rain.

[1] *Totemism and Exogamy*, i. 151. [2] *Ib.* 153.
[3] *Nat. Tribes*, 503.

Howitt (*loc. cit.*) admitted that the All-Father 'is evidently everlasting, for he existed from the beginning of all things, and he still lives. But in being so' (in being from the beginning and still living), 'he is merely in that state in which, these aborigines believe, every one would be if not prematurely killed by evil magic.'

Men can be killed; not so the All-Father, who is thus no ordinary man, and who was before Death entered the world. These are not strong arguments of Howitt. 'In this being, although supernatural, there is no trace of a divine nature'—in a benevolent and everlasting creator, in several cases the dispenser of reward and penalty in the future life! Howitt was exigeant in his ideas of what 'a divine nature' ought to be. Again, the All-Father is only 'imagined as the ideal of those qualities which are, according to their [the natives'] standard, virtues worthy of being imitated.' But no moral conception of the Deity can possibly transcend the believers' ideal of moral excellence; and the gods of Homer and Hesiod and Pindar fell very far and frequently below *their* ideal of moral excellence. At this rate there can exist no being in human faith who has 'a trace of a divine nature.'

Howitt, observing that sacrifice is not offered, nor (except in very rare cases not recorded by him) prayer addressed to the All-Father, wrote: 'It cannot be alleged that these aborigines have consciously any form of religion.' It is, perhaps, no form of religion to believe that an everlasting, benevolent, and creative Being watches over and approves of human virtues. Howitt appears to have held that, where there is no worship, there is no religion. Yet he had described the worship of Daramulun, if 'dances round the [his] figure of clay and the invocating of his name by the medicine-men' are worship. What are they if they are not worship? Howitt ended by saying that 'such a change as a recognised religion' would have been brought about, if ever, by these medicine-men. By 'a recognised religion,' he appears to have meant what *he* recognized as religion—belief *plus* prayer and sacrifice.[1] Meanwhile, whoever thinks that belief in the kind of Being described, *plus* moral obedience, and dances and invocations of the sacred Name of the Being, does constitute religion has Howitt's high authority for holding that in Australia there was a religion, unborrowed and spontaneous—and highly unwelcome to anthropologists in general.

Not all anthropologists are so hard of belief. Van Gennep (whom nobody can call a *clérical*) accepts the evidence for Baiame as more than a tribal deity. Unscientific, of course, is the opinion of Ridley that the belief in Baiame, for example, was a lingering gleam of 'the true light,' namely, of some supernormal revelation to mankind. We have to do with facts and evidence, and Ridley's remark is no part of his evidence, but a statement of his theory. The current anthropological theory is that if, after all, we must accept the evidence as to the 'powerful headman' of a people above the sky, that belief is the result of comparatively advanced culture in favoured regions, where the relative easiness of obtaining food gives leisure for

[1] *Nat. Tribes*, 500, 506 f.

religious speculation. Yet few regions are less favoured than the steppes where the Kaitish, with their self-existent benevolent Atnatu, hunt very small deer. Their neighbours, the Arunta, have no hint of an Atnatu, but then, in Frazer's words, they have a 'theory of reincarnation . . . obviously incompatible with a deification of the ancestral spirits. . . .'[1] They also have a theory of evolution of species, human and other, in a marine environment, so that they cannot conceive of a creator or maker. The theory, granting the premisses, is elaborate and ingenious, and excludes the ideas of a God and a future life, not terrene. To work out this theory, men, we might think, need all possible advantages, but the region of the Arunta is as arid, except during the season of rain, as that of the Kaitish.

Meanwhile, it may as easily be argued that the Arunta once held the All-Father belief, and lost it, under the advance of their animistic and evolutionary speculations, as that they never had it. The usual All-Father has his subordinate, sometimes his Son, who manages the initiatory rites, and is the patron or first maker of the bull-roarer. This subordinate is a bogey, known, unlike the All-Father, to the women and children. The Arunta have him, under the name of Twanyirika; he is also known to the Unmatjera.[2] The Kaitish have his counterpart. The Arunta may have retained, as a bogey to scare the women, the deputy or subordinate of an All-Father, while dropping that personage. Among the Arunta, Gillen, Spencer's collaborator, discovered[3] a great sky-dwelling Being, 'the great Ulthaana of the heavens.' We hear from Gillen nothing of his functions except that the spirits of the dead ascend to him and by him are cast into the sea, whence they are rescued by two minor Ulthaana and thenceforth live 'with the lesser Ulthaana.' In all probability this being was discovered in a southern branch of the Arunta not visited by Spencer and Gillen while collecting materials for their great book. Again, in a southern portion of the Arunta, C. Strehlow, intimately familiar with the Arunta language, finds a great sky-dwelling Being named Altjira Mara (Altjira the Good), who is not said to have made anything or to take an interest in mankind. The neighbouring tribe, the Loritja, have a similar being, Tukura, indifferent except as to rites.[4]

These peoples all have forms of the general Arunta theory of evolution and migratory spirit-germs born as men and women. It is more probable that, under stress of this philosophy, they have let their great sky-dwelling Being slip into the background, though 'good,' than that they have invented him for no reason, as he does not explain the world, and is not the creator or cause of anything. Spencer's section of the Arunta have entirely lost the idea of this Being; their neighbours, the Kaitish, retain Atnatu, who is benevolent but takes no interest in human conduct except in matters of ritual; while in several S.E. tribes the creative Being sanctions morality. Either the S.E. tribes began with a sky-dwelling Being destitute of *raison d'être*, and progressively clothed him with his creative, benevolent, and moral attributes, while the Kaitish (though sharing Arunta evolutionary ideas) worked him up into Atnatu, and the Southern Arunta and Loritja are just beginning to sketch an otiose but good Tukura Mura; or, on the other hand, all the tribes mentioned began with a Being who has a *raison d'être*, as a maker, father, judge, and friend; and his attributes, under the influence of the evolutionary theory, have dropped gradually away, leaving Atnatu careless of human morality, and the Great Ulthaana, Tukura, and the rest otiose and negligible.

If the All-Father belief, among savages, were the latest result of human speculation, we should expect it to be the most prominent and powerful. Far from being prominent, it is, in Australia, an esoteric belief, concealed from women, young boys, and uninitiated white men. Among other peoples, ancestor-worshippers and polytheists, sacrifice and service to ghosts and gods are highly conspicuous, while the creative Being receives no sacrifice, or but 'stinted sizings,' and, often, is only the shadow of a name. He is, therefore, not the latest and brightest figure evolved by speculation, but precisely the reverse.

It has been necessary to enter minutely into the nature of our evidence for a creative and moral All-Father in Australia, because, as the natives are on the lowest grade of culture, as 'in their archaic forms of society and modes of thought we seem to touch the farthest past, the most rudimentary stage of human life now open to observation on the globe' (to quote Frazer[1]), it is important to prove that they possess in many tribes the All-Father belief—a belief not based on Animism or ghosts, for these they do not adore, though in a few tribes some slight provision is made for the needs of the departed.

Many tribes, especially those of the north and centre, also believe, like almost all savages, in a pre-human, powerful, and magical race—the Alcheringa folk of the Arunta, the Mura-Mura of the Dieri. The Mura-Mura live in the sky, and the Dieri call on them, adding magical services, to make rain.[2] This is a form of religion, of prayer to superhuman personal powers. Concerning such pre-human and superhuman beings, as the introducers of sacred rites, many tales are told, and the pantomimic dances often dramatically represent their adventures. One tale is that of the search by a wife for the mangled remains of her husband. It is clear that such beings closely resemble Osiris, Demeter, and Zeus in low myths, and other deities of ancient polytheisms, whose adventures on earth were represented in the Mysteries of Demeter, Zagreus, and other Greek divinities. It is thus apparent that human religion could develop on three main lines: (1) that of ghost propitiation; (2) that of propitiation of these great pre-human beings (both lines leading to polytheism); or (3) that of the All-Father faith which, if steadily pursued, would tend to monotheism.

But the result of examination of the religions of the lower races proves that the accessibility to prayers and gifts, on the part of friendly ghosts and of gods, whether of animistic or of 'Alcheringesque' origin, causes such beings to be sought after, with sacrifice and prayer, while the All-Father, remote and in need of nothing that men can give, dwindles to a mere name, and is, at least, rarely propitiated by sacrifice. The chief, if not the only, exception to this neglect is in the case of Israel, whose prophets strenuously kept alive the idea of a supreme and ethical Creator, Judge, and Father. How deeply the Creator may fall from place and power is illustrated in the case of the Melanesian Massim of British New Guinea, among whom 'no cult of a superior being nor of the heavenly bodies could be discovered,' and there was but a faint hint of propitiatory relations with spirits of the dead.[3] And yet, in spite of all this, the idea of a creative Being was perfectly

familiar. He was a great snake, Garuboi, and had regulated human society as Baiame did; 'he separated mankind into' exogamous 'clans and named them,' giving the marriage rules. He 'made us,' said the native informants, 'the beasts, earth, and we know not what other things.'[1] His marriage laws are now decaying, but still retain some force.

In Fiji (*q.v.*) we find, among a crowd of polytheistic gods, the same conception. The creative being is Ndengei (Williams) or Degei (Fison). He is conceived of as a serpent or as a body of stone with a serpent's head. In a hymn[2] Ndengei is represented as saying: 'We made men, placed them on earth, and yet they share to us only the under shell.' Ndengei has scarcely a temple, but prayers used to be made to him through the mediation of two of his sons, and there was a tradition that of old he received much sacrifice.[3] He sends rain on earth. Here the gradual neglect of the creative Being is historically proved, and it is not unreasonable to suppose that Garuboi was honoured by the ancestors of the Massim.

Among the numerous worshipped gods and ghosts of the Baganda, an agricultural and monarchic people of Uganda, Mukasa held the highest rank, as a benign god of plenty, who refused human sacrifices. 'It seems to be almost certain that he was a human being,' says Roscoe.[4] On the other hand, 'the Creator,' Katonda, 'received little honour or attention.' He 'was spoken of as "the father of the gods," because he had created all things, but not much was known about him.' Cattle were occasionally sacrificed to him, but usually they were allowed to roam about his *temenos*.[5] Gods who 'had been human beings' were more sympathetic and easily entreated, like Saints in popular Roman Catholicism. A man or woman may pray for the intercession of the blessed Jeanne d'Arc, whose character is so sympathetic, who is so near to our idea of the tender and true.

The processes of deviation from the All-Father are perfectly intelligible and naturally human. The more Animism in religion, the more appeal to kindly spirits of men, the less theism—such is the obvious tendency; Israel, so incurious (as far as our evidence goes) concerning the dead and their propitiation, was the more free to concentrate effort on the worship of the Eternal. On this view of the case many peoples, if not all (which, of course, cannot be proved), had the opportunity of elevating their religion from such a faith as that in Baiame towards monotheism. 'But their foolish heart was darkened' (Ro 1^{21}); and animal-worship may be, in some places, a result of totemism. Under the All-Father belief, in Australia, human sacrifices and other abominations of the higher barbarism, and even of Greek and Roman religion, if many legends speak true, are, of course, impossible, as nothing is given to the All-Father. He is not localized, and has neither temples nor favoured seats, for his people have no houses. There is no 'priestcraft,' for the medicine-men have not developed into priests.

The present writer's *Making of Religion* (London, 1898) gives an account of the superior beings of the religion of low races, and of the survival of All-Fathers and creators, usually neglected, in the polytheistic and animistic religions of peoples much more advanced. Thus Qing, a Bushman who 'had never before seen a white except fighting,' gave Orpen (not a missionary) an account of Cagn: 'He made all things and we pray to him'; 'more was known by the initiated.'[6] For the Andamanese we have Man's account of their All-Father, Puluga;[1] but A. R. Brown has recently impugned this work of Man, on the ground of his own recent researches in the Andamanese Islands.[2] Brown was an inquiring visitor from Cambridge; Man, who was not a missionary, knew the language of the people and sojourned among them for eleven years. He found Puluga an unborn creator who read the hearts of men. For traces of a Creator even among the Zulus, ghost-worshippers, see 'South African Religion' in the present writer's *Magic and Religion* (London, 1901). The Creator of the Dinkas (*q.v.*) of the Upper Nile has for him the evidence of an ancient native hymn.[3] For African tendencies to monotheism, visible beneath their fetishisms, Waitz is still worth consulting, though he wrote fifty years ago.[4] For abundant new evidence the later volumes of the *JRAI*, and books on the Masai, with M. H. Kingsley's works, may be consulted. For Ahone, the Supreme Being of the natives of Virginia, see *Historie of Travaile into Virginia Britannia*, by William Strachey, who studied the Indians in 1610–1612, and wrote in 1612. For the Pawnee Ti-ra-wa, Maker and Judge, see G. B. Grinnell's *Blackfoot Lodge Tales* and *Pawnee Hero Stories* (New York, 1892, 1889). For the Zuñi self-existing creator, see Cushing, *13 RBEW* (1896), 325 ff. Much evidence is contained in Schmidt's art. 'L'Origine de l'idée de Dieu' in *Anthropos*, iii. [1908] ff. For a Supreme Being among the tribes of higher and lower culture in Sarawak, see Hose-McDougall, *JAI* xxxi. [1901] 173–213, with a discussion in *Man*, ii. [1902] 85, 87, 107. For the All-Father of the Fans, see Allégret, *RHR*, Sept.–Oct. 1904.

Speculation as to the origin of the belief in such beings as we have been discussing is, of course, purely conjectural. Marett[5] suggests that they are personifications of the bull-roarer used at rites of initiation. But, as they are often found in regions where the bull-roarer is unknown, and as the bull-roarer is found where such beings are said to be unheard of, the value of the theory is not great. If we admit it, we must go on to ask why men gave to a personified piece of wood the attributes of Baiame, Daramulun, and Atnatu. The same remark applies to Howitt's theory that these beings are idealized tribal head-men. Why should an ideal head-man be an everlasting Creator? Even the Altjira Mara of the Arunta is *ngambukula* (Spencer's *ungambikula*), 'eternal' or 'self-existing.' See also artt. on MONOTHEISM, RELIGION, etc.

LITERATURE.—This has been indicated in the course of the article. A. LANG.

GOD (Arabian, pre-Islāmic).—**1. Sources.**—Although numerous treatises were composed by Muslim authors bearing on the early religion of their country, it was not in their power to furnish much information on the subject; for no written manuals had survived from pre-Islāmic times, and during the first century of Islām the very memory of the earlier condition was detested. Only enough then was retained to explain certain allusions in the Qur'ān or the Prophet's biography; and even this is vague and contradictory. These authors, moreover, naturally regarded the Qur'ānic treatment of the matter as authoritative; but, since the accounts of Judaism and Christianity given in that work are well known to be gross travesties of those systems, we have no guarantee that its treatment of Arabian paganism is any fairer or more intelligent. At most we may assume that

the religious terms employed by the Qur'ān in connexion with paganism were understood by the Meccans, and that the latter were familiar with the concepts for which they stand. But we cannot trust the statement of their case by a bitter and passionate enemy. The sources whence the meagre information thus obtained can be supplemented are, in the first place, inscriptions discovered in N. and S. Arabia, which from the nature of the case mainly add to our store of names; in the second place, occasional statements by Greek authors; one of these, Uranius, actually compiled a treatise on Arabian affairs, several fragments of which are preserved by Stephanus Byzantinus.

2. Names for 'God.'—The word *ilāh* (identical with the *ĕlōah* of Job) is found in inscriptions belonging to various Arabian communities, and is used by the Qur'ān as a common noun—*e.g.*, 'the *ilāh* of Moses' (xl. 39); 'I know of no *ilāh* of yours save me' (xxviii. 38). A form *lāh* is quoted from an early poet (Baiḍāwī, ed. Fleischer, Leipzig, 1846–48, i. 4, line 25), but this may be evolved from *al-lāh*, 'the god,' where the elision of the *i* is in accordance with Arabic morphology. *Ilāh* appears from its form to be originally a plural, and, indeed, of the earlier Semitic *il* (Heb. *ēl*), on the analogy of *shifāh* from *shaf-at*, 'lip' (where the *at* is a feminine affix). Of *ilāh* itself the Biblical *ĕlōhîm* is a further plural, of which, curiously, there appears to be a trace in the Arabic vocative of *Allāh*, viz. *illāhumma*, which the native grammarians find the greatest difficulty in explaining. The employment of a foreign word as vocative in such a case could be paralleled. The verb derived from *ilāh*, 'to god,' means 'to take refuge with'; cf. 'I took refuge with it (*taallahtu ilaihā*), whereas had I fled from it' (*Qūt al-Qulūb* of Abū Ṭālib al-Makkī, A.H. 1310, i. 107). On the other hand, some think that the verb means 'to serve.' The feminine of *ilāh*, viz. *ilāhah*, is said to mean 'the sun,' just as Herodotus speaks of the sun as 'this god.'

A Qur'ānic equivalent of *ilāh* appears to be *rabb*, 'great one,' 'lord'; in the singular it is always annexed ('my *rabb*,' 'your *rabb*,' etc.), but it is used absolutely in the plural; 'they have taken their doctors and their monks as *arbāb* besides Allah, whereas they were commanded to worship one *ilāh*, than whom there is no other *ilāh*' (ix. 31). Probably this word is taken over from Jews or Christians, as it occurs in the Divine name *rabb al-ʿālamīn*, 'lord of the worlds,' which corresponds to *ribbōnō shel ʿōlam* in the Jewish tradition. The adjective *rabb* meaning 'great' is not used in Arabic.

The use of the form *Allāh* for 'God,' imitated in Christian Arabic by *al-Rabb*, 'Lord,' may be pre-Islāmic, and the title may have been applied in various communities to their chief object of worship, but the matter is not free from difficulty. The identification of the *Allāh* of the Meccans with the *Allāhā* of the Syrian Christians may have been opportunist, like St. Paul's interpretation of the Athenian 'unknown God' (Ac 17[23]); *i.e.*, there may have been a deity worshipped at Mecca called Allāh, as is attested by the uniform Islāmic tradition, which even gives the Prophet a father named after that deity ('Abdallāh), and states that the Meccans were generally known as Allāh's family; and of such a deity there are epigraphic traces. On the other hand, the polemic of the Qur'ān assumes that the Meccans regarded Allāh as the Creator, and theoretically made their other deities subservient to him, though in practice they gave the others greater honour. If this could be accepted, it would strongly favour the Prophet's theory of an original Arabian or, at least, Meccan monotheism, which seems to be historically excluded. Further, there is evidence showing that at one period in his career he wished to abandon the name *Allāh* for another. On the whole, some modification of the first suggestion seems the most plausible theory. It is a point which Islām shares with Christianity, that the Deity is regularly called only by a generic name with the article or its equivalent; the probability is, then, that the identification of the object of monotheistic worship with the Meccan god Allāh was at first avoided by the Prophet, but afterwards welcomed. It may be observed that the retention of the article in the vocative (*yā Allāh*) indicates that this form was used as a proper name at an early period. And the same seems to be evinced by the employment of a particular preposition in the sense of 'by' before this word only in oaths. It would also seem that the verb *alā*, 'to swear' (Heb. *ālāh*), was an early derivative; and the same may be the case with the old word *ill*, said to mean 'covenant.'

The epigraphic traces of the name are to be found in the Safaitic inscriptions, wherein a form which, it seems, should be identified with the Allāh of the Qur'ān is found five times, but regularly preceded by the H of the vocative, *e.g.* FHLH, 'so, O Allah,' whence it is not possible to state with precision how the Safaites wrote the name when used without prefix. The feminine is similarly written FHLT, interpreted 'so, O Allāt'; but this formula is sometimes written FHALT, which is somewhat nearer to the ordinary Arabic orthography. The name is clearly that of a particular god, and not applied to gods in general. In the same inscriptions the old word *il* survives in proper names (see R. Dussaud, *Les Arabes en Syrie avant l'Islam*, Paris, 1907).

From the use of *ilāhah* for the sun there comes a verb *lāha*, 'to shine,' specially used of the mirage.

In S. Arabian inscriptions the name *shayyim*, 'patron,' often appears. With this we may compare the use of *wakīl*, 'trustee,' which is often applied in the Qur'ān to God.

A name which figures in parts of the Qur'ān, *al-Raḥmān*, 'the Merciful' (where the word attached to the article is Heb. or Aram.), is said to have been abandoned because certain impostors adopted it in the sense of Messiah. It is found as an epithet of deities in pagan Aramaic inscriptions. In the common Islāmic formula called the *bismillāh* (*q.v.*), we find it wedged between the name *Allāh*, which was finally adopted, and an Arabic translation *al-Raḥīm*, 'the merciful,' to prevent misuse.

3. Nature.—Herodotus, the earliest authority on this subject, says the Arabs believe only in Dionysus and the Queen of Heaven, calling the former Orotal, the latter Alilat (iii. 8) or Alitta (i. 131). Alilat is clearly identical with Al-Lāt, a goddess mentioned in the Qur'ān (liii. 19; see, further, *ERE* i. 661[a]). Orotal is a puzzle, hitherto unsolved. What Herodotus implied is that the Arabs assigned to these beings functions corresponding to those of the Greek god and goddess—those of Dionysus being well known. Now, it seems certain that even with the Greeks such assigning of functions was a late development, ascribed by Herodotus himself to Homer and Hesiod; the Arabian gods were all tribal or local, and gave the tribe whatever it wanted. Some other names are found in Greek authors which admit of identification—*e.g.*, *Koze*, an Edomitic god who had priests (Jos. *Ant.* xv. vii. 9; and cf. art. EDOMITES, § 2 (*e*)), whose name appears in the phrase *qaus Quzaḥ*, 'the rainbow'; *Dysares* (Stephanus Byzantinus, 106, 23), in Arabic *Dhū Sharā*, 'owner of Sharā,' a place famed for its lions. The Qur'ān mentions in one verse (liii. 19) as a trinity 'Al-Lāt, Al-'Uzzā,

and Manāt the third, the other'; and many more such names have been collected. Al-'Uzzā, according to Ibn Isḥāq († A.H. 150 [A.D. 767]), was a *house* (*bait*) honoured by certain tribes of Quraish, which Wāqidī improves into an *image* (*ṣanam*), out of which, when it was destroyed, a naked Abyssinian woman (the goddess herself) tried to depart, but her captor slew her (Ṭabarī, i. 1648; see, further, *ERE* i. 660[b]). The difference between these narratives illustrates the difficulty which even the first Islāmic historians had in accommodating their minds to earlier religious theories.

The god of the Meccans seems similarly to have been a 'house'; their festival was 'the Feast of the House' (*ḥajjat al-bait*; cf. *ḥag JHVH*, Lv 23[39]). In the Qur'ān the word 'house' is used in some special theological sense where this phrase occurs, and we are told that the first 'house established for mankind is that in Bakka, for a blessing and guidance to the worlds' (iii. 90): possibly this last phrase means 'a model for all others'; 'it contains,' the text continues, 'manifest signs,—Abraham's station; and whoever enters in is secure.' The house here seems to mean 'consecrated ground,' though elsewhere the building called Ka'ba is clearly meant. Apparently, then, in the case of the local cults there was the confusion between the soil, the god who dwelt there, and something that marked it which is found in river-worships. The polemic of the Qur'ān is not directed against sanctuaries, but against certain objects called sometimes *aṣnām*, apparently meaning 'images,' such as were worshipped by Abraham's father and his compatriots, and which Abraham knocked down, mockingly ascribing the act to the greatest of them (xxvi. 71, xxi. 64). Clearly these were thought of as bearing some resemblance to human shape; each time Muhammad, before his call, approached a certain *ṣanam*, a tall white man would appear and bid him stand aside (*Dalā'il al-nubuwwah*, Haidarābād, 1324, p. 59); probably (if this story be old) the apparition was an angel rather than the god. Other old names for idols are *nuṣub* and *wathan* (plur. *auṯhān*). The former were perhaps flat stones rather than images, since we read of animals being slaughtered upon them (*ib.*). The latter is perhaps to be identified with the Heb. word for 'old' (*yāshān*), and may, from the context in which it is used (*e.g.* Qur'ān xxii. 31, 'avoid the abomination of the *auṯhān*'), be a term of abuse. Similar appellations occurring in the Qur'ān are *ṭāghūt*, evidently the Jewish *ṭā'ūt*, 'error,' used in the Targum for 'idol,' and *jibt*, possibly the γλυπτά of the LXX.

The proper names of these deities tell us little of their character. Al-'Uzzā means merely 'the mightiest' (feminine), and resembles *al-'Azīz*, 'the mighty,' a name or epithet of Allāh. Al-Lāt appears to be the feminine of Allāh, meaning 'the goddess.' Manāt seems to be identical with *maniyyah*, 'fate.' A list given in Qur'ān lxxi. 22, 23 has the same amount of lucidity: *Wadd* ('love'), *Suwā'* ('prurience'?), *Yaghūth* ('helper'), *Ya'ūq* ('hinderer'), *Nasr* ('vulture'). This last name is suggestive of zoolatry, of which otherwise Arabian paganism shows a few traces; some other names appear to be abstract, e.g. *Isāf*, 'melancholy'; or indicative of a quality, e.g. *Nā'ilah*, 'a giver' (fem.). Certain others (collected in the *Mukhaṣṣaṣ*, Cairo, A.H. 1320, x. 104) are obscure. A Sabæan deity to whom many tablets are dedicated, *Il-Maqqih*, means probably 'answering god.' The Qur'ānic description of these deities as 'names coined by your fathers' appears to be near the truth; they were mainly predicates without subjects.

4. **Theology.**—It is probable that, whatever the symbol, or whatever the origin of the cult, the worshippers really thought of the deity as some one like themselves; and the Qur'ān itself, though denying their objective existence, cannot avoid treating the Arabian idols as human beings. On the Day of Judgment 'those whom they associate with God' will deny that they ever received any worship, and even call God to witness that they knew nothing about such honour being paid them (x. 29, 30); and they are charged with having instigated infanticide (vi. 138). The former scene is exactly analogous to a later passage, in which Jesus and His mother similarly repudiate the charge of having told mankind to worship them (v. 116); and the word *mushrik*, 'associator,' is applied to Jews and Christians as well as pagans, all being supposed to give some person or persons besides Allāh a share in Divine honours. The polemic of the Qur'ān assumes that the place which the pagans give these beings is secondary; they acknowledge that Allāh, and not the idols, created the world; and, indeed, they profess to worship these idols not as deities but as intercessors with Allāh (x. 19); as His daughters, treating them perhaps as the ordinary fugitive treats the females of the family to which he resorts, as more tender-hearted and less regardful of consequences than its male head. The Qur'ān comments in reply on the indignity of ascribing daughters to Allāh, when any Arab was ashamed of begetting one. The assumptions involved by this reasoning, viz. that the deities of the Meccans were all female, with the exception of Allāh, whom they regarded as father of the others, are confirmed by nothing that we know of the cults of Arabia, and appear to be of the same character as the Qur'ānic assertion that the Jews say 'Uzair (Ezra) is the son of God.

So far as the meagre evidence at hand can be used, we should infer that the Arabian deities were treated like other tribal and local gods by peoples in the anthropomorphic stage of religion. The word *'ibādah*, 'worship,' implies properly the relation of slave to master; and another old word, *'akafa*, apparently means 'wait upon,' 'attend,' in the style of a domestic servant, and this the idolaters are represented as doing all day on their deities (Qur'ān, *passim*). Another word which represents a slave's attendance is *ḥaḍara*. Besides this they brought gifts of food and clothing; thus the 'house of Allāh' is still *clothed*, and sacrifices are still offered in Mecca. Al-'Uzzā was smeared with blood (*Mukhaṣṣaṣ, loc. cit.*). The tradition speaks of more precious offerings still—*e.g.*, objects of gold, such as were offered by the Greeks to their gods. They were naturally witnesses to oaths, being doubtless thought of as immortal; and in certain cases they probably had priests (*sādin*, a word which appears to be connected with the Gr. σινδών, 'a sheet of fine linen') and treasurers. In S. Arabia they liked public acknowledgment of their services in the shape of eulogistic tablets. When they appeared to their worshippers, they probably did so in human shape, just as, according to the Prophet's biographers, the angel Gabriel and Satan, like Homeric deities, when they appear, take the form of some well-known man. But beyond this it is probable that Arabian theology varied as elsewhere with the intellectual capacity and bent of the worshippers. Thus there is evidence that the heavenly bodies were worshipped in some places, whether identified or not with other deities; and, even where the deity was thought of as permanently fixed in some spot, a fiction could be excogitated to enable him to accompany an expedition. The speculations, however, whereby contradictions were reconciled or blurred have not been preserved.

The almost entire absence of allusions to the

pagan cults in the relics of pre-Islāmic poetry has often been noticed, and various explanations of the fact have been given. If any of this poetry is genuine, the most probable explanation is that it has undergone systematic expurgation. The theory of Cheikho, that its authors were mainly Christians, has not been widely accepted.

LITERATURE.—The *Kitāb al-aṣnām* of Ibn al-Kalbī is said to be in the press; this counts as the standard Arabic work on the subject; its author died A.H. 204 (A.D. 819). The fragments hitherto known served as the foundation of J. Wellhausen's *Reste arab. Heidentums*[2], Berlin, 1897. W. Robertson Smith's *Religion of the Semites*[2], Edinburgh, 1894, has found many followers. Cf., further, art. ARABS (ANCIENT).

D. S. MARGOLIOUTH.

GOD (Assyro-Babylonian).—A careful study of the Assyro-Babylonian religion lifts the veil that has so long enshrouded the origins and evolution of that perfected Hebrew monotheism which was later to become the mother of both Christianity and Islām. Up to the present time the devout reader of the Old Testament has been taught that the idea of the Divine Unity as set forth by the ancient schools of the Hebrew Prophets was the result of a sudden inspiration and revelation of Himself to a 'Chosen People' by the God of the Universe, but it is now possible to comprehend how, far back in the morning of Semitic religious conceptions, the minds of this ever-religious race were tending towards a gradual development of this very idea of a single all-powerful Godhead—an idea which, however, was never to be fully developed in Babylonia or Assyria. The privilege of setting forth this magnificent conception in all its clearness was to be reserved for another branch of Semitic religious thinkers, viz. the Hebrew Prophets, who were certainly in this sense a Chosen People. As will appear from this article, the germs of the conception of a Divine Unity undoubtedly existed at a date far earlier than the beginnings of the Hebrew civilization. Indeed, the principle of a single God, first for all the tribe and then for all the world, may be said to be a common racial heritage among the Semites, who were so situated as to be able to bring this thought to a climax in the later Hebrew doctrine of the universality of Jahweh.

The earliest religion of Babylonia was what may be termed a polytheistic Nature-worship, a natural step forward from a still more primitive shamanism, or the belief that the government of the world was in the hands of a great number of benevolent and malevolent gods or spirits, whom it was necessary to placate by magic rites and spells. As will presently appear, many elements of shamanism remained as a part of the lower phases of the Babylonian religious system until the very latest period.

It is a curious fact that many ancient and modern primitive religions insist on the principle of the divine Triad. This may arise from the desire to emphasize the *multiplicity* of divine power. Some very primitive tribes look upon any number higher than two as a multitude. The ancient Sumerians, the predecessors of the Semites in the Euphrates Valley called 'seven' *i-min* (*i* = 'five' and *min* = 'two'), which certainly seems to point back to a time when these people regarded *five* as their highest numeral. It is easily conceivable that there was a time still further back in the history of civilization when *three* was considered a large number, and, consequently, instead of one or two divine principles, they conceived of three. Whatever may be the origin of the idea of a Trinity, the Babylonians undoubtedly had a double triad of gods. Since they reverenced the various phenomena of Nature, which worship is certainly the beginning of all religion, they naturally personified the three great parts of the whole—viz. the heaven, under the name of the god Anu; the earth, represented by Bêl, who was also the divine type of everything on the earth; and the waters and everything under them and under the earth, whose patron was the god Ea, the deity of the Abyss. This is the first Babylonian triad of gods, and with it should undoubtedly be compared the similar Biblical division in Genesis and in Dt 5[8], Ex 20[4]. The second Babylonian triad consisted of the sun Shamash; the moon Sin; and the planet Venus represented by the goddess Ishtar. These six deities formed the basis of the Babylonian religious system, but a host of lesser personifications of natural phenomena was also recognized. Perhaps the most important of these was the god Rammân, who was the cause of the wind and rain and of the thunder and lightning. The planets also had deities sacred to them; for example, Ninib and Marduk probably represented Saturn and Jupiter, while Nergal and Nebo were the gods of Mars and Mercury respectively. On the other hand, it must not be forgotten that the last four gods possessed attributes which had no connexion with these planets at all, but which overlapped the characteristics of certain other male deities.

At this point, the most important peculiarity of the Babylonian religion becomes apparent. Every god or goddess could be regarded from many sides, some of which were not always in harmony with the others. Thus, the sun was represented by the rising and setting sun, and by the southern and noonday sun, while Ishtar as Venus was worshipped differently as Ishtar of the Evening Star, the goddess of sexual love, and as Ishtar of the Morning Star, the goddess of war. In the same manner, Rammân was distinctly the Thunder-god as separate from the lightning. Of course, all the Babylonian deities were thoroughly anthropomorphic in conception, as was naturally to be expected. They all had wives, sons, and daughters, and even attendant spirits or demons in the Greek sense, *i.e.* lower beings whose chief duty was to execute the functions commanded by the greater gods. An examination of the Babylonian pantheon shows a most varied system of polytheism *so far as mere multiplicity of god-names is concerned*, but a great sameness of conception with regard to the functions of the different deities. Just here we note the first step towards a narrowing down of the divine functions.

In this connexion it should be remarked that every one of the more important Babylonian towns had its own tutelary deity, who was regarded by the inhabitants of that district as the highest of all the hosts of the pantheon. Consequently, a distinct priesthood of every such tutelary god arose in each of the cities in question; and this priesthood guarded the cult of its own particular god with the greatest reverence, often exalting him as practically the only deity whom it was worth while to worship at all. The most significant point in all this strange system is the fact that intolerance was practically unknown, particularly in the earlier days of Babylonian history, when the hegemony of the land was still an unknown quantity. As one city after the other got the upper hand, the god of the temporarily ruling city came to be regarded throughout the entire country as more powerful than all the others. Still, the worship of these other gods never ceased in their own peculiar shrines. On the contrary, the chiefs of the ruling city constantly made offerings to the gods of the conquered cities, in order to gain the confidence of the inhabitants. In this manner the tributary peoples came to consider the king of the ruling city as a patron of the cult of the conquered gods, and were consequently the

more disposed to regard the rule of the suzerain with favour. For example, when Babylon-Borsippa held the hegemony of Babylonia, they saw no inconsistency in ascribing the very highest attributes to Marduk, the sun-god, and Nebo, the god of wisdom, who were the city-gods of the capital. In the same manner, when Ur had the upper hand, its own moon-god Sin was looked upon as the chief deity of the entire land, before whom the other deities literally sank into nothingness. Yet these temporarily lesser gods were never seriously affected by this state of affairs, because it was generally recognized that at any time another city might get the suzerainty, and then its god could and should acquire the rank of chief deity in the pantheon. In short, the tutelary god of every city was worshipped in his own peculiar place as the chief deity of the universe, without interfering at all with the claims of any other god. This system is called henotheism, as distinct from the cruder polytheism.

Such flexibility of religious conception did not jar in the least on the ancient Babylonians, because their gods were, in reality, at no time in the later period more than mere names personifying Nature. Any name of a great god was as full of meaning to denote the divinity felt to exist in Nature as was any other great god's name; and this fact is still further demonstrated by the indefiniteness of the divine genealogy which prevailed until the latest period of Babylonian history.

The same deity is said, for example, to be the daughter of two gods, and that, too, in the same inscription! Compare, in the famous Hymn to Bêlit, who was the feminine counterpart of Bêl, and who was also regarded as being identical with Ishtar, the following lines: 'The exalted daughter of the judgment of Bêl I am. The noble heroine of my father Sin I am. I am the supreme one.' Here the goddess states that she is the offspring of two widely differing deities. The main point is that she is *supreme* over all other deities.

Probably no better example than this could be cited to show the indifference with which the Babylonian priesthood looked upon the genealogy of their deities, and nowhere more satisfactorily than in this passage do we see the great underlying principle of the universality of deity as such, irrespective of mere name.

It remained for the Assyrians, however, those Semitic colonists from primitive Babylonia, who established in the north that empire which was subsequently to absorb all Western Asia, to crystallize in the personality of their tutelary deity Aššur the principle of one central Divine figure in such a manner as had never occurred to the Babylonians. Indeed, the worship of this god Aššur was perhaps the nearest approach to an all-embracing monotheism which can be found in the Assyro-Babylonian religion. Unlike all other deities of the pantheon of this region, Aššur did *not* represent any great force in Nature, but was essentially a national god—indeed, practically the *only* god of Assyria, because in him, owing to the unprecedented success of the Assyrian arms, were incorporated all the qualities which the Babylonians assigned to various deities. It is really no exaggeration to state that Aššur became almost identical in character with the warlike Jahweh of earliest Israel. Aššur's aid alone was all-sufficient in war and peace, and it is significant to observe that his devotees never attached to his train a host of minor gods, but always a number of the greater god-names. These greater gods, it will be noticed, invariably lost their identity alongside of the magnificence of the all-absorbing Aššur. Comparatively few other deities are invoked by the Assyrian kings, and even those few were really merged into the personality of Aššur; in short, they simply became Aššur under other names. There was, however, one great point of difference between the Aššur-worship and that of the Israelitish Jahweh. Whereas in the Israelitish system there existed a special high-priestly class, distinct from the monarch, it was always the monarch who was the sole high priest of Aššur.

The symbol of this god was a standard, consisting of a double-winged disk, over which stood a figure of the god shooting with an arrow. This emblem seems to point to a solar origin for Aššur, as the disk always represented the sun.

In the Aššur-worship, then, we see exemplified the most striking tendency of the Assyro-Babylonian age towards a real monolatry, the first step towards pure monotheism.

At the same time, in spite of this obvious unifying tendency, a certain rank for the gods was duly observed by both Babylonians and Assyrians, which is portrayed in the peculiar system of assigning to each deity a specified number.

Thus Anu, the head of the great Triad, had as his numeral 60, which was the fundamental number of the ancient Babylonian sexagesimal system of counting. Bêl and his son Ninib had 50; Sin, the moon-god, had 30, the number of days in the lunar month. To Shamash, the sun-god, was given 20, while to Ishtar, the goddess of love and war, was given 15, the half of the lunar month; and to Marduk, the great tutelary deity of Babylon, also a manifestation of the sun-god, was assigned 11. Rammân, the storm-god, had 6; and Nusku, the fire-god, had 10. It is probable that some of the lesser numbers were assigned purely arbitrarily, because even this enumeration of the gods is not always constant.

It must not be forgotten, moreover, that the lower side of the Babylonian religion was full of all sorts of baser superstitions, undoubtedly the relics of the earlier shamanism. The people believed in a host of evil demons and lesser divinities, against whose baleful influence there existed an equally great host of conjurors of every kind.

Thus we find observers of birds' flight, soothsayers, invokers of the dead, dream-readers, etc. The incantations, of which a large number have come down to us, usually mention every kind of possible evil influence, because the conjuror never could be certain which particular influence was present in a given case. For example, 'Whatever hath afflicted the system of the man,—evil face, evil eye, evil mouth, evil tongue, in the name of Heaven be it conjured; in the name of Earth be it conjured.' Spittle played a large part in the acts of these physician-conjurors, who applied it freely to the person of the patient (cf. the act of our Lord described in Jn 9[6]). It seems that they also possessed the knowledge of the symptoms of many recognizable diseases, which, however, were always treated by driving out the evil spirits which were the cause of all disease. Parallels from the New Testament will readily suggest themselves.

It is not, of course, the purpose of this article to give a detailed account of the religion of Babylonia and Assyria. For the special characteristics of the many deities who appear as members of the Babylonian pantheon, the reader should consult the art. BABYLONIANS AND ASSYRIANS, ii. 309 ff., and the works cited in the literature at the close of this article, the chief aim of which is rather to illustrate the real oneness of deity as conceived of by the Assyro-Babylonians. Perhaps no better method of bringing out this important point can be followed than to quote at this juncture certain extracts from the religious literature, much of which shows a spirit of true devotion equalled only by the Hebrew Psalmody. Here attention may be called to only two points.

1. Like all Nature, all creatures were considered as being absolutely dependent on the Divine will for everything in life. Nothing could happen without the gods, and everything in existence was the result of the all-powerful creative Word, which is here undoubtedly the prototype of the Logos in the Gospel of John. This creative power of the word is admirably portrayed in a hymn to Sin, the moon-god, as follows:

'In heaven, who is exalted? Thou alone art exalted.
In earth, who is exalted? Thou alone art exalted.
When thy word echoeth in heaven, all the angels of heaven cast themselves before thee in worship.
When thy word echoeth on earth, all the angels of the earth kiss the ground.
When thy word roareth above like a storm-wind, it causeth food and drink to flourish.

When thy word passeth over the earth, it causeth the plants to grow.
Thy word maketh fat the stable and barn; it increaseth the creatures of life.'

In much the same strain, but in this case with regard to the destructive word, we find a hymn to Marduk, the sun-god of Babylon:

'Thy word is an exalted word, which thou spreadest out over the heavens and the earth.
Upon the sea it sinketh down, and the sea draweth back.
Upon the field it sinketh down, and the meadows stand in mourning.
Upon the high flood of the Euphrates it sinketh down, and Marduk's word maketh it a pool of water.
O Lord, thou art exalted! Who can resist thee?'

2. The gods could be offended by sin, but they were always ready to show themselves merciful and gracious to penitent mankind. The birth of every single man was the act of God, and men as a race were the special creatures of the Godhead. Note how the god speaks to the king Esarhaddon: 'Put not thy trust in men; look to me; direct thine eyes to me.' The following extracts are illustrative of the offence of sin and the forgiving power of the gods:

'Who feareth not his god, is cut off like a reed.
Who honoureth not the goddess Ishtar, his limbs rot away.
Like the stars of heaven he disappeareth.
Like the waters of the night he melteth away.'

But the divine power was also merciful, and the truly sincere penitent might count upon the grace of his god:

'To my merciful god I turn me, seeking aid and sighing.
The feet of my goddess I clasp with tears.
O Lord, overthrow not thy servant.
Grasp his hand when he has fallen into the water.
Turn into grace the sin which I have committed.
May the wind bear away the misdeeds which I have done.
Tear like a cloth my many evils.'

The following example of an antiphonal Babylonian psalm illustrates still more strikingly the Divine pardoning power:

The Sinner: 'I am thy servant full of grief. I call to thee, O God.
The pious prayer of a transgressor thou wilt receive.
Thou wilt give him a gracious look, that he may live.
O thou, who rulest all things and steerest mankind,
How gracious is thy mercy which despiseth not the sighing of sinners.'
The Priest: 'The sinner's goddess and god are wroth; therefore he calleth upon thee.
Turn thy face to him and graciously take his hand.'
The Sinner: 'Thou leadest me in the right way, O God, like none other.
Give me of grace a firm look and accept my sighing.
Do thou only say: "When shall I get peace from his crying?" and let thy mood be mild.
Rage no more, O goddess. Turn thy countenance unto me.
Hear my sighing like the dove's moan; I am weary of lamentation.'
The Priest: 'With oh! and ah! and piteous plaint his heart is full.
He weepeth bitter tears and lamentably doth he lament.'

Any one of these productions reads like a Biblical Psalm. In this last example the priest plays the part of intermediary between God and man.

To sum up, then, with regard to the decidedly henotheistic-monolatric tendency of the Assyro-Babylonian religion: it is evident that the apparent confusion of their system of religion arose from the fact that these people were able to regard each and every god as the highest deity, without conflicting with the claims of any other god. The real reason for this phenomenon was that every god-name implied for them the true and all-embracing Godhead. In other words, they never lost sight of the fact—although it is probable that this was an innate feeling rather than a clearly enunciated principle—that beneath all the varied Divine appearances, there was in reality only one possible conception of the Divine. The student of this interesting system is forced to wonder why the religion of the Euphratean region never attained the highest ideal of all; to make for themselves a godhead out of Nature as a whole; to conceive of a Being with qualities like those attributed to the Hebrew JHWH, whose name is most appropriately vowelled Jehovah, with the vowels of the Hebrew word *Adonai*, and equivalent in use to the word *Elôhîm*, literally 'gods.' Neither the Babylonians nor the Assyrians ever seem to have attained this goal, although the Assyrians came nearest to it of any Semitic people save the Hebrews. Nor do we learn anything in any source of an esoteric priestly belief in such an idea. Perhaps their minds were not sufficiently synthetic to reach this grand conception. Some scholars have thought, not without cause, that the chief reason why a pure monotheism never developed in Babylonia and Assyria was that the people had too deep-rooted a conception of a male and female principle in all their speculations regarding their deities. The Hebrews were able to go far beyond such anthropomorphism, and thus to throw off the yoke of that polytheistic henotheism which remained for thousands of years the established principle of the religions of Babylonia and Assyria.

Friedrich Delitzsch (*Babel und Bibel*, iii. 38 f.) says of the Babylonian as compared with other Semitic religions: 'Just as it is impossible for the Arab to think that his Allah, the one Almighty Creator of heaven and earth, whom Muhammad revealed, is any other than Jhvh, the one Almighty Creator of heaven and earth, whose worship Moses kept alive among his people, so the Israelites from the days of their forefathers worshipped the One God under the name Jhvh, the Moabites adored Him under the name Chemosh, the Ammonites under the name Milkom, the Decider; but all these nations mutually recognized the individual tribal gods as real and existing beings.' The fact is, of course, that a tribal god represented the popular unity, as was the case with Ašur in Assyria, and the doctrine of a 'Chosen People,' common to the Babylonians, Assyrians, and Hebrews, then arose most naturally from this general Semitic conception. The Israelitish prophets crystallized this thought into the idea of a God for all the world, but their own writings show how little success they had among the common people, who clung to the tribal henotheistic idea long after the last Israelitish prophet had spoken. But the seed of the doctrine of the Universal Godhead was sown, and this seed has borne fruit in that loftier spirit of truth which our Lord developed during His brief ministry on earth, and gave to the world to live throughout the ages.

J. DYNELEY PRINCE.

GOD (Biblical and Christian).—The Christian conception of God, as it is held to-day, is the product of a long history, which it is the object of this article to trace in barest outline. It is the result of a gradual, but continuous, revelation on the part of God, together with a broken, fitful, and uncertain response on the part of man. The centre and pivot of the whole history is the body of writings known as the NT, or rather the events recorded in the NT and the interpretation there given to them. But the God of whom Jesus spoke, who is worshipped and believed on in the Gospels, is a Being who had previously made Himself known, and who had been the object of faith for generations in Israel. Some knowledge of the previous revelation is necessary in order to under-

stand the meaning of the phrase 'the God and Father of our Lord Jesus Christ,' while it is matter of frequent comment that the doctrine of God implied in the Sermon on the Mount seems to be removed by a wide interval from that of the Triune Deity worshipped and defined at Nicæa and Chalcedon. For a thousand years after the Fourth Ecumenical Council the Christian doctrine concerning God was practically a fixed quantity, though it was from time to time developed by the elaborate analyses, or overlaid by the ingenious syntheses, of scholastic philosophers. The modern period has left upon the Christian idea of God a mark of its own. The almost incredible enlargement of knowledge concerning the universe which has characterized modern thought, especially in the 19th cent., has profoundly influenced men's conceptions of the Divine, so that the traditional form of Christian doctrine has been enriched by a new and various content, as yet but partially assimilated and imperfectly incorporated with the old.

It has been denied that true and legitimate continuity has been preserved amidst all these changes. But, if the Christian view of God and the world be true, then, under the actual conditions of human life, revelation must be progressive on the Divine side; and the apprehension of God on the part of man will be gradual, various, and uncertain, according to the capacity and fidelity of those to whom the revelation has been given. It is the standpoint of this article that unity and continuity of conception have been sufficiently preserved, whilst growth and progress are throughout discernible. Elements in that conception may be traced back to Israel, ideas and forms of expression are due to the influence of Greek thought, the experience of the Church throughout the ages has indescribably enriched its theology, and the influence of modern science has done much to enlarge the conception of the Divine nature and operations. Still, throughout the history of Christian doctrine, the 'light of the knowledge of the glory of God in the face of Jesus Christ' has shone supreme. Christianity—a spiritual and ethical monotheism of the highest type, a religion of redemption of which Christ is both the centre and the sum—presents a consistent and ever developing doctrine of God, one that at the same time forms the true consummation of Judaism, and has proved itself to be the most potent and influential factor in the history of religion in the world.

I. *The Old Testament.*—The existence of a God is always pre-supposed by writers in the OT, never explained, still less argued out. But what was meant by the word, what connotation was given to the name, what attributes were implied by it, are quite other questions. The writings which record the earliest traditions on the subject range from the 9th to the 5th cent. B.C., and it is not easy to summarize the various ideas of the Divine Being which find a place in them. The documentary strata recognized by criticism doubtless embody much earlier material, and may furnish evidence of the existence of primitive beliefs, not sanctioned by the religion of Israel, but influencing to a considerable extent the thought and practice of successive generations. It may not lightly be taken for granted that the God of Noah, of Abraham, of Moses, was identical in all respects with the God of the Jahwistic writer of 850 B.C., or of the Priestly Code after the Exile. Yet the utterance of Dt 6^4, 'Jahweh our God, Jahweh is one,' is the watchword of the religion of Israel in no artificial or perfunctory sense throughout the national history; and the Deity worshipped and proclaimed by Israel for centuries is the God of whom Jesus said that the first great commandment in the Law was to love Him with heart and mind and soul and strength.

For the present purpose all traces of primitive beliefs in pre-Mosaic religion may be disregarded. The Semitic tribes akin to the 'Hebrews' were generally polytheistic. Jos $24^{2.\ 15}$ recognizes 'the gods whom your fathers served' in the days of Terah, beyond the River. The revelation made to Abraham marked a clear stage in advance, and similar steps forward in the knowledge of God were made in the time of Moses. The God who spoke to Moses from the bush was not an unknown Deity; He was the 'God of thy father' and 'the God of your fathers'; even His name was previously known—'Jahweh the God of the Hebrews' (Ex $3^{6.\ 15.\ 18}$). In exactly what sense, and to what extent, this God was recognized by the people at large before the time of Samuel is a moot question. Materials for an answer are scanty, and some points are still in debate. Many superstitions and some idolatrous practices were retained amongst the people, while a long, steady warfare was maintained against them, with a strenuous assertion of the supremacy of Jahweh and His claim to sole allegiance and undivided service. The beliefs and practices thus indicated may be classified as (1) those which were avowedly polytheistic; (2) those which acknowledged the existence of demons, or inferior divinities; and (3) those which turned on the veneration of places, sacred stones, and sacred trees, consistent with the worship of Jahweh, though often indulged in in a spirit of disobedience and revolt.

What is, however, beyond question is the rise of a distinctive religion of Israel from amongst tribes in which polytheism, often of a cruel and licentious type, prevailed; and the attainment, by whatever exact stages, of a pure ethical monotheism of a uniquely lofty kind. The distinction between monolatry and monotheism is often a narrow one. A nation which whole-heartedly worships one God alone may change in its mode of regarding the gods worshipped by other nations. These may be viewed as inferior deities, whom it was sometimes a temptation to acknowledge and try to propitiate; or as spirits, more or less evil, that were not really 'gods'; or as 'abominations,' banned and denounced by true religion; or as empty figments of the imagination, the 'nothings' and nonentities which some Hebrew names for idols brand them as being. Indications of what are now called 'totemism' and 'tabu' may be found in the Levitical law; the divination and ancestor-worship forbidden in successive codes of legislation may have been relics of dying cults. The precise character and religious value of *'ăshērîm*, *t'rāphîm*, *maṣṣēbôth*, and the religious history before the Exile do not belong to the present inquiry.

The lesson of the OT is the establishment of the worship of one God, unique, incomparable—the one God that matters. The main light shines clear, whatever vague forms flit and glimmer in the twilight around it. The history of revelation in the OT is a history of the way in which this light was seen to shine more purely and more powerfully till all the shadows of lesser deities fled away.

1. **Names.**—The names used for God were significant. *Elôhîm* was the generic term for Deity, *Jahweh* the personal name of the God of Israel. The term *Ēl* was common to Semitic tribes; its etymology is doubtful. Other early names were *Shaddai* (Gn 17^1, Ex 6^3), probably the Almighty or All-Sufficient One, perhaps an appellative of Ēl; and *'Elyōn* (Gn 14^{18}, Ps 7^{18}), mainly a poetical name for God Most High. The plural name *Elôhîm* is not to be understood as a remnant of polytheism, of which the form *Elōah* is the singular. The

plural number indicates either eminence and supremacy, or fullness and abundance of powers and resources. The origin of the sacred and characteristic name Jahweh (*q.v.*)[1] is still obscure. The attempt to show that it was a West Semitic name for the storm-god rests on conjecture only. The idea that it was gained from the Kenites is more than dubious. It should be understood as distinctly a personal name, going back to pre-historic times, but made the vehicle, or the channel, of special revelations, till it acquired a sacred character and significance, incommunicable otherwise. The interpretations of it given in Ex 3^{14} (EV 'I am that I am,' RVm 'I will be that I will be') are not strictly etymological in the modern sense, but are descriptive of the nature of God as then making Himself known—the one, true God, self-existent and self-sufficient, the cause and ground of all being, faithful to His promise, and constant in all His relations with His people. It would be an anachronism to draw out into a list of 'attributes' in modern fashion what none the less lies implicit in the simple sublime appellation—I AM. The content of the name was filled up in the course of history, as successive acts and manifestations showed Israel what kind of a Supreme Being it was whom they were bidden alone to worship. Jahweh remained the name for the covenant God of Israel, where the term 'covenant' indicates a special relation between God and His people, one on which the whole national history is a running commentary.

Stages of progress in the idea of God are more or less clearly traceable. But from the outset the conception was simple and concrete, not metaphysical, not an abstraction from the powers of Nature. The God of Israel was essentially (1) personal, (2) spiritual, (3) sole and supreme, (4) of an unapproachably lofty ethical character. The personality of God was pressed to the verge of extreme anthropomorphism, the language employed to describe it being popular, not scholastic; but it is not easy to determine how far the ascription to Jahweh of human limbs and organs—face, finger, arm, heart, and voice—was understood literally or symbolically. Dt 4^{12-15} shows at once the error into which the multitude were in danger of falling, and the corrective which, in the 7th cent., was supplied. Personality, implying a living Being, who thought, felt, and willed, and who possessed all the characteristics of personal life, is a distinctive feature of the God of the OT throughout. But this Being was spiritual, in the sense of being invisible to mortal eye and beyond all sensuous apprehension; while His power and operations were such as only a spirit could manifest, the living Will behind all being specially emphasized. Jahweh is proclaimed from the outset as sole and supreme; the ground of all other commandments is, 'Thou shalt have none other gods before me.' Other gods had but a relative existence, if they were thought of as existing at all; they possessed neither might nor right in comparison with Him who was the Creator and Sustainer of all that is.

The distinctive feature, however, of the OT doctrine of God is the emphasis that is laid on the moral character of Jahweh, who is unique, not in power only, but in wisdom, righteousness, goodness, and truth. An influential school of critics hold that the 'ethical monotheism' of the OT originated in the prophetic period which formed the golden age of Israel, from the 8th to the 6th cent. B.C. It would, however, probably be correct to say that the work of the prophets from Amos onwards was to define more clearly, and to enforce more strenuously, a doctrine concerning God which was not then entirely new, though the current coin needed to be minted afresh, and distinct advance in conception was made in the prophetic period. The work of the prophets consisted mainly in two things: (1) they taught the unity and supremacy of Jahweh in relation to the whole world as well as to Israel; and (2) they proclaimed and pressed home the doctrine of His 'holiness,' in its full meaning and implications, as this had never been done before. Two names of God may be mentioned as more or less representative of these ideas —*Jahweh Ṣᵉbā'ôth* and 'the Holy One of Israel.' The first of these (= 'Lord of hosts') was not new, and difference of opinion exists as to its original meaning. But, whether earthly battalions or heavenly auxiliaries were intended, whether Jahweh was Lord of stars, or of angels, or of cosmic forces generally, the title in the time of the prophets certainly connotes world-wide supremacy. The name 'Holy One of Israel' emphasized the fact that the Lord of all power and might was Himself incomparably pure, and was prepared to sanctify from all evil His people who trusted and obeyed Him. 'This new name,' says Ewald, 'was the first kindling spark which showed that now the age of the Hagiocracy was beginning in Israel, in a sense altogether unexceptionable' (*Die Lehre der Bibel von Gott*, Leipzig, 1871–76, Eng. tr., *Old and New Testament Theology*, Edinburgh, 1888, p. 94).

2. Holiness.—It is not possible to consider in detail the moral qualities of which the word 'holiness' (*q.v.*) came to constitute the sum. No formal list of Divine 'attributes' is anywhere given; the qualities enumerated are not always the same, and the emphasis laid on each varied at different epochs. But substantially the same moral excellencies distinguish Jahweh from the first; compare Ex $34^{5.6}$ with the latest Psalms. Almightiness is taken for granted; but stress is not laid on mere power, as was largely the case with the *bᵉ'ālîm* (see BAAL). Wisdom, foresight, and purpose are distinctive features of the God of Israel throughout, though omniscience in the more complete sense of the term is not dwelt upon in earlier times, as it is, *e.g.*, in Ps 139. The righteousness of Jahweh is a favourite theme with Amos and Micah and Isaiah, the attribute being explained throughout by its concrete bearing upon national life (cf. Is 5). In Deuteronomy, Jahweh is characterized by blended righteousness and love for His people, and the psalmists re-echo the description in verse. Mercy and tenderness are predominant Divine qualities in Hosea, as in Ps 103; lovingkindness and pity are not understood as contrasted with righteousness and justice, as the promise in Hos $2^{19f.}$ plainly shows. 'Jealousy' is a word used by writers of different periods to describe, not cruelty or harshness, but the uncompromising claims upon the allegiance of God's people made by His holy love. 'Faithfulness' and 'truth' are companion names, which indicate that God's words correspond with His nature, and His deeds with His words; that His present action is one with His past, and that He may be trusted as constant and unchanging in all that is to come. Finally, the word 'holy'—which in the first instance probably meant only 'divine,' that which belongs to God as such—came to stand for the whole sum of ethical excellency characteristic of Jahweh; righteousness, flawless purity, and utter antipathy to all evil being in the foreground of its significance.

3. Self-manifestation.—There is in the OT no indication of interior distinctions in the Godhead; it is an anachronism to find either the doctrine of Incarnation or that of the Trinity in its pages.

[1] See also that art. for the occurrence of the name in Bab. locuments.

But the God of the OT is emphatically a self-communicating God, as opposed to a metaphysical abstraction, or a solitary, remote Deity. The forms of manifestation described, the various modes of self-revelation which mark off the God of Israel from the gods of the nations around, prepare the way for a clearer and more intimate revelation to come. The 'angel of Jahweh' or 'angel of God' spoken of in Gn 22, Ex 3, and many other passages, is not a mere messenger from God, a created being, neither is he strictly Jahweh, but Jahweh in a particular form of self-manifestation, a special revelation of the Divine presence. The 'Spirit of God,' whose name is found so constantly, and whose operations are so various and so vital in the religion of Israel, is not distinct from God, nor does the phrase imply a distinction in the Godhead. The Spirit of God is God Himself, breathing, living, active, energizing in the world—'God at work.' The Spirit is personal because God is personal; personal distinctions within the Deity find no place in the Old Covenant. As breath is the principle of human life and the source of human energy, so God possesses life in Himself, and is the spring of all life in the universe; and, when the fullness of His vital power as in any way communicating itself is dwelt upon, the Spirit of God is expressly named. There are a few passages in the later books—of which Is 63^{10}, 'they vexed his Holy Spirit,' may serve as an example—which might seem to imply that the Spirit of God was thought of as a distinct person. But these are best understood in the light of prevailing usage, whilst they undoubtedly prepare the way for a doctrine which does not clearly appear within OT limits. See, further, art. HOLY SPIRIT.

4. Word and wisdom.—A history attaches to the two phrases, 'Word of God' and 'Wisdom of God,' which cannot here be traced out (see artt. LOGOS, WISDOM). God's word is viewed as the instrument of His working. 'He spake and it was done, he commanded and it stood fast' (Ps 33^9; cf. Gn 1, Ps 33^6 147^{18}). Also, the thought of God is mighty; His wisdom orders and controls all. But, by a natural transition, in later Jewish literature a tendency appears to personify both Word and Wisdom—notably the latter in Job 28 and Pr 8. Whether the grammatical figure of bold prosopopœia, viewing Wisdom as God's master-workman, had here passed in the mind of the writer into hypostatizing in the full sense of the term is doubtful; probably not. A distinction is discernible between the use in Job and in Proverbs, and further development is perceptible in Sirach and Wisdom of Solomon; but the poetical picture called up by the imagination had probably not given place to the idea of independent personal existence. Undoubtedly, however, in the use of these phrases a foundation was laid for the idea that the Thought or Will or Speech of God, going forth from God, might be conceived as an activity distinguished from God Himself, a manifestation of God in the world, distinct, though not separate, from His own proper Being.

5. Creation and Providence.—The relation of Jahweh to Israel is the main theme of teaching in the earlier periods; for, though He is thought of as supreme, only gradually did the idea of His relation to the world as a whole emerge. The notion of God as origin of all that exists is implicit from the first; but a doctrine of creation such as is developed in Gn 1 and embodied in many passages of 2 Isaiah and the Psalms is comparatively late. The problems of Providence dawned but slowly on the minds even of the teachers of Israel. In Job and in the later Psalms a few writers wrestle with these difficulties rather than overcome them. The underlying postulate of religion was that Jahweh ruled and did all things well, punishing the wicked and rewarding His faithful servants. The presence and prevalence of evil were acknowledged as permitted or overruled by God, but no theodicy was constructed to account for its existence. The language employed is popular, the moral sense is keen and strong, the Divine hatred of evil is strenuously asserted, but the facts of life were accepted in a matter-of-fact, almost child-like fashion for centuries before the 'maddening riddle of the root' and a demand for an answer to it pressed upon the minds of an essentially practical people. Even in Is 45^7 the prophet is content with describing both good and evil as forces so completely controlled by the Supreme Ruler that it may be said, 'I form the light and create evil: I am Jahweh that doeth all these things.'

6. The Exile.—The exile in Babylon was a fruitful epoch in many ways in the religion of Israel; it brought with it especially a widened horizon in the conception of God and the right way of worshipping and serving Him. Amongst the most notable changes may be mentioned the increased spiritualization of the idea of God, the purification of the ritual from doubtful elements, and a growing superiority to local and material considerations. Jahweh could manifest Himself to His people and be found a present help in time of trouble, independently of a sacred land and a consecrated temple. From this time onwards a certain universalism takes the place of earlier particularism. Jahweh is the God of the whole earth in a new sense; He has sworn that every knee shall bow to Him (Is 45^{23}). The destinies of the nations are in His hands, and He cares for all that His hands have made. Israel shall be the means of bringing the nations to a knowledge of Him. The captivity in Babylon, instead of weakening the attachment to Jahweh and leading to an increase in idolatry, sounded in reality its death-knell. Under the guidance of the prophets the people learned to see that the overthrow of the monarchy and the destruction of the Temple did not imply feebleness or apathy on the part of the God in whom they trusted, but were intended to be the means of leading them to loftier and more adequate views of Him. Their heart, while it trembled, would be enlarged (Is 60^5); and they acknowledged, in the midst of their worst fears, that God's ways were higher than their ways, His thoughts than their thoughts ($55^{8f.}$).

7. The Greek age.—In the Greek age and the following periods no change took place theoretically in the idea of God, but modifications passed imperceptibly over the spirit of Jewish religion and over the customary modes of acknowledging God, which reacted upon the very conception of Deity. There was no more any prophet in Israel (Ps 74^9); the priest and the scribe took his place. The living God ceased to be realized as a present and active power, and the record in the Scriptures of His dealings in the past acquired a peculiar sacredness. In proportion as the Deity was conceived as transcendental, high above man, He became further off from man, and the 'pale cast of thought sicklied o'er' the simple, healthy realization of a present, gracious Friend and Protector, who was ever thinking of His people, caring for them, willing and working on their behalf. Greek culture partly roused Jewish national feeling to greater intensity and deepened devotion to the national God. But insensibly it affected habits of thought, especially among Jews of the Dispersion. The Hellenic philosophy of the period regarded God as pure Being, transcendental, impassive, inactive, existing out of relation to time and earthly

changes. The Jews were not philosophers and never precisely adopted these views, but Greek influence aided in promoting a change which had begun as early as Ezekiel, is marked in some of the later canonical books, and is still more fully illustrated in extra-canonical literature. Greater reverence is shown for God, His name, and His word; anthropomorphisms are shunned, and a sharper contrast comes to be drawn between the natural and the supernatural. 'God is in heaven and thou upon the earth; therefore let thy words be few' (Ec 5^2) is a significant maxim of the 2nd cent. B.C. The LXX in its periphrases smoothes away stumbling-blocks from the language used concerning God in the Hebrew Scriptures, but at the same time robs it of much force and significance. The hallowing of the Ineffable Name by never pronouncing it was at the same time a mark of superficial reverence and of diminution of religious earnestness.

The Targums bear witness to the same general tendency. Names indicating the loftiness of God—'Lord of the world,' 'the Mighty One,' 'the Glory,' and especially 'the Most High'—multiplied on the one hand, and on the other it was found necessary to introduce intermediate phrases into passages where God intervenes in human history, lest due reverence for the Highest should be impaired. Hence the use of *Memrā*, the Word of God; and later *Shekhînāh*, the glorious Presence of God. In such passages as Gn 3^3 the Targum of Onkelos reads, 'Adam heard the voice of *the word of the Lord*'; and in Dt 5^5 'I stood between *the word of the Lord and you*.' Later extra-canonical writings abound in illustrations. Such a passage as Wis 18^{15}, 'Thine Almighty Word leaped down from heaven out of thy royal throne,' may be explained as a grammatical personification, but the literature of the period indicates a decided tendency to hypostatize the Word of God. The Philonian doctrine of the Logos (*q.v.*) does not come within the scope of this article, but it bears its part in a similar development of thought. Cf. art. GOD (Jewish).

The worship of God during this period underwent a corresponding change, which was partly effect and partly cause in relation to the altered conceptions of the Divine. The Temple still stood, and its ceremonial became more stately and elaborate, but comparatively few could join in it. The synagogue worship—without priest or sacrifice or formal ritual, its essence consisting in the reading of God's word to man and the offering to God of man's free and heartfelt prayers—effected a virtual revolution, and helped to perpetuate the prevailing conception of God as a spiritual Being who must be spiritually worshipped. Side by side with this the development of scribism, and an exaggerated and fanciful devotion to 'the Law' which almost deified it and put it in the place of God Himself, were the marks of a religion grown old and stiff, a formalism fanatical in its intense devotion to the letter, but impotent as a spiritual energy, because it had lost touch with the living God. The heart of the generations in the 1st cent. B.C. cried aloud for a regenerating and rejuvenating religious power which it was itself incompetent to produce.

II. *THE NEW TESTAMENT.*—An epoch was created by the appearance of Jesus of Nazareth. Himself an Israelite indeed, He had no entirely new God to announce; He begins with, takes altogether for granted, and proceeds to build upon the revelation of the one living and true God made through the generations to the Chosen People. But His teaching concerning that God and the personal manifestation of His life were such that the religious conception, which as a plant had already taken root and put forth green branches, burst into unexpected flower and brought forth new, unexpected, and abundant fruit. Jesus assumes the fundamental conceptions of God already described. He is personal, spiritual (Jn 4^{24} does but impressively declare what spiritually-minded Jews had long acknowledged), transcendent, yet draws very near to men in revelation and communion, unique in holiness, goodness, and the loftiest moral attributes. Thus the doctrine of God set forth in the discourses of Jesus exhibits the ethical monotheism of the prophets raised to its highest power. With this doctrine Jesus began; how far He travelled beyond it remains to be seen. The implications of His words and deeds were felt at the time to carry His hearers much further; in what direction and to what goal could not be immediately discerned.

1. **Christ's own teaching.**—The unity of God is taken for granted throughout Christ's discourses, and is explicitly dwelt on in Mk 12^{29} as the basis of the first great commandment. The spirituality of God, emphasized in memorable words in Jn 4^{24}, also pervades the whole teaching of Jesus. The moral attributes which characterize the God of the OT all appear and reappear in the Gospels, though the emphasis is seen to lie differently, in view of the mission that Jesus had come to fulfil. Holiness and righteousness are fundamental characteristics of the Divine will; the subjects of the Kingdom are to seek righteousness above all (Mt $5^{6.\ 20}$ 6^{33}). In the prayer recorded by the Fourth Evangelist, God is described as the holy and righteous Father (Jn $17^{11.\ 25}$). The majesty of God is implied in the epithet 'heavenly' or 'in heaven' used in the Lord's Prayer and often in the Sermon on the Mount. Yet He cares for the lowliest (Mt 6^{30}); not even a sparrow falls to the ground without Him; He works everywhere and always (Jn 5^{17}). The sunshine and the rain, the lily in its beauty, and the common grass of the field, all have their message to deliver concerning Him. He is 'good' with a goodness that far outdistances the highest standards of earth; it is such as even the teachers of Israel had not fully understood; in comparison with it no other goodness deserves the name (Mk 10^{18}). Especially is God good as being merciful and ready to forgive. Man is most like to God when he has learned the lesson of mercy (Mt 5^7 18^{21}); the unforgiving cannot be forgiven (6^{15}), but deserve severest punishment (18^{35}). God is gracious and long-suffering, but the judgment that is to come will prove that He is not slack or careless in His moral government of mankind, who are to learn reverently to fear Him in whose hands their whole destinies lie (Lk 12^5).

These characteristic utterances, however, some of which might have come from the lips of a prophet of the Old Covenant, cannot be rightly understood without placing the emphasis where Jesus Himself placed it, and interpreting all in the light of the *Divine Fatherhood*. This doctrine appears in the OT, but it describes a relation which exists between God and Israel, not with mankind at large, or with individuals who are children of God in virtue of their personal character (see Ex 4^{22}, Dt 8^5, Hos 11^1). If the king is regarded as a son of God (2 S 7^{14}), it is in virtue of his position as the head and representative of the nation. Christ's teaching on this subject differs fundamentally from that of the OT. It described three concentric circles. (1) The innermost contains One Person only. The Father occupies a peculiarly intimate relation to Jesus Himself, who, not as *a* Son, but as *the* Son, knows the Father as no other can (Mt 11^{27}), and has been sent specially to reveal Him (Jn 14^{6-11} $17^{4.\ 25.\ 26}$). Amongst the first recorded words of Jesus (Lk 2^{49}), and the last (23^{46}), the name 'Father' is on His lips. He used no language to describe God such as was familiar to scribes on

the one hand, or to philosophers on the other, but He often offended His hearers by the familiarity with which He claimed God as His own Father, in a sense shared by no others (Jn 5[18]). (2) The sense of sonship was to be enjoyed by all true disciples in their measure. 'Your heavenly Father' was the description of God which assured them that He might be trusted to supply all their needs (Mt 7[11], Lk 11[13]). But this conception widens out into (3) a universal Fatherhood, as of One who cares for the unthankful and the evil, and is ready to receive not only the lost sheep of the house of Israel, but all wanderers from the Father's home. It is true that the message of Jesus for Gentiles is not explicit as was His mission to the Jews, but the three parables in Lk 15 are evidently intended to illustrate a deep-seated compassion of God for the lost as such (Lk 19[10])—yearnings of the Father's heart that go swiftly forth to meet all penitent children of men who arise and go to Him (Lk 15[20]).

The characteristics that have been described have been drawn chiefly from the Synoptic Gospels. John does but emphasize the notes so clearly struck. The name 'Father' occurs far more frequently in the Fourth Gospel than in the other three put together, but all four Evangelists indicate that the word came always from the lips of Christ, not from His disciples, and the Master never ranks Himself and them together as sons. In the one passage that seems to do so He deliberately marks a distinction, saying, 'my Father and your Father, my God and your God' (Jn 20[17]). The universality of the Divine Fatherhood is made much more plain in the Fourth Gospel, and the word 'love' is seen to be the climactic word that describes the inmost nature of God. The unique character of the relationship between the Father and *the* Son is also much more fully brought out in this Gospel (Jn 5[17ff.]). It must be added in a word that no quotation of the words of Christ, apart from a study of Himself, His person, and whole work in the world, can ever suffice to set forth the full meaning of His teaching concerning the Fatherhood of God.

The Son and the Spirit.—The special mission of Jesus was to announce the coming of the Kingdom of God, and Himself to lay its foundations in a Gospel message (Mk 1[15]). He did not at first formally claim Messiahship, though from His baptism onwards His unique Sonship was recognized (Mt 3[17] 21[37]). But the time came when His work as the Christ, who must through suffering and death accomplish the Father's will and establish His Kingdom on earth, was made clear, and His disciples began dimly to understand that He was not only the Christ, the King of Israel, but the Son of the living God in a deeper sense than the words had usually conveyed (Mt 16[17]). Further, Jesus had much to say, not only concerning Himself as 'only-begotten' Son,—to use John's characteristic word,—but concerning the Spirit of God (see Mk 3[29], Mt 10[20], Lk 11[13]; several other passages in the Synoptists, and especially the discourses recorded in Jn 14–16). The question, therefore, arises whether the manifestation of God in Christ was such that in His own lifetime the fundamental conception of God was modified by it, and whether a distinction of persons within the Godhead amounting to what afterwards came to be called the doctrine of the Trinity was taught by the Master and accepted by His disciples.

The question cannot here be discussed in detail (see art. TRINITY). If Mt 28[19] contains the exact words of the Saviour, He did before His ascension virtually lay down this doctrine. But, quite apart from the special phraseology of this passage, it is safe to say that Christ's teaching contained the material elements out of which a doctrine of the Trinity was formulated later. His claims for Himself, His authority, His power to forgive sins, His demands for absolute personal allegiance to Himself, and His assertions concerning His own knowledge and power and His coming to judge the world—not to speak of His miracles—were enough to show even before His death and resurrection that the new doctrine of the Saviour Christ could not but affect the old doctrine of the Ruler God. 'Who is this Son of Man?' was a question in the answer to which lay many more questions and answers, still latent. The main question, however, was not fully answered till Christ's work on earth was fully accomplished; and the full light shed on the doctrine of God by a clear doctrine of Christ was not revealed until some generations had passed away.

2. **The Apostolic doctrine of God.**—The position of the Apostles was wholly changed after the day of Pentecost. The death of their Master had greatly disconcerted them, and His resurrection formed the basis of their new message. Their early sermons and addresses were naturally not occupied with the mystery of His Person. Preaching to Jews with Calvary full in view, Peter urged that the crucifixion of Jesus was a crime which God had overruled in raising Him from the dead, and that the meaning of both death and resurrection was to be found in the message of the Gospel. It promised remission of sins through faith in the Saviour; it heralded the establishment of the Kingdom of God with the Prince-Saviour at its head. The watchword of the whole was, 'Jesus is Lord; repent and believe in Him.' Salvation can come only through Him (Ac 4[12]); His work, now fully accomplished, forms the central theme of the new Gospel declared by Paul ἐν πρώτοις, 'first of all' (1 Co 15[3]). The Acts faithfully reflects the gradual stages through which this position was gained, with far-reaching effects on religion as a whole.

A Christology was needed; the question, Who is this Jesus? must be answered. The theology, or doctrine of the Godhead, that followed turned upon the answer to this question. The teaching concerning the Holy Spirit did not raise the same difficulties, because the OT had so frequently used language which described the gift of the Spirit of God. But the experience of the new life in Christ, and the way in which the blessings of salvation were realized, pointed to a threefoldness in God's relation to man. Side by side with the belief in the God of the New as well as of the Old Covenant, and blending with it as a part of the same faith, was trust in a Divine Saviour and the consciousness of a Divine Spirit, Himself at work in the hearts of all believers. This experience found expression in the triple benediction of 2 Co 13[14], and the baptismal formula of Mt 28[19]. Jesus the Christ was a manifestation of God *to* men, such as had never been known before; the Holy Spirit, after the Day of Pentecost, was a manifestation of God *in* men, such as had never before been possible. The Apostles realized that here was a richer revelation, an ampler Divine presence and blessing, which demanded fuller expression in their very definition of God, as the whole NT bears witness. The Synoptic Gospels in their measure (remembering the scope of their narratives), the Acts of the Apostles in continuing the history—Paul and John pre-eminently and at length, and other Apostles more briefly—all agree in representing the personal spiritual God, the righteous and loving Jahweh of the OT, as still believed in but displayed in a new light. God the Father *over* all, God the Son and Saviour *for* all, God the Holy Spirit operating *in* all, but especially in the believer, yet one God only, always and everywhere—this is the doctrine

of God, which, before the NT closes, has taken the place of the simpler 'ethical monotheism' of the prophets.

There is no 'doctrine' of the Trinity in the NT. But there are in it all the materials out of which such a doctrine came inevitably to be built up, together with evidence of the way in which that teaching arose out of certain central facts of history and experience, proclaimed by the Apostles and accepted by all believers as integral parts of the gospel. The intense monotheism of those who had been educated as Jews was never relinquished, but new modes of conceiving of God, of worshipping Him, and of realizing His relations to men as in some sense threefold, form an essential part of the doctrine of God in the NT. These were not so much theoretically adopted as felt to be indissolubly bound up with what believers had from the beginning held concerning Christ, and with what they themselves had enjoyed of His grace and salvation.

(1) *The Trinity.*—The testimony of Paul in 1 Co 8^6 and elsewhere shows the process of advance. There may be, he says, 'those that are called gods'—gods many and lords many, but 'to us there is one God, the Father, of whom are all things and we unto him.' Yet, without prejudice to the unity of this one God, he adds, 'and one Lord, Jesus Christ, through whom are all things and we through him.' He also is creator and of cosmic significance; the doctrine of God henceforth is mediated through Christ. Lordship is the essential word. Κύριος renders the OT *Jahweh*, and in Ro 10^{9-13} the word is used of Christ in such a way as to show His essential Divinity. His standing name and title is 'the Lord Jesus Christ'; He is preached as Lord (2 Co 4^5), and the characteristic watchwords of unbelievers and believers respectively are 'Anathema be Jesus!' and 'Jesus is Lord' (1 Co 12^3). Nor is this Lordship a merely temporal office and honour. His pre-existence is implied in 2 Co 8^9, Ph 2^6, and Col $1^{15ff.}$. All interpreters are not agreed that in Ro 9^5 Christ is styled 'God over all, blessed for ever,' though this is the natural interpretation of the words; but few can doubt that in Tit 2^{13} the appearing in glory is expected of Jesus Christ, 'our great God and Saviour.' Paul's language concerning the Holy Spirit does not bear so immediately upon his doctrine of God, because the word 'Spirit' sometimes indicates a gift of God to men and sometimes God Himself working in men, as it did in the OT. A closer examination shows that the Holy Spirit is not a mere gift or influence; yet, while Divine, He is not the whole Godhead. The intensely personal language employed in such passages as 1 Co $2^{10.11}$, Ro $8^{15.26}$, and elsewhere, combined with the distinction maintained between the Spirit and Christ, the Spirit and the Father, makes the interpretation of the Holy Spirit in an OT or 'Unitarian' sense impossible. Again, apart from the phraseology of benediction in 2 Co 13^{14}, the general tenor of description in such passages as 1 Co 12^{4-6} and Eph $2^{18.22}$ shows that St. Paul thinks easily and naturally in terms of a Tri-unity in the Godhead, when speaking of Divine operations in the salvation of men and in the worship of the Church.

The author of the Fourth Gospel declares that his object in writing is that men may believe that 'Jesus is the Christ, the Son of God, and that believing they may have life in his name' (Jn 20^{31}). The whole Gospel proves that the Sonship thus indicated was understood as one not merely of office, or mission, or ethical likeness, but of eternal and essential nature. He who shared the Father's glory before the world was is the one Saviour of men, the Way, the Truth, and the Life. The writer sometimes makes use of phraseology not found elsewhere in the NT. His doctrine of the Logos in the prologue strikes the key-note of the whole Gospel, though the note itself is not repeated throughout its chapters, the name of the Son taking the place of the Word. There is no inconsistency in this, for in a narrative of the personal life of the Logos Incarnate the emphatically personal name 'Son' is obviously the more appropriate. *Logos* is a convenient name for summing up certain ideas concerning God, which are characteristic of Paul as well as of John, though the former never uses the word. Paul expresses the same thought when he speaks of εἰκών, πλήρωμα, μορφὴ θεοῦ, of One through whom are all things, in whom all things cohere, and in whom all are to be summed up (Col $1^{16ff.}$). Similarly, the Logos is θεός, not ὁ θεός, God, not the Godhead. Thought and Speech, Reason and Utterance, *Sermo* and *Ratio* unite in the λόγος, *Verbum*, the Word. The Logos in Philo is not personal; but the prologue to the Fourth Gospel, beginning with the transcendent God, sets forth the Divine Word as personal, extra-temporal, in closest relation with God, and as so present and operative in creation, preservation, and the subsequent redemption of the world that all things are 'in and through him.' The same is He who became flesh, and who in the flesh spoke words and did works so symbolic of eternal reality that His whole life is one work of eternal significance, and that all man's duty may be summed up in the work of 'believing on Him.' The silent substitution of 'Son' for 'Word' in the Gospel and the absence of Logos from the first Epistle (1 Jn 1^1 notwithstanding) are significant. When the Word becomes flesh His name is 'Son,' and the various readings in Jn 1^{18} show how closely connected in Apostolic tradition were the ideas of 'only-begotten Son' and 'God only begotten.'

A modification is here implied in the OT idea of God, which might seem to necessitate a fundamental break in continuity. But in the teaching of both Paul and John concerning Christ there is nothing inconsistent with the unity of God, who for both of them remains still the One King, Eternal, Immortal, Invisible. It is significant that two writers occupying such different standpoints, and using such diverse phraseology, should unite so completely in what may seem a paradoxical position. Paul concentrates attention on redemption—sin, righteousness, and salvation through the death and resurrection of Christ; John's main theme is revelation—light, truth, and life eternal, the Incarnation rather than the Crucifixion being the centre of the whole. Yet both Apostles prove to demonstration that the Redeemer whom all Christians acknowledged and trusted, faith in whom constituted the very essence of the new religious life in the world, was Himself very God; and, whilst maintaining an intense monotheism as an unassailable axiom of religion, they worshipped in the one Godhead, as distinct yet inseparable, the Father, the Son, and the Holy Spirit.

(2) *God is Love.*—The ethical attributes distinctive of Jahweh in the OT are exhibited in the NT in an added light which, while it preserves, transforms them. Holiness and righteousness, faithfulness and truth, mercy and loving-kindness, are still characteristics of the one true God, but to each of the words is given a connotation so rich and deep that the use of the old words embodies a new gospel. One word, moreover, not entirely new, acquires so predominant, so consummate a place in the conception of God that henceforth it surpasses and encompasses all the rest—God is Love. Not that love eclipses righteousness, still less is opposed to it. If with Paul the idea of righteousness seems to predominate, it is he who writes in 1 Co 13 the immortal hymn of love. If

it was left for John to expound the love of God in such a way as to mould Christianity all through history, it is he who makes the strongest and most uncompromising declarations of His righteousness that are to be found in the Bible. Neither of the Apostles can conceive of a God in whom the two attributes are not eternally and indissolubly blended; but only in Jesus Christ, Son of God and Son of Man, is to be found the abiding proof that God is both righteous and merciful in the deepest sense of the words; and only through Christ can man reach and maintain his true relation with a God of infinitely holy love.

Granted the premisses that the Son of God has come to earth, suffered, died, and risen again for man's salvation, then all previous Divine manifestations pale before this stupendous Light of the world. Paul's theme in his greatest Epistle, the one which contains the fullest account of his central preaching, is *δικαιοσύνη θεοῦ ἀποκαλύπτεται*, God's righteousness is revealed from faith unto faith (Ro 1^{17}). Whether the righteousness of God means an attribute of His own nature, or a state or condition of man that is derived from and acceptable to Him, in either case much light is shed by the phrase upon the character of the God whom Paul preached. These two meanings are joined together later in the Epistle, where it is said that the object of the work and sacrifice of Christ was that God might be shown to be righteous Himself, whilst at the same time free to pardon and account as righteous every believer in Jesus (Ro 3^{26}). So far, therefore, as an exposition of the Divine nature is summed up in the phrase 'righteousness of God,' it is clearly not to be understood as bare and hard 'justice'; it combines flawless purity and perfect rectitude with a merciful provision by which a sinner may be freed from sin and obtain forgiveness in perfect accordance with the eternal law of righteousness. The climax of the argument, however, is not yet reached. Paul goes on to show that God commends His *love* towards men in that, while they were yet sinners, Christ died for them (Ro 5^{8}), and the full revelation of the God in whom he trusts appears only when, in a burst of lyrical fervour, he exclaims that nothing in heaven or earth or under the earth can separate the believer from the love of God which is in Jesus Christ our Lord (8^{39}).

Whilst Paul's theme in these chapters seems to be the salvation of man, and his reasoning upon it has been described as narrowly 'forensic,' he is in truth setting forth what amounts to an entirely new revelation of the innermost nature of God. John does the same. Having declared that God is Spirit and God is Light, he leaves it on record twice, before the canon closes, that God is Love (1 Jn $4^{8.\ 16}$). The meaning of this simply sublime utterance, which when it stands alone may easily be misunderstood, is found in iv.^{10} 'Herein is love, not that we loved God, but that he loved us and sent his Son to be the propitiation for our sins.' Strike out this fact, and the significance of the teaching of both Apostles is entirely changed. Leaving out the Cross of Christ, the discussion whether God is Love or no sinks to the level of the question, 'Is the universe friendly?'—an interesting but altogether different question, in which premisses, methods of proof, conclusions, and the very meaning of words are altogether altered.

It is impossible adequately to define love, but the conception which prevails in the NT is that of goodness spending and imparting itself to others in self-sacrifice. And the cardinal characteristic of its doctrine of God is that love in this high and sacred sense is His very essence. Each word in the definition must be raised to its highest power: goodness conceived of as consummate, incomparable, self-impartation beyond human power or conception, realized in self-sacrifice so complete that no word but 'infinite' describes it. Whilst some other religions may have risen to a part of this conception, that of the NT alone sets forth as its central feature a Holy God in uttermost self-sacrifice for the salvation of men. It declares the exaltation of God above the universe in His excellence and glory, but its Gospel is that He is also within the universe, and, especially in the history of man, loving, striving, suffering, agonizing, because only thus can His free and disobedient children be brought to love and to do His perfect will. The conviction that this doctrine—in itself stupendous and incredible—is true is based on certain facts of history and on the interpretation put upon them by those who lived nearest to Christ and understood Him best.

The light thus generated shines out on other aspects of the Divine nature and on all God's relations with the world, in ways which it is impossible to trace here. Providence is to be studied in the light of the Gospel. The dark places of personal, social, national, and racial history are illumined by the Cross. A theodicy is possible in the light of 'I, if I be lifted up from the earth, will draw all men unto me' (Jn 12^{32}), and 'He that spared not his own Son but delivered him up for us all, how shall he not with him also freely give us all things?' (Ro 8^{32}). Christ becomes the centre of human thought and the goal of human life if He is Himself accepted as the interpretation of human history. Christology is for the Christian the heart of all theology. The Eternal Word has relation to all the worlds, but for this world and for man's comprehension of the mind and heart and will of God, the Word of God is Christ. Such at least is the teaching of the NT at its highest point, and it claims to shine by its own light as the purest and loftiest revelation of the Divine known in the history of the world.

III. *THE FORMATION OF THE CHRISTIAN DOCTRINE OF GOD.*—The Apostolic writings attempt no metaphysical explanation of the new conceptions of God which unquestionably dominated the whole experience and life of the earliest Christians. The doctrine of Father, Son, and Spirit, as embodied in the baptismal formula, implied triunity. The threefoldness of the Divine manifestation and operations, as well as the underlying unity of the Divine essence, is recognized throughout the Epistles. That Jesus is Son of God as well as Son of Man, and that the Spirit is Divine and personal, closely related with Father and Son, is assumed, but no attempt is made to show how this is reconcilable with the monotheism which was an unquestioned and unquestionable axiom in the thought of the Apostles and their converts.

The next three centuries witnessed the unfolding of what lay implicit in this teaching. The relation between the earlier and later stages is usually described as 'development,' but that word does not necessarily indicate a process in which literally nothing is added but what was actually present in the germ. The more correct, though pedantic, biological term, 'epigenesis'—a progressive differentiation and integration—connotes more than the bare explicating of the implicit: it is rather the gradual organizing in one whole of elements which the separate constituents before organization did not possess. Unquestionably the changing environments of the Church through the centuries contributed largely to the shaping both of faith and of theology. Christianity furnishes an example of 'creative evolution' in which the energy of a new spiritual life adapts, assimilates, and utilizes, as

well as unfolds. From the standpoint of Christianity a believer in a living God can never resolve 'development' into a mechanical process governed by natural laws. For him the God who has revealed Himself in Christ is still the ever-to-be-known God who illumines His Church in all generations by His Spirit. The change from the heavenly Father of the Sermon on the Mount to the dogma of the Trinity in the creeds of Nicæa and Chalcedon has been described by Hatch and Harnack as a degeneration rather than a development, a corrupting of truth from its earliest simplicity, not an enrichment due to healthy and necessary growth. Such a conclusion is not lightly to be accepted. The formulation of partially realized faith is one thing; a tendency to desert the manifestation of the Triune God in experience and in history for abstract speculations concerning the interior relations of the Deity is quite another. Before the end of the 5th cent. illustrations of both processes appear in the Church, and it is necessary to keep in mind the distinction between them.

It is possible to test the legitimacy of development in the orthodox creed by means of a comparison. There were Christians in the primitive Church who took their stand on the OT and maintained its type of monotheism intact, except that Jesus of Nazareth—whether technically viewed as Messiah or not—was esteemed a prophet of exceptionally high and pure character, whose mission it was to conserve and purify the revelation of the Torah under a new covenant called the Gospel. Ebionites and Adoptianists (see EBIONISM, ADOPTIANISM) of various types preserved the OT conception of God, *plus* the acceptance of Jesus as a specially commissioned messenger from Him, one in kind with Moses and Isaiah, though far higher in spiritual degree. History has written its commentary on this doctrine, and proved that it was a specimen of arrested growth. Not along this line was it possible to carry on and carry out the teaching of Jesus Himself, of His interpreters Paul and John, and of the multitude of evangelists who in His name were beginning to regenerate the world. The Church of the 2nd and 3rd centuries, with the sacred traditions of the 1st held in trust, was called to fashion, under the guidance of the Divine Spirit, a conception of God such as would at the same time interpret Christian experience and mould Christian thought and life. That the Fathers of the Church were influenced by pre-Christian, especially Greek, thought, no one would attempt to deny. Probably pure Platonism exercised far less influence upon them than Alexandrian Hellenism, and some would rank the influence of Stoicism as still more potent. But it is in the use of philosophical terms, in forms of reasoning, and in general views of the relations between God and the world, not in essential views of God, that these influences are traceable. The vital germ of Christianity, implying a new conception of the relation between God and man in Christ—a conception not abstractly conceived in the intellect, but embodied in the experiences of thousands of devoted lives—was not lost or destroyed amidst the enveloping pressure of pagan ideas. On the contrary, the new religion assimilated some current views of the Divine nature that were not polytheistic, and made use of them for its own ends. Aristides, the first Christian apologist, illustrates this in the opening sentences of his defence:

'I say, then, that God is not born, not made, an ever abiding nature without beginning and without end, immortal, perfect, and incomprehensible.' Later he adds: 'The Christians know God the Creator and Fashioner of all things through the only-begotten Son and the Holy Ghost.'

Justin Martyr, philosopher as well as Christian, appealed to the idea of God innate in man (ἔμφυτος τῇ φύσει τῶν ἀνθρώπων δόξα [*Apol.* ii. 6]); and Minucius Felix (in his *Octavius*), following in his own fashion the example of Paul at Athens, argues that the unity of the order of Nature proves the unity of God, who is infinite, almighty, eternal, and who before the world was to Himself in the place of the world (*ante mundum sibi ipse fuit pro mundo*). Athenagoras does but represent all other exponents of Christianity, when, having established the unity of the Godhead by a philosophical line of proof, he proceeds to unfold the doctrine of the Trinity as the Christian way of conceiving that unity.

Gnosticism (*q.v.*), 'the first comprehensive attempt to construct a philosophy of Christianity' (see Harnack, *Hist. of Dogma*, Eng. tr., i. 226 f.), teaches chiefly by its failures. Gnostics of various schools furnished what were for the most part honest attempts to interpret Christ; but they did so in the light of preconceived ideas, some of which were incompatible with essential Christianity, and others inconsistent with its characteristic spirit. At this stage evolution took place by antagonism. The representatives of the Church learned some of their most valuable lessons by resistance to ideas of God thrust on their attention by the most active thinkers of the time. Monarchianism (*q.v.*), a reaction against the Gnostic tendency to interpose numerous orders of being between God and the creation, taught the unity of God in a modalistic, *i.e.* really anti-Trinitarian, fashion. For it the Son and Spirit have no distinct, personal existence, but are only modes in which the one God reveals Himself. Some of the Fathers, especially in the East, whilst avoiding this extreme, taught the subordination of the Son and the Spirit to the Father; and a tendency in this direction was for a considerable time present within, as well as outside, the pale of recognized orthodoxy.

1. Church doctrine of the Logos.—Amidst these diverging tendencies the Church built up a constructive doctrine, first of the Logos, then of the Trinity. Justin, Irenæus, Clement, and Tertullian are representative names amongst those who contributed to the earlier structure. The prologue of the Fourth Gospel formed the foundation. The Logos was eternal, not created, not emanating, but begotten, the Sonship of the 'Word' seldom being lost sight of. The Logos was not a mere creating and ordering Reason of God, impersonally conceived. Rather was He the organ of Divine revelation and operation in creation and history, and pre-eminently in redemption. The eternal purpose of God was realized in the Word Incarnate; the personal Logos took upon Him human nature that men might be partakers of the Divine. For Clement the Logos is 'the highest principle in the religious explanation of the world,' as well as the centre of the work of redemption. In nature, as in grace, He is the interpreter of the Father's attributes, being first the educator, then the Redeemer, of the human race. The work of the Holy Spirit was not at this stage ignored, though it was not elucidated and dwelt upon to the same extent.

The ideas concerning God which the Church had drawn from history and experience were not easy to express; the very vocabulary had to be created, and East and West were apt to misunderstand each other. Thus, if we find that by Tertullian and Origen, for example, whilst Christian thought was slowly crystallizing, phrases were used inconsistent with one another, or with the exact forms ultimately adopted, it will occasion no surprise. Technical phraseology, whether drawn from Roman law or from Greek metaphysic, was inevitable; but a true instinct was at work, now accepting and now rejecting the same

phrase, as certain associations seemed to render it serviceable, or undesirable, for the expression of underlying faith. The Godhead is 'one substance in three persons,' said Tertullian, employing Roman juristic terms, but the threefoldness is *non statu sed gradu, nec substantia sed forma, nec potestate sed specie* (*adv. Prax.* 2). The Three are one in substance, condition, and power, but are three in relation, in mode of existence, and in special characteristics. The Father is one, the Son is another, the Spirit is yet another; but these three are one (*unum*, not *unus*); there is no division of the one substance, though each of the three is a substantial existence with characteristic properties. Origen believed in God as the One Self-existent Source of all that is, a living Person, but only relatively knowable through the mediation of the Logos, who has personal subsistence side by side with the Father, is of one essence with Him, His perfect image, and Himself God (*θεός*, not *ὁ θεός*). The Word-Son is eternally generated, the process being continuous, timeless, and real; He is co-eternal with the Father. The Father possesses pre-eminence, the Son is subordinate in His derived being. Difficulties were created by Origen's language concerning the subordination of the Son,—though it was not of essence, but of person and office,—the Father being described as *αὐτοθεός*, the Son as *δεύτερος θεός*, whilst the Holy Spirit, who is recognized as Divine and above the category of creatures, has come into being through the Logos, and is described as inferior both to Father and to Son. Origen was a pioneer in a difficult region of thought, his own ideas had not worked themselves quite clear, and discrimination between them, with a just estimate of their relative value, was effected only by a process of controversy.

2. Nicene doctrine.—The rise of Arianism enabled the Church to distinguish between what it really held and what it might seem to hold. This heresy, which waged so long a war against orthodoxy, and at times appeared likely to gain the upper hand, was never strong in doctrine. It taught a Trinity consisting of one uncreated and two created beings—herein it was both illogical and irreligious, if creatures were to be worshipped. It represented Christ as a demi-god, and its whole doctrine implied retrogression towards paganism. The strength of Arianism lay in the fact that a large portion of Christendom was not yet Christianized, and that believers had not yet come to understand the real nature and implications of their own faith. The Nicene formulary, in insisting on *homoousios* to establish the Divinity of Christ, laid the foundation of the orthodox doctrine of God and His essential Tri-unity. The statement that in the one Godhead there are three Persons was never intended to mean three individuals, *i.e.* three self-conscious subjects and centres of personality as 'persons' are understood among men; nor merely three aspects (*πρόσωπα*) of one unitary Deity. As time went on, it was clearly laid down that there were three eternal subsistences (*ὑποστάσεις*), personal, distinct, but not separate, organic one to another and to the unity of the Triune God. Athanasius (*q.v.*) in his long and strenuous controversy was contending for real contact between God and men in a real redemption wrought out by a real Divine Saviour in the midst of the actual world. The philosopher, on the one hand, who taught that God operates continually in the world, could not preserve His personality distinct from the world, whilst, on the other hand, those who insisted on Divine personality tended to separate God from creation in transcendental isolation. If a historic Incarnation was to be preserved in the fullness of its actuality and redeeming power, it must be based on interior distinctions within the unity of the Godhead—a unity which is the home of distinctions realized and overcome. Athanasius contributed to the formation of a doctrine of God, by establishing not only the *homoousia* of the Son but also that of the Spirit as a necessary inference. The Holy Spirit is the Spirit of the Son; He is not a creature; He is the Giver of life and of celestial gifts—Himself God. Athanasius, like other leading Fathers, protests against being compelled to define relations within the Deity which are beyond human comprehension; but, finding in Scripture the word 'proceeding' used to denote the relation of the Spirit to the Father, he says that he will retain it as the best. The Arian controversy (see ARIANISM), which practically ended at Constantinople in 381, affirmed the faith of Nicaea on the basis that, while in the Godhead there is but one essence or substance (*οὐσία*), in that unity there are three eternal modes of existence, now called *ὑποστάσεις*, though that word had originally been synonymous with *οὐσία*, and the ambiguity had naturally been the source of some confusion.

3. The Trinity.—It is impossible here to trace the detailed stages by which the doctrine of the Trinity was finally shaped. The three great Cappadocian Fathers, Basil and the two Gregorys (see CAPPADOCIAN THEOLOGY), contributed to a clearer discrimination of ideas and a more accurate use of words. It is to them that the theological use of *ὑπόστασις* as above defined was due. Neither Origen nor Athanasius had made it sufficiently clear that in relation to God 'person' meant more than mere aspect or manifestation, and less than the exclusive individual existence which the word implies among men. The subject of personality, Divine and human, was not discussed in the 4th cent. as it has been during the last hundred years; and even now a clear and definite vocabulary remains a desideratum. But there was no doubt in the mind of the Greek Fathers that the three *τρόποι ὑπάρξεως*, or modes of subsistence, of the undivided Godhead were not three *πρόσωπα*, or aspects of a bare unity, neither were they three *οὐσίαι* which would imply three Gods; but all believed in *μία οὐσία ἐν τρισὶν ὑποστάσεσιν*, one Essence in three personal modes of subsistence, each with its characteristic properties, and each necessary to the One Indivisible Whole. The Godhead in itself and apart from the world is an inexhaustible living Being, neither a barren unity nor a divided multiplicity. The Father is the primal source, the Son the mediating power, the Spirit the executive energy; and every Divine act is to be understood as a working of the Father, through the Son, in and by the Holy Spirit.

4. Augustine.—The last stage is to be found in Augustine (*q.v.*). The East had throughout preserved an element of subordination in its theology, the Father being the sole Fount of Deity, the Son deriving His existence by generation, and the Spirit by procession. The equality of the Three was asserted, but a real meaning was attached to the idea of *τάξις*, rank or order; and the Greek Fathers resented any attempt at change which seemed to interfere with the *μία πηγὴ θεότητος*, the One Fount of Deity. Augustine, followed by the Western Church, taught that the Spirit proceeds from the Father and the Son, and made the co-equality complete. In the opening of the treatise he lays it down that 'the one and only and true God is a Trinity, and the Father, Son, and Holy Spirit are rightly said and believed to be of one and the same substance or essence.' Later on he explains that each Person is the undivided Deity, and that the three Persons are together the one God. Augustine destroyed what remained of subordination; but this was possible only by moving in the direction of

Modalism. The Father is conditioned by the Son and the Spirit, as the Son is by the Father. If the unity is conceived so that each Person is the undivided Deity, then the three appear merely as relations in the one Godhead. It is true that this differs from the older Modalism, which rested upon the idea of successive manifestations; from the very first, God is to be conceived as Triune. But this is possible only through a refining of the idea of personal existence, till it becomes a 'mode' only in the simplicity of the Godhead. Doubtless the Neo-Platonic element in Augustine's thought was responsible for some of the language he employed. But the analogies he used to illustrate the subject—especially his favourite one of intelligence, memory, and will in human self-consciousness—show in what direction his mind constantly moved. He preserved theoretically the tradition of three Persons in one substance; but himself emphasized, not the personality of each Person, but the personality of the One God, and he never overcame the contradictions more or less implied in his attempt to combine the philosophic and the religious standpoints. Harnack describes Augustine's speculations as an attempt to

'construe the most immanent of immanent Trinities and to sublimate the Trinity into a unity; and, just because it does this, it discards everything in the way of a basis in historical religion and loses itself in paradoxical distinctions and speculations, while at the same time it is not able to give clear expression to its new and valuable thought' (*Hist. of Dogma*, Eng. tr., iv. 130).

It is surely harsh to say, as Harnack here does, that the *de Trinitate* 'can scarcely be said to have promoted piety anywhere or at any time,' but the speculative tendencies of Augustine did unquestionably tend to draw men's minds off from the living realities of historical Christianity. Augustine, more than any other teacher, prepared the way for the barren refinements of scholasticism; he almost occupied its standpoint and anticipated some of its methods.

The idea, however, which underlay Augustine's lofty meditations on the subject of the Trinity was not peculiar to him. It came to be defined later as *περιχώρησις*, the intercommunion, or mutual interpenetration, of the Three Persons in the Trinity. John of Damascus, last of the Fathers and first of the Schoolmen (*c.* A.D. 700), gave currency to the word, and the thought which it expressed prevailed in East and West alike, though with a different emphasis. The Latin equivalents of the Greek were *circumincessio*, which implies the activity of mutual permeation, and *circuminsessio*, which denotes a mutual rest or abiding of each Person in the others. 'Co-inherence' is perhaps the nearest English equivalent; but, whatever word be used, it represents the thought that the whole Trinity is present in each Person, that each is so complete that it includes the others—a mode of speech which destroys the very conception of 'personality.' The idea first appears in Gregory of Nyssa, it was most fully developed by Augustine, and came to be the basis of orthodoxy in Scholasticism; but it has never been fairly interwoven with religious thought and experience in the actual life of Christendom.

5. The Creeds.—There is no small danger of losing sight of the main theme in the midst of discussion concerning the views of individual thinkers, however eminent. Controversies in the Church did not arise over the fundamental belief in one God, which was never questioned by any; nor, strictly speaking, were they concerned with the new revelation of God in Christ and the gift of His Spirit, which were the common heritage of believers. Questions did arise—and they were but slowly and with difficulty settled—as to the mode in which the altered conceptions of God could be most appropriately expressed amidst the environments of the Græco-Roman world of the 2nd to the 4th centuries. Faith in God the Father of all, in His Son Jesus Christ the Saviour of all, and in the Holy Spirit through whom Father and Son were revealed, formed the basis of all Christian creeds, and such trust was the animating principle of all Christian experience. It found very various expression, but it remains true that no Ecumenical formulation of the Christian conception of God was ever made. The chief records that have come down to us are as follows.

(1) *The Apostles' Creed*, an expansion of the baptismal *symbolum*, may be described as the creed of the catechumen. From the time when it consisted only of three or four clauses in the 2nd cent., down to its full development in its present shape in the 8th, this venerable Confession of Faith always retained its original character. It was never debated by authorities or adopted at a Council; slowly it grew as the expression of the working faith of the Western Church. It contains the statements, 'I believe in God the Father . . . and in Jesus Christ His only Son our Lord . . . I believe in the Holy Ghost'; but the inter-relation of these is not defined, and no doctrine of the Trinity, properly speaking, is attempted.

(2) *The Nicæno-Constantinopolitan Creed*, ratified at Chalcedon (451), is a theological document, shaped and re-shaped by successive Councils, its phraseology keenly debated and sharply defined. It was prepared for the purpose of excluding heretics, and its earliest form concludes with an anathema upon some of them. But in outline it consists of three parts that are not concatenated together. Its Christology forms its characteristic feature, and a doctrine of Christ undoubtedly implies a doctrine of God of a very significant kind; but here again no attempt at a definition of the mystery of the Trinity is attempted. It is otherwise with the Athanasian Creed.

(3) *The Athanasian Creed*—to use the modern misnomer for the anonymous *sermo* or exposition of Christian doctrine known as the *Quicunque vult*—emanated from the Western Church in the 6th century. It was a creed for the clergy, with accompanying comminatory clauses; and in its two parts it minutely defines the doctrine of the Trinity, and that of the two natures in Christ as intimately related to it. The teaching of Augustine and the phraseology of creeds in the 4th and 5th centuries are presupposed and adopted; but the document as a whole was never accepted by any Council, nor can it be described as an Ecumenical symbol.

(4) The *Te Deum*, on the other hand, was prepared for the purposes of worship, not to express nice metaphysical distinctions. Yet it embodies more adequately than any technical creed the faith of the Church, and the Christian conception of the God whom it adores—*lex orandi, lex credendi*. This lyric paraphrase of the Apostles' Creed, by whomsoever composed, is, as Luther said, a fine confession of the true faith of a Christian, as well as a hymn in which to praise God. The religious faith of the community, uttered by Paul in his solemn benediction, echoed by Clement of Rome and Ignatius, and repeated by every believer at his baptism, remained the same throughout, though only after the lapse of centuries were acceptable forms devised to express the deep convictions of the Christian heart. And throughout the generations the wisest teachers confessed with Augustine that the words that were used were at best inadequate for their purpose, and were uttered in reverence because, though speech was imperfect, silence was impossible. Scientific and speculative discussions have had their place, and metaphysical formulæ their value, in shaping the Christian doctrine of God; but it has never been forgotten that religious conceptions, when ex

pressed at all, can only be uttered in the language of religious faith.

IV. *Medi æval and Reformation Periods.*—For more than a thousand years the doctrine of God in the Christian Church preserved its character, substantially unchanged and unassailed. From Augustine to Kant, or from the Athanasian Creed to the period of the *Aufklärung*, or Enlightenment (*q.v.*), orthodoxy remained stationary. The phrase does not necessarily imply theological stagnation, but such movement as took place was within lines carefully laid down and steadfastly maintained. The work done lay chiefly in the direction of elaborating the content of the idea of God, filling up gaps, and attempting to answer difficult questions. But the gradual modification thus effected tended to make doctrine more philosophical and less religious, more complete on the speculative side, but less potent and real in practical life.

The writer known as pseudo-Dionysius exercised a wide influence from the end of the 5th cent. onwards. He attempted to blend some of the chief ideas of Neo-Platonism with those of the NT. Accepted at the time as the Areopagite of Ac 17[34], the 'first bishop of Athens,' Dionysius influenced both the scholasticism and the mysticism of the Middle Ages. His philosophy distinguishes between 'affirmative theology'—which teaches truth concerning the nameless supra-essential Deity in the form of symbols, historical manifestations, and ecclesiastical dogmas—and 'abstracting theology,' by means of which the devotee may rise from these temporal forms to the direct contemplation of the transcendent inconceivable Infinite and Absolute Being. Dionysius appears to identify this highest principle of Deity with God the Father; and, while he believes in the Trinity, to him Jesus and the Holy Spirit are but branches or channels through which the Divine enters into relation with human life. A system of 'heavenly hierarchy' was constructed, of which the earthly hierarchy is the reflexion and continuation, but its author never succeeded in making clear the steps of ascent and descent in his speculative scale of being; and his name is preserved in history chiefly because of the lasting impression he produced upon mediæval theology. Scotus Erigena, who in the 9th cent. heralded the approach of scholasticism, interpreted Christian doctrine in the light of Dionysius' teaching. His system was essentially pantheistic, and professed to lead from God, through the ideal and the real worlds, back to God. He attempts in his own way to solve the philosophical problem of the One and the Many by means of Scriptural doctrines and phrases to which he gives a meaning of his own. God is the supreme unknowable Deity, who yet manifests Himself in the manifold of creation. This process of unfolding is to be followed by the return of all orders of being back to the primal Unity, so that God may be all in all. The fundamental difficulty found in the presence of sin is met by resolving evil into a necessary factor of development which in due course will be overcome. Christ is the centre in this stupendous cycle of movement from God and to God, and Trinitarian phraseology is from time to time employed; but Erigena's scheme of existence is essentially philosophical rather than Christian, and was never accepted by the Church, though it exercised considerable influence on mediæval thought.

1. **Scholasticism.**—Scholasticism (*q.v.*) has been described both as the reproduction of ancient philosophy under the forms of ecclesiastical doctrine, and as the inculcation of Christian truth under the forms of Aristotelian philosophy. As a matter of fact it passed through various stages—ancient Greek metaphysics and orthodox Christian dogmas being blended in varying methods and proportions. But, at its best, scholasticism represents God as the origin, centre, and goal of all knowledge; all things are viewed in relation to Him; He is at the same time cause and end (*principium et finis*) of all thinking things, of all subjects, of all thought. Sacred science, *i.e.* theology, is pre-eminent in the teaching of the schoolmen; but close observation shows that, partly as regards their conception of God, partly through the methods adopted of reasoning about Him and His relations with men, and partly through the resultant views taken of human life, vanquished philosophy had at this time transformed, if not actually conquered, its conqueror. It is not possible, however, to generalize concerning scholasticism as a whole; for, during its rise, progress, and decay, from the 11th to the 15th cent., changes of various kinds are discernible. It is difficult for us now to estimate the influence upon the doctrine of God exercised first by Neo-Platonist and afterwards by Aristotelian principles, and by the prolonged philosophical discussion concerning universals and the Realist *v.* Nominalist controversy. But the names of Anselm (*q.v.*) and Abelard (*q.v.*) in the 11th cent. mark the rise of a movement of which Thomas Aquinas (*q.v.*) in the 13th constitutes the climax and crown, as Duns Scotus in the 14th represents its incipient decay.

Anselm's ontological argument in his *Monologium* for the existence of God was characteristic of the time, and the Christological argument of the *Cur Deus Homo?* sheds light upon the ideas entertained of the justice and goodness of God and the meaning of the Incarnation. Abelard's rationalism led him to interpret the Trinity in a Sabellian fashion and to explain the Atonement entirely in terms of the love of God and the impression made by Divine love in self-sacrifice upon the hearts of men. These two representative thinkers were not in reality so far apart as their respective mottoes *Credo ut intelligam* and *Intelligo ut credam* might seem to imply. Both argued *a priori* concerning the nature of God, their premisses being drawn nominally from Scripture, but in reality from quasi-philosophical ideas which belonged to their own time, and which had never passed through the searching fires of criticism. Abelard boldly challenged some assumptions of current orthodoxy, and his dialectic threatened to prove seriously destructive, but his fundamental ideas concerning the Deity did not seriously differ from those of his contemporaries. It may be said that Bernard the mystic and Abelard the rationalist presented complementary aspects of Christian thought, which were blended in different fashion in the philosophy of Aquinas and the poetry of Dante.

The general factors of development which prepared the way for Thomas's *Summa*, the standard theological monument of mediævalism, were such as follow. The pantheistic tendencies which have been described as characterizing the Neo-Platonism of Dionysius and Erigena produced a marked reaction. In time the genuine Platonism which had been handed on from Augustine to the earlier Schoolmen gave way before a revived Aristotelianism, the doctrines and methods of the Stagirite being used by Aquinas to establish and expand the truths of natural theology. God is defined as *primum movens immobile*, 'Mover of all, Himself unmoved the while,' and as *actus purus*, *i.e.* actuality without potentiality. The modes of proving the existence of God are chiefly deductive, being drawn from the nature of causality, the necessity of absolute being, and the need of intelligence in the great Designer. The metaphysical attributes

of the Deity—unity, infinity, self-existence, and the rest—are deduced in similar fashion. The proof furnished by Aquinas, that love necessarily constitutes the fundamental relation of God to the world which He has brought into being, stands in marked contrast to the idea and exposition of Divine love given in Jn 3^{16} and 1 Jn 4^{16}. Thomas insisted on the distinction between the teachings of reason concerning the existence and nature of God and the teachings of revelation. These latter must be received by faith on authority, since they could neither be discovered nor proved by reasoning. The dualism thus introduced has influenced Catholic, and to a large extent Protestant, theology ever since. Thomas rejected the pantheistic teaching which represented God as the essence of all things; he viewed Him as creator of all things from nothing, *i.e.* without pre-existing material—not from all eternity, but at a definite moment, when time began. This relation of God to the world is discernible and provable by *a posteriori* arguments. Man has the knowledge of God *naturaliter*, if he does not by evil-doing stifle and destroy it. The doctrine of the Incarnation, however, must be received on the authority of revelation. It implies a union between the Divine and human natures in the One Person of the Logos, the human nature of Christ being impersonal. God's nature, including the combined attributes of justice and mercy, made necessary the 'satisfaction' rendered by the death of Christ on the cross, and from this fountain spring all the streams of salvation needed by guilty man in a sinful world. Thomas was essentially a Realist; for him the ideal was the real in a truly Platonic sense. But, in analyzing and expounding the fundamental truths of the Christian faith, he used the categories of Aristotelian philosophy. In many of his arguments concerning the persons of the Trinity, their properties and functions, and concerning God's ethical attributes, His relation to the world, and His operations in it, Aquinas seriously modified, from the standpoint of philosophy, the data of revelation which he professed only to state and interpret. Christian theology for six centuries past has been largely moulded—for better, but to some extent decidedly for worse—by the speculative reasonings of this *Doctor Angelicus*. Long after the technical fetters of scholasticism had been broken, the movements of Christian thought concerning God were still too largely confined within the limits which the Schoolman had laid down.

2. Mysticism.—The relation between Scholasticism and Mysticism (*q.v.*)—those twin forces in shaping mediæval thought concerning God—cannot be defined in a word. The view that Mysticism represented a reaction against the extreme subtleties and logical analyses of the Scholastic method represents but a fraction of the truth, characteristic only of a few teachers at one particular epoch. Harnack's view (*Dogmengesch.* pt. ii. bk. ii. ch. vii.) is that Scholasticism is 'nothing but scientific thought,' though the science is in fetters. Mysticism is the presupposition of Scholasticism, because mediæval science based itself on piety. Piety prompts to thought, and thought in turn promotes piety. Where the knowledge of God is pursued for the sake of the inner life of the soul, it may be termed mystical theology; but, where the knowledge of the world in relation to God possesses an independent objective interest, the term 'Scholastic theology' is used. The two, therefore, neither run parallel to one another nor are in conflict with each other, but 'Mystic theology and Scholastic theology are one and the same phenomenon, which only present themselves in manifold gradations, according as the subjective or objective interest prevails' (Harnack, Eng. tr., vi. 27). 'Mysticism' is a word employed in such various senses that ambiguities are almost inseparable from the discussion of the subject. But Roman Catholic theologians distinguish between dogmatic, moral, and mystical theology, the last being essentially experimental and implying a pure and direct knowledge of God's inmost nature, obtainable only by a personal experience of the love of God as uniting the soul to Himself and transforming it in the process. In this sense, as Harnack says (*ib.*), 'Mysticism is the starting-point and practical application of Scholasticism'; but surely it is much more than this. In the Middle Ages, as always, it represents a transcendental method of attaining immediate spiritual knowledge, which leaves the dialectical methods of Scholasticism far behind. The mystical theology of Eckhart, for example, and of mediæval saints generally, whilst it was not theoretically in conflict with Scholastic theology, was in practice opposed to Scholastic methods because it professed to impart an intuitive knowledge of God as Absolute and Infinite by means of an intimate personal union with Him in self-surrender (see MYSTICISM [Christian]). This kind of knowledge could never be attained by the most elaborate processes of the logical understanding at work upon the data of revelation; and here the relation of Mysticism to the doctrine of God goes far beyond the results of Scholasticism. Harnack has, however, rendered the important service of showing that these and other apparent antagonisms in the mediæval doctrine of God are not ultimate. Anselm and his opponents, Bernard and Abelard, the German mystics of the 14th cent., and those who pronounced them heretics, were not inherently and fundamentally opposed to one another, but were travelling by different paths which led at last to the same goal.

3. Schools of mystics.—Mysticism is neither Catholic nor Protestant, though it took differing and characteristic forms in Latin and in Teutonic minds. The connexion between the idea of God and man's mode of attaining communion with Him is very close. Hugo of St. Victor in the 12th cent. unites two modes too often disjoined, of conceiving and approaching God, when he says:

'In two ways God dwells in the human heart, to wit, through knowledge and through love; yet the dwelling is one, since every one who knows Him loves, and no one can love without knowing. Knowledge, through cognition of the Faith, erects the structure; love, through virtue, paints the edifice with colour' (*de Arca Noe morali*, i. 2 [*PL* clxxvi. 621]).

The contemplation of God on which the Victorine school, with its Platonizing tendencies, laid special stress stood midway between the logical analysis of Abelard and the emotional fervours of Bernard of Clairvaux (*q.v.*). Bonaventura later furnishes an excellent example of clear thinking concerning the Trinity and the Divine attributes on the lines accepted by the Church, combined with deep devotional feeling and an insistence on the necessity of religious experience for the attainment of any true knowledge of God.

'Through faith Christ dwells in our hearts. This is the knowledge of Jesus Christ, from which, as from a source, comes the certitude and understanding of the whole Scripture. Wherefore it is impossible that any one should advance in its knowledge, unless he first has Christ infused in him' (*Breviloquium*, Prologus, Quaracchi ed., v. 201. For these last two quotations, see Osborn Taylor, *The Mediæval Mind*, ii. 367 and 409).

The school of German mystics, represented mainly by Eckhart, also by Tauler, Ruysbroek, and others, exhibits the tendency—always more or less inherent in mysticism—to lose theological landmarks in unbridled and formless speculation. Eckhart was not a Pantheist, but he often writes like one. For him the Godhead is impersonal, for ever hidden and unknowable. God, however, reveals Himself in a trinity of persons, the subject of Divine knowledge being the Father, the object

being the Son, while the Spirit is the mutual bond of love whereby they are united. The world is in God, not God in the world; time, space, creaturely life are nothing in themselves. It is the duty of man by an act of intuition, which includes intellect, feeling, and will, to realize direct union with the Absolute; and so, in Origen's phrase, the end will be like the beginning, all will return to God, and the Many will be lost in the One, from whom (or from which) all have originally proceeded.

4. The Reformation.—At the time of the Reformation no controversy arose concerning the doctrine of God, so far as creeds and formularies were concerned. The Decrees of Trent reaffirm the Nicæno-Constantinopolitan Creed with Western additions; it is noteworthy that no attempt at reconstruction was made on the lines of Aquinas. The Confession of Faith then passes to the subjects of Original Sin, Justification, and the other points of immediate controversy, with which also the Reformed Confessions were mainly occupied. The first article of the Augsburg Confession, however, after reaffirming 'the decree of the Nicene Synod concerning the Divine essence as true and without doubt to be believed,' proceeds thus:

'To wit, that there is one Divine essence which is called and is God, eternal, without body, indivisible (*impartibilis*), of infinite power, wisdom, and goodness' . . . 'and that yet there are three persons of the same essence and power, who also are co-eternal, the Father, the Son, and the Holy Ghost. And they use the name of "person" in that signification in which the ecclesiastical writers have used it in this cause, to signify, not a part or quality in another, but that which properly subsists.'

The corresponding Anglican article runs:

'There is but one living and true God, everlasting, without body, parts, or passions (*impartibilis, impassibilis*): of infinite power, wisdom, and goodness; the Maker and Preserver of all things, both visible and invisible. And in unity of this Godhead there be three Persons, of one substance, power, and eternity: the Father, the Son, and the Holy Ghost' (Art. i.).

None the less, the Reformers exhibited a change of tone and of emphasis, though not of definition, in their teaching concerning God. Luther in his Small Catechism lays the stress where Scripture lays it, and he was wont from time to time to criticize the use of the term 'Trinity' as a 'mathematical' word, saying: 'Since it is not in the Scriptures and sounds cold, we shall do much better to speak of God and not of the Trinity.' Luther dwells often upon God as a loving Father, ready to forgive and providing for men a free salvation. But he is careful to say that this means 'God in Christ'; all knowledge of God outside Christ reveals Him as a righteous Judge, wroth with sin and stern in punishing the guilty. It is the work of Christ as Redeemer that makes forgiveness possible, and opens up communion with the Father for His rebellious children. It is Christ as Saviour, not as Eternal Word, that Luther preaches, though his doctrine of salvation loses its meaning if the Eternal Word did not become flesh and dwell among us as Jesus Christ our Lord.

A distinction between Luther and Calvin is discernible—still more marked between Lutherans and Calvinists—in the conception of God which appealed to them respectively. Calvinism is a 'theology' indeed, a doctrine of God throughout the length and breadth of its teaching. The glory of God is exalted, all else is banished or abased. God is celebrated in His omnipotence and omniscience, in His sovereign and inscrutable will, in the grandeur of His eternal, unalterable decrees, God in His soleness and absoluteness, in the accomplishment of His will rather than in the manifestation of His character, a will that instantly silences opposition and irresistibly effectuates its own purposes. Lutheran Christology, on the other hand, admitted a closer approximation of God to man than orthodoxy had always allowed. It emphasized the love of God manwards, the self-emptying on the part of the Eternal Son, the quasi-deification of His humanity in the doctrine of the *communicatio idiomatum*. The contrast between Lutheranism and Calvinism furnishes a striking example of the fact that theoretical identity of creed is consistent with almost incredible divergency of spirit and temper.

5. Protestant theology.—The 16th and 17th centuries are marked by the establishment of a kind of Protestant Scholasticism. The post-Reformation theologians in their doctrine of God fell back on Scholastic categories, and laid down laws in their definitions of Deity which have been observed by their followers ever since. The second chapter in the Westminster Confession of Faith, 'Of God and of the Holy Trinity,' is a standing illustration of this in its definition of the One Being who

'hath all life, glory, goodness, blessedness, in and of himself; and is alone in and unto himself all-sufficient, not standing in need of any creatures which he hath made, nor deriving any glory from them, but only manifesting his own glory in, by, unto, and upon them:—he hath most sovereign dominion over them, to do by them, for them, or upon them, whatsoever himself pleaseth.'

God in His essence is defined as an infinite and eternal Spirit, His metaphysical and moral attributes are carefully mapped out, and an exposition of the doctrine of the Trinity on orthodox Catholic lines follows. But in the systematized doctrines of God of the 16th and 17th centuries, there are indications of constituent elements not yet sufficiently harmonized. The idea of the philosophical Absolute, God as the ultimate reality in the universe, the self-sufficing Deity of abstract thought, appears in them. There is present also a metaphysical conception of the Trinity as it had been developed through centuries of Catholic teaching. But at the heart of the whole is the living God of the Bible, the revelation of the Father in the Son of His love, the ever present Friend and Saviour of mankind; and in the whole thus presented there are unresolved antinomies. The question how the philosophical and speculative elements in these definitions were to be harmonized with the purely religious teaching of the OT and NT had hardly emerged. In the passionate conflicts which shook Christendom to its foundations in the 16th cent., it was taken for granted that Catholics and Protestants alike worshipped the same God and accepted the same fundamental conceptions of Him.

V. *The Modern Period.*—The date from which a 'modern' movement in thought is to be reckoned depends upon the subject handled and the standpoint occupied. For some purposes, in the study of theology the 16th cent. forms the watershed between mediæval and modern ideas; but the critical investigation into the foundations of Christian Theism begins with Kant and the 'Enlightenment' of the 18th cent., whilst the scientific and philosophic movements which have affected the Christian doctrine of God belong chiefly to the 19th century. The progressiveness of Christian Theism within its own lines is a marked feature of the period, and there can be little question that the ideas of God entertained by representative Christian thinkers during the last half century have been none the less profoundly, because silently, modified, without necessarily losing their essential Christian character.

1. Deism.—The Deistic movement in England, with which may be associated the revival of Arianism in the early years of the 18th cent., affected orthodox thought only indirectly. Deism (*q.v.*) was a philosophy of the universe rather than a religion; it taught the existence of a God, but, as Kant said, not of a living God. Essentially

rationalistic in their methods, the Deists recognized the Ultimate Being only as a transcendental cause of the universe. They criticized revelation if they did not entirely deny its reality, they rejected the supernatural and all claims of authority in religion, while they asserted the doctrines of Providence, moral government, and Divine rewards and punishments. Bishop Butler answered them by showing the unreasonableness of accepting a bald natural theology with an absentee Deity, whilst refusing to recognize the analogous and superior claims of revelation; and Paley contended that the cosmological argument on which the Deists relied to prove the existence of the Deity in whom they believed necessitated an advance to teleological and moral arguments in proof of a living God who had not left the mechanism of Nature to run by the mere operation of its own laws. But the full reply to Deism was not possible in the 18th century. That came later, with a deeper and more adequate understanding of the two terms, Nature and God.

2. **German theology.**—Kant promoted advance by criticism. His keen examination of the currently accepted 'proofs' of the Divine existence was carried out on the lines of a critical philosophy which denied all direct knowledge of ultimate realities. For him God was but one of the 'ideas' of pure reason, or postulates of the practical reason, whilst his strenuous assertion of the claims of the practical reason led to a permanent strengthening of the moral argument for the existence of a righteous Ruler of all. Kant's criticism of time-honoured traditional arguments was undoubtedly serviceable to Theists by leading them to test the soundness of their foundations, but the critical philosophy could not, any more than Deism, bring men into the presence of the living God. Kant's religion found no place for prayer, and resolved itself into a Divinely sanctioned morality. Hegel's epoch-making work in philosophy profoundly affected theology, especially his exposition of the relation between God and the world, and his claim to have rationalized the Christian religion and its doctrine of the Trinity. The Hegelian logical process of thesis, antithesis, and synthesis, as applied to religion, meant that the Absolute externalizes itself in Nature and comes to itself again in Spirit: that God in the process of historical development becomes self-conscious in finite spirits, and especially in Him whom Christians believe to be God manifest in the flesh. Hegelianism dissolves religion in metaphysics, and the terms used undergo a philosophical metamorphosis. Hegel's followers differed in their interpretation of his religious teaching, the right wing maintaining the personality of God in Himself apart from creation, and the doctrine of the Incarnation practically as taught by the Christian Church; the left wing—on the whole with more logical consistency—adopting a kind of evolutionary Pantheism. Schleiermacher's teaching blended philosophical and religious views of God without really reconciling them. He vindicated the place of religion as a fundamental and universal element in human experience, making its essence to consist in 'feeling'—in a wide and deep sense of the word. He helped to renew religion in Germany by his revival of the claims of devout consciousness as immediate, self-vindicating, and independent of the processes of reasoning on the one hand and the forms of morality on the other. But in the philosophy which underlay all his teaching, the explanation of religion is found in the infinite universe coming to self-consciousness in man. In Schleiermacher's earlier teaching the doctrine of the personality of God was conspicuous by its absence; personality appeared to him a limitation; and his glowing and attractive exposition of Christian teaching, which he seeks to free from traditional accretions and excrescences, does not conceal the fact that in his view we have no objective knowledge of God as He is in Himself, whilst the revelation given in Christ implies only that in Him human God-consciousness found historically complete realization. The fundamental idea of Schleiermacher's theology is that in 'God,' not necessarily viewed as personal, is found the identity of the ideal and real, which in the world exist as opposites. He is Sabellian, if not Pantheistic, and mysticism is of the essence of his religion. The redemption which he proclaims as characteristic of Christianity does not imply God in self-sacrifice for the salvation of men, but a gradual perfecting of human nature through communion with the Christ in whom human God-consciousness has been attained in perfect and consummate measure.

Lotze as a philosopher largely influenced the theology of the later 19th century. He asserted the knowledge of reality in and through phenomena, and followed Leibniz in his affirmation of the personality of God. True reality according to him is

> 'not matter and is still less Idea, but is the living personal Spirit of God and the world of personal spirits which He has created. They only are the place in which Good and good things exist' (*Microcosmus*, Eng. tr., ii. 728).

Ritschl, on the other hand, who was in some respects a disciple of Lotze, based his theology upon a practically Kantian epistemology. He distrusted metaphysics, hated mysticism, rejected natural theology, and based his teaching on the NT, as inculcating a practical knowledge of God and a religion of redemption sufficient for man's needs. God in Himself is unknowable; but an objective knowledge of Him sufficient for salvation is revealed in Christ, who has for us the value of God. Accordingly, the Fatherhood of God, His love manifested in Christ, is determinative of His nature and of all His attributes. Love is, however, not set forth as in the doctrine of the Trinity, characteristic of God in His own essential being, for this is unknown, but it describes His relation to man as seen in Christ and as operative in the upbuilding of the Divine kingdom in the world. A religious agnosticism of a kindred type was inculcated in England by Mansel, following Sir W. Hamilton in his philosophical principle that 'to think is to condition.' Hence God cannot be known as He is by human thought, though specific doctrines of revelation, such as the Trinity and the Incarnation, have been granted for the guidance of men and may be defended as knowledge regulative but not real. A direct knowledge of God being impossible, the truths of revelation must be accepted as authoritative, in spite of the contradictions which they necessarily imply. But religion based on scepticism has never been far-reaching or long-lived.

3. **Christology.**—Every doctrine of Christ implies a corresponding doctrine of God. The chief feature of the Christologies of the 19th cent. has been their Kenotic character. A growing tendency has been discernible to adopt a humanitarian doctrine of Christ, with its correlative Unitarian doctrine of God. But, apart from this, many teachers within the pale of orthodoxy have shown a disposition to desert the Chalcedonian doctrine of the two natures in one Person; and, starting from the real humanity of the historic Jesus, have sought to combine with it a doctrine of His true Divinity by asserting such an exinanition, or self-emptying, on the part of the Eternal Word as made it possible for Him to exist within the measures of human nature. Kenotic theories differ considerably in detail, but they agree in insisting

upon the one Divine-human life of the Incarnate Word, the human not being raised to the level of the Divine, or absorbed in it, but the Divine strictly limiting itself within the bounds of the human. Thomasius, Gess, Martensen, and Dorner in Germany, Godet in Switzerland, and Fairbairn and Gore in England, represent varying shades of Kenotic doctrine. The self-emptying is sometimes understood as implying the entire abnegation of some Divine attributes, such as omnipotence or omniscience; sometimes it implies a virtual transformation of the Logos into a human soul. The doctrine as taught by Martensen is based upon a twofold existence of the Logos—in the bosom of God as Eternal Reason, and in the form of man as a holy redemptive Seed. In Dorner's exposition, Kenosis takes the form of a progressive Incarnation, such that the self-communication of the Logos gradually increased during the life of Jesus from His conception till His ascension. In any case the mystery of the Incarnation is not solved, though some types of Kenotic doctrine have helped to remove difficulties which had long hampered thoughtful believers. It is to be borne in mind that the 'emptying' of Ph 2^{8} is the laying aside of status, dignity, and glory, not of the essential nature of Deity implied in *μορφή*, which is retained throughout. Kenotists have impressed on the minds of recent generations certain fundamental Christian truths, such as that it is the glory of God to limit Himself in love for such a purpose as the salvation of the human race; also that the reality of the human nature of Christ must not be lost sight of, or overlaid, through a desire to honour the Divine in Him; and that it is safer and more truly Christian to rise from the historic Jesus to the Word Incarnate than to reason *a priori* from man's conceptions of what the Divine is likely to be, or must be. Every form of Kenotic doctrine, however, which weakens the belief that 'very God' was made flesh in Jesus Christ touches the living core of Christian faith, because it tends to undermine the work of redemption, whilst seeking to explain the inexplicable in the doctrine of the Incarnation.

4. Modern Theism.—The Christian doctrine of God is Theism raised to its highest power. Consequently it is affected by all current thought which bears upon Theism, as well as by Biblical criticism and investigations concerning the historical Christ. The two currents of thought that chiefly influenced theistic doctrine during the later 19th cent. were the remarkable development of physical science and the spread of idealistic philosophy. The Materialism, Naturalism, and Agnosticism which dominated Western civilization for some decades were simply foes to be resisted by all who believed in a living personal God. But in process of time it was seen that a mechanical explanation of the universe was incredible and impossible; whilst from an idealistic view of Nature, as well as from the wealth of knowledge concerning its phenomena and laws that has been amassed by science, Theists have naturally learned much, and Christian conceptions of Deity have been imperceptibly deepened and enriched, without losing their essential character. It is impossible in a paragraph even to enumerate the gains that have resulted from this lifting of veil after veil from the face of Nature and the consequent heightening and deepening of the vision of God. The dawning conception of the vast reign of law, with the new enlargement and confirmation given to it in every department of knowledge, the establishment of evolution as the mode by which Nature works, the relations between mind and matter as exhibited by modern psychology, the proved dominance of spirit in the operations of natural and material forces, the scientific study of humanity, its genesis and history on the earth—these are but a few examples of the workings of the modern mind which have led to a wider and truer apprehension of the being and nature of God, as understood by the Christian Theist. Conflict between the conceptions of God as seen in Nature and in history, in law and in grace, in tradition and in fact, has inevitably arisen, and there have been periods when it appeared as if the two diverse points of view would be pronounced incompatible. But so it has always been during a period of assimilation of new knowledge, especially when it has been rapidly acquired. The process of separating between the abiding and the transitory in traditional ideas, between the sound and the speculative in new theorizings, cannot be readily carried out; and, whilst it lasts, a strife arises not between religion and science, but between mere time-honoured traditions of the past and mere hasty speculations in the present. The result thus far has been to lay the foundations of a truer and fuller belief in God, as the ultimate postulate of all thought, the ultimate ground of all existence, and the ultimate presupposition of all that makes our actual experience possible. Steering between the rocks of crude mechanical explanations of Nature on the one hand and the whirlpool of a Pantheism which would merge the very idea of God in the natural self-evolution of Absolute Being on the other, modern Theism has learned to set forth the living God as an ever-present Energy in a universe which in its origin and history has been always dependent on Him for existence. Herbert Spencer declared that amidst all the mystery of our inscrutable existence 'there remains the one absolute certainty that we are in the presence of an Infinite and Eternal Energy, from which all things proceed,' but that it is unknowable (*Eccles. Inst.* p. 843; cf. *First Principles*, pt. i. ch. 2 [ed. 1900, p. 34]). Contemporary Theism, accepting his premiss, has interpreted the unknowable 'actuality lying behind all appearances' as the living personal God with a fullness and richness never possible before. The very considerable literature that has appeared under the auspices of the Gifford Lectureship has borne witness to the activity of very various minds in this direction.

Modifications in the idea of God have taken place, which cannot be briefly described. They have affected what are known traditionally as 'proofs' of the Divine existence—really analyses of the processes by which human thought rises Godwards, unfoldings of what is rationally implied in all human experiences. Natural theology has been modified, including the ideas of creation, miracle, and the whole relation between the natural and the supernatural. The transcendence of God taught by the Jew and the Muslim, accepted by the Deist and by the orthodox Christian in the 18th cent., is combined by the Theist of the 19th with a belief in His immanence, stress being laid on the latter in all recent attempts to expound the relation between God and the universe which He has brought into being. The meaning of the words 'God' and 'man' has been re-examined, and the nature of personality in both has been more fully investigated, with the result that Biblical teaching concerning their mutual relations has been illumined with a new significance. Theodicy has necessarily been modified, as the facts underlying every attempt to justify the ways of God to man have multiplied and changed their shape. The old world-problems of pain and evil have not been solved; the methods and ends of Providence have not been fully explained, but they are better understood, and the reasons why, in the nature of things, they can never be com-

pletely comprehended in this life have been brought home as never before. The result has been that many age-long enigmas represent now an 'overcome standpoint'; and the idea of God has been indefinitely widened and deepened by an inclusion of some of the standing antinomies of life in the order of His eternal purpose.

5. **Divine immanence.**—It does not lie within the scope of this article to dwell upon these modifications in detail. But no account of the doctrine of God in the modern period would be complete without a comment upon its most marked feature —the Divine immanence in the world. The phrase bears many meanings; it is here understood to refer to the newly emphasized belief that God is the ever-present, ever-active ground of all finite existence, that He is not only the cause and origin of all creatures and their powers and activities, but that always and everywhere He sustains and informs the universe, the whole world of things and of spirits being continually dependent on Him 'in whom they live and move and are.' The quotation of well-known words shows that the thought is old, but its application in the 19th cent. indicates that the theology of the 20th may not improbably be transformed by it. Instead of insisting upon a sharp opposition between God and Nature, God and the world, God and man, God and the history of finite spirits, the theology of the last half century has tended to trace the operation of God as seen in the ordinary workings of Nature, in the very constitution of man, and in the developments of nations and of the human race in its long and complex history. Dualism in all these departments is preparing the way for Monism, of one type or another.

It is clear that for the Theist this process is accompanied by dangers. If Theism is maintained in its purity, the transcendence of God as of One whose infinite Being and resources are not exhausted by, or identical with, the universe will never be lost sight of. The fundamental distinctions between the Infinite Spirit and all and each of the finite spirits dependent upon Him, and the eternal contradistinction between good and evil, moral light and moral darkness, must never be effaced or slighted. The philosophy which refuses to set the One over against the Many, and seeks to find the One only in the Many, is inconsistent with true Theism. Reality would thus be resolved into the organic unity of opposites, and individuals would become only elements, or factors, in one indivisible whole. Deism banishes God from the universe, but all forms of Pantheism imprison Him in it. If the Eternal Spirit only 'realizes Himself' in finite spirits, and the Absolute only 'comes to consciousness' in the facts of history, the essential meaning of the word 'God,' the significance of evil, and the nature of religion are alike completely altered. Neither pure Theism nor real Christianity can be erected upon this basis. But short of this, there is abundant room in the Theistic and Christian conception of God for a fuller stress to be laid upon the abiding, informing presence of God in the universe than was possible in the 18th century. The chief contribution of the 19th to the doctrine of God is the development of thought in this direction. Elements of crude anthropomorphism, ideas of externality, and a dualistic opposition between God and Nature, which had lingered in Theistic teaching, are now rapidly disappearing. Influences of various kinds lead the modern mind to find its rest in the thought of a Deity informing the universe from within, as well as ordering and controlling it from without. Creation, preservation, Providence, and all progress of human thought and civilization as directed by God are best understood from this standpoint. The supernatural is intelligible in proportion as it is not severed from the order of Nature which it transcends, and revelation can be best understood when it is not opposed to that continuous operation of the Divine Spirit which guides and illumines the thoughts of all mankind.

6. **Divine personality.**—Religion is bound up with the doctrine of the Divine personality; philosophy has been for the most part opposed to it. But there need be no discrepancy between the idea of God viewed as the ultimate entity in philosophic thought and God as the ultimate ground of religious trust and hope. The philosophy of religion to-day, so far from accepting the position that to attribute personality to the Infinite limits and lowers the conception, rather lays stress on the category of personality as the only one that suffices for a worthy conception of Deity. Force and cause and substance are not ultimate in a true conception of essential being; only a Person represents existence by, in, and for itself. Personality must, of course, be rightly understood, not identified with the imperfect forms of it characteristic of finite spirits. Even amongst men it implies intelligence, feeling, and will; it is characterized by self-consciousness, and implies self-determination. As such it forms the highest category of existence that we know; even Herbert Spencer urges that the Infinite Energy on which all things depend cannot be less than personal. The Absolute must be Absolute Intelligence, and this carries with it, as implicate, Absolute Will. To assert this of the Infinite Deity is not to limit Him; to deny it constitutes the real limitation. A person knows; a thing is known. Such measure of personality as man possesses is the one source of infinitude within him; by virtue of it he grows in knowledge and power, and is *capax infiniti*. The unquestioned limitations amidst which human personality is realized arise from the conditions under which it is being developed, not from the vital principle itself. The God of Theism is not the Unconditioned, out of all relation with the universe, nor is He the Absolute, in the proper sense of that much abused term. But He is Infinite Spirit, possessed of personality in a sense that can be predicated only of the Infinite —consciousness, knowledge, feeling, will, each at its highest, and all indissolubly blended in the unity of immediate, inalienable Self-existence. Some of the speculations of Aquinas in the 13th cent. have taken more definite and abiding shape and become the assured possession of the philosophy of religion in recent years.

7. **Christian doctrine.**—Theism, however, is not Christianity. As interpreted by some, a bare theistic doctrine of God has even stood in the way of the acceptance of the Christian gospel. The God of some theistic philosophers could never become incarnate. Christian Theism, rightly understood, only carries to completeness the conception of Deity implied in the definition of an Infinite and Eternal Spirit, perfect in wisdom, righteousness, power, and love. Christianity is nothing if not a religion of redemption, and the Christian idea of God is inseparably bound up with the doctrine of Divine Incarnation for the salvation of men. Given a God of infinite compassion, and the existence of moral evil in man as dire and deep-rooted as the Bible declares sin to be, then grace is as necessary a part of Divine self-revelation as Nature. A God who humbles Himself and suffers in order to redeem, because only thus can the redemption of finite spirits be effected, becomes more than credible. A supreme manifestation of holy love in action is demanded alike by the needs of man and the nature of God. Theories as to the kind of mediation necessary to set right the disturbed relations between the Father of Spirits

and His children are still various, as they have been throughout the history of the Church. But new light is continually dawning upon the minds of men as to what is implied in a Redeemer-God, and the Christian doctrine of God is continually illumined by it. The study of history and of the facts of human life, the fuller understanding of human nature yielded by modern psychology, the development that has taken place in ethics and ethical standards, and the stress laid by such writers as Eucken upon the life of the Spirit have combined to confirm the Christian doctrine of a God who, as essential love, has proved the Divineness of His regard for men by giving Himself in uttermost self-sacrifice on their behalf. The kind of redemption set forth in Christianity is as different from the release from the Wheel of life in Buddhism as the fundamental idea of God differs in the two religions. A living, personal God of holy love delivers from sin in the cross of Christ, whilst a religion practically without belief in God and the soul can promise cessation from the four woes only by a long journey on an eightfold path leading to the happy absorption and disappearance of individual existence.

8. The Trinity.—Belief in an incarnate and redeeming God leads the mind beyond Unitarian Theism. In modern light it is seen to imply a richer and more adequate conception of God than that set forth in Judaism and Muhammadanism. The Christian doctrine of the Trinity cannot, however, be arrived at by philosophical reasoning, though a verification of it may be constructed from the standpoint of the higher Reason. In recent expositions the doctrine has chiefly been dwelt upon as the earliest Christians understood it, as one of revelation and personal experience. It best explains the facts of Gospel history, the teaching of the Apostles, and the religious experiences of believers in Christ from the first until now. Such a doctrine makes it easier to apprehend, however imperfectly, the meaning of personality in the Godhead and the true significance of thought, goodness, and love, as existing eternally in the Divine nature, by its indication of interior distinctions in the Godhead which do not impair unity. It avoids the extremes of Deism and Pantheism, preserving elements of truth in each with regard to the relation of God to the world. Trinitarian doctrine, however, did not originate in speculation, and it is not propounded to-day on *a priori* grounds arising from the nature of Deity. It commends itself to faith as the best expression of the fuller revelation of God which was given in Christ, and of the rich and many-sided communion with Him made possible in the gospel. In some important respects the phraseology of the 4th cent. does not express to men of the 20th what the Fathers of the Church intended to say more than a thousand years ago. 'Substance,' 'nature,' and 'person' do not mean precisely what οὐσία, φύσις, ὑπόστασις, and πρόσωπον meant to Athanasius, Nestorius, and Cyril, nor have the three English words always preserved the same meaning. The modern idea of personality would perhaps have been unintelligible to the Fathers at Chalcedon; and changes in that idea, subtle but significant, have taken place even within the last half-century. The theological phraseology employed to describe religious truth may well be varied as the generations pass. But the simple, untechnical language of the NT concerning Father, Son, and Spirit, Three in One and One in Three, whatever various comment it may receive, remains the highest and the best, as it was the earliest, expression of what the sacred name GOD means in the Christian religion.

GOD (Buddhist). — A general statement of Buddhist belief with regard to the Divine, and of the conception which Buddhists generally have formed of God, presents considerable difficulties—less on account of the complexities of the belief in itself than by reason of its many-sided character, and of the very various views that are held in the many Schools of Buddhism. The sects of the Hīnayāna and the Mahāyāna are as far apart in their doctrine of God as in any other article of their loosely-knit, respective creeds, and perhaps further. Both have departed widely from the position of primitive Buddhism, as formulated by Gautama Buddha himself, according to the usual interpretation of his teaching on this subject. There is, indeed, little evidence that that teaching was ever actually put into practice beyond a narrow circle, or the generation of his immediate followers and disciples. By its philosophic detachment and refusal to make concession to the natural desire of the human heart for some external support and supernatural aid in the conflicts of life, it set itself in opposition to the universal tendencies of religious thought and the cravings of the religious life, and—probably inevitably—while appealing to the few, lost the support of the majority of mankind, whose needs it thus failed to meet.

It is probably an erroneous view of the original teaching of Gautama Buddha which explains his attitude as entirely and of set purpose atheistic; as construing the universe in a materialistic sense, and denying the existence of a God. That he interpreted the universe in the sense indicated is in all probability true; and his views in this respect were derived from the ancient doctrine of the Sāṅkhya philosophy, which in India professed to explain everything in terms of soul and matter (*puruṣa* and *prakṛiti*), and to have no need for the

intervention of a Divine power. The latter view, however—that the founder of Buddhism intended to give expression to distinctly atheistic views—seems to be a mistaken inference from the response which he is recorded in the Buddhist books to have given to the questioning of his disciples with regard to another world, and his refusal to offer any definite instruction on the spiritual and unseen, or to illuminate, with any ray of light which he was competent to give, the uncertainty and darkness of the unknown realm that lay beyond the touch of sense. To all requests for enlightenment and teaching on the subject of the supernatural he steadily, if the record of the sacred books may be trusted, opposed a negative. The redaction of these books is, of course, many centuries later than the period at which Gautama lived. There is no reason, however, to doubt that in this respect they correctly report his views.

The inference, however, that he intended to imply personal disbelief in the supernatural and in the existence of a God, and to urge or enjoin this upon his disciples, is certainly mistaken. As 'enlightened' and in possession of the true and perfect *bodhi*, which he had gained after so many years of strife and endeavour, it is most unlikely that he meant to indicate that in this one particular—a subject of so transcendent importance—his insight was defective, and that he was unable of his own personal knowledge to satisfy inquiries as to the other world and its Ruler. Such a disclaimer would be entirely out of harmony with the attribute of omniscience, to which as *Tathāgata* and *Buddha* he laid claim, and which in other respects his teaching seems to have uniformly implied. Neither apparently did his hearers understand him in any such sense. The significance of his reply was rather this, that his disciples were to rely upon their own unaided efforts for deliverance from the misery of the world and of existence, not upon possible external aid; and that the question whether there were a God and a hereafter was of no moment for the obligation and duty of the present. The position which it was his purpose to adopt was neither atheistic, nor, in the strict sense of the term, agnostic. But for his hearers it was immaterial whether the reply were in the affirmative or negative; and speculation on the subject was discouraged or forbidden, lest it should impair or destroy that firm spirit of self-reliance which it was his object to arouse in their hearts. A declaration of ignorance on so momentous a subject would have been entirely at variance with his claims as a teacher of the truth, enlightened in regard to all the secrets of the universe, and of man's course and destiny therein. He simply refuses to communicate to his disciples knowledge which he judges to be needless for practical life, and the consideration of which would only minister to a harmful curiosity anxious to speculate on matters beyond human ken. In all probability he himself shared the ordinary views of his contemporaries with regard to the being and nature of God, and philosophically found himself in sympathy with the negative doctrines of the Sāṅkhya school of thought, which ignored the question of His existence, and constructed its scheme of the universe without reference to any possible interposition of the Divine (see AGNOSTICISM [Buddhist]).

The presentation of the doctrine of God in the Buddhist books of the Hīnayāna school is entirely in harmony with this interpretation of the mind and purpose of Gautama himself. There is, indeed, no exposition of set or formal doctrine on the subject, or any definite and consistent body of teaching It is assumed that the hearer or reader is in possession of certain general views, which are neither atheistic nor agnostic, but entirely theistic. And a strongly anthropomorphic conception is elaborated with the utmost possible freedom, presenting a rich and even extravagant mythology, which is based ultimately, in all essentials, upon the popular polytheism of the Indian peoples, and reproduces the two main currents of thought of its original—that, namely, which exalted the object of its reverent worship as the supreme Author and Creator of all; and that which was content with an innumerable company of deities, of varied attributes and power, often deficient and liable to err, as frail and incompetent as men.

Thus a more or less complete enumeration is presented of the various classes of gods. There are Sakka and Yāma gods, gods of the Tuṣita and other heavens, Brahmā and Mahābrahmā gods, etc.;[1] and of the thirty-one grades of being or sentient existence, the divine or that of the gods is one.[2] Elsewhere reference is made to the gods of the Thirty-Three, *i.e.* subordinate classes or varieties of gods, who approached Sakka the ruler of the gods with questions or complaints.[3] And, entirely after the manner of Indian mystical conceptions and rules, of the ten subjects of meditation or 'reflexion' (which include the physical body and death, as well as the three 'gems'—the Buddha, Dharma, and Saṅgha) meditation upon the gods is one.[4] The infirmities and disabilities of men are all predicated of the gods, *e.g.* they are liable to old age, decay, and death,[5] and are not exempt from the law of transmigration or the control of *karma*;[6] they are subject to desire or passion with all its evil consequences;[7] and even the greatest of them, Brahmā himself, has to confess to ignorance of the nature and constitution of things which he might be expected to know.[8] As they are not omniscient, so also they are not omnipotent;[9] and it is further explained that not even a god, but only one who is born a man, can by resolution and perseverance attain the highest state of a Buddha.[10]

Apparently also the abstract and philosophical conception of Brahmā as the First Cause, the Creator and Ruler of all, was taken over by Buddhism, but made no impression upon the disciples of the Hīnayāna, and was too much out of harmony with the general prepossessions of the Southern School of thought to influence their system of doctrine. It appears in the *sūtras* of the Mahāyāna, sometimes only to be controverted; especially in the Chinese version of Aśvaghoṣa's *Life of the Buddha*.[11]

The most striking and for Buddhist doctrine important conception of the Divine was the uniform exaltation of the Buddha himself above the highest god. In the Northern School this thought found expression in the conception of the Ādi-buddha, supreme and alone, the first of all the

[1] The *Dhamma-cakka-ppavattana Sutta*, 27, enumerates seven of these heavens, each with its appropriate company of gods.

Buddhas, without companion or peer.[1] But the religious thought of the Hīnayāna, moving on different lines, glorified the historical Buddha, Gautama himself, and finally satisfied its need for an object of reverence and worship by practically deifying its Founder. At his birth and death the gods come to pay him homage; they strew flowers and garlands before the corpse, and worship the relics after cremation. On more than one occasion during his lifetime they appear and offer him reverence; but especially when Gautama gains perfect insight and enlightenment under the Bo Tree.[2] He also is their teacher and guide into the Truth;[3] and they are by him converted to a knowledge of and obedience to the right way.[4] Elsewhere the same worship is extended to all the Buddhas and even to the *muni*, the sage, the man who has vanquished his passions and has entered on the path that leads to Buddhahood. Significantly also the perfect wisdom of the Buddha is contrasted with the imperfect and limited knowledge which the gods possess. He is god over all gods, supreme in knowledge as in power. And thus in the doctrinal system no less than in the actual practice of the Southern School, which in most respects is undoubtedly more true than its great rival to the teaching of Gautama himself, the deistic theories of the founder, or at least his prohibition of speculation and dogmatism on the nature of the unseen and the being of a god, have been ignored or transcended; and the faith and practice which he inculcated, and which bade his disciple look to himself and by virtue of his own strength and resolution win for himself deliverance from the bondage of existence and misery, have had superadded to them a practical deification of his person and a theistic belief in his supremacy and power.

Historically therefore, at least in its expansion and development within the area in which the Hīnayāna school of thought has prevailed, Buddhist experience has been marked by the growth and strengthening of a theistic movement which has found its centre in Śākyamuni himself.

It is probably right to regard the Buddhist teaching of the Hīnayāna as the truest exponent of Gautama's own doctrine and belief; and philosophically and in theory it has always remained loyal to the principles, deistic and agnostic, which he is understood to have commended and enforced. In practice, however, outside of the circle of the more metaphysically minded and capable of the monks themselves, and certainly to the laity, the process referred to has restored to Buddhism the personal centre and object of adoration which was lacking in the impersonal self-centred doctrines of the primitive teaching. The earliest Buddhist thought, as expressed and formulated by the Master himself, was consistently agnostic, if the representation of the Pāli books may be trusted; professed its ability to secure the highest and most desirable aims without requisitioning external aid; and from its world-scheme omitted the superhuman and the Divine. That, however, was not a position in which the followers of Gautama Buddha were satisfied to rest. The human craving for an ideal or idealized object of love and homage was too strong for the remote aloofness and somewhat cold philosophy of the doctrine. The desire was met, and found its satisfaction, in the deification of Śākyamuni himself; and this tendency manifested itself, to all appearance, at or very soon after his death. With him were reintroduced the Hindu deities, or the more important and popular of them. But they were always subordinated in attributes and power to the Buddha. And thus a system in theory deistic became a practical polytheism.

It was far otherwise, apparently from the very beginning, in the Mahāyāna system. There is no indication that the deistic type of thought ever found a place in the Northern School. Indian in its origin, it retained the rich, even extravagant, features of Oriental fancy and speculation which the Buddhist reform rejected; amplified its mythology, and elaborated a complete and extensive hierarchy of divine beings, of many grades and capacities, at the head of which, remote and altogether abstracted from practical life or experience, was the Ādibuddha (*q.v.*), a metaphysical conception but not an active force in touch with the universe which he was supposed to have brought into being. The deities, moreover, so far from remaining unconcerned, interested themselves purposefully and actively in the affairs of their worshippers, and rendered them effective aid in all their most pressing needs (see BODHISATTVA).

Mahāyāna Buddhism, therefore, was always theistic, and even monotheistic, not denying the existence of other deities, but subordinating them to a single Head. It differed remarkably, however, from the more colourless theism of the South in that among the innumerable Buddhas, who held the most exalted rank in the celestial hierarchy, Śākyamuni, the historical Buddha, occupied an entirely subordinate position. The process of deification had been applied to all the Buddhas; and all, having been human teachers upon earth, had by virtue of their own insight and effort won for themselves an abiding place in the highest heaven. Vows were made to them, prayers offered, and their favour and assistance sought in the ordinary no less than in the extraordinary events of life. Gautama, however, was only one among the rest, by no means the most distinguished or important. The first place was taken by Amitābha (Amida), a deity whose origin and history are altogether obscure,[1] but who was invested in the popular thought with every attribute that could attract devotion or win homage, and on the delights of whose paradise Mahāyānist writers expatiate with unrestrained delight. To be received thither after death and to see Amida in his glory was the longing desire of every pious believer. The Indian founder of Buddhism was hardly more than a figure and a name. In Amida every wish was centred. Grace, mercy, and beneficence, as well as wisdom and power, were his attributes. Homage might be and was given to others. But to Amida every heart went out in loving adoration with the assurance that he would hear and heed the prayers of his worshippers. A reform movement was initiated in Japan in the 13th cent., the object of which was to reinstate Śākyamuni in the supreme place. It proved, however, an entire failure. Amida has almost universally retained the position, which he has held from a very early period, the embodiment of every Divine grace, the all-wise and all-powerful guide and friend of all who call upon him.

From the speculative and metaphysical point of view also the Buddhism of the Mahāyāna, in formulating its conception of the Divine, gave expression to the familiar thought of a first principle, the primeval and essential cause of all that is. By the Buddhist thinkers of Japan in particular this result was attained. This determining principle and cause was known as the *Dharmakāya*,

[1] See art. ĀDIBUDDHA, vol. i. p. 93.
[2] *Mahāparinibbāna Sutta*, *passim*.
[3] *Ib.* ii. 9, iii. 49, etc.; *Fo-sho-hing-tsan-king*, v. 28.
[4] *Ib.* iv. 20; *Buddhacharita*, xvi. 48, etc.

[1] In one form of the legend he is born spontaneously from a lotus, without father or mother. In all probability the conception and worship of Amida were introduced into China from the West in the early centuries of the Christian era, and were of Indian origin. Other authorities, however, would connect his worship and cult with Persian Mithraism. His paradise is always conceived to be in the West.

the 'body of righteousness' or 'of the law' (cf. art. ĀDIBUDDHA, vol. i. p. 97 f.); and was in theory identical with the Buddha, one of his three bodies, his essential and permanent nature, by virtue of which he was one with all existing beings and all existing beings were one in him. The *Dharmakāya* represented, in fact, the ancient Indian conception of Brahman, but with a very important difference. The Buddhist philosophers and thinkers never lost their hold of the personal element or attribution in the *Dharmakāya*. So far from being a blind or impersonal force, the *Dharmakāya* was conceived as endowed in the highest degree with the most distinctive attributes of personality, especially will, intelligence, and love. It is in Amitābha Buddha that the *Dharmakāya* has chiefly manifested himself, and Amitābha therefore is the supreme object of religious homage and worship. The whole creation, however, is a manifestation of the *Dharmakāya*; all are really now one in him, their union being darkened and obscured by ignorance, prejudice, and sin. In the final issue they will in the *Dharmakāya* find the light and their own true nature, and be delivered from the bondage of present evil and suffering.

Accordingly this was the crown and completion in the Northern School of Buddhist teaching with regard to the nature of God and man's relation to him from the metaphysical standpoint. It differed from the Hindu view in that it so strongly maintained and emphasized the personal element. In this respect it had not a little affinity with Christian thought. Necessarily, however, it was and remained the conception of the thoughtful few; and, although truly and faithfully representing Buddhist doctrine at its purest and best, it was of too abstract and mystical a nature for the apprehension of the many. Their faith and love centred in Amitābha with his paradise of perpetual bliss, and sought for nothing further. The philosophical reasoning and the popular aspiration and devotion met and were reconciled in the doctrine that these were one and the same, that Amitābha (Amida) was, indeed, the highest manifestation of the *Dharmakāya*.

The Buddhist doctrine of God, therefore, even in its most abstract and speculative form, never lost touch, as did the Vedāntic philosophy of India, with which it is most natural to compare it, with experience, feeling, and devotion. It personified the highest attributes of man—mercy, gentleness, and love; and conceived these in a truly noble and generous spirit. In India its similarity is most marked to some forms of the so-called sectarian religions, and especially the Bhāgavata faith, which inculcated devotion to the one Supreme Lord, and self-sacrificing love in His service (see art. BHAKTI-MĀRGA, vol. ii. p. 540 ff.). Its accord in many respects with Christian teaching is not improbably to be explained on the hypothesis that at some period in the course of a long history and development it came under Christian influence, and borrowed elements from Western teaching; and that in part at least the similarity is due to the assimilation of Christian doctrine and forms of belief conveyed more or less directly in the early centuries of our era by missionaries from Europe. The theory is incapable of proof in the present state of knowledge, and may be altogether devoid of foundation. Under any circumstances, however, the development of the doctrine has proceeded on altogether natural and Oriental lines. Whether historical contact has at any point taken place and a mutual influence been exerted, or whether doctrinal growth has been altogether spontaneous and independent, it remains true that, of all non-Christian conceptions of God, the Buddhist theory of the *Dharmakāya*, the Divine Ruler immanent in the universe and manifesting Himself in His creation, is perhaps the nearest to the New Testament teaching and ideal.

LITERATURE.—The literature is sufficiently indicated in the articles to which reference is made, especially those on BUDDHA and ĀDIBUDDHA. For the Mahāyāna, see also D. T. Suzuki, *Outlines of Mahāyāna Buddhism*, London, 1907; Arthur Lloyd, *The Creed of Half Japan*, do. 1911; K. J. Saunders, *Buddhist Ideals*, Madras, London, and Colombo, 1912. The last-named work has regard mainly to the Buddhism of Ceylon, but is well worthy of study.

A. S. GEDEN.

GOD (Chinese).—The Chinese language possesses two terms which, as far as etymology goes, seem adequate to stand for 'God.' The former of the two is *Shang Ti*, or 'Sovereign (*Ti*) Above (*Shang*)'; the second is *T'ien*, or 'Heaven,' often used in later centuries for the visible heavens, but explained in the ancient Han dynasty dictionary (the *Shuo Wên*, largely quoted in the Imperial Dictionary of Kang Hsi) as 'the Exalted in the highest, being formed of signs meaning the One who is great.' Some famous Chinese scholars have explained the common substitution of the latter for the former by saying: 'It is not lawful to use the name of Shang Ti lightly, and therefore we name Him by His residence, which is T'ien, or heaven'—on the principle that 'the Court' stands for 'the Emperor.' *T'ien*, however, probably seemed to the Chinese mind the more appropriate term for general literary use, after the early ages, standing, as it does, for an unfocused God.

The earliest reference to Shang Ti, or indeed to any religion whatever, in the ancient history of China, is found in the words: 'The Yellow Emperor (2697–2598 B.C.) sacrificed to Shang Ti, gathered the whole populace together, and diffused among them (the principles of) government and religion.'[1] We seem to have here a brief note of the worship of a patriarchal priest-king, somewhat 'after the order of Melchizedek,' in the days before that branch of the Turanian race now called Chinese had continued their eastward migrations to the bend of the Yellow River, to occupy the territory which formed the nucleus of present-day China. For the palace of the Yellow Emperor is said (in a work 'probably of the 2nd or 3rd cent. B.C.' [Wylie] and universally since) to have been on the Kun-lun mountain, over a thousand miles westward from the capital of the Chow dynasty sovereigns (1122 B.C. onwards).

The next historical reference to Shang Ti is in the reign of the emperor K'u (2435–2366 B.C.), father of the much-quoted emperor Yao: 'Chiang Yuan (his consort) together with the emperor sacrificed to Shang Ti, and bore Ch'i' (or Hou Chi), afterwards Director of Husbandry under the emperor Yao. The *Book of Odes* celebrates the birth in the words: 'Shang Ti regarded her with favour; and without hurt or injury, immediately her months were fulfilled, she gave birth to Hou Chi.' Then, in the unimportant reign of Wu Tin (1324–1266), that ruler, wishing to obtain an able counsellor, 'reverently meditated upon moral matters, and in a dream Shang Ti bestowed upon him an able and virtuous helper,' whom he afterwards sought and found in reality. From this point, as far as the Historical Annals are concerned, we find the term *T'ien* substituted for *Shang Ti*. Thus the 'flood-regulator' Yü (2205–2198 B.C.), on assuming the throne, said: 'I have received the decree of Heaven, and will devote my whole energies to comfort the myriad populace in

[1] This quotation is found in the 'Easy Edition of History,' published in 1711, and ranking second only to the 'Imperially edited' edition, published in 1767. It is an abbreviation of an edition drawn up by Chü Hsi (1130–1200), which was itself a condensation of the great work of Ssu Ma-kuang (1019–1086). The tendency has always been to omit, never to add, references to spiritual matters, and we may take the quotation as an ancient one.

their labours.' And to the tyrant Chieh (1818–1767 B.C.) a memorialist said: 'The hearts of the people are lost, and Heaven's decree no longer aids'; while of the model monarchs of antiquity an early commentator says: 'They enjoyed (the favour of) Heaven's heart, and received Heaven's manifest appointment.' But that the two terms *Shang Ti* and *T'ien* were interchangeable is strikingly shown in the *History Classic* (v. 23): 'Thus did they (Wên and Wu Wang) receive the true appointment of Shang Ti; thus did Imperial Heaven approve of their ways and give them the four quarters (of the empire).'

A prominent topic in the *History Classic* is the reverence with which a ruler should carry on his government. The object of that reverence would seem to be the Supreme, whether quoted by the term *Shang Ti* or by *T'ien*. But that the former term was in frequent use down to the 12th cent. B.C., and still current much later, is evident from the passages about to be cited. The earliest reference to Shang Ti in the *History Classic* does not give us a picture of absolute monotheism: 'The emperor Shun sacrificed specially to Shang Ti, offering lesser sacrifices to the Six Honoured Ones, to the hills and rivers also, and extended his regard to the multitude of spirits.' On the whole subject a memorialist of the Sung dynasty (Hu Hung, 12th cent. A.D.) says: 'The ritual of the Chou dynasty (1122–222 B.C.) consisted in the solitary sacrifice to Shang Ti, and in offering of heaped-up faggots to sun, moon, and stars, and of bundles of reeds (as in later ceremonial homage to Confucius) to the household and kitchen spirits, and to the wind and rain spirits.'[1] In a memorial to the emperor T'ai Chia (1753–1721 B.C.), his aged minister gives us an interesting glimpse of the religious opinions of the times, which prompted a secondary worship to 'the spirits of heaven and earth, of the land and grain, and of the ancestral temple'; for the former sovereign is said to have 'served and obeyed' all these, 'keeping his eye all the while upon the lustrous requirements of Heaven.' The 'spirits of heaven and earth' were destined in after years to loom larger in the popular imagination than Shang Ti; and in six hundred years' time we find a model ruler, who ousted the last tyrant of the Shang dynasty (1122 B.C.), announcing 'heaven and earth' (perhaps in those early days an equivalent to our modern word 'Nature') as the 'parent(s) of all things.'

Yet Shang Ti was still recognized as the one King of kings—often in a very literal sense. 'Now Heaven, to protect the populace, made for them rulers and instructors, able to assist Shang Ti, and to secure the tranquillity of the (realm in all its) four quarters.' And so, returning to the earlier passages in the *History Classic*, we find Yü (afterwards emperor), while yet a minister of the emperor Shun, counselling him saying: 'Abide in your resting-point, attend to the springs of things, study stability, employ upright assistants,—then will your every action evoke a large response from a submissive populace, you will receive in brightness (the bounty of) Shang Ti, and Heaven will surely renew its appointment, dealing out blessing.'

The dynasty of Hsia, founded by Yü the Great, lasted four hundred years, and, like all the succeeding dynasties, grew rotten towards the close. A new start was needed, and T'ang the Completer was the man for the crisis. Arousing the populace to revolution, he addressed them saying: 'The (present) sovereign of the Hsia dynasty is an offender, and, as I fear Shang Ti, I dare not but rectify (the situation, by punishing him).' In a later chapter of the *History Classic* the case is represented in the words: 'I have heard that Shang Ti guideth to rest,' but (the sovereign of) Hsia would not enter into His rest, whereupon Shang Ti visited him with corrections. Then, as history repeated itself at the end of the dynasty founded by T'ang the Completer, it is recorded of the last ruler of the series that he 'was much abandoned to dissolute idleness, regarding neither the manifest (will of) Heaven nor the importance of the people, so that Shang Ti no longer protected him, but sent down the great ruin which we have seen.' For, as another passage expresses it: 'The favour of Shang Ti is not (unconditionally) settled; it is upon the good that He sends down manifold blessings, but upon the evil-doer manifold calamities.' Also 'The Majestic Shang Ti has conferred (even) upon the ordinary populace a moral sense, to comply with which would give them a right and constant spirit.' Then, passing over some fifteen other quotations in the not very massive *History Classic*, we find a glowing recognition of the goodness as well as the righteousness of Shang Ti in the ancient *Book of Odes*.

'Great is Shang Ti! Descending (or down-bending) in majesty, surveying all regions, seeking the repose of the populace.'

'How vast is Shang Ti, the Ruler of the populace below! How awful is Shang Ti! How irregular are many of His dealings! . . . (yet) it is not Shang Ti that has caused this evil time, but Yin, in not following the (good) old (ways).'

'There is the majestic Shang Ti. Does He hate any one? [Nay, He gives rain and fruitful seasons.] How beautiful are the wheat and barley! What shining produce we shall receive! The bright and glorious Shang Ti will give us a good year.'

In another ode there is the exhortation, 'Have no doubts nor anxieties. Shang Ti is with you.' This message occurs in other language, a thousand years later, in the Annals of Ssu-ma Ch'ien, addressed to the emperor (Han) Wu Ti (140–87 B.C.): 'Shang Ti bends down in grace and manifold blessing, bringing (the enterprise) to a commendable conclusion.'

The great essentials of the devout life are described as having been fulfilled in the case of Prince Wên (father of the founder of the Chow dynasty): 'This Prince Wên, with the carefulness of a fluttering bird, served Shang Ti intelligently, and secured abounding blessing.' This passage is the more interesting as marking the non-Imperial worship of Shang Ti, for the title 'Prince (or King) Wên' is merely the 'title of canonization' given to duke Ch'ang of the State of Chow, otherwise called 'Marquis of the West.'

The special ceremonies of worship, in yet earlier days, on the part of T'ang the Completer, before he ascended the throne, are thus described by the worshipper himself: 'I, the little child . . . presume to use a dark-coloured victim, making clear announcement to the spiritual Sovereign of the high heavens.' Such is the version in the *History Classic*, and in the *Analects of Confucius*: 'I, the little child Li (the child-name of T'ang), presume to use a dark-coloured victim and presume to announce to thee, O most majestic and imperial Shang Ti.' And the consciousness of priesthood on the part of the sacrificer, not yet 'Son of Heaven' or special representative of Heaven, is expressed in the rest of the invocation: 'If in my own person I commit offences, they are not to be attributed to the populace of the land. If the populace commit offences, they must rest on my person.'

Leaving unnoticed about seventeen other references to Shang Ti in the *Book of Odes*, we find the requirements of kingly worship described by a statesman of the Sung dynasty (Li Kang, 1085–1140): 'Heaven is to the sovereign as father and mother to a son, loving him with an extreme love.

[1] Traces of the worship of the heavenly bodies occur in the early history of China, in a memorial to the emperor Ku (1101–947 B.C.), and references are found in other works, amounting to some two hundred and seventy characters—such worship being described as extremely ancient. Traces of ancient altars to wind-spirits have also been found on an unfrequented hill-top in Kiangsi, and doubtless might be found in other parts.

and therefore giving him extreme admonition. Thus a ruler of men, admonished by Heaven, must be fearful and careful to the point of sincerest awe.' To this a statesman of the 12th cent. (Hu Hung) adds: 'The sovereign serves Heaven as (a son serves his) father. He must do so with settled sincerity, and the most refined unity of virtue. He selects a spot of rural land to the south of the city, sweeps the ground, and sacrifices to "Shang Ti of the vast Heaven," the word "Heaven" pointing to His disposition, and the word "(Shang) Ti" referring to His essential nature.' An emperor of that dynasty (Hsiao Tsung, 1163–1189) replies to this: 'I sincerely and reverently serve Heaven, and Heaven continues to me happiness and blessing.'

That some of the ceremonies of Imperial worship were originally undertaken by way of example to the populace seems clear from their connexion with the annual handling of the plough by the sovereign and local officials—a ceremony continued every spring-time until the Revolution of 1911. The *Book of Rites* says: 'In the first month of spring the Son of Heaven prays to Shang Ti for a good harvest . . . and himself handles the plough.'

An emperor with an otherwise fair name set a very different example to the populace in after years by identifying Shang Ti with the visible sky, and raising Earth to a position of equality with Shang Ti as an object of worship—calling forth the condemnations of the best scholars ever since in connexion with his adoption of five *Ti's* at the same time. That emperor was (Han) Wên Ti (179–157 B.C.). The story begins with the accession of 'The First Emperor,' as he termed himself, in the year 221 B.C., who for the time abolished the ancient worship of Shang Ti, setting up as objects of worship eight new deities, Heaven-lord, Earth-lord, War-lord, *Yang*-lord, *Yin*-lord, Moon-lord, Sun-lord, Four-seasons-lord; and so great was the resulting disorganization of Imperial worship that Wên Ti, coming to the throne fifty-two years later, passed fourteen years of his reign without attending to any religious rites at all. Then, in the fifteenth year of his reign, he was informed by the Master of Ceremonies that 'of old the Son of Heaven every summer [he should have said 'every spring and autumn'] personally offered ceremonial worship to Shang Ti,' and the emperor, awaking to his duty in the matter, went forth to do so. But, wishing to improve on the ancient custom, he said: 'I now personally offer sacrifice to Shang Ti, but Regal Earth is without a sacrifice, and so the ceremony is one-sided'; whereupon he erected an altar to Regal Earth, and offered similar sacrifices thereon. Thus the historian Ssu-ma Ch'ien relates in his 'Sacrificial Records.' And in his 'Historical Records' proper he says that altars to the 'Five Imperial Ones' were also erected. The emperor King Hsi, of the last dynasty, in his 'Imperial Annotations,' criticizes these serious public innovations by saying: 'Those who know the true constitution of the universe may not allow themselves to be thus deluded by spirits and bogeys.' And the editor of the 'Easy Edition of History' in 1711 exclaims: 'Heaven is one! And to talk of Five Imperial Ones! Such is not following antiquity! Sick-minded Emperor!'

The action of Wên Ti, however, was to be outdone by the weak emperor Hui Tsung (A.D. 1101–1125), who deified a favourite court magician as the 'Precious Shang Ti,' literally 'Gemmous or Jade Shang Ti'—still the chief idol of decadent Taoism.

Under the term 'Heaven,' as used of the Supreme, there are many fine utterances. In the works of Yang-Tzu (53 B.C. to A.D. 18) we read: 'Heaven is spiritual, Heaven is intelligent, with an enlightened knowledge of all regions; Heaven is refined, Heaven is subtle, and all things do homage thereto.' Heaven is claimed by Confucius as the source of all that was good in him; and of the task of national renovation the *History Classic* declares: 'The work is Heaven's work; men are (but) deputies.' A work ascribed to Chiang T'ai-kung (12th cent. B.C.), and on sale at the official libraries, contains the words: 'Heaven's extreme partiality in practice is really extreme justice.' The erratic philosopher Chuang-Tzu (3rd and 4th cents. B.C.) exclaims: 'Partiality is human, but a large completeness belongs to Heaven.' And, in Lao-Tzu's much-quoted words, 'The net of Heaven stretches everywhere; its meshes are wide, but nothing escapes them.'

Pan Ku, a notable historian (died A.D. 92) says: 'Heaven has a disposition (capable) of pleasure and anger, a heart of sorrow and joy, answering to that of humanity, so that Heaven and man may be at one.' And the work known under the name of 'Kuan-Tzu' says: 'When a man's deeds accord with Heaven, Heaven aids him; when his deeds are opposed to Heaven, Heaven disregards him. Those whom Heaven aids, though small, become great; those whom Heaven disregards, though successful, must suffer defeat.'

'Heaven is most high, yet listens to the lowliest,' says a work of the 3rd cent. A.D. In the *Book of Odes* some one suffering from slander exclaims: 'O vast and distant Heaven, who art called our Father-Mother!' And the statesman Ch'ü Yuan (332–295 B.C.), under stress of calumny, says in one of his essays: 'Heaven is man's Origin; and when oppressed with poverty he recalls his Source. For when men are overwrought and worn out, who is there that does not cry to Heaven?' The latter remark applies to China of to-day.

GOD (Egyptian).—1. Name and ideograms.—It is quite in accordance with the lack of the systematic faculty among the ancient Egyptians that, in all the vast profusion of their religious literature which has come down to us, no definition of the term 'god' has ever been found. For our knowledge of the conception we have to fall back upon discrepant allusions in the extant texts. The conditions of the earliest age of Egyptian civilization are indicated by ideograms which retained their ancient form in the script even when the objects for which they stood changed their shape. Of the ideograms used for the term 'god,' the subsequently rather frequent figure of the star (★) was derived from the occasional, but never altogether systematic, identification of the gods with the stars. The figures of the hawk or falcon[1] for 'god,' and of the *Urœus*-serpent for 'goddess,' recall the incarnation of the sun-gods (with which a large number of other gods were subsequently assimilated) as falcons, and of goddesses as serpents. The late usage of figures of the three most sacred birds—hawk, ibis, and heron—instead of three hawks, as the symbol of 'gods,' is mere

[1] According to Loret, *Bulletin de l'Inst. français d'Archéol. du Caire*, iii. [1903] 1 ff., the *Falco peregrinus*. In the animal sepulchres, the most diverse kinds of predatory birds are mingled together (Lortet and Gaillard, *La Faune momifiée de l'ancienne Egypte*, Lyons, 1903, i. 124 ff.), and thus can hardly have been precisely distinguished by the Egyptians.

pictorial play.[1] A much more frequent figure is the short axe ( ), similar to that used by soldiers.[2] The axe-head was let into a wooden helve and fixed with cords, and was painted yellow or white to suggest the polished stone used for such tools in the earliest age, and superseded later by copper or bronze. In the Nagada period, instead of the single axe-head, we sometimes find two such—thin and almost nail-like—attached to the handle. This symbol always represents a weapon, and in the inscriptions the standard, with which some have sought to identify it,[3] is normally depicted in a different way. A cult of weapons is certainly met with on Egyptian soil. In the semi-Libyan Saïs a shield and two arrows served as a sacred symbol of the nome, while an armlet with its straps formed the ideogram of the goddess Neith. Implements of war were worshipped in the Upper Egyptian city of Pa-aḥā, 'the house of conflict,' and are specified in a list from the reign of Pepi,[4] while a duplicate of this list, dating from the reign of Seti I.,[5] enumerates the weapons as sling (?), Amessceptre, club, harpoon, and two arrows. But the weapon-cult was, on the whole, of so limited a range that, while the derivation of the symbol for 'god' therefrom may seem probable, we are unable to trace the connexion with certainty.

The regular term for 'god' has the sound *ntr*, but from the time of the XVIIIth dynasty the final *r*, as in many other Egyptian words, tends to be dropped, and the Copt. NOTTE begins to come into use. Besides signifying 'natron'—a denotation which, in view of the fact that this substance was used in embalming bodies, might well arise from the meaning of 'divine'—the word *ntr* may be applied in two senses, viz. (1) to 'strike,' 'knock down,' 'throw,' and their derivatives ( ), which, while it is written, not with the symbol for 'god,' but with another syllabic sign, would nevertheless accord with the figure of the axe; and (2) to 'grow,' 'thrive,' 'be young' ( )—not, however, in the special sense of 'to come periodically and to be renewed,' as Loret (*REg* xi. 86 f.) supposed; nor can the meaning 'to be vigorous' or 'powerful'[6] be decisively made out. The crenellated rampart with which the symbol is sometimes surrounded was intended, like the cartouche enclosing the king's name, to safeguard the term and its correlative concept against malefic magic.

The frequently recurring group , *neter neter*, 'the youthfully fresh god,' is to be understood in the sense of 'being and becoming fresh, like a plant.' But this does not involve the wider sense of 'the god who by being renewed creates everlasting life for himself,'[7] as such personal immortality was not an attribute of the Egyptian deities, who, as a matter of fact, grew old and were mortal. It is also doubtful whether the idea of vegetative youthfulness is really equivalent to the fundamental conception of deity, as, apart from the isolated figure of the sprouting Osiris,[8] the distinctive character of which must not be regarded as general, plant-cults play but a small part in Egypt. A reliable derivation of the term *neter* is, therefore, still to seek.

2. Monotheism or henotheism?—The earlier Egyptologists believed that a species of monotheism must have existed in the Valley of the Nile. As a primitive revelation, this, it was supposed, would mark the starting-point of the religious development, and was afterwards overgrown by polytheism, so that it is now traceable only in vestiges.[1] Other scholars were of opinion that monotheism existed side by side with polytheism, but that it was known only to the learned, *i.e.* the priests and the initiated. The theory of an Egyptian monotheism was often combined with the hypothesis that a doctrine of mysteries likewise prevailed here, though this finds no support in the religious texts. Moret,[2] arguing from the mystery plays of the Middle Ages, applies the term 'mysteries' to the Egyptian doctrines of immortality and of the ritual necessary for the attainment of the life beyond; but, as the texts show, these doctrines were in no sense esoteric. Greek writers who treat of the Egyptian mysteries speak of the belief in immortality—which formed an element in the secret mystery cults of Greece—as being an esoteric doctrine also in the Nile Valley, but here they are undoubtedly in error. In Egypt the only mysteries were magic words and ceremonies. Nor does the statement that certain chambers of the temples could be entered, and certain ritual performances witnessed, only by the initiated find any support in the extant texts.

From the Egyptian texts scholars have laboriously collected such passages as would imply a higher conception of deity, or such as attribute to the deity the qualities appropriate to a god regarded as One. They have also found passages which speak of a god as the creator of all life and all existing things, as one who traverses eternity, the lord of infinite time, one who cannot be grasped by the hand, whose evolutions are a miracle, the outstretch of whose being knows no limits, and who is king in Thebes, and, simultaneously, prince in Heliopolis, and the 'great of crowns' in Memphis. He cannot be seen; he listens to prayers; he turns his countenance to men according to their conduct; he is hidden, and his form is not known; he is alone, and there is none beside him.[3] These attributes, however, were not all ascribed to the same deity, but now one now another of them was regarded as the special property of Amon, of Rā, of Ptah, or of some other member of the pantheon. Even when the texts refer to the One deity, they speak also of other independent figures. The One god is at most described, in a purely material sense, as the begetter,[4] father, builder, conciliator, or king of the other higher powers. He is then, as such, the sovereign of the world of gods and men—one who, corresponding for the time being to the earthly Pharaoh, reveals his will to his subjects by decrees.[5] In all this, however, he is never more than *primus inter pares*.

Nor is this relation essentially altered when it

comes under the operation of syncretistic modes of thought, for in that case the other deities are defined as the various existences or phases (*ren-u*, 'names') assumed in other localities by the One god, whose 'names' are many. The tendency to such syncretism was specially active in the later period. The highest place is given in turn to Amon-Rā, Ptah, Hathor, Khnuphis, Isis, and others. The practice finds expression more particularly in hymns, which ascribe the supreme, all-dominating position to the deity who happens to be invoked for the time, as, *e.g.*, to Amon-Rā,[1] to other deities in the Oasis of Chargeh,[2] in Esneh,[3] and so on. At a much later day, Apuleius (*Metam.* xi.) states that the true name of the goddess who was worshipped with various ceremonies, and under various forms and names, was Isis. How artificial the procedure might be in such cases may be seen from an inscription of the reign of Sabako, the aim of which was to assign, by syncretistic methods, the highest place to Ptah of Memphis.[4] Such texts, however, just because of the prominence they give to the one deity invoked, are of little value for a proper estimate of the Egyptian religion as a whole. Notwithstanding textual data of this kind, the One god holds his dominating position only at a particular place, and even there the other gods are not absorbed in him, but maintain their own functions and individualities.

Once only in the history of Egypt was an attempt made, with the aid of the civil power, to invest a deity with a more comprehensive sway. About 1450 B.C. Amenophis IV. tried to secure a wider range for the cult of Aten, the solar disk—understood in a purely material sense, and hitherto but little regarded. To this deity the king dedicated his residence, on the site of the present Tell el-Amarna, and erected temples in his honour at Thebes, Memphis, and Heliopolis. He set himself vigorously against the cult of Amon, whose name he caused, as far as possible, to be erased from the inscriptions. He manifested no such hostility towards other deities, such as Ptah and Osiris; and, though their worship was thrown into the background, it was not abolished. What is said by king Tut-ānch-Amen (on a stele published and translated by Legrain, *RT* xxix. [1907] 162 ff.) regarding the gods who had suffered wrong at the hands of Amenophis IV. is really intended to extol the merits of the former in restoring the sanctuaries, and is not to be taken too literally.

The theory that Amenophis IV. engaged in a thoroughgoing campaign against all the traditional deities of his country is refuted, for one thing, by the character of the reaction against the cult of Aten which took effect after his death. It is true that the temples of Aten in Thebes, and perhaps also in Memphis, were destroyed, that the name of Amenophis was sometimes obliterated, and that he was designated as the blasphemer of the city of Khut-aten;[5] but the monuments of his reign are, for the most part, left uninjured. As a matter of fact, a considerable number of these monuments survived till a late period in the temple of Amon himself at Thebes.[6] Amenophis IV., in his religious reforms, did not in any sense deny the existence of Amon. His erasure of the latter's name rather proves the opposite, indicating simply that the king hoped thereby to damage and impair the god's prestige. While he seems to have held that Aten was the only deity with whom he and his kingdom had any concern, he was no monotheist in the strict sense of the word. It is to be regretted that his reforming movement cannot be distinctly traced in detail, as our only real information regarding the cult of Aten is derived chiefly from hymns,[7] upon whose extravagant language we cannot safely rely.

The apparently monotheistic expressions on Egyptian monuments rest in reality upon henotheistic modes of thought. Each nome found its supreme Divine authority in its special deity. The god of the nome from which the Pharaoh had sprung was always regarded for the time as the most important of the nome-gods. The very fact that he had raised his devotee to the throne of Egypt showed that he surpassed the other nome-gods in might. But his prestige lasted only so long as his chosen dynasty held the reins of power. If his favoured dynasty was supplanted by another whose members worshipped a different deity, he himself had to give place to the latter. Thus, on merely political grounds, the supreme position was held in the Old Empire by Ptah, under the Theban dynasty by Amon, and in the Saitic period by Neith.

As a rule, however, the supreme position of the nome-god did not remain unchallenged even in his own nome. Here also he had to tolerate the cult of other deities, who, like the sun-god Rā, or Osiris, the god of the dead, were venerated by all Egyptians, or were concerned in some special way with certain localities, occupations, families, or private individuals. The lower classes in particular took but little cognizance of the nome-god, or of other gods worshipped by people of higher rank. They preferred to worship deities whose sphere of action was believed to be relatively narrow. Some of the popular deities could exercise their power at any time; others had special functions, as, *e.g.*, that of affording security against demons in general (Bes), at birth (Thueris), on entering the under world (Amenthes, a form of Hathor), or that of protecting the corn (Nepera), etc.

This class also includes the special and temporary deities (Germ. *Sondergötter* and *Augenblicksgötter*), *i.e.* the numerous by-forms in which the great gods were invested with independent personalities, and which sometimes attained to an important position in the pantheon. This took place, for example, in the case of Imhotep, 'he who comes in peace,' and Sechmet, 'the mighty,' a secondary form of Sechet of Memphis. Probably Amon, 'the hidden one,' was likewise a special form of Min of Koptos, the god of fertility. To the same class belong, in particular, the numerous animals which might be regarded as animal-deities or as sacred animals.[1] Though the worship of such animals declined in the great temples, a wide range of power was frequently still ascribed to them. In many cases the penalty of killing one of these animals, even unintentionally, was death. Such an occurrence demanded an atonement, in order to protect the country from the vengeance of the slain animal and the ruler of its species—a vengeance which not even the greater deities would otherwise be able to avert.[2]

The existence of monotheism in ancient Egypt has been inferred, finally, from certain expressions in the so-called 'moral papyri.'[3] In these we read that certain acts are desired, or rewarded, or punished, by 'god' (*neter*), no particular deity being mentioned by name. In point of fact, however, the reference in such expressions is not to a mysterious, all-ruling God, in whom, as contrasted with the other deities of the country, the authors of the papyri believed. Any such inference would run counter to the established fact that these texts were designed for the general mass of a polytheistic people. In the passages in question the writer simply left the persons using the texts to supply the name of their particular nome- or family-deity. In certain cases he may himself have been in doubt as to which deity would be concerned with a particular act. Thus the use of the term 'god' in

[1] Papyrus Bulaq, no. 17; tr. Wiedemann (*Rel. of the Ancient Egyptians*, 111 ff.) and others.
[2] Tr. in Renouf, *Lectures*, p. 231 ff.
[3] Daressy, in *RT* xxvii. [1905] 82 ff.
[4] For the most recent discussion of this, see Erman, *SBAW*, 911, p. 916 ff.
[5] *Inscription of Mes*, ed. Gardiner, Leipzig, 1905, p. 54. It is very doubtful whether the hymn to Amon, in *Inscriptions in the Hieratic Character*, London, 1868, pl. 26, refers, as is believed by Erman (*ZÄ* xlii. [1905] 106 ff.), to Amenophis IV. at all. The hymn draws a contrast between the adherent and the opponent of Amon—the one prospers, while the other fares ill; but we need not regard this as alluding to any particular episode.
[6] Legrain, *Annales du Service des Antiquités*, vii. [1906] 228 ff.
[7] A long hymn addressed to him was first published by Bouriant, *Mém. du Caire*, i. [1884] 2 ff., tr. Wiedemann, *op. cit.* p. 40 ff.

[1] For both groups (already noted by Strabo, xvii. 802), cf. Wiedemann, *Muséon*, viii. [1889] 211 ff., 309 ff., and also his *Der Tierkult d. alten Ägypter*, Leipzig, 1912, p. 22 ff.
[2] Wiedemann, *Muséon*, new ser., vi. [1905] 113 ff., *ARW* xiv. [1911] 640 f.
[3] Most recently Budge, *Osiris*, i. [London, 1911] 348 ff.; similarly Renouf, *Lectures*, p. 100 ff.

these passages may be traced to the same vein of thought as finds expression in the celebrated dedication ἀγνώστῳ θεῷ, found by St. Paul in Athens (Ac 17[23]), or the *sei deo sei deivæ sacrum* upon the altar re-erected *c.* 100 B.C. at the foot of the Palatine in Rome.

The foregoing considerations warrant the inference that monotheism had no place among the Egyptians, but that they had a leaning towards henotheistic conceptions, which, though they were never consistently applied, yet readily combined with syncretistic tendencies.

3. Systems of deities.—With a view to introducing some kind of order among the vast multitude of deities, the Egyptians attempted from a very early period to arrange them in groups. One such group after another was believed to have reigned as Pharaohs;[1] or, again, a particular deity was regarded as the king, or as the father and lord, of others, as in the enneads of Heliopolis.[2] In other instances we find certain smaller groups, as the ogdoad of Hermopolis;[3] sometimes also in the form of triads, which might appear as families (father, mother, and son, in Thebes), usually very loosely connected, or in even less coherent unions (god and two goddesses, in Elephantinē) which never developed into trinities. Alongside of these we also find larger families (the Osiris cycle), and various other arrangements. But none of these systems comprised more than a relatively small number of deities, or had in general more than a local vogue. Moreover, the deities of a certain cycle in one locality might belong to an entirely different group in another. There was no single system embracing a majority of the pantheon, and, consequently, the functions of the individual deities were not everywhere defined in the same way. All the divine attributes might for the time be concentrated in a single deity, and, if occasionally some special function is ascribed preeminently to a certain deity, such as making war to Month, creation to Ptah, sovereignty among the gods to Rā, and procreation to the goat-deities, this arose from fortuitous and, for the most part, spasmodically operative causes, which were nowhere permanently recognized.

4. The anthropomorphic character of the deities.—The gods, while they might assume the external form of men, animals, plants, or even the products of human art, were always represented as having the feelings and needs of men. They required sustenance; and food and drink were accordingly offered to them in sacrifice. Even the obelisks, the embodiments of the sun-god, received oblations of loaves and beer.[4] In the daily worship, moreover, articles of clothing, ornaments, fumigations of incense as a protection against evil spirits, and the like, were consecrated to the deity in a fixed order of sequence.[5] Attention was paid also to the housing of deities in temples and chapels, and to making these acceptable to them by such accessaries as groves, lakes, ships, attendants, slaves, etc.

In all this the relation between the deity and man rested upon the idea of reciprocity. The worshipper attended to the needs of the god, and the god was expected to requite the worshipper with divine gifts—life, prosperity, health, happiness, victory. In the temple-reliefs we see king and deity facing each other as parties to a contract, and promising or actually bestowing their mutual gifts. In the inscriptions commemorating the dead the survivors are said to have given the 'royal offerings' to the gods of death. The gods, however, do not receive such gifts for their own use; they are under obligation to supply the divine personality (*ka*) of the deceased with food and drink. Should a man, and especially a king, fail in his duty towards the gods, the latter do not further befriend him, and may bring calamity upon the whole country;[1] while, if the deity does not perform his part, the man does not need to trouble any more about him, and, by way of punishing and injuring him, ceases to offer sacrifice.[2] The deity made known his wish and will, first of all, by sending adversity to his enemies and prosperity to his votaries. He also revealed his mind in the behaviour of certain animals—whether they turned towards the man or away from him, whether or not they took food from his hand, bellowed, entered certain chambers, and the like.[3] The theophanies of Amon, and the movements of his head, mention of which is frequently made,[4] are probably to be referred to the action of a sacred animal, rather than to the mechanically devised movements of a statue (cf. art. DIVINATION [Egyp.]). The theory of mechanism would really imply that the priests deceived one another intentionally, and this is not at all likely to have been the case in the most flourishing period of the Amon cult. Finally, the gods intimated their will by words and acts in dreams,[5] and in various other ways. Even at a much later date we find Apuleius (*Metam.* x.) stating that Isis appears and gives counsel in dreams.

Besides hunger and thirst, however, the Egyptian deities were supposed also to experience joy, pain, and fear, and to be liable to sickness, senile decay, and death. Such ideas, it is true, find expression more particularly in legends,[6] which were never reduced to a homogeneous system. An excellent instance is found in the contradictory traditions regarding the introduction of Tefnut into Egypt.[7] The Egyptian sagas of the gods were not regarded as mere inventions or fabulous tales; on the contrary, they form an essential element in the religion. Some are found recorded in temples (*e.g.*, the story of the winged sun-disk of Edfu), or on the walls of tombs (*e.g.*, the narrative regarding the destruction of the human race). Numerous examples are preserved in magic texts, the underlying idea being that a relation of occurrences from the lives of the gods would make an impression on the gods themselves—and hence the narrator must have believed that the stories contained religious truth. They are, accordingly, not mere poetic transfigurations, like the Greek myths in Herodotus (cf. Wiedemann, *Herodots Zweites*

The fullest list of human attributes is met with in the case of the sun-god Rā. The centre of Rā's cult was Heliopolis, but the kings of the Vth dynasty had erected great sanctuaries to him in the neighbourhood of Memphis.[1] Thenceforward the Pharaohs regularly designated themselves as sons of Rā, who, assuming the personal form of the reigning monarch, begot his successor, as is depicted by Queen Ḥātshepsut in Deir el-Bahri, and Amenophis III. in Luxor.[2] Rā is accounted the king of gods and men; he is decrepit with age; his spittle drips from his mouth; his limbs have become silver, gold, and lapis lazuli; he prevails over mutinous deities only by the aid of the sun-god Horus of Edfu. Incensed at the refractory race of man, he issues to the goddess Sechet an order for its annihilation, but presently repents, and can thereafter deal with the destroying goddess only by wiles. He suffers agonies as the result of a snake-bite, and is cured by Isis. Nor are things any better in the case of other gods. Thus the sun-god Horus receives an injury in his eye.[3] Osiris is slain and cut in pieces by his hostile brother Set. His son Horus suffers from headache and internal pains;[4] he is stung by a scorpion,[5] and, especially in his youth, has other afflictions to endure. The goddess Sechet becomes intoxicated with a mixture of beer and blood (legend of the annihilation of mankind); and there are many other incidents of similar character. Popular tales,[6] in representing the gods as altogether human, were really quite in the spirit of the temple-religion. According to these stories, the gods move about the world as a band of musicians (*Papyrus Westcar*); Rā-Harmachis comes with the company of the gods to earth, and presents his favourites with gifts which afterwards work injury to their recipients (*Papyrus d'Orbiney*).

When any of the gods fell ill, they had to apply to others for help, as was done, *e.g.*, by Horus and Set in Heliopolis (*Pap. Ebers*, ii. 3–6). Like human beings, they found their chief source of succour in Isis, who composed the healing spells. Nor was it any Divine power that operated in such cases; the healing was effected solely in virtue of the magic. The superiority of magic to the principle of divinity was a primordial element in the religion of Egypt, and was permanently retained.[7] The oldest surviving religious texts of any extent—the inscriptions on the royal pyramids of the Vth and VIth dynasties[8]—are collections of magic formulæ designed to compel the gods to secure for the deceased a life of bliss in the world beyond. The so-called Books of the Dead, dating from the Middle[9] and the New Kingdom,[10] and the numerous texts of a kindred type, have the same end in view as the so-called magic papyri. In the healing of diseases believed to be due to demons the right magic formulæ were the essential thing. These formulæ were annexed to the collections of medical recipes,[1] but they could be quite effectively used by themselves.[2] Hence the *cher-ḥeb*, who knew the spells by heart, or recited them from a book, became a person of outstanding importance in Egypt, and it was essential for each Egyptian, more especially in view of his life after death, to be a *maā-cher*,[3] *i.e.* one who could recite the proper formulæ in the proper way. The doctrine of amulets rests on a similar belief.[4] The possession of certain objects enabled a man to compel the gods to protect him, or prevented evil spirits from injuring him in any way. Malevolent deities were helpless against the virtues of apotropæic symbols, such as the winged solar disk, the bull's head, the Bes-mask, the Ut'a-eye, etc. The idea that the gods could resist the correct employment of magic was never entertained. If the magician sometimes claimed to be a god demanding obedience, it was always for the purpose of enhancing his magic powers, never of providing a basis for them. Nor was this equality with deity imparted to him by the will of the higher beings; he had it in virtue of his own magical gifts, to which the gods themselves were subject.

5. Deities influenced by entreaties.—Reference must be made, finally, to a series of Theban inscriptions dating from *c.* 1200 B.C.,[5] the contents of which seem at the first glance to form an exception to the above. These inscriptions make appeal, with praise or thanksgiving, mainly to minor, and, in particular, to specialized, deities, as, *e.g.*, to Amon-Rā the hearer of supplication, Hor-ur the hearer of supplication, Mer-seker, the mountain-dome of the West, the Moon, the mistress of the West, Amenophis I., and the god who hears supplications. In these inscriptions we also find—though more rarely—the greater deities, *e.g.* the Sun, Khunsu, and Ptah, as independent figures. Here there is no reference to the power of magic; the desired boon comes simply by the favour which the gods manifest in response to urgent entreaty. Essentially similar ideas lie at the root of what we find in the stelæ from Memphis bearing the figures of the ear in large numbers, and sometimes speaking of Ptah as the hearer of petitions.[6] A list of the deities who thus manifest themselves as hearers of petitions has been drawn up by Spiegelberg.[7] The idea of ascribing to a deity a large number of ears is also met with elsewhere in Egypt. Thus a certain very powerful deity is alleged to have seventy-seven eyes and the like number of ears;[8] and in a hymn to the king—regarded as equal to the God—we find the words: 'When thou takest rest in thy palace, thou hearest the words of all lands, for thou art endowed with innumerable

ears.'[1] The multiplicity of ears was supposed to make the anthropomorphically conceived deity able, in a material sense, to listen simultaneously to the numerous and varied petitions of many individuals.

But the texts in question do not present, as has been surmised, a higher conception of deity. Those who erected the monuments containing them were people of lower rank, and could, therefore, make no pretensions to possess magic powers. In the world they were not of those who dictate or demand, but of those who entreat, and, accordingly, they were not in a position to extort, but could at best only try by submissive humility to win, the favour of the higher powers. Hence, too, they paid homage to the popular deities, and especially to the sacred animals,[2] as those who would be more likely to be interested in them than the greater and more august gods. The utterances, in a like submissive tone, which sometimes emanate from persons of higher rank[3] are to be regarded as mere cajolery, since in other parts of the same texts it is assumed that the deity is subject to the power of human magic and dependent upon human goodwill.

Conclusion.—The conception of deity among the ancient Egyptians thus never got beyond the primitive stage, and there is no evidence to show that it attained to any highly developed or refined form. Whenever such more exalted conception seems about to emerge, as in certain utterances in the hymns to the gods, it is at once repressed by the ascendancy of magical doctrines, and by the all-dominating idea of the reciprocal relation of deity and humanity which rests upon the assumption of their essential equality. GOD (Greek).—The words most nearly corresponding to 'God' in the Greek language are *θεός* and *δαίμων*,—both hitherto of unknown origin,—the former rather conveying the sense of an individual personality, the latter of a spiritual power. Minor differences and changes of meaning will appear in the sequel. The purpose of the present article is to trace the gradual development of the characteristically Hellenic conception of the Divine.

1. We are met at the outset with the prevalence of *a multiplicity of gods*. One who undertakes to unravel the tangled web of Greek polytheism is described by Plato as 'a laborious, and not very fortunate man' (*Phædr.* 229 D, *ἐπιπόνου καὶ οὐ πάνυ εὐτυχοῦς ἀνδρός*). The former epithet remains, and will long remain, most apposite. But recent discoveries in archæology and the comparative study of religions have removed some part of the obscurity. The earlier communities, whether they lived by hunting, pasture, or some primitive agriculture, could not but feel their dependence on powers over which they had only a limited control. Wild animals, their own flocks and herds, the seasons of the year, rivers, fountains, wind, and rain were all-important to them; vague fears of spirits, hostile or benign, were also inspired by the gloom of the forest and the darkness of the cavern, suggesting to the imagination the existence of subterranean powers into whose keeping the souls that disappeared from earth departed. It is sometimes assumed that primitive worship was wholly inspired by terror, but there must also have been in it the germs of hope and of affection. On this subject the words of Auguste Sabatier are worth considering (*Philosophie de la religion*, Paris, 1897, p. 13):

'En elle même et toute seule, la peur n'est pas religieuse; elle paralyse, elle rend stupide, elle écrase. Pour que la peur devienne religieusement féconde, il faut qu'il s'y mêle, dès l'origine, un sentiment contraire, un élan d'espérance; il faut que l'homme, en proie à la peur, conçoive d'une manière ou d'une autre la possibilité de la surmonter, c'est-à-dire de trouver au-dessus de lui une aide, un secours pour conjurer les dangers qui le menacent.'

The god of the family or tribe, perhaps an ancestor who had passed into the Unseen, was looked up to as the protector of his race from hostile powers, and from those spirits of evil which the primitive imagination was always ready to suspect as dangerously near. Immigrants by land or sea must have found existing aboriginal worships, of which probably that of some earth-goddess and of a heavenly rain-giver were most widely spread. The new-comers applied to powers worshipped by the conquered tribes names already familiar to themselves. The Aryan warriors may have found on certain mountain-heights the worship of a cloud-compelling deity, giver of the rain, whom they identified with their God of the Sky (*Dyaus=Zeus*); just as the word which signified the beech in northern climes was now applied to the oak, or as the Greek in later times recognized the objects of his familiar reverence in the gods of Egypt or of Persia. Thus the power that dwelt in the forest of Dodona now took the name of Zeus, and his female counterpart became Dione, while on Mount Lycæus the wolf-god that ravaged or spared the flock was likewise Zeus in the new nomenclature. Apollo, perhaps a sun-god, was blended with the protector of the herd, while Athene (perhaps a lightning-goddess), Artemis, Hera, Demeter, were names applied, whether by the Aryans or by some earlier immigrants, to female powers previously worshipped in different localities. Aphrodite, Heracles, perhaps Poseidon, owed their existence to Phœnician or other colonists by sea. Already those hospitable shores were sensitive to foreign influences. Ares was a Thracian; Dionysus partly Thracian, partly Cretan. Yet even he, though confessedly a late-comer, must have found in primeval village-festivals a congenial soil.

The Aryans also brought with them their own patriarchal system, involving the organized worship of ancestors, whence each family had its peculiar cult; and, when the family had grown into the tribe, there followed an amalgamation of such cults under one presiding power. Hence came a grouping of divinities differing in each central district, until in certain regions an *amphictyony* (*q.v.*), or federation of neighbouring communities, was loosely combined under the presidency of one chief god—as Apollo at Thermopylæ, Poseidon at Calauria, Zeus at Olympia, Artemis in Ætolia; and, as tribes were gathered into cities, one worship in each place tended to become supreme,

[1] *Pap. Anastasi*, ii. 6. 3 ff., iv. 5. 6 ff. With this should be compared the directly opposite mode of thought in Greek speculation (as seen in Plut. *de Isid.* 76), conformably to which a statue of Zeus in Crete had no ears at all—for it is not meet that the Lord of all things should listen to any one.

[2] Maspero, *Études de mythol.* ii. [1893] 395 ff.

[3] Passages in Erman, *SBAW*, 1911, p. 1109 ff.

e.g. Zeus at Dodona, Poseidon at Corinth, Hera in Argolis, Athene in the Acropolis of Attica. The attributes of such divinities were modified by the character and history of each city. Athene had different attributes at Athens, Sparta, Thebes, etc., Zeus in Thessaly and Caria, Nemesis at Rhamnus and at Smyrna. Powers once supreme, as the Graces (vegetative powers) at Orchomenos, became subordinated to more prevailing deities. Colonies on the Asiatic seaboard, or elsewhere on the Mediterranean coast, and the several island communities were subject to special conditions. Apollo was the same and not the same at Delphi, in the Troad, and at Branchidæ; Athene at Athens, in the Troad, and on the shores of Africa. The worships thus locally established were further modified in various ways. One potent cause was the love of story-telling which created mythology. When Hellenic worshippers were asked, 'What mean ye by this service?' their ready imagination furnished copious replies. Hence came an almost endless multiplication of divinities; for each attribute of a god or goddess tended to become a separate personality. Thus to Artemis were added Callisto, Iphigenia, Dictynna, etc.; to Aphrodite, Peitho, Harmonia, Helen, Ariadne; to Athene, Aglauros and her sisters; to Hera, Eilithyia—and so forth. Such conceptions were further developed in literature and art.

2. *The Homeric poems* show this development already at an advanced stage. They present us with a special grouping of the chief divinities, embodying possibly the acme of Achæan culture. Zeus is above all, but his nominal omnipotence is limited in reality. And the so-called trinity of Zeus, Athene, and Apollo is the usual sanction for an oath. By this time the power of divination, once vaguely attributed to an earth-goddess or some deified ancestor, and still imagined to be accessible at many local shrines, was concentrated first at Dodona, and afterwards at Delphi, where the priesthood had secured a predominating and widespread influence.

Beneath the many-coloured veil of mythology there is evidence of the unconscious working of the human mind, endeavouring to form a general notion of that which is higher and mightier than man. All manner of mortal weaknesses are attributed to individual gods; yet there are grave moments in which essential deity is not unworthily conceived, and in times of exceptional emotion not an individual god is present to the mind, but the gods collectively. This becomes more frequent in the *Odyssey*, where the gods, both as θεοί and as δαίμονες, are more often spoken of without particular mention of Zeus. What, then, are the general attributes of the Homeric gods? (1) They are immortal. This privilege is shared by some who are not dwellers on Olympus. (2) They live at ease (ῥεῖα ζώοντες), exempt from pain and sorrow. (3) They feed not on the produce of the ground, but on ambrosia and nectar. (4) They are in their nature invisible, but have the power of appearing to men in various disguises (sometimes as birds). (5) They are the givers of all good, but (6) they are ever ready to punish the breach of an oath, the oppression of the stranger, and other acts of wrong. The mortal who contends with them is doomed to perdition. They visit cities in the guise of strangers, to observe the just and unjust deeds of men.

3. *The poetry of Hesiod* reflects a parallel and partly independent growth of the religious consciousness. The Muses of Mount Helicon are imagined as revealing to their devotee the realities of the superhuman world. A crude form of reflexion comes in aid of poetic fancy, and is associated with a strong though simple ethical conviction. Such abstract notions as justice, mercy or reverence, persuasion, rumour, contention, are personified. Fanciful affinities lead to genealogical description and narrative. The distinction emerges between divine and semi-divine (θεοί, δαίμονες, ἥρωες), nor is it always possible to discriminate between the cases in which an heroic ancestor is deified and those in which some power originally worshipped as divine or some attribute of a worshipped deity comes to be regarded as a demi-god.

4. *The development of art*, always in association with religion, is later than that of epic poetry, and it reaches an expression of more advanced conceptions. There are distinct traces indeed of an aniconic stage, in which the Divine presence was realized through some striking natural form or some rude symbol—a tree, a cave, a boulder, a cone, a pillar. Then came the *xoanon*, a block of wood or stone rudely carved in human form either partially or completely. The Trojan Athene in *Il.* vi. was probably of this nature. Such idols retained a special sanctity in historic times notwithstanding the advance in artistic skill. Athene Polias of the Erechtheum still claimed the offering of the embroidered robe in preference to the Parthenos, the Promachus, or the Lemnian statue. Until about the 6th cent. B.C. little was attempted in the way of denoting attributes through form and feature. Symbolic treatment came before expression. Hermes was known by his *caduceus*, Artemis by her bow, etc. But the pious artist, in meditating on the special worship which he sought to adorn, began by and by not merely to mould in bronze or marble with wonderful perception the human form, but to breathe into his creations 'the attributes to awe and majesty,' which worshippers hitherto had but vaguely imagined. Even in work of the 4th cent. B.C., the art critic has no difficulty in discerning, from feature and expression apart from symbols (such as the *ægis*, *calathus*, *polos*, etc.), whether the person represented by a statue is human or Divine. This implies a remarkable elevation of religious feeling. It shows that, amongst all the vagaries of polytheism, there was a growing sense of something 'far more deeply interfused,' a power exalted infinitely above humanity, yet interpenetrating human life in all its aspects. It proves that the conception of divinity, while recognizing a great variety of manifestation, was becoming generalized and unified. The Pheidian Zeus at Olympia, a work of the 5th cent. B.C., was felt by those who saw it, even in the latest period of paganism, to be a complete embodiment of the Divine ideal.

5. Epic poetry had an undoubted effect in moulding subsequent modes of literature and art. But side by side with Homer it is important to recognize independent and parallel orders of religious consciousness. Ceremonials once established remained for ages, as every page of Pausanias shows, little affected by the progress of religious thought. Some popular worships, on the other hand, such as those of Demeter and Dionysus, became the nucleus for the growth of a new body of mythology. Such movements were encouraged by influences from Egypt and the East that shot across the national worships and gave rise to a strange blending of religious ideas. In this connexion it may be well to quote the following passage from W. M. Ramsay's *Cities and Bishoprics of Phrygia* (vol. i. [Oxford, 1895] p. 87) on 'Anatolian Religion':

'Its essence lies in the adoration of the life of Nature—that life subject apparently to death, yet never dying but reproducing itself in new forms, different and yet the same. This perpetual self-identity under varying forms, this annihilation of death through the power of self-reproduction, was the object of an enthusiastic worship, characterized by remarkable self-abandonment and immersion in the divine, by a mixture of obscene symbolism and sublime truths, by negation of the moral distinctions and family ties that exist in a more developed

society, but do not exist in the free life of Nature. The mystery of self-reproduction, of eternal unity amid temporary diversity, is the key to explain all the repulsive legends and ceremonies that cluster round that worship, and all the manifold manifestations or diverse embodiments of the ultimate single divine life that are carved on the rocks of Asia Minor.'

That religion had some elements essentially alien to the Greek spirit, which, however, like all strange things, possessed a powerful fascination for individual minds. Obtaining a footing at seaports, these cults found their way into the cities, bringing with them some impurities for which the earlier Greek cults were not responsible, but also diffusing a spirit of mystical devotion which in the Orphic and Pythagorean schools was associated with ascetic strictness of conduct.

6. Excesses, however, whether of impurity or asceticism, found little response until the decline of Hellenism, except on the outer fringe of Hellas. Corybantic wildness remained a peculiarity of semi-barbarous lands. The *Atys* of Catullus has nothing corresponding to it in classical Greek. Laments for Adonis were confined to women. Dionysiac exuberance, in Athens at least, had been tamed and regulated through the institution of the drama. To some such influx of foreign ideas, in which Egyptian, Oriental, and Thracian ingredients mingled, may be traced the origin of Orphism. A crude theosophy had already appeared in Hesiod. The tendency to Pantheism and blending of divinities (theocrasy) had shown itself here and there, and in the worship of Dionysus the notion of a god who suffers, dies, and lives again was already present in germ. There was a tomb of Dionysus at Delphi, as probably in Crete. The founders of the Orphic mysteries wove these several threads together in a new mythology. Dionysus Zagreus, torn in pieces by the Titans, lives again as Phanes (see article ORPHISM). This was, after all, one phase in the general process by which the Greek mind was brought through generalization and inference towards the conception of a divine unity.

7. *Philosophy* in its earliest form stood aloof from common life, and involved a reaction from ordinary belief and custom. Xenophanes despised anthropomorphism, and Heraclitus could not tolerate the absurdities of piacular sacrifice. Yet each great speculative effort was in effect a 'seeking after God.' The Heraclitean law of Change, the Perfect Sphere of Parmenides, the Thought of Anaxagoras, Pythagorean Number, were modes of expression for a new vision of the Supreme Being. Meanwhile, apart from philosophy, and from Orphic innovation, there were significant changes both in popular worship and in literary expression. The grouping of divine powers was symbolized by a common altar-place (*κοινοβώμιον*), either for the eight or for the twelve greatest gods, at Athens and in Argolis; and the generalizing tendency already noticed becomes more distinct. In Herodotus, for example (i. 32, vii. 46, viii. 13, 60), the idea of God which is present to the historian is at once impersonal and personal. All exceptionally striking events and extraordinary phenomena are accounted for by a supernatural providence above and beyond the action of individual gods (see especially the curious bit of teleology in Herod. iii. 108). The stage of reflexion which appears in his histories probably dates from an earlier time than that of their publication, representing a spirit which may be described as Ionian pessimism. The old suspicion of Divine malignity was confirmed by the sad uncertainty of life amongst those who lived beneath the ever-threatening shadow of Persia (*ὅτι ἐπικίνδυνός ἐστι αἰεί κοτε ἡ Ἰωνίη*, Herod. vi. 86).

The idea of Fate (*q.v.*) as distinct from Divine volition at the same time acquires increasing prominence (*ἕδει, τὸ χρέον*, Herod. *passim*). The hope of immortality, which in Homer had grown dim, was revived in the Eleusinian worship, and found poetical expression in Pindar. This poet has sublime conceptions of the Divine nature as exalted, irresistible, swift, etc., and he refuses to accept fables that seem to him degrading to the gods. But his ethical standard, that of the Hellenic aristocracy of birth, though noble in many ways, has not the human breadth and depth of the great tragic poets.

8. *Æschylus* absorbed and carried further the theosophic speculations which were prevalent in the early 5th cent. B.C. For him they centred in meditation upon human things. The idea of Divine righteousness striking a harmony amidst a clash and confusion of events and bringing into order the moral chaos of the primitive world is the dominant note in him. He reserves the word 'God' (*θεός*) principally for the supramundane powers, and sometimes makes express opposition between the gods and the subterranean deities (see EUMENIDES). The mythopœic faculty is still strong in him. But his mythology is not fixed into a system. It is an elastic medium for the expression of his thoughts. Apollo is the prophet of Zeus; Athene represents the glory, the freedom, and wise equity of Athens. In speculating on the Divine attributes he came to see clearly the necessity of combining power with beneficence and wisdom (*Prometheus Vinctus*).

9. In *Sophocles* the idea of justice is identified with the righteous but inscrutable will of Zeus, and destiny becomes the symbol of the mysterious, unaccountable element in human life,

> 'The burden and the mystery
> Of all this unintelligible world';

δαίμων is used of any superhuman power directly acting on the life of man.

The 'eternal laws' (probably an Eleusinian notion—see Lysias, *adv. Andocid.* p. 104) may not be broken with impunity either consciously or unconsciously, but the noble spirit, though overclouded for a time, is ultimately justified. Some notes of sadness here and there, chiefly in late plays, prepare us for the scepticism and newer pessimism which find frequent utterance in Euripides. This belongs to the period of the *Sophists* (*q.v.*), in which earlier beliefs and positive speculations gave way before obstinate questionings about the meaning of experience. Another aspect of the same time of transition is perceptible beneath the silence of Thucydides, who limits his vision to the facts of life—what has been and will be again while human nature remains. Sophocles, Euripides, and Thucydides had lived through the experiences of the Peloponnesian war.

10. It is observable that in the later tragedies the word for 'God' (*θεός*) is used with increasing laxity—for instance, for Niobe in Soph. *El.* 150—and is predicated for mere abstractions, such as Time (*χρόνος γὰρ εὐμαρὴς θεός*, Soph. *El.* 179), Thought (*ἡ φρόνησις ἀγαθὴ θεὸς μέγας*, Soph. frag. 837), Caution (*τῇ δ' εὐλαβείᾳ, χρησιμωτάτῃ θεῶν*, Eur. *Phœn.* 782), Wealth (*μὴ πλοῦτον εἴπῃς· οὐχὶ θαυμάζω θεόν | ὃν χὠ κάκιστος ῥᾳδίως ἐκτήσατο*, Eur. frag. 20; cf. Aristoph. *Plutus*), Shamefastness (*αἰδώς μ' ἔχει:—οὐ τἄρα πράξεις οὐδέν· ἀργὸς ἡ θεός*, Eur. *Ion*, 336, 337), Poverty (*οὐκ ἔστι πενίας ἱερὸν ἐχθίστης θεοῦ*, Eur. frag. 250), and even Recognition (*θεὸς γὰρ καὶ τὸ γιγνώσκειν φίλους*, Eur. *Hel.* 560). Hesiod had anticipated this mode of speaking in saying of Rumour (*φήμη*): 'She also is a god' (*θεὸς νύ τις ἐστι καὶ αὐτή*, *Op. et Dies*, 762). How conventional Athenian religion had become, although as custom it had still a powerful hold, appears from the light treatment of Dionysus and other deities by Aristophanes

11. With the career of *Socrates* (*q.v.*) a new era of reflexion, at once religious and ethical, begins. Plato is probably justified in representing him as accounting for his self-devoted pursuit of truth by the command and inspiration of Apollo, and the Divine intimation (*τὸ δαιμόνιον*) which checked him when on the point of undertaking some new enterprise was likewise regarded by him as supernatural. While conforming to the religion of his countrymen, he rejected fables which attributed immoral actions to the gods. The simple teleology which we have already noted in Herodotus was carried by him somewhat further in recognizing the adaptation of organ to function in the human frame, and he warned his hearers against praying for blessings which the gods had placed within human power.

12. In *Plato* it is necessary to distinguish between his allusions to popular conceptions and his own original thoughts. In one place the ordinary notion of God is spoken of as the figment of a 'non-natural man' (*Phædr.* 246 C). In another the gods who exist through custom and convention are contrasted with the heavenly bodies to whom he attributes real divinity (*Tim.* 41 A). But, when he speaks most seriously, he expresses theological principles which are of permanent value. God is the author of all good, but never of evil. If He chastises men, it is that He may make them better. He cannot lie or deceive. God is the measure of truth, not man, as Protagoras had said. The world is ordered not by chance, but according to the mind of God. God is free from envy (here Plato contradicts his predecessors), and He would have His creature to be as like Himself as possible. In these and other passages God is imagined as a living personality. Elsewhere the place of God is taken by the impersonal idea of good. That is the Atlas on which the universe rests, and which 'preserves the stars from wrong.' It is this which gives validity to the highest principles of truth and being, and without which the fabric of the universe would collapse. Plato speaks with some reserve on theological questions, and in his *Laws* the most sacred rites are to be performed in the temple of the Sun. Yet above and beyond all such rules of worship, there are unmistakable indications of a true monotheism. God is virtually identical with the good mind or soul, which in the end prevails over the evil or imperfect soul. That is the prime cause of motion and becoming—itself eternal, unchanging, and unmoved. The unity of the supreme will is expressly recognized in the *Statesman*. Lastly, God is not to be cajoled by rites of atonement, or by prayer and sacrifice; and only a less dangerous error is to suppose that He takes no interest in human things.

13. In the system of *Aristotle*, the spheres of theology, ethics, and politics, though not unrelated, are distinct. The life of action and of moral choice is human; the life of contemplation is alone divine. God causes motion, but is Himself unmoved. His unceasing, uninterrupted energy is the thought of thought (*νόησις νοήσεως*). This metaphysical notion, seemingly cold and unimpassioned, is yet informed with a strain of philosophical enthusiasm which occasionally breaks forth (*Eth. Nic.* x., cf. *Met.* xi.), and it has had an influence on Christian theology (both Scholastic and Reformed) more persistently effective than Platonism as later understood. Even in Aristotle the perfection of the Divine nature as immanent in the universe is not wholly abstracted from the symbolism of the circle and the sphere. But these shadows of Pythagoreanism are not essential to the philosopher's thought. God, the prime mover, Himself unmoved, is at once the first and the final cause of all things. All Nature, from the lowest to the highest, is potentially Divine. From God it has received the seeds of being, and yearns to realize itself in higher forms. Hence the final cause is also at once the efficient and the formal cause. Particular ends, such as beauty, goodness, wisdom, truth, are all subordinate to the supreme energy which is the realization of the thought of God. At this point Greek religion has travelled far away from 'the gods of custom and convention,' and may be said to have reached its apogee.

14. *Epicurus*, following the Cyrenaic school in ethics, and Democritus in physics, and adopting one of the heresies denounced by Plato, taught that the gods, living happily in eternal calm, cannot be supposed to interest themselves in the affairs of men. The *Stoic*, on the other hand, while adopting Heraclitean cosmology, deified the moral ideal, and looked for God within the human mind and will.

15. By the end of the 1st cent. A.D. it had become impossible for persons at once religious and thoughtful to accept the old mythologies in a literal sense. Meanwhile other worships, especially those of Egypt and Persia, had met and mingled with the Greek and found wide acceptance in the Roman world. The blending of divinities (*θεοκρασία*, 'syncretism') had gone far. In this welter of superstitions, those who clung affectionately to ancient ritual and tradition had recourse to allegory and symbolism. Plutarch's treatise concerning *Isis and Osiris*, addressed to a pious and intelligent lady, is very instructive in this regard. He is strongly imbued with Platonism, and quotes largely from the *Timæus* and *Laws*. His own thoughts point clearly to monotheism. Yet he assumes that the religion of Egypt, however it is to be interpreted, is authoritative and lasting. He cannot imagine that it will ever be supplanted or done away. His explanation of the worship of the crocodile may serve as an example of his method: 'This animal's eyes are so arranged that he can see while himself unseen, a power which is justly attributable to the Supreme Being.' By accepting Plato's distinction between gods and demons (*θεοί* and *δαίμονες*), Plutarch is enabled to effect a superficial reconcilement between monotheism and polytheism. The same antithesis was adopted and emphasized by the Christian Fathers, when they followed St. Paul in saying that the heathen prayed and sacrificed to demons and not to God (1 Co 10^{20}).

GOD (Hindu).—At the foundation of all the religious life and thought of India lie her sacred books. The literary element, inspired and controlled by a dominant class and largely accommodated to their own ends, has exercised an influence the breadth and comprehensive nature of which finds few if any parallels outside of Christianity. Among no other peoples is the appeal to what is traditional more absolute and decisive; and tradition appeals in turn to the written word. If it may be said that custom in the East regulates and fetters social relationships to a degree unknown among Western nations, Indian life, on the other

hand, in its religious aspect is, broadly speaking, no less determined by the teaching of the Indian Scriptures. Every leader of thought, every reformer of doctrine, takes his stand upon these, and claims to be their true interpreter. Any survey, therefore, of the forms and developments of religious thought naturally and necessarily begins here; and an inquiry into the nature of the conception or conceptions which the Indian peoples have formed of the Divine must take account in the first instance of the evidence and teaching of the authoritative books.

1. **The Vedas.**—The earliest illustrations of primitive doctrine and belief as they existed in north-west India are found in the Rig-Veda; and the chronological uncertainties of this literature hardly detract from its supreme importance as a witness to the origin and development of 'theology' in the narrower sense of the word, the doctrine of God, as formulated and held by the Indian peoples. The *succession* of the literary strata, generally speaking, is not doubtful; and it is upon this that the history of doctrine rests. Behind it lies the Indo-Iranian period, whose ideas with regard to the unseen form matter of more or less well-founded conjecture, but hardly as yet of secure inference. That these early hymns reflect the higher and serious beliefs of the people is not doubtful—as on another plane of thought the Atharva-Veda reflects the superstitions, the craving for unnatural or supernatural power, the cunning and greed of primitive man on his guard against demoniacal influences, seeking to overreach his fellow-man, and fearful lest his fellow-man should overreach him. Of both tendencies account must be taken in any attempt to trace the genesis and history of theistic belief. As a whole the Rig-Veda is the older collection, and has been most influential upon later thought. The Atharva-Veda, however, contains elements of very great, probably of not less antiquity.

It has often been pointed out that the conceptions upon which these ancient hymns are based are those of a primitive Nature-worship—a Nature-worship, moreover, which is sufficiently frank and inartificial to enable us to watch the process of personification, and to trace its development from the scarcely-disguised natural phenomenon, where the god is hardly differentiated from the physical appearance, to the idealized and abstract personality, clothed with moral attributes, and endowed with a character wholly divine. To the former belong *Dyaus*, the broad bright sky, perhaps the only one of the great gods of the Veda who carries us back to pre-Vedic times; the *Maruts*, the deities of the storm; *Indra*, the god of the rain-cloud, who became the mighty warrior and champion of heaven; *Agni*, the god of fire, as regards some of his attributes and functions; and others, all of whom are in process of becoming detached from those phenomena of Nature which they represent, and obtaining an individual and abstract existence. The rich personification of the Veda extends over the whole realm of inanimate Nature. The heavens, the earth, the waters, the air are all laid under contribution; and there is a constant tendency to assimilation and interchange of attributes, so that not only are the same qualities ascribed to different deities, but the same actions are performed, and they thus tend to become indistinguishable in character from one another. The *sameness* of many of the Vedic divinities is no less noticeable than their derivation from the physical universe.

Abstract personifications are more characteristic of the later hymns, though they are not confined to these. *Aditi*, the immensity; *Prajāpati*, the lord of creatures; *Hiraṇya-garbha*, the golden germ, are illustrations of a tendency, which seems to have become more marked with the progress of time, towards a mystical, contemplative attitude of mind, which sought to dissociate the objects of its worship from the visible and tangible, and to assign to them a position of greater independence and exaltation. Hence especially the gods originally mortal become immortal, and cease to be moved by passions like men. They wrap themselves up in distance and mystery; and the worshipper cannot come crudely with a gift in his hand, hoping to receive an equal or a greater return, but needs to inquire the way, and reverently to approach one whose nature and being he cannot fully know. In the later Rig-Vedic hymns there is a distinct approximation to the speculative and pantheistic spirit of philosophic Hinduism.

A further and noticeable feature of the Vedic gods is their predominantly beneficent character. Malevolent deities, at least of the higher order, are absent; and the demons, malicious and hurtful, in their perpetual conflict with the gods are uniformly worsted. The great gods themselves are either neutral and indifferent, or interfere actively for the suppression of wrong and the punishment of the sinner. Ethically regarded, their power was conceived as making for righteousness; and, though subject to gusts of passion, and open to external inducements and cajolery like men, the gods stood on the whole for justice and right as against deceit, fraud, and wrong. There can be little doubt that in the lofty character of their deities a comparatively high moral tone of the worshippers found expression.

That behind some of these personifications lies a deification of the heroic and honoured dead is sufficiently probable, though it can hardly be said to be demonstrated. Traces of totemism also have been found in the names of tribes derived from the cow, goat, fish, etc. These indications, however, are obscure and indecisive, and at the most are readily explicable on other principles. It remains that the leading motive of the theology of the Rig-Veda is Nature-worship, the attribution of a personal and divine character to the objects and phenomena of the external universe.

It is not of so great importance as at first sight it might appear to be that the poets of the Rig-Veda ascribe omnipotence and supremacy to the individual deity whom for the moment they are addressing; that, in other words, the religion of these hymns is henotheistic. Each divinity in turn so fully engages the thought and attention of the seer that there seems to be no room for any other, or at least for any equal. To him attributes of majesty and greatness are assigned which can be the possession of but one alone, unique and without a peer. But, as he ceases to be invoked and passes out of sight, another comes forward, who is invested with precisely the same powers and dignified with the same titles. This is the essential feature of *henotheism*, the worship of one god at a time, who for the time is regarded as supreme, to the exclusion or subordination of all others. In no other primitive religion is this character so marked as in that of early Aryan India. The logical conclusion and development of a henotheistic creed is monotheism, and from this forward movement Indian thinkers turned aside. The East cares little for logic or consistency in the strict Western sense of the term. And the Vedic religion fell back into a luxuriant polytheism, which on the one hand fettered itself with the most uncompromising system of rites and ceremonies that the world has ever known, and on the other allowed the freest scope to a speculative daring which resolved the idea of God into a vague and mystical pantheism.

2. **The Brāhmaṇas.**—In the thought that char

acterized the period of literary development which followed, from the 6th or 7th cent. B.C. and onwards, it seems that to the active invocation of the gods by hymn and prayer had succeeded a ceremonial type of worship, which deadened all spiritual life, or at least drove it beneath the surface. The priest intervened, and demanded with growing insistence a rigorous precision in the observance of the niceties of rite and sacrifice, a strictness which in turn had the effect of making his own services the more indispensable. The gods needed placating, and none could placate them aright save the priest who knew the formulæ and was able to carry out the ritual. Myth and story, precedent and custom ruled. It was an epoch of order and commandment, of method crystallizing into principle, of elaboration of the minutiæ of service, like to nothing so much as to the stringent demands of the later Judaic code, when beneath the weight of the letter of the law the spirit was almost crushed. Doubtless, however, the reality was not so entirely spiritless and formal as the extant literature would suggest. True progress was made, in doctrine as well as in the ritual and modes of the sacrifice. But the doctrinal changes hardly affected, broadly speaking, the people's conception of God. They were eschatological, extending the retribution which might be required of the sinner into a future life; building up a more ordered and settled theory of the constitution and government of the world; but leaving the idea of God still essentially that of one with whom a bargain might be made, and who for value received would forgo his wrath, acquit the transgressor, or bestow unnumbered benefits. This tendency found exaggerated and morbid expression in the practices of the hermits and ascetics, for whose use special books of rule and doctrine were framed (see art. ĀRAṆYAKAS), and who by intense meditation and prolonged self-mortification believed themselves able not only to wring from the gods any gift at will, but to supersede them in their dignity and sway, and to take possession of their throne (see artt. ASCETICISM, RENUNCIATION [Hindu]). On the other hand, a reaction against the formality and religiousness of the times seems to have given birth to a materialistic or atheistic movement, which has left its traces in the literature, though naturally not allowed to assume a prominent place there; which scoffed at all things human and divine, denied the existence of a God, and, quite after the approved manner, sought to make the best of the enjoyments and opportunities of the present.

3. A line of thought essentially opposed to that of the Brāhmaṇas is developed with great subtlety and power in the Upaniṣads (*q.v.*). Here the trend of thought on the nature and being of God is speculative and mystical, as contrasted with the practical and propitiatory view of the books of ritual. In germ there can be little doubt that the former is of at least equal antiquity; the human mind pondered and scrutinized certainly not later than it worshipped. But, in the form in which they have been preserved, the Upaniṣads present us with the final result of a long period of inquiry, discussion, and speculation, during which the ritualistic and the philosophical or speculative elements moved and were developed upon parallel lines, without in the main clashing with one another; until under Brāhman influence they were brought together, and in some sort harmonized and made to agree. The leading doctrine or doctrines of the Upaniṣads seem to have originated among the royal or warrior caste; by whom in the East, not in India alone, respite from arms and strife was devoted to eager inquiry, and to the conducting of religious and philosophical disputations. Later, the Brāhmans adopted and welcomed the new modes of thought, interpreting their own ritual as type and symbol of higher truths, which in themselves indeed transcended the type, but were thus set forth by way of accommodation to the needs of the unlettered multitude, whose minds were incapable of rising to the conception of abstract or spiritual realities, and needed a concrete image of the true. Hence there were two ways of arriving at a knowledge of the truth, of Brahma, or of God—the *jñānakāṇḍa*, the sphere of knowledge, in which he alone moves and by which he ascends who is gifted with purer, clearer insight than the common crowd; and the *karmakāṇḍa*, the department of works, designed for ordinary men, who thereby may win a proportion of merit and reach forth painfully to a higher state. It is in the former that the kernel and essence of Upaniṣad teaching is to be sought.

The thought or thoughts, then, of the Upaniṣads and of the great systems of Indian philosophy which are more or less completely based upon, and find expression in them have penetrated and rule the Indian conception of the unseen and the divine to an extent to which an adequate parallel can hardly be found elsewhere, unless it be the influence of St. Paul's Epistles, and of Augustine his interpreter, on the development of Christian theology. Thinking India is dominated by the Upaniṣads. And, owing to the presence and authority of the Brāhmans, who had constituted themselves the custodians of doctrine, the conceptions of the Upaniṣads made their way to the lowest strata of society, gradually modifying and humanizing religious belief. It is true that outside even of these there was always a wide circle of non-Hindu aboriginal peoples; of whose creed Nature-worship, fetishism, and the like were the characteristic features. In mere numbers these last formed the majority; as, apart from the looseness and elasticity of the term Hinduism, which has thrown its wide net over very many who have the most shadowy of rights to be called Hindus, they constitute the majority to-day. Moreover, peoples so diverse and distinct as those who inhabit India can hardly be said to have one only thought upon any subject, least of all upon the highest, the nature and being of God. In so far, however, as there is a common tendency of thought, an accepted principle, disavowed by few or none, and leading naturally, and in most instances by virtue of the meditative and introspective character of the people themselves, to a definite form or type of belief, the articles of that creed, and especially the first and greatest—the Divine character and essential attributes—are laid down in the Upaniṣads, and have been thence derived, expounded, and promulgated.

Interwoven in all this literature there are two main strands of thought, which issued forth in the form of the two greatest and most influential systems of Indian philosophy. These are the idealistic and the materialistic. But the latter never developed into a religion, or gave birth to religious conceptions, and was perhaps incapable of so doing. It is true that, as a system, it admitted theistic ideas, and was largely modified in a theistic direction—under the uncontrollable natural impulse to worship, which seems at all times and among all peoples to have been ultimately too strong for abstract materialistic theory. But, though at one time widely prevalent, it so completely yielded place and popularity to the idealistic view that the latter has been justly described not only as the fundamental principle of the Upaniṣads, but as the almost universal presupposition of all Indian thought.

In regard to the nature of the deity and the being of God, idealism, if it ventures on any state

ment whatever, is almost of necessity pantheistic. And, if a single term is sought by which to describe the leading principle of the many and various ramifications of Indian speculation on this theme, it could be none other than 'pantheism.' With the doctrines or conceptions associated with this term the thought of India's sons from the highest to the lowest is saturated. The pantheism of the East, however, as represented in the Sanskrit books and adopted in the belief of the people, differed from that of the West, assuming different premisses and arriving at different conclusions. Western pantheism, broadly speaking, has regarded God as immanent in Nature and the natural universe. To the Indian, Nature is immanent in God. European pantheism is hardly wronged, if it be said to have its eye first on the natural world, into which it introduces God. Indian pantheism makes God all in all, and introduces Nature only because the insistent demands of practical everyday experience compel it to do so, and to endeavour thus to reconcile theory with apparent fact; while at the same time it saves the unity and absoluteness of the Divine by denying to the natural universe any true existence or reality at all. The latter is always and only *māyā*, deceivableness and illusion. Only of God may being, existence, reality be predicated, not of the material world. There is one only, not another. Hence Indian pantheism, as far as its conception of the deity is concerned, would be more strictly and correctly described as 'pantheistic monism.'

4. The great systems of Indian philosophy carry forward, reiterate, and develop the thoughts which are found more or less fully expressed in the Upaniṣads. But of the six recognized systems (see sep. artt.), two, the Vaiśeṣika and the Nyāya, possess no significance from a religious point of view. Of the others, the materialism of the Sāṅkhya leaves no room for the spiritual or divine; and the decline of its influence, in the presence of its great rival, has been very marked. The Yoga, which philosophically is closely allied to the Sāṅkhya, has grafted upon the materialistic creed of the latter enough of theism to give reality to its doctrine of union (*yoga*) with the divine. It is upon the completeness of this union that in theory the success or failure of its ascetic practices depends; and the penances and religious exercises for which Indian ascetics have ever been remarkable are designed by virtue of this fusion to secure prospective benefits or the immediate possession of miraculous powers. The *yogin*, therefore, is a real theist, whose theistic doctrines are nevertheless scientifically irreconcilable with the philosophy with which they are combined. Although, however, the genuine *sannyāsin* still commands great respect in India, the popularity and influence of the class are declining with the spread of European ideas and education. And there can be little doubt that, like the asceticism of the early centuries in the West, the Yoga also will finally disappear, leaving behind it, nevertheless, the memory of a marvellous self-control, of many a pure and simple life, and of an entire, if often useless and misdirected, devotion to one single aim.

Of the two remaining systems, the Mīmāṁsā and the Vedānta, which are mutually related, and which seem to have originally formed parts of one whole, the former, which devotes itself to the exposition of the ritual, contains nothing which enlarges or interprets the conception of God. It is concerned with practical observance, not with theological doctrine. The latter, the Vedānta, is the dominant philosophy of India, where philosophy and religion, more than in any other country, go hand in hand. Its estimates and definitions of God have swayed the minds at least of the more thoughtful classes of the people almost as far back as the records will carry us; and have determined the trend and character of the general belief of all, from the highest to the lowest, to a degree perhaps unparalleled elsewhere. The great majority of Hindus, with more or less acknowledgment and consciousness of the fact, are Vedāntists; and Vedāntism is but the theoretical development and expansion of the governing conception of the Upaniṣads. Creed and practice, however, are not of necessity adjusted to one another. A complete adjustment would indeed, on Vedāntic principles, be an impossibility in experience. And not infrequently the man who in theory is a pantheist and idealist will in practical life repeat his prayers and perform ritual service to many gods with as much outward fervency as his unphilosophical neighbour.

So far from denying that there is a God, the Vedānta identifies everything with Him. All that is not mere *māyā*, unreality and illusion, is God. Brahman (God) is one—one being, one soul, one mind, one only without a second. This universal soul, moreover, is one with the individual soul, and therefore each soul is complete and perfect Brahman; there is no distinction of persons, for all is one. Brahman is also of necessity indefinable, since every predicate, even the most general and indefinite, implies a contrary, an opposite, and besides Brahman there is none else; he is all-pervading, all-comprising, thought without an object of thought, the thinker absolute and alone. Strange as such reasonings may appear, they were built up with consistent and unshrinking logic from the premisses which the authors of the Vedānta laid down. And, if from these heights of refined fancy and speculation, where definition fails, where 'I am Brahman' and 'Brahman is I,' and where idealism strains itself in the effort to reach the ultimate reality, thought was soon compelled to return and to endeavour to find a way to harmonize pure abstract thinking with the demands of experience and practical life, it remains true that in theory the Indian idealist is the most thoroughgoing and consistent in the world. His idealism, however, remains almost necessarily a mere creed, which he will expound with earnestness and fervour, but which under ordinary circumstances hardly affects his conduct and life.

5. **Epic poetry.**—The importance of the great epic poems of India, the *Mahābhārata* and the *Rāmāyaṇa*, for the history of religious thought in its bearing upon the Hindu conception of God, is second only, if indeed it is second, to that of the Upaniṣads and the orthodox systems of philosophy. The latter have been the property and study of the thoughtful and learned, and their influence has only indirectly touched the lower strata of the population; but the epic stories are the popular possession of the inhabitants of every village and hamlet, as well as of the great towns and centres of pilgrimage. The names of their heroes and heroines are household words throughout the length and breadth of the land. Sītā Rām is the most frequently heard sound on the lips of the devotee, whether in the open air or at one of the many shrines consecrated to the worship of the god. Hanumān, Bhīma, Rādhā, and others occupy a position second to none in the affection and reverence of the villagers. And, while each district has its own store of folk-tales, and its own gods and godlings, whose name and influence extend more or less widely into the region beyond, the great historical epics have penetrated the whole land. To use a somewhat hackneyed comparison, they are to India what Homer has been to Greece. Their heroes are known everywhere, and in many instances have become identified with

local or tribal divinities, whose attributes they have more or less adopted, and whose worship they have absorbed.

Many of the elements, the episodes, and the characters of this poetry may be traced back to a great antiquity, equal if not superior to that of the Upaniṣads themselves. Its thought, however, has moved on different lines, and the points of contact, of action and interaction, have not been numerous. But, while the tone and tendency of the philosophical literature has been pantheistic, mystical, and symbolical, that of the epic poetry has been uniformly in the direction of theism—not monotheism, but a rich polytheism, which has flooded the land with gods and goddesses innumerable. It is an illustration, moreover, of a bent of mind that has been noticed before, that from among this crowd of divinities there has always tended to emerge one or more with greater power and wider sway than the rest, whose vengeance is more to be feared and his anger deprecated, and whose aid it is more desirable to secure in times of need. The Indian pantheon is always a more or less stable monocracy, not a republic.

More or less dependent upon the epics proper is the secondary romantic and mythological literature, still imperfectly explored, and extant not in Sanskrit but in the various vernaculars, embodying material much of which has come down from a considerable antiquity. While the tone of a great part of this literature, as far as it is known, is sufficiently demoralizing and coarse, there breathes in some of the works a true religious spirit, which seeks to cast off that which is sensual and degrading, and to know and hold communion with a higher power that makes for righteousness.

6. A characteristically strange combination of theistic and ethical teaching with dreamy speculation is found in the *Bhagavad-Gītā*, the Song of the Blessed—the New Testament, as it has often been called, of Hinduism. To the European reader its many repetitions, its frank opportunism, its digressions, and the framework and presuppositions of unfamiliar ideas, fail to present an attractive whole; but upon Hindu thought there is no book which has exercised so fascinating and elevating an influence. 'When my heart is lonely,' said an Indian *sādhu* recently, 'I read in the Bhagavad-Gītā; and I like that better than any other book, because it makes my heart glad.'[1] The very features which condemn it to Western taste are beauties and excellencies in Indian eyes. But with all its difficulties and inconsistencies, characteristics which it only shares with nearly all Eastern literature, it cannot be denied that the Bhagavad-Gītā has been a moral force, and that on the whole it has promoted simplicity and purity of life.

The poem has suffered interpolation (see art. BHAGAVAD-GĪTĀ), and is no longer in its original form. To this cause undoubtedly are due some of the contradictions which meet us in the poet's view of God and the chief good. Action and devotion are the two themes upon which he insists. Nothing is better than faith in God, reliance upon Him, and obedience to His will; and this is the whole duty of man. The doctrine of Brahman, moreover, the soul of the universe, everlasting and changeless, is set forth in the manner, and even in the very phraseology of the Upaniṣads; and the entire poem, as it exists at the present time, moves in the atmosphere of Vedāntic idealism. It has been usual to suppose that this idealistic teaching represents the view of the original Bhagavad-Gītā, and that the theistic and practical doctrines are a later accretion. In a recent monograph, however, R. Garbe argues strongly for the primitive character of the theistic element, holding that the basis of the poem was a monotheistic treatise or hymn designed to commend the worship of Kṛṣṇa as supreme god; and that this was worked over and supplemented more than once in the interests of Brāhman orthodoxy and the ascendant idealistic views. The last word upon the past of the Gītā has certainly not been said. But, however its tangled history may be unravelled, there can be no doubt that its monotheistic and spiritual teaching, modified as it may have been and contaminated by other tendencies, has been a most potent factor, perhaps the most potent factor, in the religious life of India.

[1] Quoted in T. L. Pennell, *Among the Wild Tribes of the Afghan Frontier*[2], London, 1909, p. 235.

7. Sects.—By the side of the philosophic doctrines and systems there exist and have existed from the earliest times innumerable sects, over all of which has been thrown the loose cloak of the Hindu name, but which differ widely from one another in belief and practice. Of these the larger number accept more or less fully the ancient Vedic divinities, recognize the supremacy of the Brāhman rules and caste, and adhere to one or other of the philosophical systems above named. Cross currents, however, run everywhere; the sects and the systems are rarely or never conterminous. And it can only be said in general terms, which admit of numerous exceptions, that this or that form of religious belief is allied with a particular trend of philosophical speculation. The tenacity and conservatism of the Hindu, moreover, has led to the result that the circumstances of the origin and rise of a creed or sect, the environment and history of the founder and his immediate disciples, have exercised a more permanent influence on the character of the faith they have professed than is usual in the West. The sects that have rejected Vedic and Brāhmanical traditions have been comparatively few, and in most, perhaps all, instances, the impulse to such rejection has come from without. Historically also they have ordinarily assumed the shape of a reform of existing usages, and a purification of doctrine and religious belief; and in relation to the dominant orthodoxy have run a more or less prolonged course of successive antagonism, toleration, and decay, sinking back into the all-absorbing and inert mass of Hinduism by which they found themselves surrounded. A broad and general classification of the sects on these lines may be made according as they owe their inspiration mainly to internal sources, Hindu or Buddhist, as Śāktism, Rāmānuja, Chaitanya, etc., and the Ārya Samāj; to Muhammadanism, as Kabīr, Nānak, and the Sikhs; or to Christianity, as the Brāhma Samāj and kindred societies. But the originating causes of all are manifold and complex, and no such classification is exhaustive, or in details unexceptionable.

The greatest and most enduring revolt from Brāhmanical assumption and claims was raised in Buddhism, which has left marked traces of its influence in many of the sects, and, though in general extinct in India, lingers obscurely to the present day in some of the villages of Bengal.

The sectarian or popular religions of India are thus essentially theistic. The two chief forms of religious creed and life, *Vaiṣṇavism* and *Śaivism*, which recognize Viṣṇu in one or other of his forms and Śiva respectively as supreme, can both be traced back to a great antiquity, and contain elements which it is impossible now fully to disentangle, derived from the ancient beliefs and practices of the aboriginal tribes, and from the perhaps loftier faiths of the incoming Aryans. Of the two, Śaivism is the older, and has preserved most of primitive ideas, customs, and tendencies. Vaiṣṇavism has come more entirely under the influence of Aryan thought, and has submitted more completely, as far as speculation is concerned, to Brāhman ascendancy, following in its development the lead of Brāhman advance. Śaivism, on the other hand, has hardly passed beyond a material and sensual view of things. Philosophically, the latter approaches nearest to the Sāṅkhya; but on the religious or emotional side has allied itself with Śāktism, the worship of the vital principle in Nature, and with the cult of the

Mātris or Mahāmātris, the 'mothers' or 'great mothers,' who are the source of all fertility and life, and on the other hand deal out disease and death. Kālī, the black goddess, whose temples are stained with blood, and whose ferocity reflects, no doubt, the traits of primitive savage life, has been identified with the wife of Śiva; and thus to her rites has been given the sanction of official recognition. Together with other deities throughout the land, of kindred nature and probably similar origin, though less widely popular and influential, this goddess and her worship have therefore become responsible for a degradation of the idea of God, which has made of the divine power a capricious tyrant, or a monster that needs to be propitiated with the best that his worshippers can provide. Early in our era and for many centuries Śaivism was apparently the dominant cult in India; but it has long been losing ground steadily to its great rival.

The second idea closely associated with the Śaivite form of faith was that of *asceticism*. Śiva was the great patron of ascetics, and himself strenuously practised self-mortification. And the *sannyāsin* or Indian devotee, who divested himself of all his possessions, was a *yogin* who sought, thus disencumbered, the final aim of union with God. To him the rejection of family ties and the abandonment of home and friends, together with the affliction of the body, were but means to an end—the securing of release from individual existence with all its pains and penalties, and becoming absorbed at last in the divine. The ascetic ideal therefore was not only inconsistent with the prevailing pantheistic mode of thought, but directly contradicted it. To the true Vedāntist there could be no question of absorption into a higher power, whether personally conceived or not. He was already essentially and altogether one with Brahman, and the only change necessary or possible was enlightenment, the opening of his eyes to a pre-existing fact, an eternal truth. The ascetic principle, however, as worked out in India, tacitly assumed the contrary. The quest for union, on whatever lines it was pursued, implied belief in a supreme power with which the union was sought; and that power was logically personal, though even here Hindu thought did not always accept or recognize its personality. The tendency therefore of the *yoga* conception and practice was all in the direction of theism.

It may be doubted, however, whether in ancient times any more than at the present day the ascetic ideal ever exercised really a great influence on the mass of the people of India, or modified to any appreciable extent their attitude towards the spirit world. They were vaguely conscious of its excellence, admired it in theory, and were ever ready in practice to bring their gifts. But they neither imitated nor desired to imitate the manner of life therein exemplified.

Of far greater immediate influence than the Śaivite faith or ideal is Vaiṣṇavism in one or other of its many forms and sects. Allied with the philosophy of the Vedānta, the Vaiṣṇavite creed has commanded the allegiance of three-fourths of the thoughtful minds of India, and has deeply, if not always consciously or professedly, permeated the life and moulded the conduct of the great mass of the people. It can hardly be disputed that Vaiṣṇavism is the truest *general* presentation of the religious tendencies and conceptions of the Hindus; and, apart from its theoretical idealism, it is more decisively theistic in practice than Śaivism itself. In its higher, purer forms the henotheism of the Vaiṣṇavite worshipper approaches closely to monotheism; and of all the so-called heathen cults, including Buddhism, this faith in its creed and in many of its forms has most affinity with Christianity. In particular, the ascetic ideal presents no attractions to the true Vaiṣṇavite, and to him the ferocious character of the Śaivite divinities is especially abhorrent. In his temples no bloody sacrifices are offered, self-torture and self-immolation are unknown, and are indeed opposed to his religious principles. His entire conception of God is gentler and more humane, and is, moreover, deeply impressed at every point with anthropomorphic tendencies. The Deity is present to man, converses with him, walks by his side, sees and hears, knows and feels, and perpetually reincarnates Himself for the deliverance of suffering, helpless humanity. The similarity to Christian doctrines is often indeed merely verbal and superficial, as is the case with the Hindu theory of incarnation (see article INCARNATION [Hindu]). But the purpose is broadly the same, the rescue of man from the baleful dominion of a foreign and hostile power. Such 'descents' or incarnations take place continually, more or less of the deity being present under the bodily form. And every great ruler or teacher is thus regarded by his followers as divine, with a just claim not only to respect, but to formal reverence and worship.

8. Reforming movements.—Upon this theistic or monotheistic conception, as distinguished on the one hand from the vague idealistic monism of the philosophers and *yogins*, and on the other from the polytheistic beliefs of the common people, the reforming movements that have arisen within Hinduism itself have usually laid stress. In most instances a comparatively lofty moral and spiritual tone has characterized the teaching of the founders of these systems, and they have pointed the way not only to an amendment of life and manners, but to a purer faith.

(*a*) Perhaps the greatest and most influential of the reformers was *Rāmānuja*, who was born near Madras probably in the early part of the 12th cent., and took up the position of opponent of Śaṅkara in his interpretation of the Vedānta sūtras. He expounded and enforced the doctrine of a Supreme Deity, endowed with all the attributes of graciousness, wisdom, and love; of the separateness of the souls of individual men, who are capable of knowing and attaining unto God; and of the reality of the external universe. His teaching also has been supposed, without any sufficient justification, to owe its inspiration to Christian influence.

(*b*) The impulse which Rāmānuja gave to a higher, purer faith was effective mainly in the south of India, where his followers and disciples carried and still carry on his work. In the 15th cent., however, it became a power in the Panjāb and the north through the influence of *Rāmānanda*, an adherent of the principles and doctrine of Rāmānuja, who abandoned the narrow practices of the successors of the latter with regard to caste, and proclaimed the natural equality of all men, of whatever race, religion, or birth they might be. All that was best and most tolerant in his system was then taken up by *Kabīr* in the Panjāb in the 16th cent., who is said to have been a personal disciple of Rāmānanda. Himself of Muslim origin, Kabīr united in his teaching the strict uncompromising monotheism of Islām with the broader outlook and more generous views of the Vaiṣṇavite faith as represented by Rāmānuja and his school. The sayings attributed to him breathe a high moral tone, but are deeply penetrated by the mysticism characteristic of Indian thought. With him and with his great disciple *Nānak* originated the reforming movement of the Sikhs, which, taking cohesion and national life under the pressure

of external persecution, developed into a strong military society and kingdom, offering curious contrasts as well as resemblances to the militant orders of the Middle Ages in Europe; but which, while maintaining its own exclusive ceremonial and forms of worship, has ceased to possess a distinct religious significance, or to preserve its doctrinal and ethical superiority to the Hinduism by which it is surrounded. See, further, under art. SIKHS.

(*c*) In another direction, all the more interesting and instructive because it seems to draw its inspiration from purely native sources, the teaching of Rāmānanda and his school was taken up in the work and writings of *Tulasī Dās*, perhaps the greatest as well as the best-known and most popular of India's poets. Literature in India is, almost without exception, whatever its immediate theme, religious and philosophical in tone. And the poems of Tulasī Dās convey instruction in religious doctrine and embody a system of cult and creed, which by virtue of their popularity has been carried into every hamlet and almost every household where the Hindī tongue is spoken. 'Fully ninety millions of people base their theories of moral and religious conduct upon his writings.'[1] In adopting and giving literary expression to the teachings of Rāmānanda, Tulasī Dās imparted to them a tenderness and directness of application to human needs which constituted their irresistible appeal to the hearts of the common people. There is one Supreme Being, who in love and pity became incarnate for the relief of man from his sin. In His sight all men are equal, without distinction of birth and position; all are alike involved in ruin irretrievable save by the grace of the Creator, and thus all stand in need of a deliverance which in and by themselves they are incapable of achieving. Tulasī Dās further declared that it was in Rāma, the blameless king, that the Deity became thus incarnate; so linking his teaching with the most popular hero and exemplar of bygone days. The justly celebrated and much-honoured poet died early in the 17th century. He also has been freely credited with having borrowed his doctrines from Christian sources; but there seems to be no real ground for the charge, at least so far as direct derivation is concerned. His creed is the outcome and highest expression of all that was best in Hindu thought, controlled and guided by a pure heart searching after wisdom. There have been many like-minded among the sons of India.

(*d*) The later and more modern reform movements within Hinduism owe at least as much to the ferment of Christian thought and ideals as the earlier movements of the Panjāb to Muhammadanism. Of these the *Ārya Samāj* (*q.v.*) claims to find a pure monotheism in the four Vedas, which alone it accepts as inspired and authoritative Scripture. The adherents of this sect, while intensely hostile to Christianity, ascribe to the Deity attributes of mercifulness and grace, which have their nearest parallel in the God of the New Testament. They deny the possibility of an incarnation, and in this respect approximate most to the teachings of Islām. Their professed aim, however, is to restore the ancient unblemished faith of Vedic times, which they declare has been corrupted from without, at the same time maintaining strongly the doctrine of transmigration, although this is, strictly speaking, foreign to Vedic teaching. The influence of the Ārya Samāj is neither very deep nor far-reaching, and it has spread mainly in the ultra-conservative circles of those Brāhmans who have kept themselves aloof from Western ideas and education; its position and tenets nevertheless bear strong testimony to the real tendency of Hindu thought in relation to its conception of the Divine.

(*e*) The *Brāhma Samāj* (*q.v.*) and kindred societies have been more deeply affected by Christian example and teaching, and more frankly acknowledge their indebtedness to Christian books. Their leaders have moved to the very border-line of Christian belief and confession, and have often been thought to have passed over it. They have, however, uniformly rejected the doctrine of incarnation, and with it the Christian conceptions of the Trinity and of the Divinity of Christ. They preach and teach a pure monotheism, and in this respect hold the same position as the adherents of the Ārya Samāj. Their views, however, are undoubtedly broader and more liberal, and in their public services passages are read not only from the Vedas, but from the New Testament and the Qur'ān. The reverence which the followers of the Brāhma Samāj profess for Christ and His teaching is deep and sincere, and the language they employ is not seldom such as would readily lend itself to a Christian interpretation, and has indeed frequently been so regarded. They do not, however, intend it in this sense. Their creed, so far as it concerns the nature and being of God, is limited to confession of faith in one only God, infinite in wisdom and goodness and power, whom Jews and Christians, Hindus and Muhammadans, Parsis and Buddhists alike worship, though under different names.

The members of the Brāhma Samāj and of sects allied to it by origin and creed are few in number compared with the total population of India; and their propaganda, though at one time zealous and earnest, has never been very successful. There can be no doubt, however, that the ideas which they represent commend themselves generally to the Indian mind, and are widely influential among the more thoughtful of the people at the present day.

9. By the side of all these sects, which by comparison may be termed orthodox, there have existed in India from the very beginning innumerable forms of *Nature-worship*, *demonolatry*, *polytheistic beliefs*, which vary from province to province, and almost from village to village. Of the origin and subjective history of such beliefs very different accounts have been given (see artt. ANIMISM, and NATURE, NATURE-GODS). In practice in India they present themselves under the form of an almost universal belief in spirits or demons, who pervade and manifest themselves in all the forces and phenomena of Nature. It is only the higher and educated classes, and not always or all of these, who have emancipated themselves from the thraldom of the fear of invisible beings, ghosts, and imps, the spirits of fever and pestilence and mischief in general, that haunt their imagination, and render their lives a perpetual attempt at the conciliation of powers of the unseen. *Ancestor-worship* also has played its part, chiefly under the form of a propitiation of the spirits of the dead, to secure that they shall not return to injure or torment the living. Men and women, conspicuous for piety or iniquity, from whom favours may be expected or whose wrath is to be deprecated, draw to themselves the worship of multitudes, stirred by hope or fear. *Totemism*, again, has left broad traces on the superstitious beliefs and practices of the people, and lingers in hardly diminished vigour in country districts. No river or hill, no tree or rock or spring, is without its inhabiting divinity. Every malady is attributed to an evil genius, every misfortune wrought by a devil. The house, the temple, the road, the field, each has its guardian spirit—with the result that the thirty-

[1] G. A. Grierson, in *JRAS*, 1903, p. 455; cf. his art. in *IA*, vol. xxii. 1893, pp. 89, 122, *al.*; and art. TULASĪ DĀS.

three lacs of deities, with which India is popularly credited, might easily be multiplied many times, if the reckoning were to take account of every way-side image and to enumerate every village sprite.

The truth is, however, that among all these variant forms and practices of worship there is a very great likeness. It is more often a matter of name than of nature; and the underlying conceptions and principles may easily be reduced to two or three. The vast majority, moreover, of the singularly monotonous and recurrent impersonations to which the Hindu villager does reverence, from the extreme north to the farthest south of the peninsula, are not gods in any real sense of the term. At the best they are godlings, miniature deities with restricted interests and powers; at the worst, spiteful and malevolent demons, whose immediate sphere of influence is comparatively circumscribed, and who reappear under different names but with almost identical attributes and functions in every part of the country. The great gods of Hinduism are few, and are mostly the descendants or survivals of the divinities of Vedic times. The supernatural powers of lower rank are without number, an ever-changing crowd, who push and jostle one another in the struggle for pre-eminence, and pass out of sight and out of mind like any mere man. The stable element among them is usually of ancient aboriginal derivation—deities of the woods and streams and fields, that have maintained their place in the affections and reverence of the people in spite of the pressure of invading Hinduism. India is full of the spirit of religious toleration and compromise; and the assimilation of rites and divinities and worship is proceeding at the present day probably more rapidly than at any earlier time.

10. Amid so great and endless a variety it would seem almost hopeless to attempt to frame a definition of the Indian conception of God which should be at once simple and sufficiently comprehensive to include all that passes under the name of Hinduism, and which at the same time should adequately distinguish her creed in this respect from the other great religions of the world. And indeed such a broad and general definition, except in the vaguest and most catholic terms, is impracticable. For it must be remembered that throughout the course of her early and late history Hinduism, by virtue of her very elasticity and open-mindedness, has been profoundly affected by the thought and practice of Buddhism, Muhammadanism, and Christianity, to say nothing of the numerous sects to which she has given birth and which she has nurtured within her own bosom. These last have contributed no insignificant share to the sum-total of her beliefs. In no respect, in regard to her faith, is Hinduism a complete articulated whole, but rather a loosely congested mass of materials, held together by the fascination of a common name, and the imposed bondage of prevalent social customs. It would seem possible nevertheless, even if the nature and history of Hindu thought forbid rigorous definition, to indicate certain broad tendencies of mind which have almost crystallized into articles of universal faith; which have, on the whole, maintained their ground throughout the centuries; and which combine to make up no unfaithful picture of the essential creed of the ordinary Hindu, as it concerns his belief in the unseen power that he knows as *Iśvara*, or God.

Whatever measure of internal unity—unity of thought and conception, of outlook on the facts of life and interpretation of its issues—the Indian peoples possess is due to their religion. Politically and socially they have never been one. Nor are they such religiously, save in the general tendencies above indicated. But, on the other hand, Hinduism has been so broadly comprehensive, gathering into its net the most diverse races and absorbing the most unlike and even contradictory modes of thought and worship, constraining them all to pass under one name and to recognize the advantages of one social order, that many have despaired of a definition on religious lines, and have affirmed that the common bond consists merely of external conformity to certain social usages, combined with a practical recognition of the supremacy of the Brāhman caste. This denial to Hinduism of the status of a religion ignores the intensely religious character and tendency of the Hindu mind. Whatever else it may imply or concede, the essential indispensable element, without which there is no religion, is *belief in a higher power*, whether one or many. It may be doubted whether there has ever been a people among whom this belief has been more deeply engrained, or, to put the same thing in other words, who are more religiously inclined than the inhabitants of India. The definition, therefore, of Hinduism cannot be entirely secular; it will be simple, its articles few and broad, its terms of subscription wide and generously interpreted; but it will be distinctly a religious definition, not one of mere outward form or social conformity. With such a definition we have no further concern here than as it contains and gives expression to the Indian conception of the Divine, of God. It must be borne in mind also that general statements can never be other than subject to numerous exceptions and deductions.

(1) Hindu thought shows a marked inclination towards theism. It would, perhaps, be more correct to describe its speculative theory as henotheism, the occasional or opportunist worship of one divinity, the supreme object for the time being of the worshipper's devotion. Atheism has never found a congenial home on Hindu soil. Alien, like agnosticism, to Hindu nature and sympathies, it seems to have been almost always an exotic which has required delicate nurturing to bring it to even a stunted maturity. The philosophic pantheism of Śaṅkara, on the contrary, has proved itself to be in harmony with the tendencies and dispositions of the people, and his interpretation of the Vedānta on these lines, although not unchallenged, has become the accepted metaphysical belief of the great majority of those who call themselves Hindus. The philosophical theory, however, does not interfere with the practical religious faith. In actual life Brahma, the All-One, with the doctrines of non-dualism, reality and unreality, illusion and the like that are associated with the Vedantic creed, remains theory and theory only. The living potent force to which the man turns in need is not his philosophy, but the personal God, who, by whatever name He is called, as Rāma, Viṣṇu, Kṛṣṇa, or many another, is conceived as the sovereign dispenser of favours and the ultimate source of power.

(2) Together with this henotheistic and, as it were, ultimate though unformulated creed, there exists an indescribable wealth of polytheistic beliefs, godlings, male and female, without number, imps and elves, ghosts and demons, the vast crowd of whom not seldom obscures, and for immediate purposes puts out of sight, the loftier and more stable power in the background. Among the more primitive races and tribes of India also, as so frequently is the case among peoples low in the scale of civilization, there are found traces of a belief in a higher beneficent power, supreme and unchanging, seldom addressed, who has become a shadowy recollection rather than an active force or an object of worship, discarded from memory and regard in favour of spirits, whose malicious

designs it is the pressing necessity of the moment to frustrate. Hindu belief, therefore, is not wrongly described as polytheism. A better term would be 'polydæmonism.' But the description does not cover the whole ground. It leaves out of account a higher and more significant element, in which the lower and more primitive is embraced, and by which in the more thoughtful minds it is superseded.

(3) To the Indian, religion and philosophy are inseparable. His thinking is essentially spiritual and idealistic. The imperious demands of a hard daily life leave, indeed, to the ordinary Indian peasant, no opportunity for leisured or speculative thought; but amongst the higher classes the trend is distinctly in a spiritual direction. The ever recurrent puzzle of the relation of mind to matter is solved, as far as the Indian is concerned. Matter is the shadow; mind is the reality; and mind is God. His philosophy, therefore, is cast into the scale, not on the side of materialistic views or dogmas, but on that of an idealistic and reasoned theism.

(4) Hindu beliefs, finally, are coloured by the universal, or almost universal, acceptance of the doctrine of transmigration. Obscure and uncertain as the origin and early history of this doctrine in India may be, it has become a part of the most intimate faith of the people, and has profoundly influenced their outlook upon life. And, inasmuch as the gods themselves are, theoretically at least, involved in the *saṁsāra*, and subject to the perpetual flux and change of all things living, it has tended to make the outlines of these indistinct, their character and functions interchangeable. The dividing line between men and gods is not so firmly drawn as in the West, or the place and features of the latter so clearly conceived. Logically, a doctrine of transmigration assumes and necessitates a doctrine of the separateness of individual souls, and is as incompatible with the extreme idealistic theories of the Vedānta as with Christian theism. But the two conceptions lie side by side in the Indian mind without interfering with one another, or carrying on the mutually destructive war which to the European would appear inevitable. His thoughts concerning the Divine adapt themselves, or remain unadapted, to a view of life which opens out to him a vista of recurrent mundane existences practically without end.

Cf. also HINDUISM, VEDĀNTA, VEDIC RELIGION.

LITERATURE. — For the literature of the several periods of religious development, the sects, etc., consult the separate articles. All the works dealing with the religion and philosophy of India in general discuss with more or less fullness the Hindu conception of God; cf. esp. A. Barth, *Religions of India*[3], London, 1891, *passim*; E. W. Hopkins, *Religions of India*, London, 1896, ch. xi.; M. Monier-Williams, *Brāhmanism and Hinduism*[4], London, 1891; *Census of India*, General Report, Calcutta, 1903, ch. viii. 'Religion,' with a valuable Appendix on the 'Religious Ideas of some Animistic Tribes in Bengal'; P. Deussen, *Philosophy of the Upanishads*, pt. i. 'Theology,' Eng. tr., Edin. 1906. A. S. GEDEN.

GOD (Iranian).—1. The idea of God during the Early Iranian period.—For ascertaining the conception of God entertained by the Iranians during the earlier period of their history we possess neither direct records[1] of their religious practices nor any form of sacred text crystallizing their religious experiences at that stage in the development of their God-consciousness. Nevertheless, the indirect evidence bearing upon even this part of the subject is neither meagre nor wanting in significance, so that comparative science has succeeded in reconstructing what can be confidently regarded as the main content of the early Iranian pantheon.

In his well-known account of the divinities worshipped by the Persians in the middle of the 5th cent. B.C., Herodotus (i. 131) claims for the first part of his description an application to the conditions of a much higher antiquity:

'They are in the habit of ascending the highest mountains and offering sacrifices to Zeus—they give the name Zeus to the whole celestial circle. Moreover, they sacrifice to the sun, moon, earth, fire, water, and winds. To these alone,' he adds, 'they were accustomed *originally* (ἀρχῆθεν) to sacrifice.'

According to this account, therefore, the early Persian idea of God was that of worshippers of the great forces of Nature—reserving for special veneration the sky with its associated phenomena. Although this description lacks completeness in one vital respect, as will appear later, yet, so far as it goes, it accords perfectly, as we shall now proceed to show, with what our other available evidence leads us to believe of the Iranians generally at that period.

Schrader has already shown very fully (see art. ARYAN RELIGION, vol. ii. p. 31) that the worship of the elements enumerated by Herodotus always formed an essential and characteristic part of the religion of all the Indo-European peoples. That religious regard for the same Nature-powers should survive amongst the early Iranians is, therefore, in the absence of any known great disturbing influence, what was naturally to be expected.[1]

The Iranians, however, shared with one Indo-European people a common religion and culture for a much longer time than they did with any of the others; and this common life continued until the commencement of the period of which we are treating. That people was the Aryan sept which ultimately settled on the banks of the Indus, and are known to us as Indians. Of necessity, therefore, the earliest religious ideas and customs of those tribes have the highest significance for the study of the early Iranian ideas of God. It must not be forgotten that there were, as later developments strikingly prove, very marked differences between the two peoples in concept and custom, dating in some cases probably from Aryan, *i.e.* Indo-Iranian, times. Hence the necessity for caution in attributing Vedic ideas to the early Iranians. But, when we find the same religious beliefs and usages reflected in the Vedas as are attributed by other independent authorities, such as Herodotus, to the contemporary Iranians, we may feel fairly certain that we are dealing with phenomena that were common to both peoples.

Now, the Vedas reveal the same general stage in the development of the consciousness of God among the dwellers beyond the Indus, especially during early Vedic times, as we have postulated for the Iranians during, partly, the same period. The mighty Nature-powers that inspired the awe and reverence of the Vedic poets also compelled the sacrifices of the devoted Iranians. Comparative philology has shown that the two peoples from the period of unity employed the same two general terms for a god, thus indicating that the character of the objects of their worship was the same. One of these was *asura* (Skr. *asura*, Av. *ahura*); the other was *daiva* (Skr. *deva*, Av. *daēva*), from Indo-European *deivo*, pl. *deivōs* (connected with *dyāus*, 'sky'), 'heavenly ones,' meaning the sky and the great physical phenomena connected with it.

The premier position amongst early Persian

[1] In the year 1907, H. Winckler announced in the *Mittheil. d. deutsch. Orientgesellschaft* (no. 35) that he had found a number of names of Aryan gods in a Hittite inscription, of about 1400 B.C., at Boghaz-keui. Should the reading be finally confirmed, and especially their origin proved to be Iranian—a view defended by Oldenberg and other scholars—the above statement would, to that extent, require modification. On the significance of the discovery, see an article by E. Meyer in *Sitzungsber. d. kōnigl. preuss. Akad. der Wissensch.*, 1908, p. 744 ff.; also several articles in the *JRAS* for 1909–10.

[1] Agathias (ii. 24)—on the authority of Berosus, Athenocles, and Symmachus—says that previous to Zoroaster's reform the Persian religion closely resembled that of the Greeks (see Jackson, *GIrP* ii. [1896–1902] 618).

divinities assigned by Herodotus to the sky is in perfect consonance with the supremacy which the sky-god enjoyed amongst the Indians, whether in the oldest time under the name *Dyāus* or later under that of *Varuṇa*.

What was the name and what the exact connotation of the term the Persians employed in addressing themselves to the sky-god are moot questions. Our indebtedness and gratitude to the Greek historian would have been still deeper had he on this occasion departed from his countrymen's usual custom and abstained from converting the Persian term into its Greek equivalent.[1] That Herodotus had in mind the name *Ahura Mazda* is improbable,[2] for we have no evidence that he was acquainted with Mazdaism, as such, in any form, much less in its Zarathushtrian development. Spiegel suggests *thwāsha* (Mod. Pers. *sipihr*) as the probable term by which the Persians invoked the vault of heaven. It seems not improbable that the old term *dyāus* had been handed down as part of the tradition upon which Herodotus relied for his account of the earlier period.[3]

If the evidence of the Iranian sun- and moon-worship is somewhat less abundant, it is scarcely any the less clear or certain. In Vedic times the Indians worshipped the sun under the name *Sūrya* and the moon as *Mās*. The former is cognate with the Avesta *hvar* (Mod. Pers. خور, خورشید, 'sun'); the latter with Avestan *Māh* (Mod. Pers. ماه, 'moon,' and 'month'). The re-appearance of the sun and moon in the post-Zarathushtrian pantheon is highly suggestive of their earlier worship.

In this connexion mention should be made of another very important divinity, who, if not himself a sun-god, was still intimately connected with the chief luminary and gave modern Persian its usual term (مهر) for 'sun.' We mean, of course, *Mithra*, Vedic *Mitra*. Perhaps the best opinion is that which regards him as the god of the luminous ether (cf. C. de Harlez, *Avesta*, Paris, 1881, p. 53; also Moulton, *op. cit.* 36 f.). The prominence of this deity in Vedic religion, and his almost unique position among post-Zarathushtrian *Yazatas*, leave no room to doubt his existence in the early Iranian pantheon.

Although the Earth did not properly come within the category of the 'Heavenly Ones,' yet the widespread mythological conception of the Earth as one of the divine pair, the wife of the sky, is sufficient ground for accepting her as an Indo-European divinity. In the Vedas her name, *Pṛthivī*, is, with four exceptions, invariably coupled as a dyad with that of the sky, *Dyāus*, in the form *Dyāvāpṛthivī*.

Moreover, we have the testimony of Herodotus (iv. 59) that at least one branch of the Iranian peoples—the Scythians—worshipped the Earth as the wife of Zeus.

There can scarcely be any doubt that the Earth or Earth-Spirit, under the name *Aramaiti*, was worshipped by the main body of the Iranians during the early period (see Spiegel, *Die arische Periode*, pp. 198–203; Moulton, *op. cit.* 36).

The most characteristically Iranian divinities, perhaps, are those that come next for mention, namely, fire and water. When Strabo says (xv. iii. 14) that it was to fire and water especially that the Persians offered sacrifices, he was indicating no new emphasis in Persian worship. That they were part of the Indo-European heritage is well known. And the new physical conditions in which the Iranians found themselves in consequence of their eastward migration served only to enhance the use and value of the two elements, and consequently to intensify their reverence for them or for the spirits which were associated with them. In India the chief fire-god was *Agni* (Lat. *ignis*); but in Iran he was venerated under another old name, *Ātar*.

Another circumstance which substantially contributed to the prestige and pre-eminence of these two elements was their association with the thunderstorm—a phenomenon that specially excited the awe and reverence of primitive peoples, and for the Indo-European peoples it was not only a *deus*, but it proved to be a *fons multorum deorum*. We find among both branches of the Indo-Iranian people one very important and exceptionally interesting divinity, whose origin is to be traced to that great physical phenomenon, namely, *Apām Napāt*, or 'offspring of waters' (*i.e.* 'fire that resides in water' [Tiele]). In the Vedas he is a god of fire—the lightning flash; and even in the Avesta he is once associated with another god of fire, Nairosangha. But usually in the Avesta he is a god of waters. In the later books he is frequently invoked. In *Yašt* 19[52] he is even said to have made and shaped man. As Spiegel observes (*Die arische Periode*, p. 313), we have in Apām Napāt a very ancient and highly venerated divinity.

The presence of another divinity in Vedas and Avesta and the functions assigned to him point clearly to his existence in early Iranian times. *Vṛitrahan* in India is Indra, the slayer of the imaginary demon of drought; whereas his counterpart *Verethraghna* was regarded by the Iranians as the god of victory in general.

The wind was worshipped by the early Iranians under the name *Vayu* (Vedic *Vāyu*). It was specially revered for the supposed help rendered to bring to the earth the fertilizing rain from the clouds. Nor should *Haoma* (Vedic *Soma*) be omitted from the list of early Iranian divinities. It may not, as Tiele observes (*Rel. of the Iranian Peoples*, Eng. tr., Bombay, 1912, p. 54), have been materially the identical Haoma plant of the Later Avesta, but that an immortalizing drink was deified at that epoch is fairly certain. Cf. art. HAOMA.

The prominence of the custom of ancestor-worship amongst Indo-European peoples generally, taken in conjunction with the cult of the *Pitaras* in the Vedas, and particularly the lavish adoration of the *fravashis* (*q.v.*) in Later Avestan ritual, points inevitably to the conclusion that only during the strictly Zarathushtrian régime had this ancient custom been discontinued among the Iranians.

A more difficult question confronts us when we inquire how the early Iranians regarded their gods; what precise character they attributed to them; to what point in conception and feeling they had attained at this time. Whatever vestiges of Animism there may still have been in their religious notions, we are certainly justified in asserting that in pre-Zarathushtrian days in Iran, just as in India, some of the gods were credited with a tolerably high moral character (cf. Indian Varuna). Moreover, the two classes of gods, *ahuras* and *daēvas*, were even from Aryan times viewed in some respects as rivals in their claims upon the adoration of those tribes. In India, as is well known, even in early Vedic times, the *devas* are in the ascendancy, although it is not until the later Atharva Veda that we find the *asuras* regarded as demons.

In Iran the opposite course prevailed. The *ahuras*, who from Indo-Iranian times were the more feared and awe-inspiring, seem to have gradually gained in prestige, and, apparently at a very early epoch, one of them had become the Ahura

[1] Hesychius maintained that Δία in Herodotus' account is not the accus. of the Gr. Ζεύς, but the Persian form of the term for 'sky,' derived from the Aryan *dyāus* (cf. Spiegel, *Erān. Alterthumskunde*, Leipzig, 1878, ii. 190).

[2] Spiegel observes that Ahura Mazda was not specially connected with the *orb of heaven*, and in later epochs he was identified rather with the planet Jupiter (*op. cit.* ii. 141, 190; also *Die arische Periode*, Leipzig, 1877, pp. 128–134).

[3] See, however, Moulton, *Early Religious Poetry of Persia*, Cambridge, 1911, p. 36 (a small volume, but bristling with penetrating thoughts and pregnant suggestions on the whole subject of this article).

par excellence. And it is in relation to this Ahura that the religious consciousness of the Iranians has since been primarily developed and exercised. Moreover, evidence seems to be accumulating[1] to show that even the epithet *Mazdā*, 'wise,' or 'wisdom,' was, so early as the middle of the second millennium B.C., applied as the special cult-epithet of the great *Ahura*.

In consonance with this opinion is the fact that in the *Gāthās* Zarathushtra professed to reveal no new god to his countrymen, but only to bring a new revelation from one who was supposed to have been already well known. At this period, of course, even if supreme, he finds himself a member of a very extensive and miscellaneous pantheon.

2. The Gathic or Zarathushtrian conception of God.—It is the five *Gāthās* of Zarathushtra and his immediate followers that enshrine the oldest as well as the highest and purest form of the idea of God to which the Mazdayasnian religion attained. Ahura Mazda, or Mazda Ahura, which is the more usual order in the *Gāthās*,[2] is already not only supreme, but sole God. The whole Nature-pantheon has fallen from heaven to hell.

And, if Mazda himself was at any period a Nature-god,[3] the last vestiges of his ancient associations have been completely obliterated to the minds of the inspired writers of these spiritual hymns. Not that Mazda any more than Jahweh, the God of Israel, was praised in linguistic forms free from anthropomorphism or material imagery. The God of the *Gāthās* also puts on the solid heavens as a garment (*Ys.* 30[5]) and covers himself with flames of fire. But still in substance he is *mainyu*, 'spirit,' as his faithful ones are never weary of repeating.

His most characteristic attribute is *spenta*, 'beneficent,' or 'holy,' in the etymological and wider sense of that English word;[4] and this Beneficent Spirit is, in the *Gāthās*, the great and sole creator. He made not only the light, but darkness as well; not merely the dawn and noontide, but midnight just as truly (*Ys.* 44[5]). He is omniscient and omnipresent, the all-viewing Lord who cannot be deceived (46[6] 45[4] 29[4]), the immutable, who remains evermore the same (31[7]). Nevertheless, in one important respect he is limited: he is not omnipotent, or at least for the present that attribute is only potential, for there is another self-existent spirit, coeval with Ahura Mazda, fundamentally opposed to him in his very nature, and having for a period the power of thwarting the purposes of the Beneficent God and working evil and suffering among his saints.

From the principal passages in the *Gāthās* in which this doctrine is expounded, it would appear that Zarathushtra did not conceive of the Evil Spirit as gifted with positive creative power, such as is attributed to him in the post-Zarathushtrian portions of the Avesta. The truth that seems to emerge from the *locus classicus* of this doctrine in the *Gāthās* (*Ys.* 30[3-5]) is the self-determination of the rival Spirit for evil in harmony with his inherent nature, and his choice of wrong and death as the principle of his actions and influence. So far as the doctrine is developed in these hymns, *Angra Mainyu* or *Aka Mana* is conceived of as exercising his destructive and malicious power in bringing about in the creation of Mazda an issue and culmination the very opposite of that destined for it by the Beneficent Spirit. In perfect keeping with this consciousness of a mighty, malicious, unjust, and death-causing Spirit ever bent upon defeating the Divine purposes, is the emphasis placed upon certain attributes and blessings of Mazda which are the absorbing theme of the *Gāthās*. That idea of Angra Mainyu is the dark background against which this conception of Ahura Mazda with his six (or seven, if Sraosha is included) ever-recurring attributes and blessings must be placed.

The minds of the Gathic poets are not so much concerned with the essence of Mazda's nature as with the endeavour to realize his true relationship to his saints and to the world as a whole. It is not theology proper that we find in the *Gāthās*, but the soteriological aspect of the doctrine of God. It is not his transcendence and absoluteness, but his immanence and relativity, which are here emphasized. These moral attributes, through which the ideal relationship is to be realized together with the blessings resulting therefrom, are conceived of in such a vivid manner that they are constantly personified and addressed as if they were distinct from their source and ground in Ahura Mazda. Still the words are so often used as common abstract nouns, that in these hymns there need be no mistaking them for separate personalities in the essence of Mazda. Perhaps Ps 43[3] in the OT serves as a good illustration of this sustained personification of abstract ideas. The precise attributes emphasized, as well as their number, may have been determined in some degree by considerations dictated by the earlier history of Iranian religion.[1] Still the nature of the case would have been sufficient of itself to account for the facts as we find them, and perhaps this has not always been duly considered by the expounders of this part of the Gathic doctrine. The two most frequently mentioned of these abstract qualities or attributes are *Vohu Mana*, 'the good *or* best mind *or* spirit,' and *Asha* or *Asha Vahishta*, 'rightness,' 'perfect order.' The former connotes the idea of good will or benevolence, that attribute of Mazda which desires and seeks his people's good in opposition to that spirit which meditates harm to them; and in *Ys.* 45[2] these two are thus placed in opposition. The other concept is that expressed by *Asha*, which has as its root-idea that of fitness, appropriateness; hence order, rightness, and other shades of meaning. It means that ideal relationship in which all would receive their due and highest good in conformity with their nature and destiny. The next is *Khshathra* or *Khshathra Vairya*, 'power,' 'dominion,' 'kingdom,' or 'wished-for-kingdom,' and indicates that condition or state of things in which the power of Mazda completely avails, and in which his will is done, and where the two former concepts are fully realized. The fourth abstract attribute is *Ārmaiti*, 'piety' or 'devotion,' which Mazda produces in the soul of his saints, and is the subjective attitude corresponding to Mazda's benevolence and justice. The last two of the six conceptions are always mentioned together, namely, *Haurvatāt*, 'health,' 'weal'; and *Ameretāt*, or 'immortality.' They are equivalent to complete present and future salvation. This is the certain, if as yet distant, Divine event towards which the whole purpose and power of the Beneficent Spirit are ever directed.

Briefly this is the idea of God presented in the *Gāthās*, and the spirituality of their conception of

[1] See Moulton, *op. cit.* pp. 57, 63, where Hommel's discovery is referred to and apparently accepted as genuine. See also, in this connexion, Mills, *Zend-Avesta*, pt. iii. (=*SBE*, vol. xxxi. [1887]), Introd. p. xxxii, and note 1.

[2] The Gathic writers always write and decline the words separately, and were evidently conscious of the meaning of each part: *Ahura* meaning 'Lord,' and *Mazdā*, 'wise' or 'wisdom.'

[3] Tiele strongly combats the idea. But many Vedic scholars and some Iranists regard Mazda as the counterpart of the Vedic Varuṇa.

[4] See Jackson in *Monist* for Jan. 1899 (an excellent monograph on Ahura Mazda).

[1] The concepts underlying the words *asha* and *ārmaiti* go back even to Indo-Iranian times, Vedic *ṛta* being the equivalent of *asha*, and connoting the idea of moral as well as physical order.

God is reflected in the inwardness of their ethic; for Mazda demands truth and purity, not in word and deed alone, but also in mind and heart.

The apparent materialism of coupling *Ātar*, 'fire,' with the Spirit of Mazda does not mar this spiritual presentation. That it has a merely symbolical significance is certain. It typifies the power and purity of the exalted Mazda. In a beautiful psalm the Hebrew poet also couples with Jahweh's name the 'ark of his strength' (Ps 132^8). Nor is the name of the holy fire more incongruous with the Spirit of Ahura Mazda than is the mention of water with the regenerating Spirit in the NT (Jn 3^5).

3. The Mazdaism of the Later Avesta.—Ahura Mazda is still supreme, but he is no more the sole object of worship in the Later Avesta than he was in pre-Zarathushtrian days. By this time the six abstract ideas or attributes which were frequently personified, but never really regarded as distinct persons in the *Gāthās*, had become separate personalities, and were called *Amesha Spentas*, or 'Immortal Holy Ones,' and accorded Divine worship.

It must have been in this later form that the Greeks learnt of the doctrine, for Plutarch refers to them as six gods (ἐξ θεούς [*de Is. et Osir.* 47]); and Strabo speaks of a temple of Omanus (Vohu Mana), and a wooden statue of the god carried in procession (xv. iii. 15). Moreover, a distinct domain in creation is assigned to each, over which they preside (see AMESHA SPENTAS). The sacred fire, too, of whose symbolical and instrumental character the *Gāthās* are never unconscious, is now the son of Ahura Mazda, and shares his praise and adoration (cf. above, p. 30[a]).

But the outstanding feature of the contrast between the Gathic and the Later Avestan divine circle is the re-enthronement of practically the whole of the pre-Zarathushtrian Nature-gods as *Yazatas*,[1] or beings meet to be worshipped side by side with Ahura Mazda and his archangels. The number of the *Yazatas* is really unlimited. At this time practically the whole of the good creation was stamped as Mazda-made, and worshipped. Still Plutarch (*loc. cit.*) was right when he mentioned twenty-four as the number of important *Yazatas*. The foremost amongst them is undoubtedly the god *Mithra*. His name is joined with that of Mazda, just as it was with that of Varuṇa in the Vedas. In the Zarathushtrian system, Mithra naturally found no place. It would have been inconsistent with its strong monotheistic tendency to admit so serious a rival of Mazda. His character in the later doctrine is that of protector and guardian of truth and veracity, the avenger of violated faith and compact (see MITHRAISM). Closely associated with the god Mithra at this period, we find a goddess who appears for the first time in the Iranian pantheon, namely, *Anāhita*, or *Ardvi Sūra Anāhita*, the high, powerful, undefiled one. She is the genius of fertilizing waters, and Herodotus is right when he assigns to her a Semitic origin (see ANĀHITA). Reference has already been made to the worship of the *Fravashis*, or guardian spirits of good men and women. Moulton attributes the extension of this belief and custom in the Later Avesta to the influence of the Magian element in the Mazdaism of the time (see *Thinker*, vol. ii. [1892] 495). This, perhaps, is the only contribution of Magism that concerns our subject.

4. The Mazdaism of the Achæmenian Inscriptions.—Whatever may be the fact as to the historical relationship of the Mazdaism of the inscriptions, its general divergences from the religion of the Avesta are sufficiently marked to justify our treating their teaching on the idea of God in a separate section of the present article (cf. Moulton, *Thinker*, *loc. cit.*). Whether the religion of the Inscriptions is the direct and independent descendant of pre-Zarathushtrian Mazdaism, or a modified form either of Gathic or Later Avestan Zarathushtrianism, there can be no doubt that the Auramazdā[1] praised and confessed by the Achæmenian kings in these Inscriptions is identical with the Mazda Ahura or Ahura Mazda of the *Gāthās* and the later books of the Avesta. But the position assigned to him is distinct in each of the three cases. In the *Gāthās*, Mazda Ahura alone is recognized as God. He only is invoked for aid and deliverance, either directly or indirectly, his attributes and blessings being poetically personified and besought to come to his people's succour. In the Younger Avesta, although a great host of divinities are prayed to and acknowledged as worthy of worship, still, formally at least, they are accorded that dignity as the creation of Ahura Mazda. Even Mithra, 'the lord of wide pastures,' was created by the great Ahura (*Yt.* 10^1), and Anāhita also 'proceeded from the Maker Mazda' (5^7).

In the Inscriptions, on the other hand, there are associated with Auramazdā, in the prayers of the kings, 'clan-gods' (perhaps the words should be rendered 'all the gods'), and 'the other gods that are' (cf. Xenophon's τοῖς ἄλλοις θεοῖς). And, even when Auramazdā is said to be 'the greatest of the gods' (*mathishta bagānām*[2]), there is a tacit admission that he is only supreme, but not sole God. There is no suggestion that they are his creatures. Mithra is co-ordinated with Auramazdā in the Inscription of Ochus: 'May Auramazdā and the god Mithra protect me and my kingdom and the work I have accomplished.' His predecessor, Artaxerxes Mnemon, not only addressed his prayers to Mithra and Anāhita with Auramazdā, but, according to Berosus (frag. 16, *apud* Clem. Alex.), he erected statues to Anāhita at Persepolis (see his Inscription), Ecbatana, Bactria, Susa, and Babylon. Nevertheless, the whole of the Inscriptions of Darius and Xerxes breathe a spirit more akin to that of monotheism than that of most parts of the Younger Avesta. The recognition of the other gods in these Inscriptions impresses us as being, very largely, formal; for the number of times they are mentioned in conjunction with Auramazdā is very small, compared with the instances in which he is prayed to alone. The character of Auramazdā as creator is constantly emphasized in all except the Inscriptions of Mnemon.

'A great god (*baga vazarka*) is Auramazdā, who created this earth, who created yonder heaven, who created man, who created peace or prosperity or delight (*shiyāti*) for man, who made Darius [Xerxes, Artaxerxes] king.'

Not even in the *Gāthās* is the creator conceived of as being more distinct from his creation than these words show him to be. As for his government and providence, he is more unfettered according to the Inscriptions. He has created peace (*shiyāti*) for man, a state of happiness and prosperity of which even the *Gāthās* have no more than a promise.

5. The history of the later development of the idea of God amongst the Iranians is practically identical with that of certain sects in Sasanian times, whose views have also largely determined those of modern Parsiism on this subject. The treatment of this period will, therefore, come more properly under SECTS (Persian).

LITERATURE.—In addition to works already referred to, see, on the earlier period, O. Schrader, *Prehistoric Antiquities of the Aryan Peoples* (tr. Jevons, London, 1890); M. Rapp, 'Die

[1] Cf. mod. Persian term *Izad* or *Yazdān*, meaning 'God.'

[1] Always, with one exception, written as one word.

[2] *Baga* is the general term for a god in the Inscriptions. It is found a few times in the Avesta in the form *bagha*, and applied to Ahura Mazda in *Ys.* 10^{10} 70^1. In the Vedas it is the name of a particular god—Bhaga. Its cognate *bogu* (*bog*) is used in Slav. as a general term for 'god' (see below, p. 302[b])

Religion und Sitte der Perser und übrigen Iranier,' *ZDMG*, vols. xix.–xx. (1866); A. A. Macdonell, 'Vedic Mythology,' in Bühler's *GIAP*, Strassburg, 1897. Casartelli, *La Religion des rois achéménides d'après leurs inscriptions*, Brussels, 1895, and *Philosophy of the Mazdayasnian Religion under the Sasanids*, Bombay, 1889, dealing with later developments, which this article has merely mentioned for future treatment.

E. EDWARDS.

GOD (Japanese).—The Japanese word for 'god' is *kami*. Its derivation is uncertain. Some see in it an abbreviation of *kangami*, meaning 'to look at,' 'to judge,' 'to decide'; others, a form of *kimi*, or 'lord'; while still others propose *kabi*, 'the mysterious,' as its origin. A comparatively modern theory traces it to an Ainu word, *kamui*, meaning 'he who *or* that which covers *or* overshadows,' and so representing divinity. The generally accepted derivation, however, is that to be traced in modified meanings of the same word *kami*, signifying that which is 'above' or 'superior,' in contrast to *shimo*, signifying that which is 'below' or 'inferior.' The upper part of the body is *kami*, while the lower part is *shimo*. A man of superior rank is *kami*, while an inferior is *shimo*. Heaven is *kami*, earth is *shimo*. So general is the term that it lends itself readily as an appellation of that which is looked upon with fear or respect, as above man in power or superior in any attribute. Motoori, an eminent Shinto scholar (1730–1801), says:

'The term *kami* is applied in the first place to the various deities of Heaven and Earth who are mentioned in the ancient records, as well as to their spirits which reside in the shrines where they are worshipped. Moreover, not only human beings, but birds and beasts, plants and trees, seas and mountains, and all other things whatsoever which deserve to be dreaded and revered for the extraordinary and pre-eminent powers which they possess, are called *kami*. They need not be eminent for surpassing nobleness, goodness, or serviceableness alone. Malignant and uncanny beings are also called *kami*, if only they are objects of general dread' (*Kojikiden*, ed. 1901, iii. 150).

The primitive faith of the Japanese was Naturism, in which various natural phenomena, awakening awe and reverence, such as the sun and moon, fire and water, wind and storm, were worshipped, and in which various Divine names were given to the powers controlling the more noticeable manifestations of Nature. To this limited body of divinity others were added; and not a few from foreign countries were recognized, until the number was generously stated as 'eight myriads,' and the country was called 'the Land of the Gods.' According to an official record, compiled in A.D. 901, the number of shrines at that time was 2861, while the number of deities worshipped therein was given as 3132. This multiplication of deities has continued until the present time; and the latest official statistics give the number of Shinto shrines of all grades as 190,436. These shrines are sacred to: (1) mythical gods, (2) patriots and heroes, (3) phenomena and objects of Nature, and (4) various animals and objects. Among the shrines recognized as governmental and national, those under the special supervision of the provincial or national government are classified as follows: sacred to mythical gods, 100; to emperors and members of the Royal Family, 25; to patriots and heroes, 30; to sacred swords and dragons, etc., 6. The deities worshipped by the Japanese might be roughly grouped as: (1) stellar bodies; (2) the elements of earth, air, fire, and water; (3) natural phenomena; (4) prominent natural objects, as mountains, rocks, trees, and caverns; (5) men; (6) animals; and (7) manufactured objects.

In short, anything conspicuous or exalted may have become an object of worship. Not infrequently the people worship *kami* of which they know absolutely nothing as to nature, origin, or being. 'What god we know not, yet a god there dwells.'

It does not follow that these manifold gods have been regarded as of equal importance, nor have they all been reverenced by the mass of the people. According to the *Kojiki*, which for the Japanese embodies the sacred story of beginnings and of the founding of their nation, the gods of heaven are the primal, chief divinities; and it is said that Jimmu, the first Emperor, worshipped the deities of Heaven and Earth. In the opening chapters of the *Kojiki* marked distinction is given to three deities: Ame-no-minaka-nushino-mikoto (the Deity-master-of-the-august-centre-heaven), Takami-musubi-no-kami (the high-august-producing-wondrous-deity), and Kami-musubi-no-kami (the Divine-producing-wondrous-deity), who are said to have been 'born in the plain of High Heaven when the heaven and the earth began.' To them alone certain modern Shinto sects pay reverence.

Atsutane Hirata, a modern Shinto scholar (1776–1843), says:

'The object of fear and worship in foreign countries is known by several names, the Supreme Being, Sovereign Ruler, Imperial Heaven, or Heaven. He is none other than our Heavenly *Kami* who dwells in Heaven and governs all the affairs of the world.'

This clearly shows the tendency of Shinto scholars to a monotheistic belief.

G. Kato, in a monograph in *TASJ* for 1908, on 'the Chief god of Shinto,' concludes that the deity 'shows in its origin a clear trace of primitive monotheism, when viewed in the light of the modern study of the science of religion.'

It is true that a strict monotheism has never found congenial soil in Japan, yet there is not infrequently to be noticed the idea of a unitary force behind the manifold exhibitions of what are called *kami*. Moreover, the introduction of Chinese thought modified earlier Japanese conceptions; and *Shang-ti*, the Supreme Being, or *Tien*, the Heaven, of the Chinese, became identified with *Kami*, and was worshipped, often supremely, though not exclusively by many. Shuntai Dazai (1681–1747), a Chinese scholar, said:

'All the fortunes of man, whether prosperity or calamity, happiness or sorrow, are in accordance with the will of Heaven. . . . Among all so-called Kami there is none so lofty and mighty as Heaven.'

Belief in Heaven as the Supreme Force, the Providence over all, and the criterion of all, to whom is due allegiance to the uttermost, may be said to be universal among the Japanese, while individuals and classes reverence also in particular certain other subordinate *kami*. Among the most popular individual *kami* may be mentioned the Sun, associated with Amaterasu Ōmikami, as a sun-goddess, with whom is identified the prehistoric ancestress of the ruling house of Japan; Hachiman, an old-time hero; Ten-jin, a great scholar, now reverenced as the god of learning; Inari, the god of rice; Kompira, reverenced by sailors, as in Yebisu by the seekers for good luck. In recent years Emperor-worship has been advocated by not a few as a unifying substitute for vaguer religious faith.

The rendering of the English word 'God' by Jap. *Kami* is not entirely satisfactory; but, in spite of the polytheistic ideas long associated with the term, it has been in a remarkable degree filled with the content of the English word as limited in Western religious and philosophic thought. The confusion becomes daily less; and the idea of a unitary Supreme Being is now one of the first conveyed to the educated Japanese mind by the

word *Kami*. The definition of the word in modern Japanese dictionaries is significant: (1) a spirit which is thought to exist invisibly, with unlimited supernatural power of good or ill, to punish crime and reward virtue in human beings; an object of religious trust or fear; (2) the honorific name given to rulers previous to the reign of Jimmu; (3) the name applied to spirits enshrined in Shinto shrines; (4) the Christian God, the almighty and omnipresent creator and ruler; the Heavenly Ruler; (5) the spirits of the dead in Shinto funeral ceremonies; (6) that which transcends human understanding (the *Jirin* by S. Kanazawa, 1907). Or, again; (1) God; a deity; supernatural being; (2) the consecrated spirit of the dead, especially of an emperor, sage, or hero; (3) that which cannot be conceived by the human mind; a miracle (*Jap.-Eng. Dict.*, by F. Brinkley and others, 1896).

TASUKU HARADA.

GOD (Jewish).—Whatever had still lingered in Israel of the ancient conception of Jahweh as a territorial God (which rendered a lapse into idolatry easy whenever interest urged a prior or collateral claim of some other local god) was largely eradicated during the Exile; and after Nehemiah's time the Jews were uncompromising monotheists. This faith Judaism preserved and confessed before the world by liturgical expression, by legal observances, and by dissociation from every appearance of idolatry. The secret of its power to hold its own against an opposing world lay in the conviction that the Jewish race was the favourite of Heaven. Indeed, Israel's election is an integral part of the Jewish conception of God. The Jews are monotheist because Jahweh is monolaic. They have not chosen Him, but He chose them first.

'One God, one Israel, one Temple,' says Josephus (*c. Apion.* esp. ii. 24); and in the *'Amida* for Sabbath vespers every Jew repeats: 'Thou art one, Thy Name is one, who is one (unique) in the world as Thy people Israel' (cf. *Suk.* 55*b* יחידה אומה, and 2 Es 5^{28} 'Thy only one people').

1. Anthropomorphism. — The anthropomorphic expressions of the OT are linguistic relics of an age when the Hebrews attributed to Jahweh a human form and human passions (*HDB* v. 627). The Prophets retained these expressions as conscious anthropomorphisms and convenient terms to describe the personality and activity of the Deity. We doubt, however, whether the popular conception of Jahweh was other than of a gigantic warrior in human shape. The Exile brought the Jews into contact with the gross idolatry of the Babylonians; and, viewing their captivity as a punishment for disloyalty to Jahweh, they became the more averse to the gods and religion of their conquerors. The Exile became to the Jews a means of spiritual development. Jahweh ceased to be regarded as a territorial God, though the tribal conception remained. He was the God of the universe, but father of Israel—the God of Nature and revelation. Efforts began to be made to explain and remove anthropomorphisms.

The first step we read of was taken by the *Sôpherîm*—the early scribes and immediate successors of Ezra (I. H. Weiss, *Zur Gesch. d. jüd. Tradition*, Vienna, 1871–91, vii. xxiii.). In the Apocrypha, anthropomorphisms are used rarely and with caution. An important step was taken in the versions of the Bible. The artful manner in which the LXX softens down many anthropomorphic expressions is well known. And yet the version was viewed with distrust by the Palestinian Jews, for fear it might convey to the heathen world wrong impressions of the nature of the God of Israel. Versions in the Aramaic vernacular (see art. 'Targum,' in *HDB*) circulated orally in Palestine from the days of Ezra (*Meg.* 3). Children received their first instruction in the Law in Aramaic. At the public reading of the Law a *methurgeman* (dragoman or interpreter) stood by the side of the reader, and rendered into Aramaic each verse as it was read in Hebrew. The frequent repetition must have produced in a very short time a stereotyped version, and we may safely assume that it is embodied in our editions of the Targum, and that they represent the oldest form of Judaism. In these all anthropomorphisms, with few exceptions, are paraphrased and spiritualized. Thus, *e.g.*, by the eyes and ears of God are understood His omniscience, by the hand His omnipotence, by the mouth of God His immediate communication with man, or inspiration (*e.g.* Nu 12^{8}). The finger of God in Ex 8^{19} is rendered 'this is a plague from before Jahweh.' Peculiar to the Targums is the use of the Memra (*q.v.*), the executive word of God. The existence of this intermediate being was deduced from passages like Ps 33^{6}, Is $55^{10f.}$. Although not regarded as an emanation of the Deity, like Philo's Logos, the Memra was conceived as apart from God; and to it, and not to God, all anthropomorphisms and anthropopathisms were ascribed.

Turning to the Rabbinic literature, we find that anthropomorphisms were removed in several ways. (*a*) The particle כְּאִלּוּ, 'as it were,' or כְּבָיכוֹל, 'as though it were possible,' was placed before anthropomorphic assertions. (*b*) Such appearances and actions as seemed inconsistent with an absolute Deity were attributed to intermediate beings and to angels. (*c*) Convenient explanations got rid of many anthropomorphisms. Thus 'a jealous God' (Ex 20^{5}) is explained in the *Mechilta* as 'the God who rules over jealousy.' The same Midrash comments on Ex 12^{13}:

'Is not everything revealed before Him? Why then does He say, "When I shall see the blood"? Ans. "As a reward for executing My command I will reveal myself and protect them."'

In the same section it is asserted that anthropomorphisms are used לְשַׁעֲבֵּד הָאָזֶן, 'to sink it into the ear,' *i.e.* to assist a person's perception. R. Judan said: 'Bold, indeed, were the Prophets to liken the Creator to the creature' (*Gen. R.* 27^{1}; see also *Pesiḳta*, 36*b*). Another Rabbi went so far as to deny that the Shekhinah ever descended on earth, or that Moses or Elijah ever went up to heaven (*Suk.* 5; *Mechilta Jethro*, 4).

When we turn to the Rabbinic writings from about the 3rd cent. A.D. onwards, however, we meet with gross anthropomorphisms. There is no special event in Jewish history to which we should ascribe the reaction. No doubt Essenism, the fertile imagination of Alexandrianism, the cessation of the sacrificial cult, the rise and progress of Christianity, with its offshoots of speculative Gnostics, directly and indirectly influenced the Rabbis in favour of mysticism. But the reaction was rather the gradual outcome of legalism, according to which Israel's sole mission in the world was to keep the Divine Law. Israel's election was never lost sight of since the Exile, and ultimately developed a Judaized conception of God. The Halakha laid the foundation, and the superstructure was raised by the Haggada. The latter, originally with a few traditions in stock more or less based on facts or curiously deduced from them, might have been a good handmaid of homiletics, but in time it mounted the heights of imagination and spake of everything. It not only wrote human history as it ought or ought not to have happened, but explored the seven heavens and revealed the Deity.

Putting together the passages from the Talmud and Midrashim, we find in plain prose that on the highest heaven is the throne of Glory, on the back of which is engraved the image

of Jacob (*Targ. Jon.* Gn 28[12]). Meṭaṭron is close to the Deity. A *bêth dîn*, a consultative body, assists God in government (Jerus. *Ber.* ix. 5). Satan accuses Israel, and Michael silences him by recounting their merits (*Ex. R.* 18). On God's seal is engraved אמת, 'truth,' the first, middle, and last letters of the Hebrew alphabet, indicating that He was, is, and is to be (*Shab.* 54; *Cant. R.*). In the heavenly Jerusalem there is an altar on which Michael offers up the souls of the righteous (*Ḥag.* 13). Behind the throne stands Sandalphon, whose height is a distance of a walk of 500 years, and who binds chaplets for the Deity (*ib.* 13). God is occupied with studying the 24 books of the Bible by day, and the six *sᵉdārîm* of the Mishna by night (*Targ. Cant.* v. 10). There are schools in heaven after the Rabbinic model, where Rabbis in their order discuss the Halakha, and God studies with them (Bab. *Meg.* 86). Every day He promulgates a new Halakha (*Gen. R.* 49). He wears phylacteries (*Ber.* 6), of which Moses saw the knot (*ib.* 7). At the Exodus from Egypt every servant girl saw God bodily and could point Him out with her finger. When God descended on Sinai, He was wrapped in the Rabbinic *ṭallîth* (*R. Hash.* 17). He has His own synagogue. He prays to Himself that His mercy should overcome His wrath (*Ber.* 7). He weeps daily over Jerusalem (59). The last three hours of the day He sports with Leviathan (*'Ab. zara*, 3).

A more hideous form of anthropomorphism meets us in the period of the *Gaonim* (7th–10th cent.). The success of Muhammadanism, with its disastrous effect on the Eastern Jews, revived Messianic hopes. Several false Messiahs appeared. Old traditions about the nature of the Messiah were searched out. Mysticism, which hitherto lurked only in dark corners, crawled to the light. The study of the Talmud was neglected in favour of this new theosophy. The experts were called *ba'ălê 'ĕmûnôth*, 'men of faith,' who by means of charms and the recitation of senseless formulæ worked miracles, healed the sick, assuaged the raging sea, and revealed the secrets of the Deity. The most monstrous book of this period was the *Shi'ur Ḳoma*, 'Estimation of the Height,' of which we possess only two fragments—a greater one in the book of *Raziel*, and a lesser in the Alphabet of R. 'Aḳiba. In it the Deity is described as a huge being in human shape and out of all proportion. The measurement of each member, such as the neck, the beard, the right and left eyes, the upper and lower lips, the ankles, etc., is given in parasangs.

Only 'those parasangs are not like ours, for a heavenly parasang measures a million cubits, each cubit four spans, and each span reaches from one end of the world to the other.' 'And,' says the book of *Raziel*, 'blessed is he who knows these measurements, for he has a share in the world to come.'

The Karaites were the first to ridicule the *Shi'ur Ḳoma*. The most learned orthodox Jews also, among whom were the Gaonim Saadya, Sherira, and Ḥai, vigorously opposed mystic anthropomorphism. But Maimonides gave the most effectual blow. In his *More Nebuchim* he asserts in philosophic language the spirituality of God, and explains the Biblical anthropomorphisms as figurative terms.

2. The names of God.—Evidence of a transition to a new conception of God after the Exile is found in the manner in which God is spoken of. (1) The covenant name Jahweh, originally a proper name necessary in polytheistic and henotheistic periods to distinguish Him from other gods, gradually vanished from the consciousness of the people as a personal name of the Deity, until, at the time of the Christian era (and probably considerably earlier) it was entirely forgotten. *Gen. R.* 33 states that, whenever *Jahweh* is used, it signifies God in His attribute of mercy, while *Elohim* stands for His attribute of judgment (see also *Ex. R.* 3). To guard against an irreverent use of the sacred name the laity ceased to pronounce it. Only the priests at the benediction, and, after the death of Simon the Just, only the high priest, and he with bated breath, so as to render it inaudible even to his colleagues, pronounced the 'unutterable' name. The correct pronunciation of the name was delivered only to the pious and humble (*Ḳid.* 71*a*). According to Philo (*Vita Mos.* iii. 14), it was breathed by holy lips into holy ears i holy place.[1] The cruel death which R. Ḥanina Teradion suffered in the Hadrian persecution w accounted for as a punishment for pronouncing the name (*'Ab. zara*, 18*a*). A כינוי (*kinui*), or substituted word, was used, the oldest of which was probably שֵׁם, 'the name.' The Samaritans still use שמא except when, in taking an oath, they pronounce the tetragrammaton *Yawe*. The name is sometimes spoken of as שם המיוחד (*Sanh.* 60), 'the distinguished or proper name,' and more frequently שם המפורש, 'the name pronounced' (in the Temple). It is also called אזכרה, 'remembrance,' 'mention' (*Cant. R.* ii. 4); 'the name of four letters' (*Ḳid.* 71); 'the great name' (*Onḳ. Targ.*); 'the great and precious name' (Jerus. *Targ.*); 'the great and holy name' (*Targ.* on Ps 47[4]); in post-Talmudic writings 'the name' הו"ה; and in the mediæval philosophers we find השם העצם, 'the proper, the great, the wonderful, the hidden, the excellent name, the written-but-not-read name.' In the later Halakha all the names of God are styled שמות. But the usual substitute is *Adonai* (the plural form of *Adon*), אדני, the pointing of which is supplied to the tetragrammaton as a *memoria technica* (*Ḳid.* 71). The LXX renders *Jahweh* by ὁ κύριος, or the anarthrous Κύριος. This, without a proper name to follow, must have been the origin of the charge of ἀθεότης laid to the Jews of the Diaspora.

Adonai came to be styled the chief of the *kinuim*, and was invested with an awe similar almost to the name *Jahweh*. 'Abraham called God *Adon*' (*Ber.* 7), and taught Him as such to mankind (*Soṭ.* 10).

The name *El Elyon* or *Elyon*, 'Most High,' originally with a relative meaning, used in the OT by non-Jews, and in the Psalms absolutely of Jahweh, came into more frequent use after the Exile (G. Dalman, *Die Worte Jesu*, Leipzig, 1898, p. 162). H. J. Holtzmann sees in the revival of this name a transition to an abstract conception of the Deity (*Lehrb. der neutest. Theol.*, Tübingen, 1896–97, i. 49). The official title of the Hasmonæan princes seems to have been 'high priests of El Elyon.' *Rosh. Hash.* 18*b* records that, after the victory of the Maccabæans, it was ordained that in dates of documents the name *El Elyon* should be added after the reigning high priest's name. The practice did not please the wise men, because of the irreverence to the Divine name when the documents are rendered useless and thrown away. It was accordingly abolished, and the day and its anniversary were observed as a festival. *El Elyon*, though occurring in the liturgy (*e.g.* first petition of the *'Amida*), is seldom met with in the Talmudic literature.

Analogous to this conception of God as having His residence in the most elevated spot of the universe is 'Heaven' (שָׁמַיִם). That this term frequently stands for 'God' in the Talmudic literature, but never in the liturgies, indicates that it was a popular appellation borrowed from surrounding phraseology. Ahura Mazda was the ancient god of the vault of heaven. Bel-*Shamin*, 'the Bel of Heaven,' was worshipped throughout Syria, like Ζεὺς Οὐράνιος and Caelus in the Roman Empire.

The Divine Majesty, conceived as located in a special region in the heavens, was called מָקוֹם, 'the place' (*e.g.* המקום יהיה בעזרו, 'God help him' [*Nidd.* 49*b*]; בָּרוּךְ הַמָּקוֹם, 'blessed be God' [*'Ab. zara*, 40, and in the liturgies]; cf. response in the קדושה, 'Blessed be Jahweh from His place,' Ezk 3[12]). From Palestinian usage and not *vice versa*, Philo took his τόπος, although Philo's idea made its way back

[1] Josephus already makes a mystery of the tetragrammaton (*Ant.* II. xii. 4).

into the Talmudic literature, *e.g.* 'Why do they call the Holy One, blessed be He, מָקוֹם?' Because He is the place for the world, and not the world His place (*Pesiḳ. R.* 21).

The usual expression by which God is spoken of is 'the Holy One,' with the doxological addition, 'Blessed be He.'

(2) *God as 'King.'*—The practice of uttering a benediction on various occasions is probably in imitation of Zoroastrianism. Copies of these benedictions were current in the Tanaitic period (*Shab.* 115*b*). Their composition and institution are traced back to the 'Men of the Great Synagogue' (*Ber.* 33). Every such benediction is invalid unless it contains שֵׁם and מַלְכוּת, *i.e.* the name of God and acknowledgment of His Sovereignty.[1] Likewise the response of the laity in the temple when the high priest uttered the tetragrammaton was, 'Blessed be the name of the Glory of His Kingdom.' It is also the response after the *Shema'*. As King, God is repeatedly confessed and invoked in the Prayer-book. The phraseology is borrowed from the OT, but the model is not the Hebrew king, to whom the humblest of subjects can have access, but, as Holtzmann insists (*NTZG* 364), the Persian monarch. The 'Great King' lives in solemn seclusion from his subjects. Only the favoured few may see his face. Access to him without his grace is punished with death. Officials execute his will. Often he is not the author of his edicts, but government is carried on by his consent before him rather than through him. Books of remembrance are kept. Analogous to this is the Jewish conception of the court of heaven. God is transcendent. No one has seen His face at any time. 'To Moses He only showed the knot of His phylacteries (resting on His back)' (*Ber.* 7*a*). He is surrounded by angelic hosts in military array, who execute His will. Around His immediate presence are the Princes of the Countenance, of whom Suriel is one (*Ber.* 51); and so is Meṭaṭron (*Sanh.* 38). The latter is also called the Prince of the World (*Yeb.* 16*b*; *Ḥal.* 60*a*), and enters the deeds of men in a book (*Ḥag.* 15). The seventy nations have each a representative in the court of heaven, of whom the greatest is Michael (*Yom.* 36). The forces of Nature are presided over by viceroys. Rahab is the Prince of the Sea (*Baba bathra*, 74), Yurḳami the Prince of Hail (*Pes.* 118), Dumah the angel of Spirits (*Baba bathra*, 94), and Lailah the angel of conception (*Nid.* 15). The angels intercede for men; and, as they know only Hebrew, prayers should not be said in Aramaic. Sandalphon presents the petitions to God (*Ḥag.* 13). Elijah is a kind of Mercury, making known God's plans to the pious and sometimes solving their doubts (*Ber.* 3; *Pes.* 70). He travels from city to city (*Baba ḳamma*, 60), is a frequent visitant among the Rabbis (*Sanh.* 113), is familiarly known as 'that aged man' (*Ḥul.* 6), and assumes various shapes in accordance with the commission with which he is entrusted (*Ber.* 6; *'Ab. zara*, 77, etc.). God's statute book is the Law, which existed before creation, according to which He created, governs, and finally will judge the world. To keep this Law, and to sacrifice to Him at Jerusalem, God chose to Himself the Jewish race. Hence a right standing before God is procured by adherence to the Law. Judaism is not a faith but a system of observance, the obedience of a slave to his master. The very word in late Hebrew for 'religion,' דָּת (occurring only in Esther), is borrowed from Old Persian and signifies 'law' (*Oxf. Heb. Lex. s.v.*). Forensic knowledge itself is a piece of piety. The מְלֻמָּד טָעַם, or he who understands how to apply to and fulfil the Law under all circumstances, is accounted of higher merit than even an illiterate high priest. It was a saying of the 'gentle' Hillel: 'An empty-headed man cannot be a sin-fearing man, nor can an ignorant person be pious' (*Pirḳe Aboth*, ii. 6).

[1] The formula is, 'Blessed art thou, Jahweh our God, King of the universe, who,' etc.

(3) *God as 'Father.'*—Sometimes the epithet 'Father' precedes the word 'King,' as in the *'Abinu Malkenu*, four verses of which were known and used by Rabbi 'Akiba, or in a parallelism, as in the sixth petition of the *'Amida*: 'Forgive us, O our Father, for we have sinned; pardon us, O our King, for we have transgressed.' 'Our Father, who art in Heaven,' is frequently used in the Mishna (*Yoma*, viii. 9; *Soṭa*, ix. 15), and in the Liturgy. The appellation, however, signifies nothing more than that Israel is God's property.

'To a deeper penetration into the essence of God as Love it never led in Jewish theology' (F. Weber, *Jüdische Theologie*[2], Leipzig, 1897, p. 154). 'The address of God as Father gives one the impression of a lost word in a strange world. The manner in which Jesus imparted intensity and depth to the spiritual life from the faith in a Father-God, such as in the Parable of the Prodigal Son, or when speaking of the birds under heaven, is peculiar to Him' (W. Bousset, *Relig. des Judentums*, Berlin, 1906, p. 434).

(4) *God as 'Creator.'*—To the contact of Judaism with Mazdaism under Persian rule is probably due the institution of the *Yôṣēr*, in which universal creation is ascribed to God, with which the second part or morning prayer proper commences. Its original form consisted probably of Is 45[7a], in which God is styled 'Former,' 'Creator,' 'Maker.' A later epithet, savouring of polemics against Gnosticism, is 'He-who-spake-and-the-world-came-into-being.' It occurs in *Siphre* on Dt 11[22] 'Wilt thou know Him who, etc., study the Haggada'; and frequently in the Talmud, and is the invocation in the collect of the first half of morning prayer. In the various phenomena of Nature the Jew saw the operations of the Creator and the 'King of the Universe,' and uttered a blessing. Not only is there an elaborate grace after each substantial meal, but different blessings (many of which are referred to in the Mishna as known) on every conceivable occasion, such as at the partaking of wine, of water, of fruit; at the scent of spices, of fruit trees, of precious ointment; in a storm; at the sight of lightning, of the rainbow, of the sea, of spring-buds, of a king, of a wise man, of a monstrosity.

Fine, indeed, are the very few sentiments of the Rabbis on Divine immanence.

R. Ḥanina said: 'Sometimes the Universe and the fullness thereof cannot contain the glory of His Deity, and sometimes He converses with man through the hair of his head' (*Gen. R.* 4). To R. Yosi is attributed a dispute with a lady who was a serpent-worshipper. When she maintained that her god was the greater because Moses at the sight of the burning bush hid his face (Ex 3[6]) but from the serpent he fled (4[3]), the Rabbi replied that in two or three steps he could escape from the serpent, but from God nowhere (*Sam. R.* 3). 'As no one knows where the soul is situated in the human body, so no creature knows the exact place of the Holy One, blessed be He; not even the Holy Beasts who carry the Throne of glory know it' (*Midr. Shochar Ṭob*, 103).

(5) Peculiar to post-Biblical addresses to God is *a lengthy enumeration of His attributes.* Yet R. Ḥanina silenced a reader for saying 'O God, the Great, the Strong, the Awful, the Mighty, the Powerful, the Bold,' it being as derogatory to the Deity as praising a millionaire for possessing only a hundred thousand (*Meg.* 25*a*).

The tendency was to avoid the use of the name of God altogether. Already the Book of Esther, which records a providential deliverance of the chosen race, does not contain it, but only once alludes to it (4[14]). A similar reserve is observed in the first Book of Maccabees, where 'Heaven,' rarely 'Lord,' is substituted for 'God.' This is the more remarkable in a book of Sadducean authorship (Holtzmann, 363). In the Rabbinic literature the usual surrogates are one of the above-mentioned epithets or an attribute. Some-

times the third person plural is used, *e.g.* 'Whosoever has pity on mankind, *they* show pity on him from heaven' (*Shab.* 151*a*).

Of the use of a Divine name in exclamations we know of only one instance in the Talmud: 'Lord of Abraham!' (*Keth.* 1).

3. The solity of God.—A God who is Creator and absolute Monarch of the universe can have no rival. Jewish monotheism, therefore, denotes belief in the existence of one God, and connotes denial of Divine attributes to any other being. This the Jew has confessed by creed and conduct since post-exilic times: the former by the double, daily recitation of the *Sh'ma'*, Dt 6^4 'Hear, O Israel, Jahweh our God is One Jahweh'; the latter by repudiation of the remotest approach to idolatry. It is, however, incorrect to speak of 'faith' in Judaism, which is a religion of mere observance. The Hebrew האמין does not signify an active principle, but is only an expression for strong confidence in God's help, a reliance on His faithfulness, His willingness to answer prayer, and the like (see art. 'Faith,' in *HDB* and *EBi*). Sirach still uses πίστις in this sense (2^{10} 11^{21} 40^{12}). It was applied also as trust in the saving power of the Divine precepts (Ps 119^{66}; cf. Dn 6^{23}).

The persecution of Judaism under Antiochus Epiphanes produced martyrs and confessors of faith. אמונה came to stand for 'knowledge of Jahweh' and trust in Him, based not only on Israel's election, but also on individual conviction. To become a believer meant to be converted to a form of religion (Jth 14^{10}). To be a believer involved adherence to the essentials of that religion and steadfastness under persecution (Enoch 61^4 $63^{8ff.}$, He 11). It is possible that in this period was instituted the morning and evening recitation of the *Sh'ma'* as a confession of faith. That it was so used in early pre-Christian times is attested by Josephus (*Ant.* IV. viii. 13), to whom the practice seemed so ancient that he ascribed it to Moses. It formed part of the Temple liturgy (*Tam.* V. i.). In the Mishna and the early Midrashim the recitation of the *Sh'ma'* is styled 'taking upon oneself the yoke of the Kingdom of Heaven' (קבלת עול מלכות שמים).

'A traveller who recites the *Shema'* walking must halt when he takes upon himself the yoke of the Kingdom of Heaven. Which is the Kingdom of Heaven? The Lord our God is one Lord' (*Deut. Rab.* 6^4).

Women, slaves, and children are exempt from reciting it (*Ber.* iii. 3), which indicates its use as a confession of faith such as an adult and a responsible member of the race could make. It is not surprising that the Rabbis made much of the *Sh'ma'*. Minute directions are given about the time, the posture, and manner of its recitation. It must be read with the utmost exactness. A slight pause must be made between words separated by dittographical letters, such as בכל לבבך. The first verse is read louder and with greater emphasis on the last word, אחד, and with 'intention' that God is ruling above, below, and in all the four corners of heaven. Hence the *Sh'ma'* is sometimes spoken of as 'הכליך ד', 'to cause God to reign.' The omission of the 'intention' would frustrate the process and require a repetition of the *Sh'ma'*. After the first verse the *gloria* is said *sotto voce*: 'Blessed be the name of the glory of his kingdom for ever and ever.'

The Gehenna will be cooled for him who recites the *Shema'* carefully' (*Ber.* 15). 'Greater is he who recites the *Shema'* in season than he who is occupied in the study of the Law' (*ib.* 10). 'He is worthy that Shekhina should rest on him' (*ib.* 57), and 'is sure of a share in the world to come' (*Shab.* 119). It is accepted by God in the place of the daily sacrifice (*Siphre* on Dt 6^5). The omission of the Ten Commandments from the daily liturgy is ingeniously explained by R. Simeon on the ground that they are not needed because they are contained in the *Shema'* (Jerus. *Ber.* 1). A further recitation of the *Shema'* arms one with a two-edged sword against demons (*Ber.* 5). In sudden fear of an apparition, let him say the *Sh'ma'* (*Meg.* 3). It is inscribed on the door-post of every habitable room and saluted reverently. It forms one of the texts encased in the phylacteries. It is the first spiritual lesson a Jewish child should be taught (*Suk.* 42) and the last words uttered by, or breathed into the ear of, the dying. R. Akiba, expiring under torture, breathed his last while accentuating the word *one* (*Ber.* 61). Many a time has it sounded from amidst the burning crosses of an *auto da fé*.

To the mystics the confession of the Divine Unity in the *Sh'ma'* was fraught with meaning.

To quote one instance from Abudaraham (*c.* 1350), a commentator on the liturgies, שמע is an acrostic for: שאו מרום עיניכם, 'Lift up your eyes to heaven.' When? שחרית מנחה ערבית, 'Morning, evening, and vesper.' To whom? To שדי מלך עליון, 'The Almighty, the Most High King.' Doing so one takes upon himself עול מלכות שמים, 'The yoke of the Kingdom of heaven.'

The Divine Unity insisted on in the *Sh'ma'* is re-echoed throughout the Jewish liturgy. Every office ends with the *'Alenu*, which is a repudiation of idolatry and an acknowledgment of the Divine Unity and Sovereignty.

The prayer is ascribed by Zunz to Rab (*c.* 230), against Mendelssohn, who places its origin at a much earlier date. Its triple daily recitation dates from the Middle Ages. Whether it was intended to be used as a protest against Christianity or not (see *JE*, art. '*'Alenu*'), it is less damnatory than the prayer against the Minim composed by Samuel the Wool-merchant (see Schürer, *GJV* ii. 463). The *Min* is distinguished from a Gentile and Samaritan. He quotes Scripture, but believes in a plurality in the Godhead. He is, therefore, originally a Jew, and can be no one else but a Hebrew Christian. M. Friedländer, in his *Relig. Bewegungen* (Berlin, 1905), has failed to convince any one that the *Minim* did not include Hebrew Christians. The petition is for their utter destruction (for text of the *'Amida*, see Dalman, *Worte Jesu*, 299–304). Simeon b. Yochai, also a disciple of Gamaliel II. and contemporary of Samuel the Wool-merchant, says: 'Whosoever couples with the name of God any other thing is exterminated from the world' (*Sanh.* 63). The point at issue between the Rabbis and the *Minim* was the Divine Unity (see Weber[2], 152 f.; and J. Bergmann, *Jüd. Apologetik*, Berlin, 1908, p. 81 ff.).

The spread of Greek philosophy, through Arabic culture, in the Middle Ages encouraged many Rabbis to devote themselves to the new learning. Foremost among them was the Gaon Saadya (892–942). In his book, better known by the Hebrew title, *Emunoth W'deoth*, he proves the Divine Unity. In ii. 5 he attacks the doctrine of the Trinity, addressing himself not to the vulgar, but to those whose faith is supported by speculative knowledge. He was followed by other Rabbis, who were influenced by Aristotelian philosophy and wrote philosophical treatises on traditional monotheism, such as Baḥya (1270–1340) in his *Choboth Ha-l'baboth*, ch. vii., Chasdai Crescas (1340–1410) in his *Or Yahweh*, Joseph Albo (1380–1444) in *Ikḳarim*, the Great Maimonides both in his *Yad* (*Yesode Ha-torah*, i. 6, 7) and in the *Moreh*. But, whatever the value of their labours, they had not materially altered the Rabbinico-liturgical conception of God. Maimonides, in imitation of Muhammadan and Christian confessions, formulated a Creed in his commentary on the Mishna. It consists of thirteen essentials of the faith, each commencing 'I believe with perfect faith.' The second asserts that 'the Creator, blessed be His name, is a unity' (יחיד, *solus*), and that 'there is no unity (יחידות) in any manner like unto His,' etc. The Creed has never been favourably accepted; and, although it is printed in some prayer-books, it is never recited publicly. But it was versified in the *Yigdal* and the *Adon 'Olam*, with which the introductory part of morning prayer begins. The two poems are also read in the death-chamber before life is extinct.

As a system of observances restricted to a race, Judaism demanded of every member a confession of its faith not so much in words as in conduct, consisting in conforming to the requirements of that system positively and negatively. The former was called *Ḳiddush ha-Shem*, 'the hallowing of God's name'; the latter, the avoidance of *Ḥillul*

ha-Shem, 'profanation of God's name.' God's name is hallowed when His elect keep His precepts. No distinction, however, is made between moral and ceremonial precepts. The prayer in the *Ḳaddish*, which runs,

'Magnified and hallowed be the Great Name in the world which He has created according to His Will, and may He establish His Kingdom,' etc.,

would imply that it is a prayer for the conversion of the world to legalism. To hallow God's Name stood for keeping any commandment in the face of opposition (see, e.g., *Ber.* 20, and Rashi). To transgress the Law, however, when under compulsion, was considered permissible except in the case of idolatry, murder, and incest (*Sanh.* 74). *Ḳiddush ha-Shem* came to stand for confessing Judaism by martyrdom. The negative side of this precept is *Ḥillul ha-Shem*. The name of God is profaned or blasphemed among the Gentiles when the Jew exhibits in conduct a lower standard of morality than what the Law prescribes, or does or omits to observe anything that will bring Judaism into ill repute. But the act must be a public one.

'When one perceives that his evil passion has the better of him, let him go where he is unknown, disguise himself, and do what his heart desires rather than profane the Name of God in public' (*Ḳid.* 40). 'Whosoever has no regard to the honour of his Creator—it were better for him not to have come into the world' (*ib.*). On the other hand, R. Jochanan b. Beroḳah said: 'Whosoever profanes the Name of God in secret will suffer the penalty for it in public' (*Ab.* iv. 5).

Thus the central point of Judaism was Law. A knowledge of God and keeping commandments were convertible terms. Rabbinic legalism was finally codified in the *Ṭurim*. Ponderous are the commentaries and super-commentaries of the Rabbis on that code, to carry out which involved utter dissociation from non-Jewish elements. This isolation rather than his faith was the exciting cause of many a persecution of the Jew. Heinrich Heine well said that Judaism was not a religion but a misfortune. The emancipation of the Jews in many lands was also an incentive to them to have access to the fund of historical and philosophical knowledge accumulated by Christians through centuries. But the new status and new learning produced a rocking and upheaval in the Jewish camp. On the one hand, Rabbinism is fast dying out. The misanthropic code of the *Ṭurim* cannot be carried out by citizens of enlightened countries. On the other hand, no other system can save Judaism from dissolution.

LITERATURE.—Art. 'God,' in *HDB*, *PRE*[3], Hamburger, and *JE*, and literature given there; also S. Bernfeld, *Da'ath Elohim*, Warsaw, 1897; N. Krochmal, *More Nebuche Ha-zman*, Warsaw, 1894; Morris Joseph, *Judaism as Creed and Life*, London, 1910, pp. 40–71.

A. E. SUFFRIN.

GOD (Muslim).—1. The name for 'God' in common use amongst Muhammadans is *Allāh*, a word which, according to their theologians, denotes a 'Being who exists necessarily by Himself, comprising all the attributes of perfection' (cf., further, 'Arabian, pre-Islāmic' section of this art.). Another Qur'ānic word is *ar-Rabb*, 'the Lord.' There are also many names which express the various attributes of God. These are called the *Asmā' aṣ-Ṣifāt*, names of qualities in contradistinction to the *Ism adh-dhāt* (Allāh), the name of the essence of God.

It is said that, when Muhammad and his Companions addressed God as *ar-Raḥmān*, 'the Merciful,' Abū Jahl said: 'Muhammad and his Companions bid us worship one God, why, then, do they call upon another God?' On this the following verse was revealed: 'Most excellent titles hath God; by these call upon Him, and stand aloof from those who pervert His titles' (Qur. vii. 179). Those who perverted His titles were the pagan Arabs who were alleged to derive the names of their idols from names of God, as *al-Lāt* from *Allāh*, *al-'Uzzā* from *al-'Azīz*, 'the Mighty' (cf. Qur. liii. 19), which is now considered a grievous sin, and even infidelity.

In a much earlier Sūra also, in a verse which emphasizes the unity of God, these names are referred to, as if to show that their existence did not impair the idea of unity: 'There is no God but He: His are the excellent titles [*Asmā al-ḥusnā*]' (xx. 7). Again, a tradition recorded by Abū Hurāira states that Muhammad said: 'Verily there are ninety-nine names of God, and whosoever recites them shall enter Paradise.' These names all express some quality of God, and are such as *ar-Raḥmān*, 'the Merciful'; *al-Khāliq*, 'the Creator'; *al-Ḥalīm*, 'the Clement'; *al-Jalīl*, 'the Majestic'; *al-Hādī*, 'the Guide,' etc. (see full list in Hughes' *DI*, p. 141). The reason given for this large number is that God may always be addressed by a name suited to the need of His petitioner. Thus, if a man confesses sin, he calls on God as *al-Ghaffār*, 'the Forgiving,' or *at-Tawwāb*, 'the Acceptor of repentance'; is he in need of bodily sustenance, he prays to *ar-Razzāq*, 'the Provider'; is he in doubt as to a course of action, he addresses God as *ar-Rashīd*, 'the Director,' etc. To assist in the repetition of these names, a rosary of one hundred beads is used. The Wahhābites, however, use their fingers, believing that to have been the custom of Muhammad. The name *Allāh* is recited first or last to make up the hundred.

All Muhammadans agree that such names as 'the Living,' 'the Wise,' 'the Powerful,' can be applied to God, but they must be *tauqīfī*, i.e. authorized in some revelation—Qur'ān or tradition; *e.g.* God can be called *ash-Shāfī*, 'the Healer,' but He cannot be called *aṭ-Ṭabīb*, 'the Physician,' because that word is not applied to Him either in the Qur'ān or by Muhammad. Some authorities are less strict and say that, though the exact word may not have been so applied, yet, if an attribute of the Deity has been praised, an adjective expressive of that attribute can be used; but, if names not so given are used of Him, such use must be looked upon as expressive only of His attributes and not of His nature. Such a term is *Musabbib al-asbāb*, 'the Causer of causes.' To the Persian word *Khudā* objection also has been taken; but, as it means 'one who exists in himself,' it is equivalent to the Arabic title *Wājib al-wujūd*, 'one who has necessary existence,' and, therefore, may be used. Of names taken from a language of the infidels, such as 'God,' 'Dieu,' 'Gott,' the general opinion is that they ought not to be used at all.

Among the many names of God is the *Ism al-A'ẓam*, 'the exalted name.' According to one tradition, it occurs in Qur. ii. 158 and iii. 1. The names there are *ar-Raḥmān*, 'the Merciful,' *al-Qaiyūm*, 'the Self-subsistent,' and *al-Ḥaiy*, 'the Living'; but, according to 'Ā'isha, the *Ism al-A'ẓam* is known only to prophets and saints. As it is believed that those who call upon God by this name will obtain all they desire, Ṣūfīs and dervishes profess to spend much time in the search for it, and, when they claim to have found it, they gain great influence over the common people. The desire to attain this knowledge has been a powerful incentive to enter on the long novitiate and discipline of the Dervish Orders.

2. The doctrine of God may be considered with reference to His essence, His attributes, and His works.

(*a*) Muhammad laid great stress on the Divine unity. His creed, 'There is no god but God,' contains the negation of false gods and the affirmation of the unity of the one true God. The principal passages in the Qur'ān referring to this are:

'Say: "He is God alone; God the eternal; He begetteth not, and He is not begotten; And there is none like unto Him"' (cxii. 1–4). 'Truly your God is but one; Lord of the heavens and of the earth' (xxxvii. 4 f.). 'God, there is no God but He; most excellent His titles' (xx. 7). 'This is God your Lord; there is no God but He, the Creator of all things; therefore, worship Him alone' (vi. 102). In a Medīna Sūra, a verse which is probably Meccan occurs: 'Your God is one God: there is no God but He, the Compassionate, the Merciful' (ii. 158). In the same Sūra (ii. 256) we have one of the most beautiful passages in the Qur'ān, the 'verse of the throne': 'God, there is no God but He, the Living, the Eternal; nor slumber seizeth Him, nor sleep; His, whatsoever is in the heavens and whatsoever is in the earth, who is he that can intercede with Him but by His own permission? He knoweth what hath been before them and

what shall be after them; yet nought of His knowledge shall they grasp, save what He willeth. His throne reacheth over the heavens and the earth, and the upholding of both burdeneth Him not; and He is the High, the Great.' 'There is no God but He, the Living, the Merciful.' 'There is no God but He, the Mighty, the Wise' (iii. 1 and 4).

This strong conception of the unity of God led Muhammad to denounce what he considered to be the Christian doctrine of the Trinity. At Medīna, when all hope of winning the Christians to his side had passed away, he thus appealed to them:

'O ye people of the Book, overstep not bounds in your religion; and of God speak only truth. The Messiah, Jesus son of Mary, is only an apostle of God and His word, which He conveyed into Mary and a spirit proceeding from Him. Believe, therefore, in God and His apostles, and say not, "Three"; forbear; it will be better for you. God is only one God. Far be it from His glory that He should have a son' (iv. 169).

In the last Sūra revealed we read: 'They surely are infidels who say, "God is a third of three," for there is no God but one God' (v. 77). 'And when God shall say: "O Jesus, son of Mary, hast thou said unto mankind, Take me and my mother as two Gods beside God?" He shall say: "Glory be unto Thee; it is not for me to say that which I know to be not the truth"' (v. 116).

Muhammad's idea was that the Christian Trinity consisted of God, Mary, and Jesus. He considered the Holy Spirit to be Gabriel, and, accordingly, not a person in the Trinity.

From a Muslim philosophic point of view, as nothing exists without a cause, it must be assumed that there is a Being, the first cause of all things, existing of necessity and self-sufficing. This Being must be one, and one only. This unity, or *tawḥīd*, is said to be either *tawḥīd ar-rubūbīya* or *tawḥīd al-'ulūhīya*. The former means that God creates and sustains all things, but belief in this does not necessarily make a man a believer; belief in the latter does, for he who accepts it worships the one God only.

(*b*) Muslim theologians divide their definitions of God under the seven attributes of Life (*ḥayāh*), Knowledge (*'ilm*), Power, (*qudra*), Will (*irāda*), Hearing (*sam'*), Seeing (*baṣar*), and Speech (*kalām*).

Life.—God has neither associate nor equal. 'Had there been in either heaven or earth gods beside God, both surely had gone to ruin' (xxi. 22). He is immutable, invisible, without figure, form, colour, or parts. His existence has neither beginning nor end. He is not a body composed of substances or elements. He is not an accident inherent in a body or dwelling in a place.

Knowledge.—God knows all things, whether in the present, past, or future, whether hidden or manifest, whether in heaven or on earth. He knows the thoughts of the heart of man, and the words which proceed from his mouth. He is free from forgetfulness, negligence, and error. His knowledge is eternal; it is not posterior to His essence. 'Dost thou not see that God knoweth all things that are in the heavens and all that is on the earth' (lviii. 8). 'With Him are the keys of the secret things; none knoweth them but He: He knoweth whatever is on the land and in the sea; and no leaf falleth but He knoweth it; neither is there a grain in the darkness of the earth, nor a thing green or sere, but it is noted in a distinct writing' (vi. 59).

Power.—God is almighty. He can raise the dead, make stones talk, trees walk, annihilate the heavens and the earth, and recreate them. His power is eternal *a priori* and *a posteriori*. It is not posterior to His essence. 'Is He not powerful enough to quicken the dead?' (lxxv. 35). 'If God pleased, of their ears and of their eyes would He surely deprive them' (ii. 19). 'God hath power over all things' (iii. 159).

Will.—God can do what He wills, and whatever He wills comes to pass. His will comprises everything possible, whether good or evil. He wills the faith of the believer and the unbelief of the infidel. His will is eternal, and is not posterior to His essence. 'God is worker of that He willeth' (lxxxv. 16). 'God misleadeth whom He will, and whom He will He guideth.' 'God doeth His pleasure' (xiv. 4, 32). 'If God pleased, He would surely bring them, one and all, to guidance' (vi. 35).

Hearing.—God hears all sounds without an ear, for His attributes are not like those of a man. 'He truly heareth and knoweth all things' (xliv. 5).

Seeing.—God sees all things, however small, yet He has no eye as men have. 'No vision taketh Him in, but He taketh in all vision' (vi. 103).

Speech.—God speaks, but not with a tongue as men do. Speech, the word of God, is one; but it has various modes, as command, prohibition, promises, and threats. To some of His servants He speaks directly, as He did to Moses on the Mount and to Muhammad on the night of the Ascension to heaven. To others He speaks by the instrumentality of Gabriel. This is the way He speaks to the Prophets. The Qur'ān is the speech (*kalām*) of God, and is therefore eternal.

There is agreement as to the number of the attributes, but not as to their nature and the extent of the knowledge concerning them to which men can attain. The differences with regard to the mode of their existence and operation may be brought under three heads: the ancient Ṣifātite doctrine that the attributes are eternal and of the essence of God, the Mu'tazilite theory that they are not eternal, and the Ash'arite dogma that they are eternal but distinct from His essence. The first four of the attributes are called 'essential,' for without them the others could not exist. They can have no opposite in God. Thus, death, the opposite of life, cannot be predicated of God; life in Him is an essential attribute. They are also called *ṣifāt ath-thubūtīya*, affirmative attributes, the privation of which would imply loss; there are also *ṣifāt as-salbīya*, or privative attributes, such as that God has no form, no equal, is not limited by place, etc. Some difficulty has arisen over the expressions 'sitting,' 'rising,' 'descending,' and the references to face, hands, eyes, for, being connected with the idea of corporeal existence, these actions and references seem to imply imperfection and contradict the doctrine of removal (*tanzīh*), according to which, in virtue of His essence, God is not like the creatures He has made. The four leading theologians, Abū Ḥanīfa, ash-Shāfi'ī, Aḥmad ibn Ḥanbal, and Mālik ibn Anas, taught that discussions on such subjects were unlawful. They believed in the Qur'ān and in the traditions regarding Muhammad, and accepted these without disputing on such abstract questions.

The Prophet himself said: 'Think of God's gifts, not of His nature; certainly you have no power for that.' Ibn Ḥanbal said: 'Whosoever moves his hand when he reads in the Qur'ān (xxxviii. 75) the words, "I have created with my hands," ought to have his hand cut off; and whosoever stretches forth his finger in repeating the saying of Muhammad, "The heart of the believer is between two fingers of the Merciful," deserves to have his fingers cut off' (ash-Shahrastānī's *Milal wa'n-Niḥal*, Cureton's ed., London, 1842, p. 76). The commentator at-Tirmidhī said concerning the statement that God had descended to the lowest of the seven heavens: 'The descent is intelligible; the manner of it is unknown; the belief in it is obligatory; the discussion of it a blamable innovation.' Al-Baiḍāwī says: 'Certainly sitting on the throne is an attribute of God, its manner is not known.' Ibn Ḥanbal keeps to the literal meaning: '"God sits on His throne" means that He has the power of sitting.' He held, with most of the orthodox, that to allow a figurative interpretation was to introduce a dangerous principle. No explanation could be given, for it is written, 'There is none like unto Him' (cxii. 4), 'Nought is there like Him' (xlii. 9), 'Unworthy the estimate they form of God' (xxii. 73). One day a slave-woman was brought into the presence of Muhammad with a view to the granting of freedom to her. Muhammad said to her, 'Where is God?' 'In heaven,' was her reply. 'Set her at liberty; she is a true believer,' said Muhammad. The commentators explain that the Prophet was pleased with her, because she took the words 'in heaven' in their literal signification.

The orthodox position may be summed up in the saying, 'Just as the eye, turning to the brightness of the sun, finds darkness intervene which prevents all observation, so the understanding finds itself bewildered in its attempts to pry into the nature of God.' The attributes of God are beyond explanation, and so cannot be understood by man. Men should, therefore, mistrust their own notions, simply accept what Muhammad taught, and not exercise their reason in the consideration of the Divine attributes. This is not, Ibn Khaldūn explains, meant to depreciate the use of reason in all human matters, but it is an absurdity to employ it on things Divine (de Slane, *Prolégomènes d'Ibn Khaldūn*, iii. 45). The orthodox supported their position by the verse:

'He it is who hath sent down to thee the Book. Some of its signs are of themselves perspicuous [*muḥkam*]; these are the basis of the book, and others are ambiguous [*mutashābih*]. But they whose hearts are given to err follow its ambiguities, craving discord, craving an interpretation; yet none knoweth its interpretation but God. And the stable in knowledge say, "We believe in it, it is all from our Lord." But none will bear this in mind, save men endued with understanding' (iii. 5).

The difference between *muḥkam* and *mutashābih* verses has been thus defined: 'The verses which

give orders and prohibitions are *muḥkam*; all others are *mutashābih*.' This ruling brings all verses which speak of God and His attributes under the term 'ambiguous.' That being the case, the orthodox say that this verse clearly shows that the interpretation of such is known only to God. There must not be any discussion on the ambiguous terms. This was the ancient rule (de Slane, *Prolégomènes d'Ibn Khaldūn*, iii. 67). A tradition records that 'Ā'isha said: 'One day the Prophet recited the fifth verse and said to me, "When thou seest those who follow its ambiguities, these are they whom God has named, avoid them."'

This apparently closes the door to any freedom of discussion, but men arose who altogether disputed the right of the orthodox thus to set aside the use of reason. They, too, based their position on this very verse by insisting on a different punctuation, which ran: 'None knoweth its interpretation but God and the stable in knowledge. They say, "We believe in it."' Here God and the wise are said to be able to investigate all those matters which come under ambiguous expressions, and this use of reason then leads them to say, 'We believe in it.' The first reading is the orthodox one; the scholastic theologians generally adopt the second.

When the latter asked, 'How can men believe what they do not know?' the reply was ready, 'The act of belief in the unknown is the very thing praised by God.' Or, 'Why, if the Qur'ān is a guide to man, are not all its verses plain?' The answer was: 'There are two kinds of eloquence, one the arrangement of words in a plain style, the other is figurative language. The Qur'ān, as a perfect book, must contain both (az-Zamakhsharī reads the verse as 'except God and his servants who are established in knowledge,' Com. on iii. 5; see also Fleischer's edition of Baiḍāwī, Leipzig, 1846–48, vol. i. p. 146, and footnote in Sell's *Faith of Islām*, p. 191).

This controversy, however, dealt chiefly with the questions whether the attributes of God were internal or external, were part of His essence or not, were eternal or not. The orthodox party, called the Ṣifātites (*ṣifāt* = 'qualities,' 'attributes'), held that the attributes of God are eternally inherent in His essence without separation or change. All the attributes are conjoined with Him, as life with knowledge, or knowledge with power. The ambiguous verses in the Qur'ān were not to be explained. The Mu'tazilites opposed this, and rejected the idea of eternal attributes, saying that to accept the orthodox view would be to admit a multiplicity of eternal existences. The attributes of hearing, seeing, and speech they rejected; they were accidents peculiar to corporeal existence. They looked upon such an expression as 'the hand of God' as a figurative way of speaking of His power. Ash-Shahrastānī in the *Milal wa'n-Niḥal* (Cureton's ed. p. 30) thus puts the Mu'tazilite view:

'They say that God is eternal, that eternity is the peculiar property of His essence; but they deny the existence of any eternal attribute (as distinct from His nature); they say that He is omniscient as to His nature; living as to His nature; almighty as to His nature; but not through any knowledge, power, or life existing in Him as eternal attributes; for knowledge, life, power are part of His essence; otherwise, if they were looked upon as eternal attributes of the Deity, it would give rise to a multiplicity of eternal entities. They maintained also that the knowledge of God is within the province of reason, for knowledge is obtained only through reason.'

To the Mu'tazilites a plurality of co-eternal attributes, such as those involved in the Beautiful Names described above, seemed to conflict with the idea of absolute unity. They, therefore, apprehended them as states of the Divine essence, or identified them with the essence itself. The significance of the attributes thus, indeed, ran the risk of being lost. It is said that a philosopher who denied entirely the existence of any attribute said: 'God is by His essence a Being who knows.' A Mu'tazilite who denied the existence of an eternal attribute did believe in attributes, and so far differed from the philosopher. His way of putting the case would be: 'God is a Being who knows, but by means of a knowledge which He Himself is.'

For the rise of the Ash'arite school, see art. AL-ASH'ARĪ. It is enough now to say that Abū al-Ḥasan al-Ash'arī (A.H. 260–324) was for a time a Mu'tazilite, but returned to the orthodox views. His defection was a serious blow to the progress of liberal thought in Islām. On the question of the attributes of God, the views of his disciples, the Ash'arites, are opposed to those of the Mu'tazilites, and are slightly different from those of the Ṣifātites. They say that the attributes of God are not of His essence; they are distinct from the latter, yet in such a way as to forbid any comparison between God and His creatures. The great dispute ranged round the attributes of will and speech (see FATE and INSPIRATION [Muslim]).

There are other small sects which hold peculiar views, such as the Mushabbihites, 'Assimilators' (ash-Shahrastānī, p. 76), who, taking figurative expressions literally, hold that there is a resemblance between God and His creatures; and the Mujassimites, 'Corporealizers,' who say that God has a self-subsisting body; but both of these views are considered heretical.

The question whether in the future world God will be seen with the physical eye has been a subject of much discussion. The orthodox quote the words to Moses: 'Look towards the Mount, and, if it abide firm in its place, then shalt thou see me' (vii. 139). It is argued that, as the standing firm of the mountain was possible, and, indeed, probable, so that which was connected with it—the seeing of God—must be possible also. The Mu'tazilites, however, held that He cannot be beheld with the corporeal sight (ash-Shahrastānī, p. 30). One day, a man was brought before the Khalīf al-Wāthiq and questioned regarding the Vision of God on the Day of Judgment. He repeated the tradition recorded by al-Bukhārī.

'We were sitting on the fourteenth night of the month [the night of the full moon] with the Prophet, who said, "Certainly, you will see your Lord, just as you see this moon" (*Ṣaḥīḥ al-Bukhārī*, ch. on 'Sūra Qāf'), and declared his assent to it. The Khalīf called him a liar, and the man retorted the same. On this, the Khalīf became angry, and said: "What, will He be seen as a circumscribed and corporeal form which space can contain and the eye see? Verily, I deny a God with such attributes. What say ye?"'

The Mu'tazilites, thus appealed to, gave it as their opinion that the man should be put to death—which was done. Some Mu'tazilite teachers tried to explain away this tradition by saying that Muhammad did not refer to Allāh, but to the 'primary intelligence' or the 'primary reason,' which, in the cosmogony of the mystics, was the first thing created, and is the manifestation of the Supreme. Still, the Mu'tazilite doctrine was definite—God cannot be seen. The orthodox view is that Muslims, at least, will see God, though the manner thereof cannot be described.

As-Suyūṭī, a famous theologian († A.D. 1505), classified the attributes of God thus:

(1) Attributes which must necessarily be ascribed to God: existence, eternity past, eternity future, self-existence, unity. The first is the attribute of essence; the other four are privative attributes. Then, there are the attributes of ideas (*ṣifāt al-ma'ānī*): power, will, knowledge, life, hearing, seeing, speaking. These are all necessary (*wājib*).

(2) Attributes which cannot be applied to God: non-existence, disappearance, similarity to created things, dependent existence, plurality in His nature, absence of power, of will, ignorance, deafness, dumbness, blindness, liability to death.

(3) Attributes which it is possible to ascribe to God: these may be summed up in the saying that to God can be ascribed the doing or the not doing of any thing possible.

Muhammad ibn ash-Shāfi'ī al-Fudālī puts the case somewhat differently. He says that there are twenty necessary qualities in God: existence (*wujūd*), the proof of which is the origin of

the world, which must have had an originator; priority (*qidam*), that is, there was never a time when He was not; continuance (*baqā'*), or lack of termination to His existence; difference (*mukhālafa*) from things created; self-subsistence (*qiyām bin-nafs*), independence of anything; unity; power; will; knowledge; life; hearing; seeing; speech; being powerful, which is thus distinguished from the attribute of power—'when power exists in an essence, the quality called "being powerful" is in that essence; being a willer, a knower, a living one, a hearer, a seer, a speaker.' These are said to be qualities subsisting in His essence, and are states (*hāl*); they are not the attributes of will, knowledge, etc.; but between them and the attributes concerned there is a reciprocal inseparability.

God is described as Merciful and Gracious, the Guardian over all, the Provider of daily bread, the Reviver of His people and their Deliverer, and many similar terms; but all that the Qur'ān says of the loving-kindness of God is overshadowed by the teaching of Muhammad in the Qur'ān and the tradition as to His Power. This is the prominent element in the conception of God as taught by the Prophet; it has ruled the Muslim world, and still rules it. The 'most excellent names,' ninety and nine in number, do not contain any term which denotes the relation of God as a Father to His people. The idea is repugnant to the Muslim mind, and so in Islām the relation of man to God must ever be that of a slave, who lacks the freedom and dignity of a son.

The Prophet's Semitic origin is apparent in his rigorous assertion of the unity of God. Allāh, *the* God, the absolute ruler of Nature and of man, was to him the truest and noblest conception of the Divine Being. Whether, if he had not been brought into contact with Jews, his monotheism would have been so strong is perhaps doubtful. It has been well said that there is no 'charm in the abstract doctrine of the unity of God to elevate mankind,' and the general idea that has grown out of this dogma—that God cannot be known, and that inquiries into His nature are wrong—has tended to put the God of the Muslim afar off. The prevailing conception of God as the All-Powerful is not far removed from the idea of a despot, and fear, thus separate from love, is either the incentive to all effort or leads to the repression of all energy in the Muslim. The idea of unlimited, arbitrary power, unrestrained by any law of holiness, has so filled the Muslim mind that sin is regarded less as a breach of moral law than as a violation of some arbitrary decree. Certain actions of the Prophet were evil according to any law of righteousness; but no Muslim would admit that in doing them Muhammad committed a sin, for he acted under the command of God. Thus, salvation has come to be regarded not as the moral elevation of a man, but as safety from punishment. It is attained not by spiritual regeneration of the man's evil nature, but by the punctilious performance of certain religious rites, submission to the will of God regarding them being the essential characteristic of a good Muslim.

The Wahhābites, the most fanatical of all Muslim sects, have so emphasized this idea of the unity and power of God that, from their point of view, 'Islām may be called the Deification of Power, just as Hinduism deifies the productive and generative principles of Nature' (see the description which Palgrave gives in his *Central and Eastern Arabia*, i. 365 [reproduced in Hughes' *DI*, art. 'God,' and Sell's *Faith of Islām*[3], p. 181 f.], of the Wahhābite idea of God; it is more or less true of what men of the other Muslim sects believe). Their conception of God realizes the greatness and grandeur of His power, but it does not tend to call forth the deep love of the human soul; and, as it retards the growth of spiritual life in the individual, so also it hinders progress in the community, and prevents the formation of a national life. A practical fatalism settles sooner or later on all Muslim communities.

EDWARD SELL.

GOD (Slavic).—The word for 'God' in the Slavic languages is *Bog*. It is found in the names of primitive pagan deities mentioned in the ancient chronicles (e.g. *Stribog*, *Dashbog*), and by Helmold (i. 2, *Zcerneboh*, i.e. *deum nigrum*). It is the same word as the Skr. *bhaga* (Old Pers. *baga*), which means 'good,' 'blessing'; and this meaning is found in derivatives from the root *bog* (e.g. *bogaty*, 'rich'; *ubog*, 'poor,' etc.).

Procopius of Cæsarea (11th cent.) seems to think it possible (*de Bello Gothico*, iii. 14) that the ancient Slavs had a supreme God dominating their pantheon, as Zeus dominated the Greek pantheon.

'The Slavs,' he says, speaking of those bordering on the Byzantine Empire, 'believe in a God who causes thunder, and is the sole master of the universe.'

Helmold (*Chronicon Slavorum*, i. 83) makes the same assertion in regard to the Slavs of the Baltic and the Elbe:

'Among the various gods to whom they attribute the fields and forests, sorrows and joys, they are all agreed that one God rules over the others from the heights of heaven. This all-powerful God attends only to celestial affairs. The others have each their separate functions and obey Him; they are the offspring of His blood, and take precedence in rank according to their nearness to this God of gods.'

Unfortunately, we have no text to confirm what Helmold says of the filiation of the Slavic gods. A biographer of the missionary Otto of Bamberg tells us that the Slavs regarded their supreme God as 'glorious and filled with all riches' (Ebbo, ii. 1). In the treaty concluded in 945 between the Slavs and Greeks it is said (supposed Russian chronicle of Nestor):

'May the Christian Russians who violate this treaty be abandoned by the all-powerful God; may those who have not been baptized get no help from God or Perun.'

But no other text mentions this anonymous god.

L. LEGER.

GOD (Teutonic).—**1. The term 'god.'**—The term 'god,' as used to denote anthropomorphic beings of a higher order, is found in all the Teutonic languages (Goth. *guþ*, O.N. *goð*, A.S. and O.S. *god*, O.H.G. *got*), but in no other branch of the Indogermanic family. After the conversion of the Teutons to Christianity the word came to be applied also to the Christian Deity. In the heathen period it was a neuter; in Christian times, a masculine. Its etymology and its original meaning are obscure, and have been much debated (cf. O. Schade, *Altdeutsches Wörterbuch*[2], Halle, 1872–1882, i. 342; L. K. Weigand, *Deutsches Wörterbuch*[5], Giessen, 1909, i. 751); but, as in Norse

sources *goð* signifies 'image of a deity,' and as the word is philologically connected with Germ. *Götze* ('idol'), its original meaning was perhaps 'image,' 'figure' (Osthoff, in Bezzenberger's *Beiträge zur Kunde der indogerm. Spr.* xxiv. [1900] 177). The higher being was believed to be present in the image, and so the term was transferred from the latter to the former.

2. The four pan-Teutonic deities.—The worship of anthropomorphic deities constitutes the final stage in the religious evolution of the heathen Teutons. It was, in the main, a development from the belief in souls and spirits. One of these innumerable creatures of the imagination was singled out as representative of a whole group, and became the central object of the cultus; it was worshipped by prayer and sacrifice, and gradually extended its sphere of influence, in harmony with the interests of the confederation whose members paid homage to it. Such was the origin of the deities worshipped by the Teutons and regarded as holy either by single communities or by whole nations. It sometimes happened that other deities surrendered their province to the god thus worshipped, became incorporated with him, and were then recognized as mere epithets of the chief deity; while, on the other hand, certain attributes of the latter were detached from him and became independent deities. There was no uniform cult common to all the Teutons. In many instances a cult migrated from one tribe to another, and so either superseded, or became amalgamated with, the indigenous cult (religious syncretism). We, nevertheless, find among the Teutons three specially prominent gods, who, moreover, are met with in all the different tribes, and must, accordingly, have come down from a period when the Teutons were still an undivided people. These three are **Wōðanaz*, the god of the dead and of the wind; **þonaraz*, the god of thunder and of the sky; and **Tīwaz*, the god of war. With these is associated a female figure who appears in the O.H.G. sources as *Frīa*, in the O.N. as *Frigg* ('the beloved,' 'the wife'), and is always regarded as the consort of Wōdan. Roman writers identify Wōdan with Mercury; Donar—in the earlier period—with Hercules, and subsequently with Juppiter; Zīu-Týr with Mars; and Frīa-Frigg with Venus; and thus, when the Roman calendar was introduced among the Teutons, the *dies Martis* was rendered 'Tuesday,' the *dies Mercurii* 'Wednesday,' the *dies Jovis* Thursday' (Norse *Thórsdagr*), and the *dies Veneris* Friday.'

(*a*) *Wōdan-Óðin.*—From the host of souls which continue to exist in the wind—the spirit-army still known in popular legend as the raging host, the wild hunt, the Asgard chase (in Norway), and the like—was evolved Wōdan as the leader of the host. This leader of departed souls then became the lord of the dead and of the dead-realm, and at length also the lord of life and death. The attributes of all soul-like beings are engrafted upon him: like the dead, he is ruthless, and deprives men of life; he is the swift traveller or rider through the air; he has the protean nature, and is able at any time to assume at will the form of man or animal; magic and divination are under his sway. In N.W. Germany, probably in pre-historic times, he had come to be worshipped in various Teutonic tribes, and here, accordingly, he became the god of war, and finally the god of the sky, or, in other words, the supreme god of a tribe or people. Thus, for example, he was worshipped as the supreme deity by the Anglo-Saxons at the time of their occupation of Britain (Geoffrey of Monmouth, 6); as the lord of battles by the Langobards, who, as legend tells, owed to him their name, and also their victory over the neighbouring peoples (Paulus Diaconus, *de Gest. Langob.* i. 7, 8); thus, too, his cult migrated by way of Denmark to Scandinavia, gained a footing there, more especially at the royal courts, and, in Norway, frequently superseded the earlier cult of Thor. In the kings' courts, however—the residences of the skalds—he became also the god of poetry and poets. But his chthonic character still adheres to him; he had found admission to the courts as the head of the *Asas, i.e.* the ancestral spirits worshipped as divine; he is the lord of Valholl, the Norse paradise of fallen warriors; he is waited upon by the Valkyrs, who bring to him those slain in battle. His demand for human sacrifice is also known elsewhere. He has the power of changing his shape, and may show himself in a variety of human forms or as an animal. As the demonic wind-spirit of popular legend, he has a liking for amatory exploits. He presides over magic and spells. It was probably owing to this aspect of his character that he became the god of the poetic art, and then also of all higher wisdom—the one who, in particular, was aware of all that takes place in the life of gods and men. This knowledge, according to Norse mythology, he acquired by drinking the poetic mead, which was originally in the keeping of the dwarfs and then passed into the possession of the giants. In the form of a serpent, Óðin crawled into the mountain within which Gunnlöð, daughter of the giant Suttung, kept watch over the mead, outwitted her, and stole away with the precious liquor. He gave draughts of the mead to such men as he destined to become poets.

Óðin's chthonic nature shows itself also in his external form. He is depicted as an old man with a long grey beard, and is therefore called *Hárbarðr*; he is one-eyed, like the man-eating demons of other myths; he wears a slouched hat pressed far down over his face, and is thus also named *Síðhottr*. He is sometimes the tireless traveller ('viator indefessus' [Saxo Gram. i. 128]), sometimes the swift rider who is borne through the air by his eight-footed steed Sleipnir. He appears also as the god of war in full armour ('armatus sicut Mars' [Adam of Bremen, iv. 26]), wearing the helmet upon his head, and holding in his hand the spear *Gungnir*, with which he stirs up war, and smites down those whom he has destined for his ghostly army. To his immediate retinue belong his two wolves, Geri ('the greedy') and Freki ('the voracious'), and his ravens, Hugin ('thought') and Munin ('memory'), which bring him tidings from all quarters. His abode during his times of rest was originally the mountain Valholl, the ancient realm of the dead, and, accordingly, he speaks of himself as the 'ancient of the mountain' (*Reginsmál* 18), while the skalds call him *fjallgautr* ('fell-god'). But, when he had been raised to the position of the supreme god among the Norsemen, Valholl became his citadel, where he sat enthroned as a king, exercising sway over the *einherjar*, the host of fallen warriors, and sending forth the Valkyrs, his wish-maidens, to bestow victory on his protégés, and convey the slain warriors to his castle. At their banquets there, the Valkyrs serve the *einherjar* with mead. Óðin, having thus attained the supreme place, becomes lord over all other deities, most of whom, in fact—*e.g.* Thor and Balder—now become his sons. This final stage of his development was attained more fully than elsewhere at the courts of the Norwegian kings, and was the work of the skalds resident there (cf. H. M. Chadwick, *The Cult of Othin*, London, 1899).

(*b*) *Donar-Thor.*—A second deity acknowledged by all the Teutons was Donar (O.N. *Þórr*), who was in a special sense the god worshipped by the Norwegians. His name is connected with the root *tan*, 'to sound,' and the Lat. *tonare*, and means the 'thunderer.' He is properly the Teutonic god

of the upper regions, who manifests himself in the thunder. In this capacity he bears the axe or hammer, which he hurls from the sky, and with which he makes the earth fruitful (Adam of Bremen, iv. 26). He is depicted as a strong man in the prime of life and with a ruddy beard, and he is accordingly met with on the votive stones of Teutonic mercenaries as 'Hercules magusanus' or 'Hercules barbatus' (W. Brambach, *Corp. Inscr. Rhen.*, Elberfeld, 1867, no. 130 ff., 653). During the thunderstorm he travels through the air in a chariot, which, according to Norse mythology, is drawn by two goats. The saga also tells us that his hammer, which he grasps with gauntlets of iron, is called *Mjollnir*, and, further, that he wears a peculiar girdle, which increases his strength when his anger is roused. By virtue of his hammer he is also the god of human fecundity, using it to bless the rite of marriage. He is attended sometimes by the youthful Þjálfi, pre-eminent in swiftness, and sometimes by Loki the cunning. His mother is Jorð, 'the earth,' whom the skalds identify with Fjorgyn or with Hlóðyn (O.H.G. *Hludana*). In the North, certain of his attributes are personified as his sons, Magni ('power') and Móði ('courage'), or as his daughter Þrúðr ('strength'), and his abode is called Þrúðheimr ('realm of strength') or Þrúðvangr ('land of strength'). His consort is Sif, *i.e.* simply 'the wife.' In certain districts Thor came to be regarded as the son of Óðin, but this took place only after the latter had advanced to the position of supreme deity. He, nevertheless, maintained his prerogative as the chief object of belief and worship among the peasantry of Norway and Iceland till the downfall of paganism. In all the Norse countries he is the friend of man, succouring him in his conflict with demonic powers. The latter being represented mainly as giants, Thor's battles with giants form the theme of numerous myths, the materials of which were to a large extent furnished by widely diffused legends. In both Norway and Iceland temples were erected to him in large numbers; his cult has left traces in many place-names, while the numerous proper names formed with Thor are a further testimony to the prevalence of his worship among the Northern Teutons. It is true that outside this area we find but few data bearing upon his cult; but such as we have are in complete agreement with the evidence of the Norse sources. Thor's sacred tree was the oak (cf. L. Uhland, 'Der Mythus von Thor,' in *Schriften*, vi., Stuttgart, 1868).

(*c*) *Zîu-Týr.*—The third pan-Teutonic god was the war-god—the O.H.G. *Zio*, A.S. *Tíw*, O.N. *Týr*, whose name appears in the O.H.G. *Ziestag*, A.S. *Tíwesdæg*, O.N. *Týrsdagr*. He has often been regarded as a survival of *Tîwaz, the Teutonic sky-god of pre-historic times, but in our extant sources he is never anything else than the god of war. His worship was specially prevalent among the Western Teutons. Thus he is met with on the Rhine as 'praecipuus deorum Mars' (Tac. *Hist.* iv. 64); the Alemanni, in virtue of their being devoted to his cult, were also called *Cyuuari*, *i.e.* 'worshippers of Zîu'; Batavian mercenaries stationed near Hadrian's wall dedicated altars to him as Mars Thingsus (*Things*, another appellation of Zîo; cf. *Dien-* in Germ. *Dienstag*, 'Tuesday'), the god of the popular assembly (cf. Dan. *Ting*, 'parliament'). Among the Saxons he was known also as Sahsnôt, and Er or Ear. His symbolic weapon was the sword. Norse myths depict him as having one arm, and tell how he lost his right arm by a stratagem of the Fenris wolf.

(*d*) *Frîja-Frigg.*—In addition to these three male deities, all the Teutonic tribes recognized the goddess Frîja (A.S. *Frí*, O.N. *Frigg*), the wife of Wôdan-Óðin. Her name (akin to Skr. *prîya*) means simply 'the beloved,' 'consort,' 'wife,' and she was, accordingly, the goddess of married women, and the bestower of children. She shared with Óðin his growing prestige, and became the mother of the gods; but she had no such position in the cultus as was enjoyed by her husband or by Thor.

3. Local deities.—Beyond the four mentioned above, no other deity was acknowledged by all the Teutonic peoples. Among the Southern Teutons and the Norwegians we meet with the indefinite figure of Frîja's sister, who is called Volla by the former, and Fulla by the latter—a name signifying the dispenser of wealth. But we find a large number of deities belonging to particular districts—in Germany chiefly female, in Scandinavia both male and female—and known to us mainly from legendary sources. The great profusion of such local deities is shown by the votive stones erected by German mercenaries and inscribed with the names of goddesses. One of the most prominent of these was the Nehalennia worshipped in the Rhine delta—the tutelary deity of fishermen and the bestower of fruitfulness. The Marsi accorded a tribal worship to Tanfana, whose festival was celebrated in autumn (Tac. *Ann.* i. 51). A goddess of seafaring, whom Tacitus (*Germ.* 9) identifies with the Egyptian Isis, was worshipped by the Suevi. A confederation of seven tribes on the coast of the Baltic or the North Sea offered sacrifice and worship to Nerthus, who had her seat in a sacred grove, and travelled through the various territories in the beginning of spring (*ib.* 40; cf. Mannhardt, *Wald- u. Feldkulte*, Berlin, 1877, i. 567 ff.).

4. Deities peculiar to the Northern Teutons.—The deities of the Southern Teutons cannot compare in point of numbers with those met with in the Scandinavian sources. These Northern deities, moreover, are associated with mythology rather than with the cultus. The Eddas speak of two different classes of deities—the *Asas* and the *Vans*. We are told in a certain saga that these two groups were once at war, but ended their mutual hostility by a treaty, and thereafter became merged in one (*Ynglinga Saga*, cap. 4; cf. Weinhold, *Der Mythus vom Wanenkrieg*, Berlin, 1890). Here we can also trace the growth of the Wôdan-Óðin cult, and its eventual triumph over the Norse cult of Frey. In the North, accordingly, the more outstanding figures among the *Vans* were also objects of worship.

(*a*) *Frey, Njorð, and Freyja.*—At their head was Frey, whose principal sphere of worship was in the fertile plains of Sweden, his chief temple being at Upsala. His cult found its way thence to Norway (Trondhjem), and was then carried to Iceland by Norwegian colonists. The name *Frey* means simply 'the lord.' He was regarded as the god of the fertility of the soil, and thus also as the dispenser of wealth and prosperity—the deity from whose hand came sunshine, rain, and favourable winds. In the Eddas he is represented as travelling in a carriage drawn by a boar with bristles of gold. He possessed a marvellous sword, able of itself to fight, and also the ship *Skíðblaðnir*, in which he travelled through the air. His father is Njorð; his sister is Freyja. Njorð is really the Norse form of the Nerthus found in Tacitus. If Nerthus was, as Tacitus says, 'mother-earth' (*terra mater*), Frey was her consort, and then, when the female Nerthus became in the North the male Njorð, the latter became the father of the older god Frey, and, like him, also the bestower of wealth—wealth, however, more in keeping with Norwegian conditions, *i.e.* as acquired by seafaring. In Norway, wherever Frey was worshipped, Njorð also was worshipped, and their names appear side

by side in the Norwegian form of oath. The female Nerthus, on the other hand, survived in Frey's sister Freyja, whose name may have been derived from her brother's. A Norse myth speaks of Nóatún ('place of ships') as the abode of Njorð, and says that his wife, Skaði, the daughter of a giant, stays with him only three nights in Nóatún, while he spends nine nights with her in his mountain home. In Freyja, who appears only in the Norwego-Icelandic sources, are combined attributes of her brother and of Frigg. She was the goddess of fecundity and love. As a chthonic deity she has a share in the slain. She has the elf-like power of flying through the air in the form of a falcon, while legend endows her also with a resplendent breast-ornament, the *Brísingamen* ('the sparkling jewel').

(*b*) *Balder.*—Of the other Norse deities the most prominent was Balder, whose name signifies 'light,' 'the bright one.' Nothing is known of a Balder-cult, and what is told of him by Saxo Grammaticus and the Eddas consists of mythical narratives which group themselves round the subject of his death. The *Snorra Edda* says that he was noted for his lustrous appearance and his gentleness of nature. It is clear that, in the latest form of the myth, Balder has been endowed with certain attributes of Christ. His death, according to Saxo, was due to Hotherus (Hoðr), who for the occasion availed himself of a magic sword; the object of the conflict was the winning of the beautiful Nanna, who was the lady-love of Hotherus and to whom Balder also had paid court (*Hist. Dan.* i. 110). In the Edda, on the other hand, Nanna is Balder's wife, and Balder is the favourite of the gods, who were forewarned of his doom by evil dreams. His mother Frigg, accordingly, made all animate and inanimate things take an oath that they would not injure Balder, and only the mistletoe remained unsworn. In this form of the myth, however, it is not Hoðr, but Loki, who perpetrates the deed, Hoðr being a blind *Asa* who acts merely as the instrument of Loki. Thus, when the *Asas* cast stones and other missiles at Balder, as they were wont to do in play, Loki thrusts the mistletoe bough into Hoðr's hand and so instigates the throw which kills Balder (*Snorra Edda*, i. 172 ff.). In both forms of the myth Balder was avenged by a brother, whom Óðin begot for the purpose; this brother appears in Saxo as Bous, and in the Edda as Vali, of whom the *Voluspá* says that he will share the sovereignty in the new world. According to the Norse saga, Balder had a son named Forseti ('president'), who was the best of all judges, and is probably to be traced to the Frisian Fosite (cf. S. Bugge, *Studien über d. Entstehung der nord. Götter- u. Heldensagen*, Munich, 1889; Frazer, *GB*², London, 1900, iii. 236 ff.; F. Kauffmann, *Balder*, Strassburg, 1902; Schück, *Studier i nordisk Litteratur- och Religionshistoria*, Stockholm, 1904, ii. 1 ff.).

(*c*) *Heimdallr.*—Another of the *Asas* named in the Norse sources is Heimdallr, *i.e.* 'world-gleam,' 'he who shines over the world,' the sentinel of the *Asas* on the border of the Divine world, and as such provided with the *Gjallarhorn*, on which he sounds a blast at the outbreak of the last great battle between the gods and the demonic powers. In his capacity of watchman he requires less sleep than a bird, and sees equally well by day and by night. His ears are so acute that he hears the grass growing on the earth, and the wool on the sheep's back. According to a saga in the Edda, he is the son of nine sisters, daughters of the female sea-demon Rán, and derives his enormous strength from earth-force, the ice-cold sea, and boar's blood. Night after night upon the foaming cliff he wrestles with Loki for the possession of Freyja's *Brísingamen*, and wrests from him the stolen jewel.

(*d*) *Minor and later deities: Ullr, Hoenir, Viðar, Bragi.*—(1) Still another figure numbered amongst the gods by the *Snorra Edda* is Ullr, whom Saxo calls Ollerus, making him the vicegerent of Óðin during the latter's absence (i. 130 f.). Ullr is highly skilled in fishing and ski-running, and is conspicuous for his beauty of form. (2) The figure of Hoenir, as regards both his name and his character, is difficult to explain. In the sagas he is often found in alliance with Óðin and Loki, the three being repeatedly associated in tales of adventure. So, too, the *Voluspá* represents them as having created the human race, but here Hoenir never becomes prominent. He fills a peculiar rôle in the legend of the war with the *Vans*. After the treaty of peace he was given as a hostage to the latter, amongst whom he became notorious for his mental incapacity, leaving everything in the hands of his fellow-hostage Mimir. The only quality in which he excels is swiftness. (3) In the Eddas we read also of Viðar, the son of Óðin and the giantess Gríð, as one of the gods. He is the taciturn *Asa*, and bears a striking resemblance to Vali. Like the latter, he is destined by birth to be an avenger. He avenges his father Óðin by thrusting his sword through the heart of the Fenris wolf, and wrenching apart the creature's upper and under jaws. He shares with Vali the sovereignty of the renewed world (*Voluspá*, 53). (4) The latest group of Norse deities includes Bragi, who with Óðin is the god of poetic art. He was really the skald Bragi, who lived in the 9th cent. and was accorded a place among the *einherjar*. In Valholl he acts as Óðin's counsellor, and, with other *einherjar*, receives the kings who die in battle. As an *Asa* he becomes a son of Óðin. He was noted for his long beard, and, according to the later sagas, was the husband of Iðun, who bestowed the gift of youth.

(*e*) *Loki.*—A peculiar position among the Norse deities is assigned to Loki. He is the *Asa* who sometimes succours, sometimes works injury; he is sometimes an ally of Óðin and Thór, and their comrade in travel, while, again, he seeks to overreach and deceive them. His double character makes him a favourite theme of poetic legend, and he became the nucleus of mythical incidents and Christian stories about Satan. Loki is in reality evolved from the chthonic elves, and in his original form he still survives in Scandinavian superstition as a domestic spirit. His chthonic character shows itself also in the blood-covenant which he makes with Óðin, while his elfish nature is seen in his power of assuming at will the form of a woman or an animal, in his artistic skill, his dexterity in theft, and his malicious cunning. His beautiful and graceful appearance and his lameness are characteristics also found among elfish beings. After the process of development by which the elfish appellative *loki* (related to *lúka*, 'to lock in,' as *holda* to *helan*, 'to hide') had become personified as Loki the *Asa*, the latter joins with Óðin and Hoenir in the creation of man; he wanders with these gods in quest of adventures; he brings the apples of Iðun to the giants, and in the form of an eagle takes them away again; in the shape of a mare, after union with the stallion of the architect of Asgard, he gives birth to Óðin's eight-footed steed Sleipnir; he cuts off Sif's hair, and then brings hair of gold for her from the dwarfs; he accompanies Thór upon the expedition in which the latter recovered his hammer from the land of the giants, and also upon his journey to Útgarðaloki. But Loki also brings about the death of Balder, and it was on this account that Norse poetry fastened upon him

the saga of the chained monster, telling how he was fettered by the *Asas*. Among the latter his wife is Sigyn, and their son Narfi.

In consequence of his destructive propensities, Loki became the enemy of the gods, and thus also the giant who at the head of the demonic powers has a share in bringing about the dissolution of the gods and the world. In this, the latest, phase of the myth, his wife is the giantess Angrboða, 'the worker of calamity,' while his children are the Miðgarð serpent, the Fenris wolf, and Hel, the queen of the under world (cf. A. Olrik, 'Loke i nyere folkeoverlevering,' in *Danske Studier*, v. [1908] 193 ff., vi. [1909] 69 ff.; *Festskrift til Feilberg*, 1911, p. 548 ff.; Celander, *Lokes mytiska ursprung*, Upsala, 1911).

(*f*) *Female deities.*—In the Norse poetic literature, moreover, we find the names of numerous female beings, the *gyðjur*, but in most cases the name is all we learn of them. In addition to Freyja, the sister of Frey (see above), the Norse peoples recognized Gefjon, who was at one time regarded as the goddess of the fruit-yielding earth, and was even worshipped as such (cf. A. Olrik, in *Danske Studier*, vii. [1910] 1 ff.), and to whom the Danes ascribed the present position of the Island of Zealand. Iðun typified eternal youth, and was the guardian of the apples which rejuvenated the gods. Later tradition made her the wife of Bragi. Female deities having special functions are found in Gná, the messenger of Frigg; Sága, the goddess of wisdom, who in company with Óðin drank wisdom from vessels of gold at Sökkvabekk; Snotra, who imparts wisdom to women; Sjofn, who unites lovers; Lofn, who acts as intermediary between gods and men; Hlín, protectress in times of danger; Sýn, custodian of domestic peace; and Vor, guardian of oaths and treaties.

GODS, DRESS OF.—See DRESS, vol. v. p. 66.

GODĀVARĪ (Skr. *godāvarī*, 'granting water or kine'; but the name is more probably a Sanskritized form of the original Dravidian name *Goda* [Telugu *godē*], 'limit,' 'boundary,' in the sense that it divided two regions of the Dakkhin). —The great river of the central part of India, rising near Nāsik (*q.v.*), thence flowing E., and forming the boundary between the British District of Aḥmadnagar and the Dominions of the Nizām of Haidarābād; thence through part of the latter territory, and finally falling into the Bay of Bengal in two branches—the E. or Gautamī Godāvarī, and the W. or Vasiṣṭa. Its total length is 898 miles. The Godāvarī ranks high among the twelve sacred rivers of India, its chief rivals being the Ganges and the Narbadā. It is associated with the story of the wanderings of Rāma, who is said to have lived for a long time at a place called Pañchavaṭī, which is by some identified with Nāsik, but was probably lower down the course of the river. The chief sanctity attaches to the E. or Gautamī branch, based on the legend that it was revealed by Rāma to the *ṛṣi* Gautama. Another story tells that it flows from the same source as the Ganges, and this connexion is shown by its name, *Vṛddha-gaṅgā*, 'old lady Ganges.' Every part of its course is sacred, and bathing in its waters washes away the foulest sin. Every twelve years the great Pushkara bathing-festival is held on its banks. One of the chief holy places is Trimbak (Skr. *Tryambaka*, 'three-eyed,' a title of Śiva), which contains one of the great *liṅgas* of India. This is the reputed, but not the real, source. Here a place is shown under the name of Gaumukh, 'cow's mouth,' where the water drips from a lofty cliff through a stone cow's mouth, which the attendant priest decorates with leaves and flowers. Here the god is paraded in a litter every Monday; and every twelfth year, when the sun enters the sign of Leo, a great bathing-festival is held, the reputation of which is so great that the word *godāvarī* is commonly used in Gujarāt to express the number twelve (*BG* viii. 649 ff.). Nāsik, close by, is held to be one of the sacred places of India. Lower down the course of the river comes Bhadrāchalam (Skr. *bhadra-achala*, 'lovely hill'), also known as Rāmatīrtha, the sacred ford where Rāma is said to have crossed the river. It contains a famous temple dedicated to the god, which is a place of pilgrimage. As the river approaches the sea, the chief holy places are Rājahmundry (Telugu *Rājamahendravarama*), which takes its name from the king Mahendradeva of the Orissa dynasty, and the village of Kotipalī on the left bank of the E. mouth of the river.

GODDESS.—See GOD, DEÆ MATRES, FEMALE PRINCIPLE.

GOETHE. — 1. Life. — Goethe was born at Frankfort-on-the-Main on 28th August 1749. The place was good and the time was great. For his was the generation of Herder, Voss, Bürger, and Schiller—a generation succeeding that of Klopstock, Wieland, Winckelmann, Kant, and Lessing. His father was a man of firm will and serious purpose; his mother a woman of warm, noble, and imaginative nature. He was trained in law studies at the University of Leipzig, though his likings all the while were for poetry and classical antiquity. Later, he pursued his law studies at the University of Strassburg. Here, at the age of 21, he met the gifted and unfortunate Lenz; also the clear-headed Lerse and the strangely dreaming Jung-Stillung; and, most important of all, Herder, who, amid much interchange of thought, introduced him to the beauties of Shakespeare, and read with him certain other English works (1770–1771). Significant of Goethe's intellectual development is his writing to Salzmann in 1771: 'My *nisus* forwards is so strong that I can seldom compel myself to take breath and look backwards.' From Strassburg he returned for a short time to Frankfort, whence he went to Wetzlar. It was while practising at lawyer-work, which he greatly disliked, that his *Götz* was produced, and met with the most enthusiastic praise.

In 1775, Goethe went to Weimar, by invitation of the Duke Charles Augustus, and there began those years of active service that ran on till 1786. To his friend Merck he wrote: 'We are playing the devil here; we hold together, the Duke and I, and go our own way.' The Duke's doings were boisterous enough, and Goethe did not fail to share them. Wieland soon became the fast friend of Goethe. For years the latter was now actively engaged in State duties, having been promoted to the work of the Privy Council, through the Duke's favour. His influence upon the Duke was beneficial. Of Goethe's relations with women, such as

his romance, earlier, with Lotte, and his Weimar relations with Frau von Stein, there is neither space nor call to speak here, as we are concerned with his life mainly in its intellectual developments. Amid multiplying cares and distractions, Goethe maintained his interest in literary activities and plastic art; his official duties deepened his studies in science. Then came the years 1786–1788, wherein his life was made up of Italian sojourning, of which more will be said later.

After an absence of nearly two years in Italy, Goethe returned, and soon afterwards married a humble but winsome maiden, named Christiane Sophie Vulpius, in whose love he was happy. The years 1794–1805 were marked by the truly beautiful, and extremely striking, friendship of Goethe with Schiller. For the men were opposites, and did not readily draw to each other. Each was at first adversely critical of the other's work. In 1789, Schiller wrote that it would make him unhappy to be much with Goethe, who seemed egoistic; and for five years their friendship saw no advance. But, once an interesting start was gained, it remained faithful and fruitful to the end. Their despicable detractors they scourged in the *Xenien*, which varied very much in their quality. Goethe wrote to Schiller that their first cordial intercourse had been an epoch in his life; Schiller wrote of Goethe to the Countess Schimmelmann, in 1800, that 'there are in his nature a lofty integrity and truth, together with the highest earnestness on behalf of what is right and good.' Their correspondence shows how each was the complement of the other, and how each reinforced the other. When their union of hearts was broken by Schiller's death in May, 1805, it was an irreparable loss to Goethe, and his grief was great. A time of political troubles and distresses followed, until the peace that was concluded between France and Prussia in July 1807. Goethe's activities continued—official, literary, scientific, artistic. Years of revived life passed, but at length, in 1823, he had a serious illness, with slow recovery. Once recovered, however, he spent the years 1824–1830 in ceaseless activities, but 1830 was saddened by the death of his son, August. In 1831, however, his marvellous literary industry was proceeding. When he had put the finishing touches to *Faust*, he said to Eckermann that he considered the rest of his life a free gift. In the following year (22nd March 1832) he gently passed away. His dust was laid beside that of Schiller—in death not divided.

2. Works and characteristics.—With Goethe's relations to religion and ethics we are here concerned in a particular manner, without in any way overlooking literary aspects. It may be remarked that his religion took the pantheistic form of a world-spirit unfolding itself into the whole and various forms of life and being. But the most characteristic thing in his pantheism is its sense of the cohesiveness of Nature—its universal unity. Nature is to him self-renewing, self-multiplying, self-loving, and self-revealing—a unity coherent, and growingly conscious of itself. His grasp of Nature proceeds from no casual mechanism, but from a unity, revealing itself in manifold ways. Anything like a machine-like conception was entirely foreign to his point of view. Nature was to him an infinite ocean, restless and heaving, or a boundless tide of ceaseless, glowing life. He would have none of the skilled analyses sought to be imposed on what was to him the all-and-ever-living, exempt from application of mechanical and mathematical categories. Nature was to him God, and God Nature; man was a monad living in this God-Nature, enjoying it to the full, however many might be the metamorphoses through which he should be called to pass. In the spirit of man Goethe found the same unity which for him marked the world of Nature. In these two worlds—the Nature-world and the Spirit-world—the Divine was for him the source of all harmony, pantheistic as the foundation of such a union might be. Faust's development is an instructive illustration. Goethe represents Faust as yearning for an inner comprehension of the secrets of Nature; he shows him as longing for a sense of oneness with her life, such that the intellectual and the sensuous spheres alike shall be transcended; he depicts him as demanding to be set above the limitations of human nature, and to share, though still as man, the inmost life of Nature. To Goethe the whole vesture of man's thought was but a parable or likeness of the eternal infinity of Nature—that *unendliche Natur* at whose breasts all things are nourished.

The philosophic thought which underlay Goethe's Nature outbursts was that of endless transformations of eternal substance in a universal activity, for the spell of the Spinozan ethics never ceased for him. But his Nature-contemplation was touched to joyous strength by Leibnizian optimism. In his indomitable study of Nature as one whole, he was led to anticipate organic unity, and to reject everything of the nature of final discrepancy or perfect isolation. His evolutionary instincts led him, in his studies of organic Nature, to lay fundamental stress on the type. Indeed, his aim was precisely for final unity, and he expressly said that the harmony of the whole makes every creature what it is.

In the literary work of Goethe, the creative and the critical functions were conjoined in a conspicuous manner, even if we should be obliged to hold that his creative spirit suffered in its results from the chill reflectiveness of the critical mind—from the prevalence of philosophic thought over the passional springs of nature. He distinctly recognized that there is a destructive criticism, and also a criticism creative or constructive; and he took the poet's aim, and the measure of its fulfilment, to be the supreme tests in criticism. His was the well-known and felicitous summarizing of criticism in the formula *im Ganzen, Guten, Schönen resolut zu leben*—'to live resolutely in the Whole, the Good, the Beautiful.' Great as was Goethe's literary achievement, it must not for an instant be supposed that he reached the highest level of excellence in all the various kinds of work which he attempted, for that was by no means the case. Everywhere in his work there is high literary distinction, but not always, or perhaps anywhere, supreme excellence. The real ground of the profound impression which he made as a literary figure we shall see later. Meantime, we take critical account of many of his more important literary efforts. His *Götz von Berlichingen*, a juvenile but captivating drama, attracted the attention of Scott, and was not without influence on *Ivanhoe*. It sets before us the ideal of freedom, in rude and natural forms of active and heroic will, battling against circumstance, and asserting its independence, under a native sense of justice. A like cry for freedom—the freedom of the artist—marks Goethe's *Prometheus*, which contains passages of living interest.

Of Goethe's superb power as a writer of ballads, instances are seen in his 'Bride of Corinth' (*Die Braut von Korinth*), 'The Erl-King' (*Der Erlkönig*), and 'The God and the Bayadere' (*Der Gott und die Bajadere*), which witness to his wide-reaching insight and subtle charm of expression, and abound in elements of beauty and mystery.

Goethe's sojourn in Italy, passed in rapt contemplation of Art and Nature, developed in him the spectatorial attitude rather than that of practical activity. This attitude, with its own ethical conception of the world, is reflected in his exquisite

drama *Iphigenie*, his refined play *Torquato Tasso* —neither of which, however, proceeded from a Shakespeare—and in his serious work, *Wilhelm Meister*. Of the last we shall presently speak, but meantime remark of his *Tasso* that he found it hard to complete this fine and penetrative piece of work. But he said to Eckermann that the play was bone of his bone and flesh of his flesh. The Tasso of the drama, it should be said, is in certain respects not at all like the Tasso of historic fame. In the same way, Goethe's *Egmont* differs in many respects from the Egmont of history, and is ruined by his inability to read hostility where it exists. There is something not quite admirable in Goethe's treating a noble figure of history, not only without any idealizing, but with positive reduction of moral stature. For all that, there are many fine things in the work. His Iphigenia, already mentioned, is a figure admirable and pathetic, drawn by Goethe's Hellenism with characteristically Greek reserve. Not less delicately drawn are the figures in his *Hermann und Dorothea*, which, while truly individual, are significant of the typical. Redolent of the Greek spirit they may be, but they remain genuinely German. Artistically, the piece is perfect.

Goethe's ethical attitude, to which reference has already been made, is a rather difficult subject, as is seen in his resolving morality into systematized self-expression and self-realization, even in the case of the self-development of Faust, wherein are incidents not easily brought within the ethical sphere. But Goethe's own moments of aggressive paganism are not to be forgotten, and they cast a significant light on his rather absurd impatience with what he regarded as Christianity's ascetic chastisement of the senses. This is not to overlook the fact that he felt the force of Kant's thought with respect to practical problems of ethics. It was in one of his later stages that he took Christianity to be a religion inculcating reverence in three kinds—for what is above us, for what is below us, and for equals—and this Neo-Christianism, if it may be so termed, consisted in the fusion of these three elements.

The artistic view of life finds expression in Goethe's *Wilhelm Meister*, which has no lack of wealth of life and thought, though wanting in artistic finality. Culture, or *Bildung*, sums up his aim, and the work has been aptly styled an Odyssey of culture. The world is for him harmonized in cultured society. In spite of ethical and artistic drawbacks not difficult to find, many have been able to learn much from it. It presents the world as a 'vast quarry' of materials, which it is for us to reduce to an ideal form in virtue of the creative power within us. Thus a vague and formless idealism will be supplanted, under life's disciplinary processes, by definite and well-chosen activity. It is as a philosophical realist that Goethe so speaks, his own happiness being, in some sort, a religion to him. But the work insists that man shall develop his sentient and perceptive powers, no less than his powers of moral culture, in order to the harmonious working of all the powers of his nature. All these teachings, as to the wisdom and strength of life, are set forth in a manner as far as possible removed from didactic or moralistic presentations, in the rich and varied guise, indeed, of animated description and thrilling romance. This is not to say, however, that the work is not dull and prosaic enough in places.

In 'The Sufferings of Young Werther' (*Die Leiden des jungen Werthers*), Goethe gave utterance to that reaction against the domination of the understanding which marked the 18th century. He made the work expressive of the high sensibility, and the feeling for Nature, which were being in new ways developed. But his Werther was too given over to the sway of sensibility to have it, as in Goethe himself, controlled and regulated by reflective reason. Hence the work has little healthiness of tone, and is infected with the malady of the age—the excessive sentimentalism of the closing 18th century.

Goethe's 'Elective Affinities' (*Die Wahlverwandtschaften*) is a fine prose work, telling of the tragic significance of the relations which he calls 'elective affinities,' under given circumstances. The book is marked by great feeling, high imagination, and deep knowledge of man and the world.

As in *Wilhelm Meister*, so in the 'Poetry and Truth' (*Dichtung und Wahrheit*), the culture idea is emphasized. The work is an autobiographic record of somewhat unusual and informal character, but it presents, in light and graceful style, more than personal experiences of his early life; it even reflects the national currents of thought and feeling. Friend as Goethe was of world-literature, he here complains that national subjects had practically no treatment from the friends of his early days. It contains, too, in a noteworthy way, his scorn of the 'melancholy, atheistical twilight,' wherein Nature is viewed as mere eternal and unaided movement of matter.

On the development of Faust we have already touched, but it remains to remark that *Faust*, as a work, is unique and incommensurable. It may be said to be philosophic for the way in which it embodies criticisms of life. The power and prestige of Goethe as a critic of life are extraordinarily great. In Germany itself *Faust* has been styled a world-epic, or *Welt-epos*, because of its vast range and wondrous universality. Great, however, as it is, it is scarcely to be taken as the most characteristic product of Goethe's genius, so marked by factual tendency and breadth, as of an inductive philosopher. But even in this work, knowledge of a true sort is to come, in its author's view, through direct, living, and wondering contemplation of Nature—looking 'into her breast as into the bosom of a friend'—and not through dry thinking or analysis. To know life in its concrete variety, pressure, and fullness is to be able to appreciate *Faust*. Here Goethe's religion is 'the religion of the deed,' which, in his pagan moods, he elsewhere describes as a kind of religion of healthy-mindedness, if that may be so termed which consists in sheer absorption in the world and its joys. But his religious attachments are characteristically vague. In an advanced part of *Faust* we find the 'religion of the deed' reappear, when it is announced that we have power to redeem 'him who labours ceaselessly striving.' It is to be noted that in *Faust* the problem of evil was what engrossed Goethe—whether to be regarded as an essential element of the universe or as a merely negative thing, a transient appearance to be overpassed. The attitude of Faust is that two souls dwell within his breast, the one fain to separate itself from the other. Should evil be destined to be overcome, Goethe would take Faust to represent the triumphant process. This is where the ethical worth of *Faust* is to be found, in its manner of typifying or embodying the modern spirit or tendency: in Faust is set forth the essential man—bold in aspiration, all-consuming in desire, hopeless in fallen condition, and exultant in ultimate salvation—so as to foreshadow the destiny of the human race. He expressly aspires to take up into himself what is portioned among the whole of humanity. The whole drama has profound symbolic significance. In its course the claims of the individual and the social spirit will mayhap be harmonized in an ideal of practical culture. Its basal thought is that evil is not a positive power, but merely some-

thing negative—an interpretation of moral evil, it must be said, of too optimistic a character, and one which is not quite clearly and satisfactorily wrought out, so far as the *Läuterung* (the purification or rectification) of Faust's character and development is concerned. The progress is wanting in inwardness of character. It is in the Second Part of *Faust* —often partially misconceived and greatly undervalued—that we see the triumph of humanity in Faust, mounting the heavens after his soaring ideal. The Second Part lacks, of course, the passion of the First; its erudite air is more felt; its philosophic intent and prolonged manipulation are more evident; its thought is less sapid and spontaneous; but, in spite of these and other defects, it has abundant genius, and does not fail to prove itself the completion of the First, as the present writer has elsewhere shown ('The Philosophy of Faust,' in *Essays Literary and Philosophical*). Goethe has contrived to introduce geology, optics, and chemistry into *Faust*; but such didactic attempts to combine science with poetry must always remain hazardous, if only because science cares nothing for the individual, while individuality is of the essence of art. *Faust* has, at any rate, given the world a supreme, unforgettable lesson as to progressive development being the essential mode whereby such conditioned beings as we are may hope to reach the ideal—the perfection of love.

The famous *Zueignung*, or dedication, now used as Introduction to Goethe's poems, is of unsurpassed loveliness in German literature, impressing one, it has been said, as a lofty vestibule, with the awe-inspiring grandeur of the temple to be entered. Its lovely message leads up to the self-revealing of the Divine form of poetic Truth, who gives him a veil, and tells him how to use it.

Goethe's 'Italian Journey' (*Italiänische Reise*) was worked up thirty years after the journey itself, from journals and letters belonging to that time. The book presents, in a most vivid form, the features of delight and charm that mark Italian travel; but it is even more interesting for its psychic experiences and revelations. On 6th September 1787 we find Goethe writing from Rome:

'So much is certain: the old artists had as great a knowledge of Nature, and as certain a notion (*Begriff*) of what can be represented, as Homer had.' And, further: 'These high works of Art have been, at the same time, supreme works of Nature, produced by men according to true and natural laws; all that is arbitrary or imaginary falls away; here is necessity, here is God' (*Ital. Reise*, ed. Düntzer, Berlin, 1877, p. 396).

The way to perfect Art, in form and content, seems to have lain for Goethe through looking into the deeps of Nature and Man. He held that in Art and Poesy personality is everything, and that the artist, to create something fit and capable, must be himself fit and capable. The comprehensive character of Goethe's interests and powers of observation needs no mention, but his strange limitations are not always clearly known and understood. His intense dislike of Byzantine and Gothic architecture; his huge indifference to the early art of Italy; his lack of interest in Mediæval and Christian Rome; his supreme neglect of historical associations, as outside the realm of *Anschauung*, or intuition—all, in diverse ways, mark limitations due to a sense of form which kept from him the power of appreciation. Greek sculpture, Renaissance painting, architectural Rome—these were things that caught up, in significant fashion, his sense of artistic form. The Classicism to be found in Goethe was, it seems warrantable to say, more the result of this Italian journey and his study of antique Art than of direct contact with the ancient Classical Literatures. It is not meant, in saying this, that his Hellenism had in it anything of the nature of a literary pose. The chief result of his Italian sojourning on Goethe's work was the plastic quality imparted to it. When he says that Art and Nature are only one, that is because Art is for him the highest manifestation of the working of Nature. Goethe's world is the world of the eye. His evolutionary instincts led him to view the single specimen in its relation to the organic whole. We find him writing to Herder from Naples on 17th May 1787, that the *Urpflanze* —or grand type of all plants—is the most marvellous thing in the world, 'which Nature herself might envy me' (*Ital. Reise*, 308).

The 'West-Eastern Divan' (*West-östlicher Divan*) is concerned with the life of the East, and is not now to be dwelt upon; it must suffice to say that the work was largely a fruit of his study of the Persian poets, and is rich in its own varied metres, and wise, beautiful poems. It proved a well of inspiration to Rückert, Platen, and other poets.

3. **Influence.**—We cannot now pursue the study of Goethe's works further, but must be content to appraise his genius, work, and character in more general and comprehensive terms. The vitality of his ideas is very striking; the range of his activities was certainly extraordinary. Activity was to him life. The great principle of activity was woven into his philosophical conception of the universe. For he raised himself to contemplate the whole range and scope of man's existence, and pierced by his insight to the central core of reality. Thus he came to fashion the *Weltanschauung* which was his own (see the present writer's 'Goethe as Philosopher,' in *Literary Essays*). Sane and discerning as a literary critic, pre-eminent in genius and gifts as romancer, dramatist, and lyrical poet, Goethe yet did not escape originality in science, and in the criticism of Art. Emerson quaintly said of him that 'the old Eternal Genius who built the world has confided himself more to this man than to any other' (*Works*, vol. i., London, 1899, 'Goethe, or The Writer'). It seems to be just in the totality of his achievement that Goethe's power and fascination lie; his career embodied a deeper synthesis of life—more of his own ideal of life in the Whole, the Good, and the Beautiful—than men had before seen; and all this, in spite of those limitations, shortcomings, mistakes, futilities, and pessimisms, which are, even in his case, not at all to be denied. Striking as is the influence of Goethe on the whole German nation, he exerts an influence hardly less strong on the cultivated classes of Britain and America. Still, his aims were too intellectualized; and his striving was really too restless. He thinks restless activity proves the man—*nur rastlos bethätigt sich der Mann*. One might almost apply to him what Marmontel said of Voltaire, that repose was unknown to him. Not even the calming power of Spinozism greatly helped him here. His will was not sufficiently invigorated by moral affections. He also lacked spiritualized unity of conception. But, in the sphere of intellect, he towers sublime, with amazing vigour and persistency in his intellectual performances. His ideal is *reine Menschlichkeit*, or humanity purified of every hampering element. In his latest years, at any rate, he cherished a belief in immortality; and it seems in some ways rather a fine thing that he declared the weightiest ground for that belief to be the fact that we cannot do without it.

JAMES LINDSAY.

GOKARN (Skr. *gokarṇa*, 'cow's ear').—A famous place of pilgrimage on the W. coast of India, in the N. Kanara District of the Bombay Presidency; lat. 14° 32′ N., long. 74° 19′ E. The name is based on a legend that Brahmā produced four sages to carry on the work of creation, which they refused to undertake. He then formed Śiva from his forehead. Śiva hesitated to create the universe until he could devise measures to render it imperishable. So he dived into the ocean and remained for many ages in meditation. Brahmā, weary of the delay, moulded the earth and filled it with life. When Śiva heard of this creation, he was wroth, and, rising through the water, struck the land. He attempted to force his way through it with his trident, when the earth-goddess, taking the form of a cow, begged the angry god, instead of destroying her, to rise to the surface through her ear. Śiva accordingly passed through her ear, and rose on the Gokarn beach, where a cave, known as the *Rudrayoni*, or 'Rudra's passage,' marks the spot. A story of the same type tells how the hero Paraśurāma, 'Rāma with the axe,' by severe penances and propitiation of Varuṇa the sea-god and Bhūmī Devī the earth-goddess, was allowed to claim as his own as much land as could be covered by his axe when flung from Gokarn, which was then the Land's End, into the southern ocean. Thus was created the land of Kerala, reaching from Gokarn to Cape Comorin, which now stands at the S. of the Peninsula. These legends seem to embody a tradition of land elevation in pre-historic times, which is confirmed by modern geological researches (*Manual of Travancore*, 1906, i. 212 ff.).

The chief temple at Gokarn is that dedicated to Śiva under the title of Mahābaleśvara, 'the very powerful Lord,' built of granite in the Dravidian style. It contains the famous *liṅga* known as Ātma, or 'self,' which, in his wrath at the creation of the world by Brahmā, Śiva created out of his own essence, and long wore round his neck. There are also numerous shrines named after various gods and saints who visited the place and performed austerities here, including Brahmā, Viṣṇu, Śiva, the *ṛṣi* Agastya, Rāma, and Rāvaṇa. The place is visited by hosts of pilgrims and religious mendicants, as well as by those who bring the bones and ashes of deceased relatives, which they consign to the waters, believing that this ensures for them eternal felicity. Bathing here cleanses from all sin, even that of murdering a Brāhman. The mention of the place by Kālidāsa carries back its sanctity to the beginning of the 7th cent. A.D. (*IGI* ii. [1908] 17). It is also mentioned in the *Mahābhārata* and *Rāmāyaṇa* (J. Muir, *Original Sanskrit Texts*[2], 1873, iv. 285; R. T. H. Griffith, *The Rámáyan of Válmíki*, 1895, p. 54), the sacred books declaring that he who spends three nights here and worships Śiva gains as much merit as if he performed the horse-sacrifice; while he who remains twelve nights becomes pure in heart. Dr. John Fryer, one of the early travellers to India, visited Gokarn in 1675, and has left an interesting account of the place.

LITERATURE.—*BG*, vol. xv. pt. i. p. 288 ff.; J. Fryer, *A New Account of E. India and Persia*, London, 1698, p. 158 ff., ed. 1912 (Hakluyt Society), ii. 30 ff.

W. CROOKE.

GOKUL (Skr. *gokula*, 'a herd of kine,' 'a cow-house').—A sacred town and place of pilgrimage situated on the left bank of the river Jumnā, in the Muttra (Mathura) District of the United Provinces of Agra and Oudh; lat. 27° 26′ N., long. 77° 46′ E.; sacred as the scene of many legends connected with Kṛṣṇa. It is in reality only the waterside suburb of Mahāban (*q.v.*); and all the traditional sites of Kṛṣṇa's adventures which the *Purāṇas* fix at Gokul are also shown at Mahāban, which is the place alluded to whenever Gokul is mentioned in Skr. literature. But, as it retains its ancient name, this suburb is considered much more sacred than the original town. It is specially important as the headquarters of the Vallabhāchārya or Gokulastha Gosāins,

'the Epicureans of the East, who are not ashamed to avow their belief that the ideal life consists rather in social enjoyment than in solitude and mortification. Such a creed is naturally destructive of all self-restraint, even in matters where indulgence is by common consent held criminal; and the profligacy to which it has given rise is so notorious that the late Mahārājā of Jaypur was moved to expel from his capital the ancient image of Gokul Chandrama, for which the sect entertained a special veneration. He further conceived such a prejudice against Vaiṣṇavas in general, that all his subjects were compelled, before they appeared in his presence, to mark their forehead with the three horizontal lines that indicate a votary of Śiva. The scandalous practices of the Gosāins and the unnatural subserviency of the people in ministering to their gratification received a crushing *exposé* in a *cause célèbre* for libel tried before the Supreme Court of Bombay in 1861' (Growse, p. 284).

LITERATURE.—F. S. Growse, *Mathura, a District Memoir*[3], Allahabad, 1883, p. 282 ff.; *JASB* xli. 313 ff.; A. Führer, *Monumental Antiquities and Inscriptions of the North-west Provinces and Oudh*, do. 1891, p. 101. For the practices of the Vallabhāchārya Gosāins, see [Karsandās Mūlji] *Hist. of the Sect of the Mahárájas or Vallabhácháryas in W. India*, London, 1865, *Report of the Maharaj Libel Case, and of the Bhattia Conspiracy Case connected with it*, Bombay, 1862.

GOLDEN AGE.—See AGES OF THE WORLD, FALL (Ethnic).

GOLDEN RULE.—The Golden Rule, as it is often called, is found in two different connexions, and in slightly differing forms, in Mt 7[12] and Lk 6[31]. In Mt. it occurs in the Sermon on the Mount in the form:

'All things therefore whatsoever ye would that men should do unto you, even so do ye also unto them: for this is the law and the prophets.'

In Lk. the saying runs:

'And as ye would that men should do unto you, do ye also to them likewise.'

While in Lk. the maxim is found in immediate connexion with other sayings bearing on conduct towards our neighbours, in Mt. this is not equally the case; it follows on directions relating to instancy in prayer and on the promise that God will give good things to those that ask Him. It has, therefore, been argued that, while the saying formed part of the original *Logia* on which, in this portion of his Gospel, the Evangelist is drawing, St. Matthew must have wrongly inserted it in this particular connexion; and that it would more appropriately find a place among the precepts relating to our conduct to our neighbour in 5[30-40], or should follow on vv.[1, 2] and v.[6] of the 7th chapter. In the latter case it would seem, however, that the intermediate verses and not the saying itself have been wrongly inserted. The argument that the saying has got into a wrong place in Mt. is not very convincing; the connexion between it and the immediately preceding verses is not really very forced or unnatural. The train of thought would seem to be that, as God gives good gifts to those who ask Him, so we as Christians ought to render to others the sort of service, the good things, which we should wish them to render to us. That this is the connexion of thought which the earlier translators recognized in the passage is made probable by the fact that most of the early Latin versions, though not the Vulgate itself, render: 'Whatever *good* things, therefore, you wish that others should do unto you, even such do unto them; for this is the law and the prophets.'

We may observe that both St. Matthew and St.

Luke, though they differ as to the precise context in which the words occur, equally regard them as a summary of the principles by which the conduct of Christians in respect to their neighbours is to be governed. And this is the position which the maxim holds in the earliest quotations of it which are to be found in Christian literature outside the Gospels. The earliest of them occurs in the well-known passage in the Western (Cod. D) recension of the decree of the Council of Jerusalem, in Ac $15^{28f.}$. It runs as follows:

'It has seemed good to the Holy Spirit and to us to lay upon you no greater burden than these necessary things: to abstain from meats offered to idols, and from blood, and from fornication, *and whatsoever ye do not wish should be done unto you not to do* (*or do not do*) *to others*—from which if ye keep yourselves ye shall do well, being borne along in the Holy Spirit—Fare ye well.'

Now, there has arisen a considerable controversy between Blass and Harnack whether the Western or the text of other great uncial MSS represents the earlier form of text in the Acts, and the controversy has especially ranged itself about this particular passage. Blass holds that Cod. D, originally composed probably at Rome, represents the first rough draft of the Acts put forth by St. Luke; while the ordinary text gives us the more polished and elaborated recension which he ultimately dedicated to Theophilus. Harnack, on the other hand, maintains that the text preserved in the non-Western MSS embodies St. Luke's original recension, and that Cod. D represents a later and comparatively ignorant recension, dating probably from early in the 2nd century. This, on the whole, is the view taken also by W. M. Ramsay. The question, however answered, is not, for our present purpose, of first-rate importance; for those who regard the insertion of the Golden Rule in this passage as the work of a later editor still assign to that editor a very early date—not later than the opening years of the 2nd cent.—so that in any case the appearance of the saying in this connexion is a proof of the wide acceptance which the Rule, in this negative form at least, obtained in the early Church. And that, in spite of its absence from the received text, it continued to hold a place in this passage of the Acts down to a comparatively late date, we have interesting evidence from the 'Dooms of King Alfred.' One of them, quoting this passage, runs as follows:

'It seemed good to the Holy Ghost, and to us, that we should set no burden upon you above that which it was needful for you to bear, now, that is, that you forbear from worshipping idols, and from tasting blood, or things strangled, and from fornication, *and that which ye will that other men should not do unto you, do ye not that to other men.*'

On this last precept the king observes:

'From this one doom a man may remember that he judge every man righteously; he need heed no other doom book. Let him remember that he adjudge to no man that which he would not that he adjudge to him, if he sought judgment against him.'

Thus emphatically, but reverently, does the king enforce our Lord's own comment on the principle 'This is the Law and the Prophets' (see *ExpT* x. [1899] 395 ff., on Ac $15^{28f.}$; and, for the reference to King Alfred's 'Dooms,' Estlin Carpenter and G. Harford's *Composition of the Hexateuch*, ed. 1902, p. 10).

We observe, further, that in this earliest quotation the form in which the saying is presented is not the positive form in which it appears in both Mt. and Lk., but the negative form, *i.e.* as a prohibition, and not as a command: 'Do *not* do to others that which you would not they should do to you.' We note that the same characteristic is observable also in the two earliest quotations in which the phrase is to be found in post-Biblical Christian writings. The first of them is at the opening of 'The Way of Life' as presented in the *Didache*:

'First of all, thou shalt love the Lord thy God who made thee. Secondly, thou shalt love thy neighbour as thyself. *All things, then, whatsoever thou wouldest not wish to be done to thee, do thou also not do to another.*'

The second reference occurs in the recently recovered *Apology of Aristides*. Towards the close (ch. 15), in giving a summary of Christian belief and practice, Aristides uses the following words:

'They [*i.e.* the Christians] do not commit adultery, do not commit fornication, do not bear false witness, do not covet their neighbour's goods, honour their father and their mother, love their neighbours, judge justly, *whatever they do not wish to be done to them they do not do to another*; they exhort those who injure them and make them friendly to themselves.'

Harnack considers that both these passages may very likely be taken from an early Christian catechism in wide use in different Churches; but, whether they are so or not, the appearance of the Golden Rule in two distinct summaries of Christian practice testifies to the importance attached to it in the early Church.

But the precept, at least in its negative form, is by no means confined to Christianity; it is to be found in the earlier Judaism, and on the lips of philosophers outside both Judaism and Christianity. For the first we may refer to To $4^{14t.}$, which runs: 'Take heed to thyself, my child, in all thy works, and be discreet in all thy behaviour; *and what thou thyself hatest, do to no man.*' Hillel, the famous Jewish Rabbi, when asked for a short summary of the Law in relation to a man's neighbour, is reported to have given it in this form: '*Whatsoever thou wouldest that men should not do to thee, do not do that to them*' (cf. Bab. *Shabb.* 31*a*). For other parallels, see C. Taylor, *Sayings of the Jewish Fathers*[2], Cambridge, 1897, p. 142 f., and cf. Hirsch, 'Golden Rule,' in *JE* vi. (1904) 21 f.

Among the Greeks, Isocrates is mentioned as enunciating the maxim, '*Do not do to others that at which you would be angry if you suffered it from others*' (*Nicocles*, 61*b*). Plato, in more than one passage in the *Republic* (*e.g.* iv. 443), lays down a rule of a similar purport. Aristotle, when questioned how we should behave to our friends, is quoted by Diog. Laert. (v. 21) as saying: '*Exactly as we would they should behave to us*' (cf. *Nic. Eth.* ix. 8). See also Epictetus, fr. 42.

In the wider world outside we find two further enunciations of the precept—one in a precise, the other in a less definite, form. Confucius, drawing, as he said, the maxim from the study of man's mental constitution, laid it down in the following terms: '*What you do not like if done to yourself, do not do to others*' (cf. J. Legge, *Chinese Classics*, Hongkong, 1861–72, i. 191 f.). This is the Golden Rule in its negative form, but he expressed it also in the positive shape of 'reciprocity' or 'as heart to heart.' This was embodied by him in a characteristic Chinese symbol, and is given in places as the ultimate rule of life (*EBr*[11], art. 'Confucius,' p. 912). Something like the same thought appears in the writings of his older contemporary Buddha; but here no precise words give expression to the apothegm; his principle more nearly approaches to the maxim of St. Paul, 'Rejoice with them that rejoice; weep with them that weep' (Ro 12^{15}); and a certain self-centredness in his system, which makes the doing of kindnesses to others valuable mainly on account of the merit thus earned for a man's self, makes it clear that such a principle as our Lord enjoins was not altogether cognate to his thought (Copleston, *Buddhism Primitive and Present*, London, 1902; but cf. A. J. Edmunds, *Buddhist and Christian Gospels*[4], Philad. 1908, § 12).

It would appear, then, that as a negative or limiting principle, a principle of justice, the maxim obtained a wide acceptance among the best and most enlightened intellects of the ancient world; but it was for them a restraining principle, a guide of what they ought not to do rather than of what

they ought. With our Lord, however, it has a wider sweep than this: with Him it is a rule of universal application, a rule of benevolence embracing all our relations to our fellow-men: 'All things therefore whatsoever ye would that men should do unto you, even so do ye also unto them: for this is the law and the prophets.' As such it has been accepted, and acted upon, by Christians ever since. But, as thus interpreted, it is obvious that the principle needs explanation and some limitation. Almost from the outset this seems to have been felt. We have already noticed that in some of the early Latin versions the words 'good things' were inserted after the word 'whatsoever.' This implies clearly that those who made the insertion recognized that it was not everything that we might be said, or thought, or fancy ourselves to wish for ourselves that we are bound to do for others. We might wish for ourselves, for instance, some form of illicit or undesirable pleasure; and we certainly are not bound to provide for others such pleasures or to assist them in obtaining them for themselves. Common sense clearly suggests such a limitation as this. Augustine, in his Commentary on St. Matthew, gets over the difficulty in another way. He draws a distinction between 'desire' and 'wish,' and will not admit that a man, however much he may desire, can really *will* or *wish* for himself that which is not good. This explanation precludes the possibility of our ever doing anything which is not good to others, since we cannot *wish* anything which is not good for ourselves.

Secondly, the maxim does not imply that we should always do to others exactly that which we should wish under our own present circumstances (which may be quite different from theirs) to be done to us. What the maxim implies is that we are, as far as possible, to put ourselves in the place of others; to consider what we would wish to be done to us, *were we in their circumstances*; to adopt the rôle, as Adam Smith puts it, of impartial spectators; and then, having made up our minds what in the circumstances, as so viewed, we should wish to be done to us, to act accordingly.

LITERATURE.—In addition to the authorities cited in the art., see J. G. Tasker, art. 'Golden Rule,' in Hastings' *DCG*.

W. A. SPOONER.

GONDS.—1. Origin, names, and physical characteristics.—The Gonds are an important forest-tribe found in the central parts of the Indian peninsula, at the census of 1901 numbering 2,286,913, of whom the great majority, 1,926,556, are found in the Central Provinces, and smaller numbers in Bengal, Berar, Haidarābād, and Madras.

The origin of the name is disputed. They call themselves *Kōītōr* or *Kōītūr*, a plural appellative regularly formed from *Koi*; in Chhatisgarh they call themselves *Kōyā*, and high-class members of the tribe object to being called *Gonḍ*, as this name implies that they are cow-killers and beef-eaters (Brett, *Gazetteer Chhatisgarh*, 47; Oppert, *Original Inhabitants*, 109, 145; *IA* viii. 34; Caldwell, *Dravid. Gram.*[2], 38). Hislop, the best authority on the tribe, derives the name Gonḍ from Telugu *koṇḍa*, 'a mountain,' in the sense that they are a hill-tribe (*Papers*, 2; Oppert, 13), which is more probable than the theory of Cunningham, that the name is a corruption of Gauḍa, the ancient term to designate Central Bengal.

Though the Gonds, probably under Hindu influence, trace a legendary connexion with N. India, which they exhibit by burying their dead with the feet of the corpse towards the Himālaya, the supposed original home of their race, their physical appearance and speech connect them with the so-called Dravidian races of S. India. They include at the present time a group of tribes with a general physical uniformity, but differing according as they have been more or less exposed to Hindu or to other foreign influences.

Capt. J. Forsyth, who was well acquainted with them, writes: 'Most of the chiefs possess the tall, well-proportioned figure and light complexion of the Hindu, but allied with more or less of the thickness of lip and animal type of countenance of the pure aborigine. The mass of the tribes, on the other hand, are marked by the black skin, short squat figure, and features of the negretto (*sic*) race of humanity. Between them are found certain sections of the tribes, who would also seem to have been imbued with something of the foreign blood, though in a less degree than the chiefs. Like the latter, they affect much Hindu manners and customs; and it is probable that they, too, are the result of some connection in long past times between immigrant Aryans and the indigenous tribes' (*Highlands of Central India*, 9, 156). Some of the women are 'more like monkeys than human beings'; others 'finer animals by far than the men, and here Hindu blood may be fairly suspected.' Hislop (p. 1) says: 'They have a roundish head, distended nostrils, wide mouth, thickish lips, straight black hair, and scanty beard and moustache; a few have curly hair, but not of the Negro type.'

The same conclusion is reached from a study of their language.

There are some Gonḍs who speak their own Dravidian language, others a broken Aryan dialect—both known as Gonḍi. The Dravidian form of speech has a common ancestor with Tamil and Kanarese, but shows little connexion with Telugu, appearing in various dialects, such as Māṛi or Maṛiā, and Paṛji, both spoken in the Bastar State; and Gaṭṭu or Goṭṭe, the dialect of the Hill Kōis. The true Gonḍ speech is known in Chanda and the Nizām's Dominions as Nāiki, and in Berar as Kōlāmi and Ladhādhi, the latter closely connected and differing from other dialects. Gonḍi has no literature, except translations of the Gospels and the Book of Genesis (G. A. Grierson, *Census of India*, 1901, i. 279, 287 f.; cf. Caldwell, 513 ff.).

2. The tribal legends.—The legends of the tribe have been considerably modified by Hindu influence; but some are original.

They believe that the sky once lay close upon the earth; an old woman, while sweeping, knocked her head against the sky and pushed it away; since then it has remained separate from the earth (Russell, *Census Rep. Central Provinces*, 1901, i. 94; cf. Tylor, *FC*[4], 1903, i. 322 ff.; Lang, *Myth, Rit., and Rel.*, Lond. 1899, i. 291). Eclipses are accounted for by a myth of the earth being turned upside down, and nobody being left alive save one Ḍom (*q.v.*); the gods, wishing to re-people the earth, borrowed seed-grain from the Ḍom; this was never repaid, and eclipses are caused when he, now king of the Doms in the other world, demands it from the sun and moon—a story which seems to be the basis of the myth of Rāhu in the *Purāṇas* (Russell, i. 94; cf. Crooke, *PR*[2], 1896, i. 20 f.). A more elaborate story is that of Lingo, a name by some connected with the *liṅga*, or phallic emblem. It tells, in order, of the creation of the world and of the Gonḍs; how they were driven into a cave by Śiva-Mahādeva; of the birth, death, and life of Lingo, the tribal hero; of his revival and how he delivered the Gonḍs; and how he instituted marriage rites among them. Forsyth (p. 188 ff.), who versified the version recorded by Hislop (pt. iii. 1 ff.), justly regards it as largely due to Hindu inspiration.

3. History of the tribe.—The early history of the Gonds, except so far as it can be gathered from the tribal legends, is a blank.

They have been identified with the Kandaloi of Ptolemy (VII. i. 66; J. W. McCrindle, *Ancient India as described by Ptolemy*, Calcutta, 1885, p. 159 f.), and the Phyllitæ, with whom they are connected, are supposed to be either Bhīls (*q.v.*), or Pulindas—a term applied to various aboriginal races (but see Oppert, 82 n.). The Gonḍs are remarkable as being the only Indian forest-tribe which has established flourishing monarchies. Of these, four dynasties ruled the greater part of the present Central Provinces from about the 14th down to the 18th cent. of the Christian era (A. E. Nelson, *Gazetteer Jubbulpore*, 47 ff.; C. Grant, *Gazetteer Central Provinces*, 1901, p. 231 ff.). These kingdoms gained power on the destruction of Hindu authority in N. India by the Muhammadans, and on the disruption of the independent Muhammadan powers of S. India by the Mughal Empire. They attained a fairly high type of civilization, as is shown by the great irrigation works constructed by them. They finally fell before the Marāṭhās (Grant, *op. cit.*, Introd. lxxiii ff.).

4. Social position.—It is remarkable that the Gonds, who are now a subject race, have never fallen into a state of degradation, like the menial castes in other parts of the country.

The explanation is that they were protected by the inaccessibility of their country from conquest such as overtook the other aboriginal races; they long held the place of rulers, and were not ousted from possession of their lands by the new race, which appeared as colonists rather than conquerors (Russell, i. 179 f.; Grant, Introd. cxii, cxxvi). At present several of the feudatory States in the Central Provinces are ruled by Gonḍ chiefs, who belong to the aristocratic branch of the tribe, and call themselves Rāj, or 'royal,' Gonds. These are gradually asserting their claims to be regarded as Rājputs; and one great Rājput sept, the Chandel, is believed to be of Gonḍ origin (Sleeman, *Rambles and Recollections*, London, 1893, i. 231; Smith, *Early Hist. of India*[2], Oxford, 1908, pp. 360 f., 379 f.). In the plains the lower class, known as Nāik, Dhur, or Dhurvē Gonḍs, are in a state of serfage, making their living by labour. Between these two groups come the really wild Gonḍs, of whom the most primitive are the Maṛiyā, or 'tree,' Gonds, who serve no master, and who subsist by hunting or by a rude system of burning the

jungle and sowing seed in the ashes—a process known as *dahya*—and collecting various kinds of jungle produce. All the authorities believe that these are a peaceable, truthful, law-abiding people when they have not been corrupted by contact with the Hindus of the plains. Under British rule over-indulgence in intoxicating liquors, one of their chief vices, has been greatly checked (Forsyth, 159 ff.; Grant, 34 ff., 137 f.; Hislop, 7).

5. Domestic rites.—The rites of birth, marriage, and death are of the normal Dravidian type (see artt. CENTRAL PROVINCES, vol. iii. p. 311 ff., DRAVIDIANS [North], vol. v. p. 1 ff.).

6. Religion.—'In religion,' says Forsyth (p. 148), 'the Gond tribes have passed through all the earlier stages of belief, and are now entering on that of idolatry pure and simple.' Every prominent mountain has a spirit, which must be satisfied before its slopes can be cleared. When a field is sown, the field-god, Kodopen, said to represent the god of the *kodo* millet (*Paspalum scrobiculatum*), but more probably a hill-god, is propitiated. The tiger-god has a hut built for him in the jungle so that he may not approach their dwellings. Their worship is chiefly devoted to the propitiation of the malignant Mother-goddess, known as Mātā Devī, the goddess of smallpox, or Marī, who presides over cholera. In her more awful form she is known as Danteśvarī, 'the goddess with teeth,' at whose shrine in the Bastar State human sacrifices are said to have been performed in early days (Grant, 181, 327; Brett, 39). Her consort is Budhā or Būṛhāpen, sometimes known as Ṭhākur, 'lord,' who is worshipped as a house-deity. In Seoni he lives in a *sāj* tree (*Terminalia tomentosa*), which is held sacred (Russell, *Seoni Gazetteer*, 58). He has now come to be identified with the Hindu Śiva, and his spouse with Kālī. Animism is represented by the cult of objects supposed to be the abode of spirits. Pharsapen is represented by an iron spear-head (Skr. *paraśu*). The trident said to have been received by the ancestors of the Bastar family from the goddess Bhuvaneśvarī at Maṭhurā, and the sword given by Māṇikyā Devī or Danteśvarī, their family-goddess, are still worshipped—a record of the impression made upon a tribe in the Stone Age by the introduction of iron (Brett, 36 f.). Pharsapen is supported by Ghāghrāpen, the bell-god, the bell being sacred, as among the Todas (Rivers, *The Todas*, London, 1906, p. 424; cf. *PR*[2] i. 168); and by the chain-god, Śānkarpen, represented by a few links of a chain supposed to be endowed with powers of motion, but really the *gurdā*, or magical chain of the allied tribes, with which hysterical patients are beaten to drive evil spirits from them (Grant, 275; *PR*[2] i. 99, 155). A favourite household-god is Dūlhādeo, the spirit of a bridegroom who died in a tragical way at his wedding (Sleeman, i. 123 f.; *PR*[2] i. 119 ff.). Tree-worship is found in that of the bamboo and *sāj* tree (Hislop, iii. 47). The spirits of the dead are propitiated, at least for a year after death; those of distinguished persons are worshipped for some years or generations at earthen shrines, on which sacrifices are yearly offered—a cult which, among the more advanced branches of the tribe, takes the Hindu form (Hislop, 17, 20; Kitts, *Census Rep. Berar*, 1881, p. 79). In Sambalpur the ancestors are represented by small pebbles kept in the holiest part of the house, the kitchen, and periodically worshipped (L. S. S. O'Malley, *Sambalpur Gazetteer*, 75). Many of the exogamous septs are of totemic origin; but totemism seems to be a purely social institution (Russell, *Census Rep.*, 1901, i. 189 f.). Like all secluded races, the Gonds are reputed sorcerers, and witchcraft in a cruel form is sometimes found among the jungle groups (Grant, Introd. cxxx ff., 110, 156). Serpent-worship appears, but it is done in secret (*ib.* lxvi). At the beginning of the sowing season, the Gāitī branch set up a line of stones representing the gods, daub them with vermilion, and make offerings to them; at harvest Būṛhādeo is worshipped in the form of a small copper coin; and sacrifices, which in former days included that of a cow, are made to him (Hislop, 22). Among the allied tribes, like the Majhwārs and Kōyīs, the beliefs and usages are of a similar type (Crooke, *TC* iii. 413 ff.; Thurston, *Castes and Tribes*, iv. 37 ff.; Bilgrami-Willmott, *Sketch of the Nizam's Dominions*, i. 325 f.; Risley, *TC*, 1891, i. 292 f.; Dalton, *Descrip. Ethnol. of Bengal*, 275 ff.). For the *baigā* priests of the tribe, see *ERE* ii. 333.

W. CROOKE.

GONGS AND BELLS.—1. Scope of the present article.

—Among instruments of percussion the bell and the gong hold the first place, either one or other being found among most races of mankind. To define the difference between bell and gong is not easy. A bell is a hollow cup-shaped body made of cast metal, giving a sonorous vibration throughout its entire circumference when struck by a metal clapper usually hung inside. A gong, on the other hand, is usually made of hammered malleable metal, flat or approximately flat in form, and is struck by hand with a soft mallet. Many of the Chinese 'bells' are made without an internal clapper, and are struck on the outside edge with wood. Presumably they are gongs, although bell-shaped. The essential differences, then, are that a bell is struck by a metal clapper, while a gong has a hammer of material other than metal, and that the sound of a bell is usually obtained by the movement of the bell, while the gong remains stationary. The small crotal bells and bells made of riveted plates, which are used for religious purposes by some peoples, are included in this article.

Onomatopœia plays a large part in the title of bells. The Lat. *tintinnabulum* suggests the tinkling of the hand-bell. The bellow of the large mass suggests 'bell,' from Lat. *bellare*, O.E. *bellan*. 'Gong' is suggested by γογγύζειν, 'to murmur.' *Campana* is used in later writers for a large bell, and *nola* for the small hand-bell.

The object of the present article is to give by typical examples some idea of the significance of the religious use of bells.

2. Origin of bells and gongs.—As to the origin, there is considerable difficulty. Wide search among encyclopædias and books dealing with campanology meets with an almost unvarying intimation that 'the origin of bells is lost in antiquity; they probably came from the East.' Such a statement is unsatisfactory enough. Some bolder writers refer to the bells on Aaron's high-priestly clothing (Ex 28[33f.]) as the earliest mention. But these probably were not really bells but merely jingles—small carved pieces of metal which emitted sound by striking against the metal pomegranate, and not by a clapper. The two formed an ornamental design similar to the lotus and bud border

used in Egypt (*HDB*, art. 'Bell'). Then, too, there is evidence of the art of bell-making being practised in Japan during the 8th cent. B.C., at the time when large bronzes were cast for the temples of Buddha.[1]

Such evidence, however, does not help us to find out the origin of these instruments of percussion, and we are reduced to conjecture. Quite probably bells may date from the Iron Age. Fairies and witches were creatures belonging to the more ancient Stone Age which was passing away; and the new metal, iron, was considered hateful and harmful to them.[2] The metal itself was a powerful prophylactic, but the sound of metal had even greater virtue for restraining their evil influence. It would soon be found that by striking the edge of metal pots a more resonant note could be obtained than from an iron bar; and from this it is but a small advance to turn an iron basin upside down and fasten some sort of a clapper inside. Armed thus, man would feel himself fairly safe from the attacks of his spiritual foes. Such a possible explanation of the origin of bells and gongs has at least the merit of being simple and of complying with the stereotyped phrase, 'the origin of bells is lost in antiquity.'

3. **Early uses of bells.**—Probably the earliest use of bells was, as has been said, prophylactic. Man, who believed the air to be crowded with demons eager to destroy him, used the most efficacious safeguards that came to hand. Among all peoples we find the bell used for this purpose, and even in the Christian era this superstition has survived.

The gong of Dodona[3] mentioned by Aristotle (Suidas, *s.v.* χαλκεῖον Δωδωναῖον) seems to have consisted of two pillars supporting respectively a cauldron (λέβητα) and the figure of a boy (παῖδα) grasping a whip, whose bronze lashes, when swayed by the wind, struck the inside of the bronze cauldron and produced a resonant sound which was considered to have oracular intent. Theocritus (ii. 36) refers to bronze as employed in all kinds of purificatory ritual. Moreover, it was considered as itself pure, while the sound of it was an averter of pollution. From many Latin sources we know that bronze was beaten at eclipses to avert the evil. Bells were sometimes placed in tombs. A bas-relief in the Louvre (Fröhner, *Cat.* 545; S. Reinach, *Répertoire de la statuaire grecque et rom.*, Paris, 1897–98, i. 101) represents the sacrifice of a ram to Attis, from an old oak whereon are suspended two bells. On a coin representing Cybele enthroned with Attis at her side two bells are seen in the foreground. P. Gusman (*Pompéi*, Paris, 1899, p. 146) gives illustrations of many little bells found at Pompeii, and speaks of them as used 'comme moyen de protection.' The British Museum possesses a small bronze bell (Cat. 318, fig. 11) from the temple of the Kabiri at Thebes. The attendants of Dionysus are frequently represented as carrying tympana edged with a row of small bells. A small bell of gold found on the Esquiline has an inscription referring to the evil eye. Moreover, to avert evil influences, bells were attached to the heads of horses used in a procession of criminals led to execution.

Possibly the gongs or bells attached to the façade of the second temple of Jupiter Capitolinus have this prophylactic object. Triumphant generals hung bells on their horses' heads to avert the evil eye. This is found not only in Greece but also on sculptures in Assyria.[4]

[2] Tylor, *PC*[4] i. [1903] 140.
[3] A. B. Cook, *JHS* xxii. [1902] pt. 1, p. 5 ff.
[4] For further illustrations of such usage, see Smith's *Dict. of Gr. and Rom. Ant.*[3], London, 1890, *s.v.* 'Tintinnabulum.'

Among the Greeks a bell was used at funerals to keep off the crowd and warn the *flamen Dialis* lest he be polluted by sight or sound of funeral music. But there is evidence of usage other than as a prophylaxis. Bells were used for the opening of market or the baths, and by sentries on night duty. The priests of Proserpine at Athens rang bells when calling the people to worship. Small bells were similarly used in the mysteries of Bacchus. But for the most part the Greeks had wooden rattles, such as are now used by Muslims. The use of bells for summoning to worship arose in the Far East, and was not customary in countries bordering the Mediterranean till late Roman times.[1] In Egypt, Palestine, and Assyria, people were summoned to worship by the sound of the trumpet. The precise purpose of the bells attached to high-priestly robes seems debatable. Arabian princesses have bells on their garments to announce their movements and warn people to keep out of the way. No one was allowed to enter the Persian court without giving audible warning, and perhaps the bells on Aaron's robe were intended to announce his movements to Jahweh. An alternative suggestion is that the stillness of the Holy Place was full of peril to intruders. The air became charged, as it were, with the Divine influence, and this was dangerous to mortals. In order to dissipate this nocuous condition, the high priest's robe was decked with bells, which, by stirring the laden air, made it possible for man to enter the Holy Place. More obviously the jingles are explained as useful to let the people know how the high priest was progressing with his ministrations. The horse-bells in Zec 14[20] are inscribed 'Holy unto the Lord.' The object is not clear. It may have been intended to add efficiency to any magical powers the bells possessed, or else the bells may have been thought of as sending far and wide the message of holiness.

4. **Christian use of bells.**—At the dawn of the Christian era bells were used, but the Greek and Roman style of architecture did not readily lend itself to the use of large bells in buildings. During the first three centuries the use of bells for summoning the faithful to worship was impossible, owing to the certainty of persecution; but it is probable that soon after the Edict of Milan (A.D. 313) the Christian Church availed itself of this obvious means of calling to worship. The introduction of large bells is attributed to Paulinus, Bishop of Nola in Italy, about A.D. 400; but, as he omits any reference to bells in his letter giving a very full description of his church, the claim made for him seems to be doubtful. St. Jerome (*In Joel.* 2[16]. [*PL* xxv. 964 f.]) speaks of musical instruments used in religious worship under the generic name *tuba*; and, although his description is not clear, it appears that small peals of bells were used in conjunction with trumpets.[2] Certainly, however, by the 6th cent. bells were used in the Western Church. Gregory, Bishop of Tours (573), speaks of bells as *signa*. This takes us back to Sidonius Apollinaris. Rather later the *Gregorian Sacramentary* (590) contains a formula of benediction which came from Rheims. The campaniles give fairly strong evidence of the use of bells before the end of the 6th century. That of Ravenna dates from the 6th century.

Quite early in the Celtic Church bells were used by the bishops as part of their episcopal insignia. In the *Life* of St. Patrick the office of *campanarius* is mentioned, and in an illustration, given by de Fleury, in *La Messe*, St. Patrick is depicted as

[1] K. Sittl, *Archäologie der Kunst*, Munich, 1895, p. 246. A few small bells have been found at Gezer (*PEFSt*, 1904).
[2] Paul Lacroix, *The Arts in the Middle Ages and at the Renaissance*, Eng. tr., London, 1870.

handing a bell in a box to a bishop consecrated by him. The probable object of the bell was to command silence when the bishop was about to speak. In the museum of the Royal Academy of Ireland a Celtic bell is preserved which on fairly good evidence is attributed to St. Patrick. Small hand-bells were often engraved with the name of a saint, and in later years were venerated as relics.[1] Bede (*HE* iv. 23) mentions a bell rung after the death of Hilda at Whitby (680). Adamnan (*Vita S. Columbæ*) has references to a *clocca* which was used to call the brethren to prayer. Egbert, Archbishop of York (740), in his 'Excerptions' ordered his clergy to toll bells at the hours of service. We first hear of a peal of bells at Croyland Abbey in 960; but, as Ingulphus compares the tone of it with others, it seems clear that many other churches had more than a single bell for summoning to worship. Early in the reign of King Edgar (960) the new canons provided for bell-ringing as preliminary to prayer in church, and the clergy of the Church of England are still required to toll a bell daily before service.

Another use for bells is indicated in the Bayeux tapestry.[2] In the illustration of the funeral of Edward the Confessor the corpse is accompanied by two boys, each ringing a pair of hand-bells. This was a practice taken from paganism, but with altered intentions. The ringing of bells at funerals called the faithful to pray for the departed soul. Still, however, the supposed power of driving away evil spirits was commonly believed in, and the ringing of hand-bells at funerals was carried to such excess during the 14th cent. that the abuse called for the attention of the bishops. Not only were bells carried by the funeral officers, but the people used to open their doors and ring vigorously any bell they had while the cortège passed by. The 'lych' bell is still rung at Oxford before the body of any University official is carried to burial.

Distinct from this is the custom dating from the 7th cent. and enjoined by Canon 67: when 'any is passing out of this life, a bell shall be tolled, and the minister shall not then slack to do his last duty.' This is the 'passing bell.' During the ages of superstition men lost sight of this call to pray for the 'passing' soul, and thought of the bell as a means of scaring away the evil spirits lying in wait for the dying man's soul. After death the 'soul' bell was knelled in order that all might give thanks for the deceased's deliverance from this vale of misery. This custom was carried to such excess that Elizabeth forbade more than one short peal, lest it should be an annoyance to the living and injurious to the fabric and the bells themselves. In later times the varied uses of bells in funerals have been curtailed; the 'passing' bell has become merged in the 'soul' bell, and, being knelled some time after death, serves as an intimation of the age and sex of the departed.

Indisputably, during the Middle Ages bells were chiefly valued for their prophylactic powers in scaring the evil spirits from doing harm ghostly and bodily. Most wide-spread was the idea that bells could dispel storm and lightning. Originally the object was to call the people to church to pray for deliverance from the danger. Then the devil was thought of as hating the sound of bells, because they called the faithful to prayer; and, later, the original idea was lost sight of, and the mere ringing of bells was considered efficacious of itself. Largely owing to their popularity, bells escaped the destruction of things 'Romanish' at the Reformation. In order to increase their supposed efficacy, bells were 'christened' with elaborate ceremonial. Originally the bells were thought of as heathen, and were baptized to make them converts; but, later, the object was clearly to strengthen their powers over the spirits of the air. Charlemagne in 789 protested against this 'baptism,' but the rite found a place in most pontificals until the Reformation, and is still used on the Continent.

In pre-Reformation times it was rare to find fewer than two or three bells in one tower. Frequently a small bell was hung in a bell-cote over the chancel and rung at the Elevation of the Host. This 'sacring bell' gave intimation to sick folk of the consecration of the elements. Distinct from this was the *sanctus* bell, a small hand-bell tinkled within the church at the 'Ter Sanctus,' and necessary in large churches, where the musicians were at a distance from the high altar. In the Middle Ages bells were often embroidered on bed-curtains and other hangings, as well as on ecclesiastical vestments.[1] The fundamental idea was probably superstitious. For the many other religious and quasi-religious uses reference should be made to some of the excellent books mentioned in the Literature. The same underlying ideas seem to inspire the Continental use of bells, the real difference being the method of ringing large bells. Change-ringing is confined to Great Britain; abroad the carillon takes its place. It is a mechanical contrivance by means of which a number of elaborate tunes can be played by one performer on the bells by hammers which strike the edge of the bell. In England bells are chimed in this way and also rung. In ringing, the bell is made to swing round through a complete circle so that the clapper strikes twice in each revolution.

5. **Non-Christian uses.**—To the Far East we must look for the earliest use of bells, but there is little evidence before the 8th cent. B.C. At that time large bells and gongs are found to have a definite part in ceremonial. One dating 677 B.C. is inscribed: 'We will everlastingly prize this bell and use it in our ritual worship.'[2] This bell would be hung in the temple, its purpose being to call the shades to the funeral meats prepared for them.

In Buddhistic ceremonial, bells and gongs play a large part. The noise made during certain rites is quite deafening,[3] the object being to call the attention of the divinity to the prayers and ceremonies of the devotees. The pagoda style of architecture lends itself to the suspension of a number of bells which are made to tinkle by the wind. This is considered by many to be prophylactic, and to scare away the demons. The Buddhistic theogony is practically identical with the Brāhmanical, and a bell is invariably connected with every Buddha as part of the insignia. The opening up of Tibet has given us several books upon the Buddhistic ceremonial. In Lhasa the more saintly of the lamas wear a tinkling bell on the crown of their hats. Before their devotions the chief lamas cross themselves, touching their foreheads with a bell; and they hold a special service for one who is sick, in which tinkling bells are used.[4] Hand-bells are placed upon the very altar itself. The probable use in these cases is to attract the god's attention.

The supposed influence of the bell on the spirit world is further illustrated by the attempts to expel the death-demon by the aid of bells. In India we find these usages supplemented by others.

[4] L. A. Waddell, *Lhasa and its Mysteries*, London, 1905, and *The Buddhism of Tibet*, London, 1895.

According to the Brāhmans, two things are indispensable to the sacrificer—several lighted lamps and a bell to wake the divinity from sleep so that he may consume the offering, while the vagrant ghost is scared away by the same sound.[1] The *patāri* priest in Mirzapur and many classes of ascetics carry bells and rattles of iron which move as they walk, the object being to protect the wearer from evil spirits. The Gonds have elevated the bell into a deity, in the form of Ghāghrāpen, or 'bell-god'; and one special class of their devil-priests, the *maṛiā ojhyāls*, devote themselves to making bells; and they themselves wear them continually. The Todas of Madras worship Hiriya Deva, whose representative is the sacred buffalo-bell which hangs from the neck of the finest buffalo of the herd (Crooke, i. 168). The goddess Pārvatī, as Durgā (*q.v.*), has certain insignia which are invoked in this manner: 'Om to the bell (*ghaṇṭā*) striking terror by thy world-wide sound into our enemies. Drive out from us all our iniquities. Defend and bless us, O Lord.' In Burma great bells are found at most of the shrines. The worshipper takes a large deer antler and strikes first the ground and then the bell, to summon as witnesses beings under and above ground, and further to make them join in the act of worship.[2]

In West Africa some witch-doctors have a custom, when going their rounds, of ringing a bell before the house of the guilty. Bells are often hung over doorways, probably for prophylaxis.[3] Very few bells are found in the rest of Africa, except among the Masai and tribes of similar culture. They hang bells around the necks of animals, but there is no evidence to show that these were worshipped, or that the bells were used to scare evil spirits. Probably they are merely utilitarian.

In Egypt there is little evidence. The *sistrum* was invariably used in the worship of Isis. Possibly small crotal jingles were attached. In later times bells were used as charms, but with no real musical purpose, and they are very rarely found in Egyptian religion proper. The same may be said of bells among the Assyrians. They had no religious use and very little in magic. Clappers took the place of bells. Layard (*Monuments of Nineveh*, London, 1849–53) illustrates some horse-bells, possibly importations for magical purposes.

Bells and instruments of percussion are not found in New Zealand. In the Tonga and Fiji Islands a *lali* is used. It is a form of gong made out of a tree-trunk.[4] It is the favourite instrument at Tonga and is named in the same way that we give names to our bells. It is chiefly used to summon worshippers to their religious exercises. In many parts of the world babies are given rattles to which jingle bells are attached. The underlying object is probably prophylactic.

Although the religious value of bells varies considerably in different parts of the world, in Turkey alone is there found an aversion to their sound. The Muhammadans do not use them, because of their associations with Christianity, and the Pañjābī Muslims have a prejudice against gongs, as they are supposed to disturb the dead, who awake, thinking the Day of Judgment has arrived.

LITERATURE.—In addition to books mentioned in the footnotes, see H. T. Ellacombe's list of books in *NQ*, 5th ser., vol. iii. pp. 42, 82, 163. See also Hieronymus Magius, *de Tintinnabulis*, Hague, 1724; M. E. C. Walcott, *Parish Churches before the Reformation*, Lincoln, 1879; W. W. Rockhill, *Land of the Lamas*, London, 1891. Most modern encyclopædias contain information of little value. S. Madge, *Moulton Church and its Bells*, London, 1895, has a bibliography of 304 books. For Scottish bells, see D. Wilson, *Archæology and Prehistoric Annals of Scotland*, Edinburgh, 1851; for Irish bells, M. Stokes, *Early Christian Art in Ireland*, London, 1875; for bells of England, J. J. Raven, *Bells of England*, London, 1906; H. B. Walters, *Church Bells of England*, Oxford, 1913 (with an admirable bibliography; the latest and best book on the subject). For a good account of change-ringing and bell-manufacture, see art. 'Campanology' in *EBr*[10]. For a manual H. B. Walters, *The Arts of the Church: Church Bells*, London, 1908, is of value.

ADDISON J. WHEELER.

6. American bells.—(1) Bells of metal were in use in certain regions of America long before the Columbian discovery. They were natural developments from, or modifications of, previously existing rattles and like implements of clay, shell, gourds, and other materials. According to W. H. Holmes (*Bull. 3 BE* 22–24), metal bells were in common use in Middle America in pre-Columbian times, but they are rarely found north of the Rio Grande, either in possession of the tribes or on ancient sites; but bells were certainly known to the Pueblos and possibly to the mound-builders before the arrival of the Whites. The copper bells occasionally found in the south-eastern part of the United States may, some of them at least, have been introduced by way of trade (like certain varieties of tobacco-pipe and tomahawk) with the Indian tribes, since specimens of undoubtedly European origin have been discovered in mounds and other burial-places that are distinctly post-Columbian. Others of the metal bells from this region may, however, have been brought to the north by way of Florida, etc., from Central America and Mexico as incidents of inter-tribal commerce or the like. Metal bells are also known in large numbers from the remains of the civilizations of the Pacific coast of South America and from the area of so-called 'Calchaqui culture' in the Catamarcan country of Argentina, etc. Bells of other materials, such as clay, are, of course, more widely distributed among aboriginal peoples of a type less civilized than the Aztecs, Mayas, Peruvians, and others very close to them in matters of art and religion. Many wooden bells have also been found, *e.g.*, in the Atacaman region of Pacific South America (Boman, *Antiq.*).

(2) Some investigators were formerly of the opinion that the bells found in the New World were all imitations of European models, and that no such thing as a genuine pre-Columbian bell of aboriginal manufacture existed. But for the Pueblo region, as well as for Mexico, Central and South America, the existence of bells of Indian make long prior to the coming of the Whites has been demonstrated. The variety in the forms of the bells of primitive America, their presence as ornaments on statues, figures of the gods (Mayan MSS and monuments; Aztec deities, etc.), their utilization as decorative *motifs* (*e.g.* eyes in the golden figures of reptiles from ancient Chiriqui), the situation and circumstances of their discovery in ruins of great age in different parts of the continent—all these facts make the theory of European origins impossible, and it has now been abandoned by the best authorities. The existence of bells of wood, clay, copper, and gold testifies to the evolution of a bell in primitive America from the rattle. According to Holmes, the genealogy of the bell is first a nut-shell or gourd, then a clay model, and, finally, metal forms cast upon models, like those of the ancient Chiriquians. Doubtless some of the less civilized tribes imitated in clay or wood the metal bells of their neighbours of higher culture, which sometimes came to them in the way of trade, or in some other incidental fashion. The more or less civilized peoples, upon whom the Europeans intruded, may have also, at times, imitated bells of

[1] J. Lubbock, *The Origin of Civilisation*[6], London, 1902; T. H. Lewin, *Hill Tracts of Chittagong*, Calcutta, 1869; G. Oppert, *Original Inhabitants of India*, London, 1893; J. A. Dubois, *Descr. of the People of India*, London, 1817.

[3] M. H. Kingsley, *Travels in West Africa*, London, 1897, pp. 464, 450.

[4] *Annales de la Propagation de la Foi*, 1860.

Old World origin. There seems no doubt, however, that bells, used for several different purposes, were in existence in pre-historic times in various regions of North, Central, and South America.

(3) Both metal and clay bells seem pre-Columbian in several parts of the ancient Pueblo region of New Mexico and Arizona. The small copper hawk-bells obtained from ruins in southern Arizona are said by Fewkes to be 'identical in form and make with those used by the ancient Nahualt [Aztec] people' (*17 RBEW*, pt. 2, p. 629). A clay bell found in the oldest part of the old pueblo of Awatobi, and in all probability pre-historic, is regarded by Fewkes as 'made in exact imitation of one of the copper bells that have been reported from several southern ruins' (*op. cit.* p. 629). In this case the Pueblo clay bell would be modelled upon the copper bell, and not *vice versa*. In Awatobi was also discovered a fragment of a copper bell of Spanish origin, such objects coming into the Pueblo country with the Catholic priests and their churches. In the Tusayan ruins immediately about the inhabited towns, Fewkes found no copper bells of such great age that they could be called pre-historic. A fragment of one of the old Spanish or Mexican church-bells 'was used for many years as a paint-grinder by a Walpi Indian priest' (*op. cit.* p. 609). Hough found that bells of clay, like those from Awatobi described by Fewkes, were somewhat numerous in the great ruin of Kawaiokuh. They are undoubtedly pre-historic, and earlier than the bells, similar in form, used in trade. In ancient Mexico bells (*tzilinilli*) of copper were in general use before the Spanish Conquest, and from the Aztecs the knowledge of them passed northward to some of the less cultured peoples of the southern United States. The characteristic Mexican bell has rather marked and peculiar differences of form and structure which indicate its aboriginal origin. The ancient Aztecs had also large numbers of little golden bells, employed chiefly for ornament, and for use in dances and other ceremonial observances, sacrifices, etc. Metal bells were known also to the semi-civilized races of Central America, the copper bells of the ancient Chiriquians of the Panama region being especially noteworthy. Spinden (*Mem. Peab. Mus., Harv. Univ.*, 1913, vi. 146) states that copper bells, 'similar to the common sleigh-bell,' were well-known in the Maya country; a few gold bells have also been found there. Some of them, after having been cast, were 'plated' or 'washed' with gold. One of these Chiriquian bells is very interesting as having upon it the features of a human face. Others are surmounted by rude figures of animals, through the bodies of which, or under them, are apertures for cords, etc. Some have holes for such purposes at the top. Most remarkable, and suggestive of the intimate relationship between the bell and the rattle, is a triple bell or rattle of gold found on the Rio Grande near Panama. This instrument consists of 'three very neatly shaped and gracefully ornamented bells mounted upon a circular plate, to which a short handle is attached' (Holmes, *op. cit.* p. 23 f.). On the handle is the figure of a bird. In the case of the bell with human features, 'double coils of wire take the place of the ears, and the other features are formed by setting on bits of the material used in modelling' (*ib.* p. 23). Many bells more elaborate in character than this are reported from Chiriqui. The Pacific coast area of South America, with its several different 'civilizations,' has furnished many examples of the bell. Capitan has recently described some bronze and copper *tintinnabula* with movable rings and hollow spaces to contain pebbles, bits of metal, etc., from ancient Peru. One is of an entirely new type. Some recall certain Buddhistic *tintinnabula*, and likewise those of the lake-dwellings of the Bronze Age.

The bronze and copper bells of the Calchaqui region, especially those from the province of Salta in Argentina, have a very characteristic form, slightly resembling, according to Ambrosetti, certain ancient Chinese bells. The mouth is a sort of compressed ellipse, the sides flat, falling in as they reach the narrow top. No bells of this shape seem to have been discovered in the ancient Peruvian sites. These Calchaquian bells are perforated, for suspension, at the top, and they are ornamented with figures whose nature is much the same as those occurring on certain bronze disks from the same region. One bell from Curtiembre has on each face the outlines of five human countenances; others have three, two, one, in like manner. Other ornamentations are triangles, vertical lines, zigzags, animal figures, etc. Besides these, another sort of bell from the Calchaqui region is described by Ambrosetti, which is also prior to the Spanish Conquest. The form is that which would be produced by making four folds in a very thin lamina of metal, so as to shape it somewhat after the fashion of certain hats or fancy dishes. There are some more modern bells of this type which have been modified through Spanish influence (in the clapper, the tang, etc.). But the general form of the ancient bell has been preserved. These bells, Ambrosetti thinks, were used by the Indians to attach to the domestic llamas, or to suspend from their clothes or belts in dances and festivals, as the Indians of the Gran Chaco still do with fruit-shells, the ancestors of the bell. In the pre-historic necropolis of Calama (Chilian province of Antofagasta), in the area of Atacaman culture, Count G. de Créqui-Montfort discovered in 1904 a wooden bell similar in form to the Calchaquian copper bells of the first sort described above (Boman, *op. cit.*).

(4) The uses to which bells were put in aboriginal America were various. Concerning the Pueblo Indians, Fewkes informs us: 'Copper bells are said to be used in the secret ceremonials of the modern Tusayan villages, and in certain of the ceremonial foot races metal bells of great age and antique pattern are sometimes tied about the waists of the runners' (*op. cit.* p. 628). Many of the small clay bells from the Pueblo region and elsewhere were also used as pendant ornaments of some sort, as were doubtless also some of the smaller metal bells from various parts of the continent. The nature of many of these, which are provided with holes or with perforated tangs, indicates their suspension to a cord or some similar object, and their attachment to articles of dress or ornament. One of the clay bells from Pueblo ruins still contained its pellet of clay, and 'on being shaken, produced an agreeable tinkling sound'; it was evidently used as a bell to produce musical sounds—a purpose likewise served by many other bells of metal and clay in ancient America. Here the bell lies close to the rattle. On ancient sites in New Mexico and Arizona, besides clay bells of this sort, copper bells with stone tinklers have been discovered. In various parts of Mexico and Central America little bells of gold were employed as ornaments, as the devices for suspension and attachment prove. In ancient Mexico such bells were attached to the ankles of important warriors and other prominent participants in ceremonial dances. They were also attached to the feet and wrists of victims of sacrifice, those who represented deities, etc. The gods Tezcatlipoca, Tlaloc, and Huitzilopochtli, in particular, were represented with little golden bells at their ankles (in the case of the first, to the number of twenty). According to Cogolludo, copper bells were to be found in the houses of the

nobles among the Mayas. The Mayas also used bells as ornaments for their gods, etc., represented in the hieroglyphic writings. Brinton mentions the fact that Ah-Puch. the god of death, occasionally has bells attached to his ankles and clothing. One of the Mayan signs usually interpreted as 'eye' may really represent sometimes the small bells used for ornament. Holmes found that 'the eyes of the golden figures of reptiles [ancient Chiriqui] are in many cases minute hawk-bells' (*op. cit.* p. 24). According to Ximenes de la Espada, some of the ancient Peruvian rattles and bells were used in religious ceremonies 'to call the devil' (Capitan). In some parts of Central America little bells are said to have been in use as a sort of currency.

ALEXANDER F. CHAMBERLAIN.

GOOD.—See GOOD AND EVIL, SUMMUM BONUM.

GOOD AND EVIL.—I. *GENERAL DEFINITION.*—When we collate instances of their usage, we find that the meaning and implications of 'good' and its opposites are most varied. Let us take at random 'good measure,' 'a good beating' (which, curiously, is synonymous with a bad beating), 'a good dinner,' 'good music,' 'a good knife,' 'a good soldier,' 'a good intention,' 'a good man.' In the series scarcely two will be found wherein 'good' means in the one precisely what it means in the other. In all cases, in pronouncing a thing good we are judging its value, and the meaning of 'good' or its opposite in any particular case depends on the point of view from which we judge. It may be almost a purely quantitative judgment, *e.g.* 'a good ten miles.' It may be a judgment of sensuous value, in which case 'good'='pleasant' or 'agreeable,' *e.g.* 'it tastes good,' 'a vile odour.' It may be an æsthetic judgment, *e.g.* 'a good view,' 'bad music.' It may be expressive of the suitability or efficiency of tools, instruments, implements, etc., as means to particular ends, *e.g.* 'a good knife.' It may be a judgment of skill, *e.g.* 'a good marksman.' Then come the senses of 'good' and 'evil' of most importance, and almost exclusive importance for our present purpose, good as well-*being*, good as well-*doing*, evil as the opposite of both.

It is possible to frame a broad general definition of 'good' and 'evil' which shall include all the above varieties of meaning. Such a definition is given by Naville (*Problem of Evil*, ch. i.), who puts it: 'Good is what ought to be, evil is what ought not to be.' To this two objections may be raised. (1) There is no valid application of 'ought' to unthinking non-moral objects. In strictness of language, to say that an instrument such as a pen *ought* to be of a particular quality is absurd. (2) 'What ought to be' seems to apply better as a description of what is *right*. And, though the right and the good may largely be identical, the implications of the two are different, and the difference is worth marking and conserving. 'Right' means *according to rule*. 'Good' means *valuable for some end*, therefore desirable. Both in 'right' and in 'good' there is reference to a standard or ideal; but, while 'right' emphasizes the compelling, *prescribing* power of that ideal, 'good' emphasizes its *attractive* power. Hence, if we wish such a broad general definition, we should say that the good in all its senses is the *desirable*, and the evil is the *undesirable* (cf. Sidgwick, *Methods of Ethics*[6], London, 1901, p. 110 f.). This seems to be the summary of Royce's statement:

'By good, as we mortals experience it, we mean something that, when it comes or is expected, we actively welcome, try to attain or keep, and regard with content. By evil in general as it is in our experience, we mean whatever we find in any sense repugnant and intolerable. . . . We mean [by evil] precisely whatever we regard as something to be gotten rid of, shrunken from, put out of sight, of hearing, of memory, eschewed, expelled, assailed, or otherwise directly or indirectly resisted. By good we mean whatever we regard as something to be welcomed, pursued, won, grasped, held, persisted in, preserved. And we show all this in our acts in presence of any grade of good or evil, sensuous, æsthetic, ideal, or moral . . . whether you regard us as animals or as moralists, whether it is a sweet taste, a poem, a virtue or God that we look to as good; or whether it is a burn or a temptation, an outward physical foe or a stealthy, inward, ideal enemy that we regard as evil' (*Studies of Good and Evil*, 18).

It may be noted that, in defining the good as the desirable and evil as the undesirable, we are not committing ourselves to a hedonistic view. It is a false psychology which maintains that the only object of desire, therefore the only desirable, is pleasure.

II. *GOOD AND EVIL ACTIVE AND PASSIVE.*—While the definition of good and evil as the desirable and the undesirable respectively would probably be universally accepted, it is certain that, as soon as individuals begin to fill in the definite content of the general notion, there will be nothing approaching unanimity; and this fact constitutes one problem with which we must deal. But, before approaching it, it is best to draw a distinction between two kinds of good and evil. There is good which *comes to* us, and good which *starts from* us. There is evil which *befalls* us, which we suffer and endure; on the other hand, there is evil which we *do*. This is not represented as an absolute distinction; the two kinds are inter-related in a variety of ways; still it is a convenient distinction. It is not easy to find appropriate names for the two kinds. Fairbairn designates them *physical* and *moral* (*Philos. of Christian Religion*, 134), but 'physical' must be used in a somewhat unusual and perhaps scarcely justifiable sense.

'Physical evil means all the sufferings he may have to endure, whether bodily or mental, nervous or sympathetic, alike as a distinct individual and a social unit, alike as a natural being, fleshly and mortal, and as a human being, sharing in the special history of a people and in the collective fortunes and immortality of the race' (*op. cit.* 134 f.).

Now, as regards the good and evil that *befall* men there will be little lack of unanimity. Health, strength, abundance of food, gifts of fortune or of friends, and a multitude of such like things will be classed as good universally. Sickness, accident, death, penury, destructive forces of Nature, and a host of other ills to which men are exposed will be as universally acknowledged to be ills. With regard to this kind of good and evil, men differ only in the number of goods and ills they know, and in the degree of importance which they attach to this or that particular good or ill. When we turn, however, to consider moral good and evil, the good or evil that men *do*, we find an altogether different situation. Here we find endless variety in the beliefs of men as to what is good and what evil.

It does not lie within the scope of this article to set forth and discuss the various ways in which at different times and by different individuals the good has been more particularly defined. For that the art. ETHICS and articles dealing with various schools of ethical speculation must be consulted. But here it is necessary to try to gather the signifi-

cance of the fact that there is no universal agreement among men as to what conduct is good and what evil. That is plain from consideration of the variety of view maintained in different systems of ethics. It is still plainer and becomes a problem when we consider the contrariety of opinion and practice among mankind in general. What in one place is esteemed as virtue, in another is held to be vice; for what some men approve most highly others cannot find words express to their abhorrence.

'We hardly know of anything just or unjust which does not change its character with a change of climate. Three degrees of polar elevation overturn the whole system of jurisprudence. A meridian determines what is truth. . . . There is not a single law which is universal' (Pascal, *Pensées*, ed. P. Faugère, Paris, 1844, ii. 126 f.).

This raises the problem, Are good and evil purely relative? Are we to say *homo mensura*? If 'somewhere east of Suez there ain't no ten commandments,' have we simply to acquiesce in the fact, because others may be as right in their notions as we?

III. *OBJECTIVITY OF MORAL LAW.*—If we answer the foregoing questions in the affirmative, it is obvious that all moral effort has lost its spring and inspiration. Further, morality which should be purely subjective and individualistic would not be morality at all. The ineradicable belief of every moral being is that the law he obeys, the ideal he strives to realize, are something of universal validity: valid for and binding on him not as ἄνθρωπός τις, but as ἄνθρωπος; binding on him not because of the *differences* which distinguish him from all others, but in virtue of his *oneness* with all others.

'The Moral Law has a real existence, there is such a thing as an absolute Morality, there is something absolutely true or false in ethical judgments, whether we or any number of human beings at any given time actually think so or not. Such a belief is distinctly implied in what we mean by Morality. The idea of such an unconditional, objectively valid, Moral Law or ideal undoubtedly exists as a psychological fact' (Rashdall, *Theory of Good and Evil*, ii. 211).

It is to be noted that, in most statements made to demonstrate the relativity of morality, we find manifest exaggeration both of facts and of the significance of them, and an ignoring of considerations such as profoundly modify the problem presented by the indubitable facts. Is it really the case, as is alleged in the passage by Pascal part of which has been quoted, that 'truth on this side of the Pyrenees is error on the other'? If so, it can be only a very trivial truth or error that is in view, a difference of etiquette or such like. The theory of relativity of morality is in sore need of support if it requires and uses such support as that. The theory, indeed, makes out its case largely by pointing to the fact that the *customs* and *institutions* of different peoples vary. And it can bring out striking differences only by contrasting savage or semi-savage peoples with the civilized and cultured. That such difference should exist is no wonder, and constitutes no problem, granted that moral knowledge, like knowledge in general, is capable of growth. When customary morality has given place to reflective morality, and when we compare peoples that have reached approximately the same degree of development, we find that differences in moral belief and practice are not so pronounced, not so much of a problem after all. And, so far as such difference actually exists, we have to remember that customs and institutions are, at the best, imperfect revelations and embodiments of ideas and ideals. They are, from the nature of the case, conservative. The public 'conscience' is usually ahead of them. The most 'enlightened' members of the community are usually in open protest against and conflict with them. Hence, in comparing two communities, a difference in custom and institutions is not safely interpreted as the exponent of a like difference of moral ideas and ideals; between the two differences there may be no relation of strict proportion.

Or, again, customs and institutions may be regarded as means to moral ends, means of realizing ideals. And, plainly, difference of view as to appropriateness of means does not necessarily imply divergence of ends and ideals. Two individuals may identify themselves with the same end; but, because one has more power of insight and foresight, they may differ to any degree in their choice of means. Through lack of insight or foresight, one may adopt means which in reality more or less defeat the end in view—a fact of which all are painfully aware from their own experience. This is shown, too, by the degree to which, and the facility with which, individuals fall in with a more excellent way when it is represented to them. After all, there is so much ground as to what constitutes goodness common to the South Sea Islander and the missionary of a vastly higher morality.

It is not here being argued that moral ideas and ideals as actually held by men do not vary after all. The point is that, in considering the significance of the manifold variety of moral belief and practice on which the theory of relativity of good and evil bases itself, we have to bear in mind such considerations as have been adduced, which go to show that great varieties are possible without anything like the same divergence of idea or ideal.

Coming now to differences as to moral idea and ideal, the existence of which we have no concern to deny, we may hold that a sufficient explanation of them also has been indicated above. The fact that men differ in power of insight and foresight explains not only why they adopt different means as appropriate to the like ends, but also why they identify themselves with quite different ends, and define their desirable in very different ways. This is just what truth there is in the Socratic identification of virtue with knowledge, and vice with ignorance. It does not require the genius of an Aristotle to perceive that the good man is not merely one who knows what is good, or that the problem of moral evil is far from solution when ignorance is abolished. The statement of Socrates is no adequate explanation of the fact that men do evil, but it is an explanation of the fact that they differ in their views as to what goodness is. To know what is really desirable requires insight and foresight, and men differ in their conception of what is desirable because they possess these powers in varying degree.

If thus the relativity of moral conceptions resolves itself into a relativity of moral knowledge, it may seem that the problem of the relativity of morality is on all fours with, is indeed simply part of, the problem of the relativity of knowledge, into which it is not our place to enter. There appears, indeed, to be an important difference between the two questions. A moral ideal, it may be argued, is not a real thing in the way that the world of fact with which physical science deals is real. It seems easy to hold that a certain scientific fact is true, whether any individual or any number of individuals deny it or not. About a moral ideal there is not the same objective constraint. On the other hand, it may be replied that the scientist will be puzzled to give an account of an 'independent' world, of a fact which is anything save a fact for his mind, of a '"correspondence" between experience and a Reality whose *esse* is something other than to be experienced' (Rashdall, *op. cit.* 211).

The stages on the path of progress of science are marked by the derelicts of abandoned—because, as advancing knowledge proved, erroneous—hypotheses, views which were held for truth at the time, and served their purpose for a time. There lie,

with all reality now denied them, 'caloric,' 'epicycles,' various 'corpuscles' and 'vortices,' and the like. Yet their presence does not daunt the scientist in his pursuit of truth. But it is as easy for a sceptic, by adducing them, to adopt *homo mensura* as the answer to the question, What is truth? as it is for another to argue the pure relativity of moral conceptions from a comparison and contrast of views held in various quarters. To *homo mensura* we reply: Beyond the truth and the good so regarded by any individual there is Truth and Good absolute; otherwise there is no meaning in speaking of progress; what you call progress is but change; and you will have difficulty in adducing any rational ground for any one desiring to change the views in virtue of which he is already the standard of true and good for himself.

We come back to the psychological fact already referred to, viz. that we have an idea that an unconditional objectively valid moral Law or Ideal exists. We must ask, Is this idea capable of justification? What are its implications?

IV. *Implications.*—**1. God as Mind.**—We have the idea that an absolute moral ideal exists. Where does it exist? Very plainly, a moral ideal can exist only in some mind. It is as plain also that it is to be found complete in no human mind. We admit, with whatever criticism we pass on a tendency which we think exists to exaggerate the facts or their significance, that men do think differently on moral questions. We may also admit with Rashdall that 'there is no empirical reason for supposing that they will ever do otherwise' (*loc. cit.*). The conclusion to which we are led, then, is that we must postulate a *Mind* in which the absolute Moral Law or ideal exists. God as Mind is implied in the existence of an absolute standard.

'Only if we believe in the existence of a Mind for which the true moral ideal is already in some sense real, a Mind which is the source of whatever is true in our own moral judgments, can we rationally think of the moral ideal as no less real than the world itself. Only so can we believe in an absolute standard of right and wrong, which is as independent of this or that man's actual ideas and actual desires as the facts of material nature. . . . Our moral ideal can only claim objective validity in so far as it can rationally be regarded as the revelation of a moral ideal eternally existing in the mind of God. . . . The existence of God . . is essential to that belief which vaguely and implicitly underlies all moral beliefs, and which forms the very heart of Morality in its highest forms. . . . Moral obligation means moral objectivity. That *at least* seems to be implied in any legitimate use of the term. . . . Such a belief we have seen imperatively to demand an explanation of the Universe . . . which shall recognize the existence of a Mind whose thoughts are the standard of truth and falsehood alike in Morality and in respect of all other existence. . . . The belief in God . . . is still a postulate of a Morality which shall be able fully to satisfy the demands of the moral consciousness' (Rashdall, *op. cit.* ii. 212 *f.*).

An alternative to this view is, of course, possible. It is to deny the validity of the idea of an absolute moral distinction. This is the only course open to those holding materialistic and naturalistic views of the Universe. The idea in question must be classed as an illusion, or set down as meaningless and inexplicable, the mere freak of a mindless, purposeless Nature, which somehow has superimposed on material phenomena consciousness as an epiphenomenon. This is not the place to offer a criticism of Materialism (*q.v.*) or Naturalism (*q.v.*). We must hold it sufficient to say that, in our view, the Universe and morality require far other theories adequately to account for and explain them. It is a short and easy way with ideas to set them aside as illusions. But, if one thinks the matter out, one will find that, after all, it is not an easy view to take that an idea is an illusion, though it is implicit in every moral judgment. Hence we hold that it is not to be set aside, but accepted with all its implications, all the postulates it can be shown to require. Thus we postulate God as the Mind, in which exists the absolute moral Ideal.

2. God as Will.—This is not a postulate in the same immediate sense as that of God as Thought. It is not at once apparent that, if there be an absolute ideal, there must be also a Will active in realizing it. As we shall soon see, when one contemplates the world, one might be excused for coming to the conclusion that nothing is so certain as that there is no superhuman Will active in realizing an Ideal of absolute Good. Nevertheless we hold that God as Will is an implication of our first postulate, God as Thought—and for this reason, that thought apart from will does not seem to be a thinkable conception. To distinguish between Thought and Will is convenient and necessary enough. To regard them as really separate or separable is a very different matter. As we know them, the one always involves the other. To suppose that anywhere there exists Thought without Will is to hypostatize an abstraction. So, if we are to postulate a Mind in and for which the absolute Law or Ideal exists, it must be a Mind which wills as well as thinks. As nothing can be said to be willed which is not thought of as good, it follows that God must will the absolute Good, the Ideal of which exists in His Mind; and the Universe must have a purpose, an end conceived of as good by the Mind which wills it.

It may be noted in passing that we do not regard the above considerations as a demonstration of a Theistic position or set them forth with that aim. It is possible for one to hold that there is a rational principle in or behind Nature, a fundamental rationality in the Universe, while coming more or less short of Theism. Thus in Buddhism we find a profound belief in *karma* (*q.v.*), an inexorable, intelligible, impersonal principle, combined with an explicit denial of anything like Theism. We are not concerned here to justify Theism. We justify our use of terms which seem to have theistic implications, by saying that they seem the best terms to use, if not, indeed, the only terms that can be used. We are not coming nearer adequate expression of the truth of things in proportion as our thought and language become vague.

Now, if there be a superhuman Mind which thinks and wills absolute Good, the question arises, Is that Good realized? If we admit that such a Good must be realized—and we cannot do otherwise—we are immediately confronted with some of the most perplexing and painful problems that have occupied the mind of man, and we must now consider them.

V. *Problem of Evil.*—It is common to speak of the problem of evil, and there is no objection to that, provided we understand that under the name are grouped a number of separable problems; for evils are of different kinds and raise different questions; and of all kinds two questions may be asked, What is the *terminus a quo*, and what the *terminus ad quem*?

It is to be noted that the problem of evil of any kind exists in most acute perplexing form only for those holding a Theistic view. Just in proportion as God is held to be omnipotent, all-wise, all-loving, the 'blessed and only Potentate,' the Creator, the Disposer of events, and so on, does the existence of evil become an ever deeper mystery. Only if there be a God, and a God in some sense outside of, superior to, and responsible for the world, can any complaint against what is be entertained. It is meaningless to criticize and protest against the scheme of things as we find it, if there is no One responsible for it, who, we conceive rightly or wrongly, might or should have made it other than it is. Of this Job, to whom the problem of evil was acute, has clear perception. 'O that I knew where I might find him! that I might come even to his seat! I would order my

cause before him, and fill my mouth with arguments. I would know the words which he would answer me, and understand what he would say unto me' (Job 23^{3-5}). In this way, indeed, all problems of evil merge into one—the problem of *theodicy*: 'si Deus bonus est, unde malum?'

VI. *REALITY OF EVIL.*—As men survey the facts of experience and the world about them, they come to varied views as to the extent of evil. So little do ills and evil bulk in the view of *one* that he regards all the talk of evil as a gross exaggeration, and for the evils that he is compelled to admit he finds simple and adequate explanation lying on the very surface; and he is prepared to pronounce all things very good. *Another* finds everywhere evil in one or other of its manifold forms triumphant: the world is full of misery; Nature is blind, reckless, indiscriminating; human life with all its pains, sorrows, defeated hopes, thwarted aims, and brief span, which indeed is, after all, too long considering what it brings, seems not worth the living.

> 'Life which ye prize is long-drawn agony.'

To the optimist who says 'no world *could* be better,' the pessimist replies 'no world *would* be better; better that no world should exist than that there should be such a world as we have.'

On the question as to the extent of evil, men will give different answers. Something has to be allowed for temperament and personal experience. But it is clear that, if any one takes anything more than the merest superficial and the most contracted view, it will be impossible for him to take the optimistic view that, as a matter of fact, all things are very good and quite as they should be. Take no more than external Nature as we find it. We have Wordsworth's stanza:

> 'One impulse from a vernal wood
> May teach you more of man,
> Of moral evil and of good
> Than all the sages can.'

On the other hand, we have J. S. Mill's violent indictment of Nature:

> 'In sober truth, nearly all the things which men are hanged or imprisoned for doing to one another, are nature's everyday performances. . . . Nature impales men, . . . and has hundreds of other hideous deaths in reserve, such as the cruelty of a . . . Domitian never surpassed. All this, Nature does with the most supercilious disregard both of mercy and of justice' (*Essay on Nature*).

In Mill's statement there is an element of rhetorical exaggeration, but for all that we may feel that it does more justice to the facts as we know them than the verse quoted.

Pessimism is an advance on optimism, and is nearer truth, since it recognizes the facts of the case, that there is disorder in Nature, and that there are seeming irrationalities in the external world, and in human experience ills which, by their number and the extent to which they can blight happiness and maim and stunt life, constitute an almost overwhelming perplexity. Reviewing the facts of life, we may say with Schopenhauer:

> 'To me optimism, when it is not merely the thoughtless talk of such as harbour nothing but words under their low foreheads, appears not merely as an absurd, but also as a really *wicked* way of thinking, as a bitter mockery of the unspeakable suffering of humanity' (*The World as Will and Idea*, Eng. tr., i. 420).

Yet it has to be observed that, as there may be a shallow, self-centred optimism, which spreads a rosy light over all because of personal well-being, so there is such a thing as a no less shallow, insincere pessimism, a megalomania not uncommon to youth, a pose deliberately adopted, a morbid sentimentalism—a pessimism which is certainly as absurd as, and probably more wicked than, the optimism referred to. The *Weltschmerz*, so frequent at the stage of adolescence and not unconnected with physiological changes, represents only the difficulty felt by an individuality taking its first independent steps, and normally soon passes.

Optimism and Pessimism, however, are not merely estimates of the extent to which evils exist; they are theories of the origin, significance, and final issue of evil. One who can adopt the pessimist's estimate of the extent of evil may yet be an optimist as holding that 'Good is the final goal of ill'; that

> 'Good shall fall
> At last, far off, at last to all,
> And every winter change to Spring.'

To accept the pessimistic estimate of the magnitude of the problem does not involve the acceptance of a pessimistic solution of the problem.

The problem as noted is, If God is good, whence comes evil? and we must consider—

VII. *THE MAIN TYPES OF SOLUTION THAT HAVE BEEN OFFERED.*—It is easy to see how one might adopt the position: the world and life being what they are, either (1) God is not good; or (2) He is not omnipotent; or else (3) evil is not what it seems to be, it cannot be anything but good, and we must try so to interpret it. Each of those positions has been adopted as explanatory of evil, and we may so group the theories we consider.

1. **The view that God is not good.**—This is a convenient way of grouping some theories which have little enough in common save that all hold that God (using the term in a wider than the Theistic sense, to denote the fundamental Principle of the Universe, the World-ground, or howsoever else He or It may be named) is not good, or, what comes to the same thing, that the goodness of God is something essentially different from what we in every other case understand by goodness.

(i.) First we consider *Pessimism*. Its estimate of the extent of evil we have seen to be not unjustifiable. We must now look at its general account of evil. In brief, Pessimism holds that existence itself is evil, that non-existence is preferable to existence, that the root of all evil is the desire for existence. Pessimism, both as a temperamental attitude of mind towards the world and as a philosophy, is native to the East rather than to the West. In modern times, however, there has appeared in the West a popular and more or less vague pessimism in poetry, and even in the philosophy of the street corner; a political pessimism (Nihilism); and, what we are concerned with, a pessimistic philosophy.

(*a*) Eastern (or ancient) Pessimism has its best known and fullest expression in philosophic Buddhism. Buddhism grew out of the current Brāhmanism, and so far accepted its teaching. In that system the old simple Theistic Aryan faith had given way to a belief in an impersonal Neuter (Brahma, Ātman, or Paramātman), the source and goal of all existence, which in some dim way had willed existence in order to realize itself. A vast interval separates source and goal, and through it the wheel of existence turns, involving for souls incalculable changes till at last they escape back into Brahma whence they sprang. The soul passes through one incarnation after another, each state of being with its conditions being determined by merit or demerit acquired in the preceding state. It is easy to see how to Buddha it was only a making explicit of what was already implicit to say that the wheel of existence itself is an evil, *the* evil. The soul craves for rest, and will never find it so long as it is turning with the wheel. Rest means escape from the wheel. And every act is a thong which binds the soul to the wheel. Hence a good deed is only a less evil for the soul than a bad one, for it maintains the soul in being.

Existence, then, seemed to Buddha to be evil. Life means sorrow, and the only escape from

sorrow is to escape from life. There is no God, only an impersonal inexorable Law (*karma*), which attaches fitting consequences to merit and demerit. Escape from evil is possible just in proportion as we retire from the world and suppress the very desire to live, and stifle that will to act which by impelling us to action binds us, be it by merit or demerit, to the wheel of existence. When we have ceased to desire, we shall escape and attain Nirvāna.

In thus holding that escape is possible, Buddhism may be said to be, after all, an optimism. At the best it is a negative optimism. The final Good is one ever to be desired, never to be enjoyed; though it may be attained, never to be consciously attained. We are not concerned with practical Buddhism, which on the whole may be as optimistic a system as Christianity, or at least comparable with it (see the artt. on NIRVĀNA and KARMA).

(*b*) Western (or modern) Pessimism is represented in the systems of Schopenhauer and von Hartmann.

Schopenhauer (1788–1860) was a student of Oriental philosophy, and his pessimism is largely influenced by, if not borrowed from, Buddhism as we have outlined it. We find in his *Die Welt als Wille und Vorstellung* the same estimate of life and existence as evil, and the same doctrine that the desire to live must be mastered and destroyed by way of asceticism as we find in Buddhism. Instead of *karma*, Schopenhauer finds behind and causative of all existence *Will*. Will is the *Ding an Sich* which Kant regarded as unknowable. Will is the innermost essence of everything and of the totality of things. This Will is blind, stupid, and groping; hence a world of such misery as we find. If creation and life as we know them were the work of a conscious Creator, 'he would be the greatest of all wrong-doers. He must have been an ill-advised god, who could make no better sport than to change himself into so lean and hungry a world.' Hence Schopenhauer rejects Theism, and finds in the transition from Theism to Pantheism a progress from what is indemonstrable to what is absurd. In his view the world is so bad that non-existence would be preferable (*The World as Will and Idea*, Eng. tr., i. 493, *et al.*).

Von Hartmann is so far a disciple of Schopenhauer, though his originality is conspicuous. He develops more fully the *a posteriori* argument for the universal extent of evil. He comes to an 'indubitable conclusion' that pain is greatly in excess of happiness, even in the case of the most fortunately situated individuals. Nor is there any prospect of anything better in the future. Due to the development of human intelligence and sympathy there will come an ever keener sense of the predominance of pain. The practical conclusion is that we must aim at the extinction of the will to live, must work towards the end of the world-process. But von Hartmann's view is neither so simple nor so intelligible as that. Like Schopenhauer, he posits an unconscious Principle, but he differs from his predecessor in making it a Principle in which a dualism is inherent. There is not merely unconscious Will from which all existence with its miseries has sprung; there is an unconscious Intelligence which is striving to undo the mischief wrought by unconscious Will. The Universe then has an end, and the Absolute is good as seeking to realize it. And this end must be the end for us also. We are told that the only right course for us in the present time is to ratify the will to live, for only by surrender to life with all its pains, not through cowardly renunciation, can we play our part in the world-process (*Philosophie des Unbewussten*[3], p. 748). That act of universal suicide which seemed the only rational thing must be postponed, indefinitely it would seem. For, if it took place, the Absolute which has produced the existing number of men would immediately produce other individuals to take their place (*Das sittliche Bewusstsein*, Berlin, 1879, p. 476). Hence von Hartmann's pessimism is the most absolute of all.

(ii.) The view has been expressed that evil largely at least disappears as a problem, if we hold that *the distinction of good and evil is different to God from what it is to us*. In various forms this view has been held by, *e.g.*, H. L. Mansel, F. H. Bradley, A. E. Taylor, and in a sense by von Hartmann. And it has become a kind of fashion to talk of a super-moral sphere. The view in question is worked out in Bradley's *Appearance and Reality* (London, 1897), and Taylor's *Problem of Conduct* (do. 1901). (It has to be noted of the latter that to a great extent it has been disowned by the author.)

Without entering into detail, we may state the position shortly. The view is that the spheres of Religion and Morality are distinct. Morality, the lower, is concerned with human action alone. Moral distinctions applicable enough to men are inapplicable to God. Owing only to the limitations of human nature we present some things to ourselves as bad. Religious faith reveals a perfect world. There is ultimately nothing which ought not to be. Acts and principles of action which seem to us immoral are in God perfectly good. To some extent the human mind can see that it is so already, and, when it cannot see, it is the task of faith to trust that in all cases it is so.

Now there is considerable plausibility in such a view. It may seem to humble piety to be simply a comment on the text 'As the heavens are higher than the earth, so are my ways higher than your ways, and my thoughts than your thoughts' (Is 55^9). We all realize that God's view of good and evil must differ in great measure from ours. But are we to say that this difference results in a *sharpening* or in an *obliteration* of the distinction of good and evil for God? Either view is possible; the former is the conviction on which all our moral striving is based; the latter is the view we are now considering. That we should be mistaken, as we often are, in our estimate of the degree to which any particular thing is good or bad is absolutely no ground for holding that to the Supreme Mind, with perfect knowledge, there is no real distinction between good and evil at all. To say that God is good and yet that to Him there exists nothing of our distinction between good and bad is contradictory and meaningless. If there is nothing bad to God, He is not good. If He does not feel about evil as we feel, only with far greater intensity, it is not obvious why we should trouble to worship or seek to serve Him, nor is it plain why we ourselves should draw distinctions which are not real in themselves, and have nothing in reality corresponding to them.

'It is of the essence of the moral consciousness, as it actually exists, to *claim* universal validity; if it possesses no such validity, it is not merely particular moral judgments that are false and delusive but the whole idea that there is such a thing as an end which absolutely ought to be promoted, and that we have a power (more or less adequate) of determining what that something is' (Rashdall, ii. 270). 'The word "good" means the same in him [God] and in us, else it means nothing to us' (W. N. Clarke, *Outline of Christian Theology*, Edin. 1898, p. 69).

(iii.) The conclusion, God is not good, follows logically from views which make *the will of God a capricious, inexplicable thing*, or which represent Him *as permitting* (*if not willing*) *evil in order primarily to reveal certain of His own attributes*. A God who wills the existence of persons as mere means towards an end in which they have no share, and which involves for them inexpressible suffering, can be called good only by affirming contradictories (cf. Kant, *Dialectic of Pure Practical Reason*, v.).

2. The view that God is not omnipotent.—The second group of theories is constituted by all that in various ways deny that God is omnipotent. They hold that God is absolutely good and means good, but cannot carry out His purpose of good immediately at least. There are obstacles which thwart and retard His purpose.

(i.) Here we have first various forms of *Dualism* (*q.v.*). We classify relevant dualistic theories thus:

(*a*) Those which postulate two equally original and eternal Principles which have been ever in rivalry and conflict. The evil principle can create, and throws his works among the creations of the Good Principle: hence all evil (Iranian dualism).

(*b*) Those which postulate the eternity of matter. God did not create matter. He made the world out of matter He found, and He made it as perfect as the intractable material would allow (*e.g. Timæus* of Plato). What imperfection exists, therefore, is due to the matter, not to the Maker, of the world. In various quarters this belief developed into the view that matter is inherently evil. In some Gnostic systems the world was represented as the outcome of the evil, originally subsisting in chaotic matter, organizing itself into a Kingdom. And man is a microcosm; the enemy of the highest principle within him is the material sensuous element, which is not merely, as we all hold, often the occasion or instrument of sin, but in itself is intrinsically evil. Cf. art. GNOSTICISM.

(*c*) Those which postulate an original dualism in God. We have noted this in von Hartmann's system. It appears also in the view of Boehme († 1624). Evil must have its root in God; this root is that in God which is not God, if we understand by God love only. Yet it is a Divine element, broken away from the original harmony to become 'God against God' (*Morgenröte*, xiv. 72). It appears also in certain Gnostic systems in which we have a representation of a fall within the Pleroma. A product of this fall is a Demiurge who is either ignorant of or hostile to the supreme God.

Dualism of type (*a*) is on the whole optimistic in outlook. The evil principle is destined to be at last vanquished and destroyed. Type (*b*), on the other hand, tends towards a pessimistic or at any rate a gloomy view. Existence in this world is evil; the body is the prison of the soul which must seek deliverance through asceticism (so notably the Essenes, Plotinus, many Gnostics), or vindicate its liberty by antinomianism (Ophites and other Gnostics).

Dualism is just the assertion that what we find now in the world has been there all along. The world is dualistic for each of us as we find it. Two streams of influence beat upon us. We feel the conflict of two tendencies within us. And Dualism explains the conflict by saying that it has always been so. It is an ultimate fact. Dualism in any of its forms cannot be expressive of the final truth of things, and thought cannot rest satisfied with it.

(ii.) We have next *Pluralism*, a philosophy which has in recent times come into great prominence, expounded by, *e.g.*, W. James, Howison, and F. C. S. Schiller. Pluralism, when thoroughgoing, asserts that God is limited *ab initio* by other beings, among whom He is only *primus inter pares*. Souls are uncreated, eternally pre-existent. In the world-process God is striving to rid those souls of evil. Thus God is in no way, near or remote, responsible for evil. Pluralism (*q.v.*) is a *Weltanschauung*, and cannot be confuted in a sentence. As to pre-existence (*q.v.*), if we say with Rashdall,

'For one difficulty which the theory of Pre-existence removes it creates a hundred. . . . The theory is certainly not capable of positive disproof, but it is unsupported by the obvious and *prima facie* evidence of experience; and involves, the more it is worked out, a ramifying network of difficulties only to be disguised by some mythological structure which itself is the greatest difficulty of all' (*op. cit.* ii. 346 f.),

the Pluralist may reply in Ward's terms:

'[The theory of pre-existence] involves a "network" of assumptions unquestionably; but if it "is certainly not capable of positive disproof," the objector is bound to show that the result of the whole is worthless. As regards this particular hypothesis of pre-existence, its complexity is no advantage certainly; but even so the disadvantage is reduced in proportion as the separate assumptions are analogous with actual experience and consilient with each other' (*The Realm of Ends*, 'Pluralism and Theism,' p. 404 f.).

It is, however, a strange doctrine that the burden brought with any theory should be primarily a burden of disproof for the objector. The existence of a race of intelligent beings in the interior of the moon is a hypothesis not capable of positive disproof, its assumptions are all analogous with actual experience and quite consilient with each other, and the objector may be unable to show that the result of the whole is worthless. In spite of all that, the hypothesis is still in want of a single justifying consideration.

The theory of pre-existence must certainly be treated with respect. It is the belief of a large proportion of mankind. It has ever appealed to those who grapple with the problem of evil, and many names may be quoted in support—from Pythagoras, Plato, and Origen, to Kant and J. Müller. Admittedly no theory of the origin of souls is free from difficulty. But, obviously, to explain the taint of souls in this life by a 'fall' of created or emanated souls in a former life leaves the problem of evil exactly where it was. To gain anything we must hold that souls and evil are eternally pre-existent; and the gain, it seems to us, is small, balanced against the difficulty of the enormously complex problems that immediately confront us.

The metaphysical difficulty of Pluralism may be put thus: if the monads are absolutely separate, it is not obvious how a cosm can arise; while, if they are inter-related, there is no intelligible sense in which they can be ultimate.

(iii.) That the omnipotence of God is *inherently* limited is implied in all theories which represent *evil as necessary*. In some sense the necessity of evil must be an element in every attempted solution of the problem; and hence in some sense it is true that evil exists because God, though perfectly good, is not omnipotent. What kind of limitation of omnipotence is compatible with an adequate Theism? Only the limitations necessary to make omnipotence a thinkable conception—limitations without which omnipotence is a totally absurd notion, meaning power not only to do all possible things, but to determine what is possible; an omnipotence which absolutely excludes impossibility. This is the foolish notion of omnipotence argued upon by, *e.g.*, Schopenhauer and J. S. Mill.

'The Creator is the author not merely of the world, but of possibility too. He might accordingly have devised this in such a way as to admit of a better world' (Schopenhauer, *Parerga*, ii. 157; cf. Mill, *Theism*).

This meaningless omnipotence is denied as soon as God is conceived of as a definite Being at all, with any stability of intelligence or will. *Omnis determinatio est negatio.* To find that derogatory to God is to abuse language.

Plainly God is limited by His own Being (He cannot deny Himself), by His own purpose, and by His own works. It cannot be otherwise. We should else have a Being to whom no predicates could be attached, of whom nothing could be firmly hoped.

Hence in many quarters evil is represented as necessary; and, as noted, it must in some sense be so. The thought is not free from difficulty. For, if evil be necessary, is it not justifiable? Can we

condemn what must be? If a thing is necessary, is it not in a sense good? Even if we say, 'Evil must be, not in order that it may be for its own sake, but in order to be thwarted, fought with, destroyed, and to make good possible,' the evil-doer may still justify himself. If we say to him, with Royce,

'God's will is your will. Yes, but it is your will thwarted, scorned, overcome, defeated. . . . God wills you not to triumph. . . . And that is the use of you in the world . . . to be willed down in the very life of which you are a part' (*Studies*, p. 28),

he may reply, 'Your argument is irrelevant. It remains true that on your own showing I am fulfilling a useful and necessary function in the scheme of things. Without me you can do nothing; your goodness were impossible without me to contend with. In your interest it is necessary for me to exist, and it is goodness in me to choose to constitute myself a round in the ladder of your ascent. Evil if justifiable in the abstract is justifiable in the concrete; in the abstract it does not exist. If there must be evil, there must be evil-doers.'

The possibility of evil is clearly necessary; it is no true limitation of omnipotence to affirm that. And, as Royce himself shows the possibility of evil (*Studies*, iv.), the presentation of moral choice is all we need for knowledge of good and evil. It is a delusion that we have more knowledge by yielding to temptation than we have in resisting it. Hence the difficulty remains, Why did not God prevent the actualization of evil? It is not an adequate answer to say, God cannot prevent moral beings from choosing evil rather than good. For, if God can govern moral beings now, as it must be admitted He can and does, He could have done so all along without damage to their moral freedom. Besides, the other difficulty remains as to why moral beings should will evil. After all, there is much to be said for Lotze's view:

'Of all imaginable assertions the most indemonstrable is that the evil of the world is due to the validity of eternal truth; on the contrary, to any unprejudiced view of Nature it appears to depend upon the definite arrangements of reality, beside which other arrangements are thinkable, also based upon the same eternal truth. If there were retained the separation . . . between necessary laws and the creative activity of God, in our view evil would undoubtedly belong not to that which must be, but to that which is freely created. Let us therefore . . . say that where there appears to be an irreconcilable contradiction between the omnipotence and the goodness of God, there our finite wisdom has come to the end of its tether, and that we do not understand the solution which yet we believe in' (*Microcosmus*[4], Edin. 1894, ii. 717).

3. The view that evil is not really evil.—The view that what is to us evil is not evil to God we have discussed above. Here we deal with various arguments which attempt to show that what at first sight seem evils are not, when better examined, evils to us. The characteristic formula of all such theories is, 'Partial evil is universal good.' And the most familiar expression of it is Pope's *Essay on Man*, which is a summary of Deistic optimism as represented by, *e.g.*, Bolingbroke. The view is, 'Whatever is is right,' *i.e.* there is really no evil. Suffering is to be borne with content because the evil suffered is serving a great universal end. Nature is not to be rebuked for enforcing her laws at the expense of an individual.

'Respecting man, whatever wrong we call,
May, must be right, as relative to all.'

A similar view was to some extent accepted by the Stoics, who grappled earnestly with the problem of evil—not in Pope's dilettante manner—and in regard to the bearing of evil and the good that comes out of evil said nearly all that can be said. The Stoics, too, regarded the world as perfect. 'The nature of evil exists not in the Universe' (Epictetus, *Enchir.* 27). Evil is conducive to the best of the whole. Chrysippus and M. Aurelius compare evil to the coarse jest in the comedy, which, though offensive by itself, improves the piece as a whole (Aur. *Med.* vi. 42). 'God has fitted all, evil with good, in one great whole, so that in all things reigns one reason everlastingly' (Cleanthes, *Hymn to Zeus*). In reply to this position that partial evil is universal good, we say that it does not make the evil any less or any less real. The individual afflicted for the good of the whole may well ask, Why select *me*? As Voltaire in *Candide* asks, Why should Lisbon perish while Paris escaped? Was not Paris sunk in evil too? However true it be that evil leads to good and to greater good, the problem remains as to its distribution. And, whatsoever its effects, near or remote, evil is still evil.

'It may be said that evil appears only in particulars, and that when we take a comprehensive view of the great whole it disappears; but of what use is a consolation the power of which depends upon the arrangement of clauses in a sentence? For what becomes of our consolation if we convert the sentence which contains it thus—The world is indeed harmonious as a whole, but if we look nearer it is full of misery?' (Lotze, *Microcosmus*[4], ii. 716).

Another point emphasized by the Stoics, and in many quarters since, is that evil is good as a *disciplinary agent*. On this point Seneca writes in almost a Christian strain in his *de Providentia*: 'Fragile are the plants that grow in a sunny valley.' And so Epictetus (*Diss.* iii. 24): 'God sends me hither and thither, shows me to men as poor, without authority, and sick . . . not because He hates me . . . but with the view of exercising me and of using me as a witness to others.' This is all fine and true, but the problem of evil remains. For this does not explain the suffering which destroys the very possibility of moral improvement, *e.g.* by reducing a mind to imbecility, or the fact that the evil inflicted seems utterly disproportionate; the old question is, in fact, raised in acute form, Is God not good to His own, or is He powerless, that this is the only way in which He can educate them?

Still another consideration is urged by the Stoics which has also played a great part in explanations of evil, viz. Evil is the necessary condition, the correlate, without which good is not conceivable. *No evil, no good.* This gives rise to different views. (*a*) Evil is a merely negative or privative conception, meaning only the absence of good; (*b*) evil is the condition of knowing or doing good. In answer it is easy to point out that evil is no mere negative. It is something quite positive which attempts to usurp good. Evil is not merely *good-less*, but *anti-good*, if we may use the words. A man may fail to exhibit a virtue without being guilty of the contrary vice, or, as we say, have only negative virtue. As to our knowledge of good:

'Things are known to us only in relation to their opposites. . . . But the law need not be so interpreted as to require that these opposites must be absolute contrasts. In order to consciousness, we must have change. . . . But *change* does not necessarily mean transition to the entirely opposite state. . . . We should be conscious of good without experience of positive sin or evil, if there were within good itself change from one degree to another, or if there were varieties of good' (Davidson, *Stoic Creed*, p. 227).

The position that evil is necessary if moral beings are to be good and do good has been in our view already.

VIII. *Conclusions.*—We have seen that every proposed solution either leaves the old question unanswered or raises new ones. The problem is for the human mind insoluble. However far we may get with an answer, ultimately

'There is a veil past which we cannot see,'

and the final and complete answer to 'Si Deus bonus, unde malum?' lies within. There are, however, considerations which so far lighten the problem.

1. Metaphysical evil (the fact that we are finite) is no evil at all. 'To be finite is unsatisfactory,' says Royce, but it is scarcely a thing to complain

about, if, as we actually find, the finitude is capable of indefinite expansion, and if, as we have ground for hoping, this is destined to be immortal. When knowledge cannot be extended, when possibilities of discovery and invention have been exhausted, it may be time to find our finitude an evil. When our world is conquered, we may weep.

2. Physical evil, the evil we suffer.—(*a*) If one argues, We can conceive the world and the conditions of life as better than they are, why are they not better? the answer is: As a matter of fact they are becoming better, our demand for a better world is God's demand, our purpose to make it better is His purpose, our task in improving it is His task. To demand from God a better world, to complain that it is so imperfect, is to demand for man an easier task, that there shall be less which man has any share in producing. The demand for a perfect world is the demand that man shall have no task, no function in the world at all, and makes the creation of a world needless and unintelligible. As Iverach says, 'the world is not yet made, it is only in the making' (see also Fairbairn, *The Philosophy of the Christian Religion*, p. 59); and man himself is called to play a part in the making of it. He is not at home in the world as he finds it; by his labour he has to make it more of a home. Hence it seems inevitable that there should be suffering in various forms for him. Which is preferable—a world in which man has nothing to do in making it a better world, or a world which calls him to be a worker along with God?

(*b*) Physical evil has been the goad which has impelled men to most of those achievements which make the history of man so wonderful. Hardship is the stern but fecund parent of invention. Where life is easy, because physical ills are at a minimum, we find man degenerating in body, mind, and character. With a new world we must demand a being different from man as we know him, *i.e.* not man.

(*c*) This indicates that the demand that the world should be other than it is in this or that particular leads us whither we know not. It is not one thing which has to be changed when one change is proposed, but ultimately all things; and a world totally different from the world we know cannot be thought out. It is not possible to foresee all the changes necessitated by one change regarded as desirable. Could we foresee them, it is conceivable that we should find the last state worse than the first. Leibniz's formula, 'this is the best of all possible worlds,' does not admit of demonstration, but neither does its denial. We cannot prove that there is no more suffering in the world than is necessary for any good purpose, neither can we prove that there is more. And the burden of proof seems fairly to rest on the critic of Providence.

3. Moral evil.—There are ultimate questions that cannot be answered, *e.g.* the origin of sin, and its universality (see art. SIN). Here it is in place to state that we may hold that it was God's purpose to have in man not merely an intelligent fellow-worker, but a moral being who should be partly the architect of his own character and worth. Again we ask which is preferable—a being who cannot do evil, or a being who with full power to do evil abstains? a *non posse peccare*, or a *posse non peccare*? We note that Huxley answers that he would prefer the former:

> 'I protest that if some great Power would agree to make me always think what is true and do what is right, on condition of being turned into a sort of clock . . . I should instantly close with the offer' ('Method and Results,' *Collected Essays*, Lond. 1893–94, i. 192).

But it may be doubted if many will agree with him. Once again it is a demand for no task, no battle; and what is the worth of such a character? The wine of life would be drawn under such conditions; man would have no share in working out God's plan. Which is preferable—a grim fight, with the possibility of splendid triumph, or no battle at all?

The *possibility* of evil is necessary for a moral being. And the *actuality* of evil is the only ground we can see on which there rises any need or any possibility for the manifestation and development of some human virtues, and the revelation of some Divine excellences, which we regard as among the best. Nor, though we might have knowledge of evil, could we have knowledge of the *consequences* of evil, were evil not actual.

It will appear that we might go on to say that God wills not merely the possibility, but the actuality of evil. If we admit that He has perfect foreknowledge and wills a possibility which He knows will be realized, manifestly it might seem His responsibility is not different from that of willing its realization (cf. Rashdall, ii. 343). We prefer to say that here we are in a difficulty which shows, in Lotze's phrase, that our thought is at the end of its tether.

4. Connexion of physical with moral evil.—The problem of evil would be far less acute if we saw that suffering was proportionate to wrong-doing. The greatest problem of all is the apparent indiscrimination with which good and evil fortune are assigned. Three considerations must be regarded.

(*a*) We see but in part. Could we see the whole, it is not inconceivable, to say the least, that the apparent disproportion would wear a very different aspect. As Royce puts it, we see things in the temporal series; the problem may be quite other *sub specie æternitatis* (*World and Individual*, ii. 338 ff.).

(*b*) For then, in particular, we should see how God's government of the race modifies His government of the individual. God has the race to govern, and the race can be disciplined only in individuals. Hence there is vicarious suffering, and it is difficult to hold that what is reasonable in men, who in various circumstances must and do punish, causing vicarious suffering, is unreasonable in God.

(*c*) If we believe in immortality, the whole problem of evil, and this one in particular, is profoundly modified. And this problem is one point of view from which it may be shown that immortality is a postulate of morality. If we believe that the conflict with evil shall result in final victory for good, that evil shall at last find its place in Reality only as trampled on and triumphed over, and, further, that we who have striven and suffered and been perplexed shall see the triumph of what we fought for, and the good meaning of our burdens, and the explanation of our problems, then at the worst life is full of interest; it is good to be, worth while to suffer and to fight.

In brief, our view is: God is good and means only good, but His purpose is to realize His ends with our co-operation; and in some sense evil is necessary that they may be revealed to us, and striven after by us.

LITERATURE.—The main Biblical passages are Gn 3, Job, Ps 73, Ecclesiastes, 2 Co 4, Ja 1[13f.]. On these there is a vast expository and homiletical literature, details of which cannot be given here. See also Plato, *Protagoras*, *Gorgias*, *Republic*, *Timæus*; Aristotle, *Nicom. Ethics* (Peters' tr., Lond. 1886); for the Stoics, see W. L. Davidson, *The Stoic Creed*, Edinburgh, 1907; Cicero, *de Finibus* (Yonge's tr., Lond. 1888); for Plotinus, see B. A. G. Fuller, *The Problem of Evil in Plotinus*, Camb. 1912; Augustine, *de Civitate Dei*, A.D. 426 (tr. M. Dods, Edin. 1871); Boethius, *de Consolatione Philosophiæ*, c. A.D. 526 (tr. King, Lond. 1897); Al-Fārābi, *Fontes Quæstionum*, c. A.D 950 (see M. Steinschneider, *Alfarabi*, St. Petersburg and Leipzig, 1869);

M. Maimonides, *Dalalat al-Ḥa'irin (Moreh Nebuchim)*, A.D. 1190 (Paris, 1520; Fr. tr. 1866); G. Bruno, *Della Causa, Principio ed Uno*, Lond. 1584, *de Monade*, etc., Frankfort, 1591; J. Boehme, *Aurora*, Amsterdam, 1656; N. Malebranche, *Entretiens sur la métaphysique*, Paris, 1687; P. Bayle, 'Réponse aux questions d'un provincial' (in *Œuvres*, The Hague, 1727–31), art. Manichæans,' in *Dict. histor. et critique*, Rotterdam, 1697 (Eng. tr., Lond. 1736–38); B. de Spinoza, *Ethics*, Amsterdam, 1677 (tr. R. Willis, Lond. 1870); G. W. v. Leibniz, *Theodicée*, Amsterdam, 1710; W. King, *An Essay on the Origin of Evil*, Lond. 1731; A. Pope, *Essay on Man*, do. 1732; J. Butler, *The Analogy of Religion*, do. 1736; J. Edwards, *Freedom of the Will*, Boston, 1754, *The Great Christian Doctrine of Original Sin*, do. 1788, *Dissertation concerning the End for which God created the World*, do. 1788.

Of more modern works, the following may be noted: I. Kant, *Kritik der Urtheilskraft*, Appendix, Berlin, 1704 (tr. J. H. Bernard, Lond. 1892), *Religion innerhalb d. Grenzen d. blossen Vernunft*, Königsberg, 1794 (tr. in T. K. Abbott's *Kant's Theory of Ethics*, Lond. 1883); F. W. J. Schelling, *Philosoph. Untersuchungen über d. Wesen d. menschlichen Freiheit*, Landshut, 1809; G. W. F. Hegel (see J. M. E. MacTaggart, *Studies in Hegelian Cosmology*, Camb. 1901); S. T. Coleridge, *Aids to Reflection*, Lond. 1825 (many reprints); F. D. E. Schleiermacher, *Der christliche Glaube*[2], Berlin, 1830–31; A. Rosmini, *Teodicea*, Turin, 1828; B. H. Further, the subject is treated in nearly all Philosophies of Religion (Schopenhauer, Lotze, Pfleiderer, etc.), and Systems of Dogmatics (Aquinas, Oosterzee, Martensen, Hodge, etc.).

W. D. Niven.

GOOD NATURE.—That quality of temperament which is evinced, outwardly, in easy and agreeable accommodation to the social environment, and, inwardly, in aptness for adaptation without irritation or undue disturbance. Two types of good nature are to be distinguished.

(1) The first and more austere type consists in an attained orderliness of the sensibilities and a consciousness of harmony with nature. In its pagan interpretation it is the virtue of temperament sought in the Stoic ideal of wisdom as pious accord with natural law, to be attained by reasoned self-discipline; psychically it is marked by evenness of mood, avoiding both exuberance and depression, and it is generalized as right feeling (εὐπάθεια), at finer fortitude than mere patient endurance. In its Christian interpretation good nature is the native innocence and right inclination which are conceived to have been the original endowment of mankind; it is (to quote Jeremy Taylor) 'the relicks and remains of that shipwreck which Adam made,' or, more precisely, 'the proper and immediate disposition to holiness.' Hence it is the source of natural morality and innate apprehension of the good.

(2) A second type of good nature, more lively and spontaneous, is a fact of elementary psychology—in no sense a product of discipline. Kindliness and easiness are its salient traits, health and sound nerves its primary conditions. Over and above these is implied a mental constitution mobile and facile enough to meet change without friction or strain (ill nature is as likely to be a result of lax and sodden as of hypersensitive nerves). It is to be noted that such good nature is susceptible of cultivation, suggestion and auto-suggestion being capable agents for its inducement, and that it usually results in physical benefit. Many of the cures of 'Christian Science,' 'Mental Science,' etc. are primarily cures of temperament; the result is probably attained by inhibition (through suggestion) of irritations arising from local strains, and the process is, in effect, a centrally induced rest cure.

In its moral aspects good nature favours certain perils, such as over-readiness to be persuaded, or a too easy complaisance in abetting or condoning what should be morally repugnant. 'Weak good nature' is a manifestation of deficient will (cf. Aboulia), shown either in extreme susceptibility to suggestion or in that temperamental laziness which appears in disinclination to fortify moral resolution in irksome directions. It is this aspect of good nature which has chiefly impressed itself upon the modern use of the term, where it is widely given a derogatory turn, as implying want of moral stamina. As a social virtue it should properly be cultivated between the extremes of hyper-conscientious scruple on the one hand and lax compliance with social expediency on the other.

H. B. Alexander.

GOODNESS.—The story of the Fall has a profound truth embedded in it. Science regards it as the legend of the awakening of man from a merely animal state to the consciousness of good and evil, of his transition from thoughtless innocence to purposed virtue or deliberate vice, of the introduction of a new sense into the world, the sense which is named conscience. 'A fall it might seem, just as a vicious man sometimes seems degraded below the beasts, but in promise and potency a rise it really was' (O. Lodge, *Man and Nature*, London, 1905, p. 91). Later, for all peoples that have a history, there has, somehow or other, come a time of reflexion, and with it there has arisen 'a conception of good things of the soul, as having a value distinct from and independent of the good things of the body, if not as the only things truly good, to which other goodness is merely relative' (T. H. Green, *Prolegomena to Ethics*, Oxford, 1884, p. 261).

1. **The Greek conception.**—The 'good' (τὸ ἀγαθόν) was made the subject of reflexion in all the philosophical schools of Greece, and it is to Socrates and his successors that we owe our chief moral categories. The Platonic and Aristotelian conception of virtue is final in so far as it defines the good as goodness.

> 'It marks the great transition, whenever and however achieved, in the development of the idea of the true good from a state of mind in which it is conceived as a well-being more or less independent of what a man is in himself, to that in which it is conceived as a well-being constituted by character and action' (Green, *op. cit.* p. 300).

As a concrete ideal, however, the Greek conception of virtue, limited as it necessarily was by the moral progress of the nation, is inadequate. For us, as for Aristotle, the good is the realization of the powers of the human soul or the perfecting of man; for us, as for him, the good for the individual is to be good; but the idea of human brotherhood, which had no meaning for the philosophers of Greece, has achieved, and is destined to achieve, results of which they did not dream.

In opposition to the moral scepticism of the Sophists, some at least of whom reduced morality to a matter of private caprice, Socrates held that virtue is one and may be taught. Following out

this thought consistently, Plato was led to 'the Absolute Good,' or 'the Idea of Good' (*ἡ τοῦ ἀγαθοῦ ἰδέα* [*Rep.* bk. vi.]), which is the source of all truth, all goodness, and all beauty. Its apprehension by the soul is knowledge, its indwelling in the soul is virtue, its shining forth to the soul (it may be through the medium of sense) is beauty. It is the eternal and unchanging principle of goodness. Correcting the Pythagorean dictum, Plato asserted that God, not man, is the measure of all things. He believed that the ideal for each lower soul is to become dear to God and to grow like Him.

Socrates further taught that 'Virtue is knowledge.' Himself blessed with a will which obeyed all the behests of reason, he fell into the error of ignoring its operations. Assuming that all motives are rational, he held that practical wisdom (*φρόνησις*) is the sole condition of well-doing. No man, he was wont to say, knowingly chooses the evil and rejects the good—a statement which owed its plausibility to the double meaning of the word 'good,' virtue and interest. He taught that the various forms of goodness are wisdom in different spheres of action: to be pious is to know what is due to the gods; to be just is to know what is due to men; to be courageous is to know what is to be feared and what is not; to be temperate is to know how to use what is good and to avoid what is evil.

The principle that wisdom is the sole good and ignorance the sole evil became the basis of all subsequent discussions of the ethical problem. For Plato, the philosophic man is the good man. Plato was, indeed, too clear-sighted and fair-minded to suppose that virtue is the exclusive possession of a few choice spirits. He admits that there is much to commend in the lives of some men who are not philosophers. Ordinary citizens who are brave, temperate, and just must have certain true notions of good and evil; their right opinion comes partly from nature or 'divine allotment,' and partly from custom and practice. But for the perfecting of character and conduct, for the adequate preparation of men for good citizenship and especially good government, there is needed the discipline of philosophy. True knowledge, and with it true virtue, can be imparted only to the soul that has undergone a long course of training. Practical excellence of character is the finished product of a liberal education.
